INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES-V

EVALUATION PROCESS and POLICIES

All applications have undergone double blind peer review process. In addition, each paper was accepted and the process of publishing in the book was carried out through editorial oversight. The published papers were presented and discussed at the meeting.

Full texts and abstracts published in accordance with the Symposium Policy have been prepared in accordance with ethical rules and APA standards. Authors of all papers are both ethically and legally responsible.

PARTICIPANTS COUNTRIES

Türkiye, Albania, Algeria, Azerbaijan, Bangladesh, Bulgaria, Ethiopia, Georgia, India, Indonesia, Iran, Kazakhstan, Malaysia, Morocco, Nigeria, Pakistan, Philippines, Saudi Arabia, Slovenia, Sri Lanka, Uganda, Ukraine

TOTAL ACCEPTED ARTICLES: 306

The Number of Accepted Papers from Türkiye: 161
The Number of Accepted Full Papers from Other Countries: 169
The Number of Total Papers:330

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

CHAIRPERSONS OF THE ORGANIZING BOARD

Assoc. Prof. Dr. Mehmet Fırat BARAN

Siirt Üniversitesi

Assoc. Prof. Dr. Arzu ALTUNTAŞ

Siirt Üniversitesi

SYMPOSIUM COORDINATORS

- **Assoc. Prof. Dr. Seyithan SEYDOŞOĞLU**
IKSAD Scientific Support Coordinator
 - **Atabek MOVLYANOV**
IKSAD Scientific Support Coordinator

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

ORGANIZING BOARD

- Dr. Telman Nusretođlu (Hazar Üniversitesi Tarih Bölümü Başkanı, Azerbaycan)
- Dr. Şahla Abbasova (Hazar Üniversitesi Mimarlık Ve Tasarım Bölümü Başkanı, Azerbaycan)
- Dr. Natella Barkaya (Hazar Üniversitesi İletişim Merkezi Başkanı, Azerbaycan)
- Dr. İlkin Alizade (Hazar Üniversitesi Enformasyon Teknolojileri Şubesi, Azerbaycan)
- Dr. Aynura Agayeva (Hazar Üniversitesi Koordinatörlüğü, Azerbaycan)
- Dr. Ahmet Çelik (Adıyaman Üniversitesi, Ziraat Fakültesi, Adıyaman, Türkiye)
- Dr. Özer Hakan Bayraktar (Ege Üniversitesi Ziraat Fakültesi, Türkiye)
- Dr. Gülcan Demirođlu Topçu (Ege Üniversitesi Ziraat Fakültesi, Türkiye)
- Dr. Ferhat Öztürk (Şırnak Üniversitesi, Şırnak, Türkiye)
- Dr. Korkmaz Bellitürk (Tekirdađ Namık Kemal Üniversitesi, Ziraat Fakültesi, Tekirdađ,
Türkiye)
- Dr. Nizamettin Turan (Siirt Üniversitesi, Ziraat Fakültesi, Siirt, Türkiye)
- Dr. Zain Mushtaq (Department of Soil Science, Faculty of Agricultural Sciences, University
of The Punjab, Lahore, Pakistan)
- Dr. Ristina Siti Sundari (University of Perjuangan Tasikmalaya, West Java, Indonesia)
- Dr. Zubair Aslam (University of Agriculture, Department of Agronomy, Faisalabad-Pakistan)

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

SCIENCE AND ADVISORY BOARD

Dr. Abdurrahim Yılmaz-(Bolu Abant İzzet Baysal University, Faculty Of Agriculture,
Türkiye)

Dr. Ali Beyhan Uçak (Siirt University, Faculty Of Agriculture Türkiye)

Dr. A. Konuralp Eliçin (Dicle Üniversitesi University, Faculty Of Agriculture Türkiye)

Dr. Alamettin Bayav (Isparta University Of Applied Sciences, Faculty Of Agriculture,
Türkiye)

Dr. Akgül Taş (Bolu Abant İzzet University, Seben İzzet Baysal Vocational School, Bolu,
Türkiye)

Dr. Arzu Altuntaş (Siirt Üniversitesi University, Faculty Of Agriculture, Türkiye)

Dr. Arzu Çığ (Siirt University, Faculty Of Agriculture, Türkiye)

Dr. Aydın Adiloğlu (Tekirdağ Namık Kemal University, Faculty Of Agriculture, Türkiye)

Dr. Aynur Bilmez Özçınar- (Siirt University, Faculty Of Agriculture, Türkiye)

Dr. Bahar Sözübek (Tekirdağ Namık Kemal University, Faculty Of Agriculture, Türkiye).

Dr. Bahar Burtan Doğan (Dicle University, Faculty Of Economics And Administrative
Sciences, Türkiye)

Dr. Cihan Demir (Kırklareli University, Türkiye,)

Dr. Mehmet Can Dal (Directorate Of National Education, Türkiye)

Dr. Erhan Kahya (Tekirdağ Namık Kemal University, Türkiye)

Dr. Esra Bilici (Uşak University , Türkiye)

Dr. Fatih Çığ (Siirt University, Faculty Of Agriculture, Türkiye)

Dr. Fatih Taş (Siirt University Faculty Of Medicine, Türkiye)

Dr. Ferhat Kızılgeçi(Mardin University, Türkiye)

Dr. Fırat Pala (Siirt University, Faculty Of Veterinary, Türkiye)

Dr. Gülşah Çalışkan (Uşak University , Türkiye)

Dr. Görkem Öruk (Siirt University, Faculty Of Agriculture, Türkiye)

Dr. H. Deniz Şireli (University Of Dicle, Faculty Of Agriculture , Türkiye)

Dr. Nilgün Onursal (Siirt University Faculty Of Education, Türkiye)

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

SCIENCE AND ADVISORY BOARD

- Dr. Halil İbrahim Oğuz (Adıyaman University, Faculty Of Agriculture, Türkiye)
Dr. İlker İnal (Eastern Mediterranean Agricultural Research Institute, Department Of
Agronomy, Türkiye)
- Dr. Kerem Mertoğlu (Usak University, Faculty Of Agriculture, Department Of Horticulture,
Türkiye)
- Dr. Melekber Sülüsoğlu Durul, (Kocaeli University, Faculty Of Agriculture, Department Of
Horticulture, Türkiye)
- Dr. Mehmet Yılmaz (Siirt University Faculty Of Medicine, Türkiye)
Dr. Mehmet Polat (Isparta University Of Applied Science, Faculty Of Agriculture, Department
Of Horticulture, Türkiye)
- Dr. Mesut Budak (Siirt University, Faculty Of Agriculture, Türkiye)
Dr. Mesut Sırrı (Siirt University, Faculty Of Agriculture, Türkiye)
Dr. Mesut Yılmaz (Akdeniz University, Faculty Of Fisheries, Türkiye)
- Dr. Murat Deveci (Tekirdag Namık Kemal University, Faculty Of Agriculture, Department Of
Horticulture, Türkiye)
- Dr. Nihayet Koçyiğit (Batman University, Türkiye)
- Dr. Nurhan Keskin (Van Yüzüncü Yıl University, Faculty Of Agriculture, Türkiye)
Dr. Nusret Özbay (Bingöl University, Faculty Of Agriculture, Türkiye)
- Dr. Osman Gökdoğan (Isparta University Of Applied Sciences, Faculty Of Agriculture,
Türkiye)
- Dr. Ömer Acer (Siirt University Faculty Of Medicine, Türkiye)
Dr. Sipan Soysal (Siirt University, Faculty Of Agriculture, Türkiye)
Dr. Suat Benek (Tekirdağ Namık Kemal University Faculty Of Medicine, Türkiye)
Dr. Şerif Aksin (Siirt University Faculty Of Medicine, Türkiye)
Dr. Sevilay Gül (Tekirdağ Namık Kemal University, Türkiye)
Dr. Sıdika Ekren (Ege University, Faculty Of Agriculture, Türkiye)
Dr. Şahin Ay (Siirt University, Türkiye)
Dr. Yusuf Dilay, (Karamanoğlu Mehmetbey University, Türkiye)

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

SCIENCE AND ADVISORY BOARD

Dr. Zekiye Şengül (Siirt University, Faculty Of Agriculture, Türkiye)

Dr. Zeynep Dumanoglu (Bingöl University, Faculty Of Agriculture, Türkiye)

Dr. Zeynep Ünal (Niğde Ömer Halisdemir University, Faculty Of Agriculture, Türkiye)

Dr. Abdul Khaliq (University Of Agriculture, Department Of Agronomy, Faisalabad,
Pakistan)

Dr. Adnan Abbas (Nanjing University Of Information Science And Technology, Nanjing
China).

Dr. Ali Mekki (University Of Sfax, Biological Engineering-Environmental Bioprocesses And
Soil Science, Sfax-Tunisia)

Dr. Ajar Nath Yadav (Eternal University, Department Of Biotechnology, Himachal Pradesh-
India)

Dr. Ashokkumar Vallabhnbhai Rajani (Junagadh Agricultural University, College Of
Agriculture, Dept. Of Agril. Chem. & Soil Science, Gujarat-India)

Dr. Barbara Wiśniowska-Kielian (University Of Agriculture In Krakow, Faculty Of
Agriculture And Economics, Department Of Agricultural And Environmental Chemistry,
Krakow-Poland)

Dr. Blend Ibrahim (School Of Tourism And Hospitality Management. Department Of
Tourism Girne American University, Cyprus)

Dr. Hab. Barbara Sawicka (University Of Life Sciences In Lublin, Faculty Of
Agrobioengineering, Department Of Plant Production Technology And Commodity Sciences,
Lublin-Poland)

M.Sc. Benjamin Bantchina (Bursa Uludag University, Faculty Of Agriculture, Department Of
Biosystems Engineering, Bursa-Türkiye)

Dr. Brygida Klemens (Opole University Of Technology, Faculty Of Economics And
Management, Opole-Poland)

Dr. Derya Timuçin, (School Of Tourism And Hospitality Management. Department Of
Tourism Girne American University, Cyprus)

Dr. Grzegorz Pączka (Rzeszów University, Department Of Natural Theories Of Agriculture
And Environmental Education, Rzeszów, Poland)

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

SCIENCE AND ADVISORY BOARD

Dr. Fahrurrozi Fahrurrozi (University Of Bengkulu, Faculty Of Agriculture, Dept. Of Crop Production, Bengkulu-Indonesia)

Dr. Herák David, (Czech University Of Life Sciences Prague, Czech Republic)

Dr. Hüseyin Bozdağlar (Girne American University, School Of Tourism And Hospitality Cyprus)

Dr. Irshad Bibi (University Of Agriculture, Faculty Of Agriculture, Institute Of Soil And Environmental Sciences, Faisalabad-Pakistan)

Dr. İsmet Esenyel (Girne American University, School Of Tourism And Hospitality Cyprus)

Dr. Jam Nazeer Ahmad University Of Agriculture, Faculty Of Agriculture, Department Of Entomology, Faisalabad-Pakistan)

Dr. Khalid Hussain (University Of Agriculture, Faculty Of Agriculture, Department Of Agronomy, Faisalabad-Pakistan)

Dr. Mazhar Rafique (University Of Haripur, Faculty Of Agriculture Sciences, Department Of Soil & Climate Sciences-Pakistan)

Dr. Muhammad Arshad (University Of Agriculture, Faculty Of Agriculture, Department Of Entomology, Faisalabad-Pakistan)

Dr. Muhammad Shahbaz Naeem (University Of Agriculture, Faculty Of Agriculture, Department Of Agronomy, Faisalabad-Pakistan)

Dr. Mohammad Mehdizadeh (Univesity Of Mohagheh, Department Of Agronomy And Plant Breeding, Ardabili-Iran)

Dr. Muhammad Zahid Ihsan (Islamia Univeristy Of Bahawalpur, Cholistan Institute Of Desert Studies, Bahawalpur-Pakistan)

Dr. Muhammad Adnan (University Of Swabi, Department Of Agriculture, Swabi-Pakistan)

Dr. Muhammad Zubair Siddiqi (Hankyong National University, Department Of Biotechnology, South Korea)

Dr. Mushtaque Ahmed Jatoui, (University Of Zagreb, Department Of Pomology, Zagreb, Croatia, Beijing, China)

Dr. Murat Akkaya (Girne American Universty, Vocational School, Cyprus)

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

SCIENCE AND ADVISORY BOARD

Dr. Nabeel Khan Niazi (University Of Agriculture, Faculty Of Agriculture, Institute Of Soil
And Environmental Sciences, Faisalabad-Pakistan)

Dr. Ristina Siti Sundari (Tasikmalaya University-Indonesia).

Dr. Rana Nadeem Abbas (University Of Agriculture, Faculty Of Agriculture, Department Of
Agronomy, Faisalabad-Pakistan)

Dr. Mazhar Rafique (University Of Haripur, Faculty Of Agriculture Sciences, Department Of
Soil & Climate Sciences-Pakistan)

Dr. Safdar Bashir (Ghazi University, Faculty Of Agricultural Sciences, Department Of Soil
And Environmental Sciences, Dera Ghazi Khan-Pakistan)

Dr. Sardar Alam Cheema (University Of Agriculture, Faculty Of Agriculture, Department Of
Agronomy, Faisalabad-Pakistan)

Dr. Shah Fahad (University Of Haripur, Department Of Agronomy, Haripur-Pakistan)

Dr. Saddam Hussain (University Of Agriculture, Faculty Of Agriculture, Department Of
Agronomy, Faisalabad-Pakistan)

Dr. Seden Turamberk Özerden (Girne American Universty, Cyprus)

M.Sc. Setyo Budi Kurniawan (Universiti Kebangsaan Malaysia, Faculty Of Engineering &
Built Environment, Department Of Chemical And Process Engineering, Malaysia)

Dr. Tahir Iqbal, (Arid Agriculture University, Rawalpindi, Pakistan)

Dr. Wan Taek Im (Hankyong National University, Department Of Biotechnology, South
Korea)

Dr. Viliana Vasileva (Agricultural Academy, Institute Of Forage Crops, Forage Production
And Livestock Department, Pleven-Bulgaria)

Dr. Zain Mushtaq (Department Of Soil Science, Faculty Of Agricultural Sciences, University
Of The Punjab, Lahore, Pakistan)

Dr. Zhongbing Chen (Czech University Of Life Sciences Prague, Faculty Of Environmental
Sciences, Prague-Czech Republic)

Dr. Zisis Vryzas (Democritus University, Thrace School Of Agricultural & Forestry Sciences,
Department Of Agricultural Development, Orestiada-Greece)

**INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF
MULTIDISCIPLINARY SCIENTIFIC STUDIES-V**

SCIENCE AND ADVISORY BOARD

Dr. Zulfiqar Ahmad Dasti (University Of Agriculture, Faculty Of Agriculture, Institute Of
Soil And Environmental Sciences, Faisalabad-Pakistan)

Dr. Zubair Aslam (University Of Agriculture, Faculty Of Agriculture, Department Of
Agronomy, Faisalabad-Pakistan)

December 10-12, 2023

Baku, Azerbaijan

SYMPOSIUM SCHEDULE

INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES-V

December 10-12, 2023 / Baku, Azerbaijan

CONFERENCE PROGRAM

IMPORTANT, PLEASE READ CAREFULLY

- ❖ To be able to attend a meeting online, login via <https://zoom.us/join> site, enter ID "Meeting ID or Personal Link Name" and solidify the session.
- ❖ The Zoom application is free and no need to create an account.
- ❖ The Zoom application can be used without registration.
- ❖ The application works on tablets, phones and PCs.
- ❖ The participant must be connected to the session 5 minutes before the presentation time.
- ❖ All congress participants can connect live and listen to all sessions.
- ❖ Moderator is responsible for the presentation and scientific discussion (question-answer) section of the session.

Points to Take into Consideration - TECHNICAL INFORMATION

- ◆ Make sure your computer has a microphone and is working.
- ◆ You should be able to use screen sharing feature in Zoom.
- ◆ Attendance certificates will be sent to you as pdf at the end of the congress.
- ◆ Requests such as change of place and time will not be taken into consideration in the congress program.

ÖNEMLİ, DİKKATLE OKUYUNUZ LÜTFEN

- ❖ Kongremizde Yazım Kurallarına uygun gönderilmiş ve bilim kurulundan geçen bildirimler için online (video konferans sistemi üzerinden) sunum imkanı sağlanmıştır.
- ❖ Online sunum yapabilmek için <https://zoom.us/join> sitesi üzerinden giriş yaparak "Meeting ID or Personal Link Name" yerine ID numarasını girerek oturuma katılabiliyorsunuz.
- ❖ Zoom uygulaması ücretsizdir ve hesap oluşturmaya gerek yoktur.
- ❖ Zoom uygulaması kaydolmadan kullanılabilir.
- ❖ Uygulama tablet, telefon ve PC'lerde çalışıyor.
- ❖ Her oturumdaki sunucular, sunum saatinden 5 dk öncesinde oturuma bağlanmış olmaları gerekmektedir.
- ❖ Tüm kongre katılımcıları canlı bağlanarak tüm oturumları dinleyebilir.
- ❖ Moderatör - oturumdaki sunum ve bilimsel tartışma (soru-cevap) kısmından sorumludur.

Dikkat Edilmesi Gerekenler- TEKNİK BİLGİLER

- ◆ Bilgisayarınızda mikrofon olduğuna ve çalıştığına emin olun.
- ◆ Zoom'da ekran paylaşma özelliğine kullanabilmelisiniz.
- ◆ Kabul edilen bildiri sahiplerinin mail adreslerine Zoom uygulamasında oluşturduğumuz oturuma ait ID numarası gönderilecektir.
- ◆ Katılım belgeleri kongre sonunda tarafınıza pdf olarak gönderilecektir
- ◆ Kongre programında yer ve saat değişikliği gibi talepler dikkate alınmayacaktır

Before you login to Zoom please indicate your name surname and hall number,
exp. H- 1, M. Firat BARAN

CONGRESS LANGUAGES: English and All Turkish Dialects

OPENING CEREMONY

Date: 11.12.2023

Baku Local Time: 11:00-12:00

Honorary Chairman of the Conference

Prof. Dr. Hamlet ISAHANLI

Chairman of the Board of Trustees of Khazar University

Honorary Chairman of the Conference

Assoc. Prof. Irada KHALILOVA

Rector of Khazar University

Head of Conference

Dr. Mehmet Fırat BARAN

Siirt University

Head of Conference

Dr. Elvan CAFEROV

Head of IKSAD Azerbaijan

Özet

Tarhana is a food product produced with various names in different countries around the world, including Egypt, Greece, and Finland. It is made by making a dough prepared with wheat flour, yogurt, peppers, salt, onions, tomatoes, and spices, fermenting, drying, and grinding the prepared dough. In Turkey, the ingredients, production methods, and the final composition of tarhana vary by region. Various types of tarhana produced in different parts of the country, including Ege, wet (Trakya and Kastamonu), Göce (Ankara, Maraş, Muğla, and Aydın), ball (Isparta), sweet (üzümlü, Tokat), Kiren (cranberry, Bolu), white (Kütahya), milk (Çanakkale), meat (Karaman), Maraş, etc. Cranberry tarhana is specifically produced in the provinces of Kastamonu, Kütahya, Bolu, Bursa, and Zonguldak. Cranberry tarhana is typically a locally consumed product and remains relatively unknown in many regions of our country. However, cranberry fruit is a rich source of valuable components such as anthocyanins and phenols, making cranberry tarhana quite important for health. It can be prepared by mixing wheat flour, cranberry pulp, and salt and then drying. Alternatively, it can also be produced by adding cranberry pulp to traditional tarhana ingredients (tomatoes, pepper, onion, yogurt, and spices), followed by fermentation and drying. Cranberry tarhana has a more acidic structure compared to traditional tarhana. It contains rich phenolic components (557.89mg GAE/100g dry matter basis) and has high anthocyanin and fiber contents (0.17%, dry matter basis), which can have positive health effects. The moisture content (6.28-15.44%, dry matter basis), ash content (1.75-3.96%, dry matter basis), and protein content (11.01-13.80%, dry matter basis) of cranberry tarhana produced in Bolu vary depending on the production methods and conditions. The purpose of this review is to examine the ingredients, production methods, and chemical composition of cranberry tarhana produced in different regions in Turkey. This review will provide information about how traditional foods like cranberry tarhana vary depending on local culture and geography, and their nutritional value.

Keywords: Tarhana, cranberry, phenolic, anthocyanin

KÜRESEL KAMUSAL MALLARIN KAMU MALİYESİNDEKİ ÖNEMİNİN KAVRANMASI SÜRECİ

Dr. Öğr. Üyesi Şahin AY (ORCID: 0000-0002-3036-2155)

Özet

Yoksulluğun azaltılmasında ve kalkınmanın sağlanmasında çok önemli bir yere sahip olan küresel kamusal mallar pek çok ülkenin bir arada hareket etmesiyle anlamlılık kazanmaktadır. İş birliklerinin olmaması durumunda dışşallığın etkisiyle istenilen amaca ulaşılamamaktadır. Ekonomik, sosyal, çevresel ve sağlık alanlarında var olan küresel kamusal mallar için ülkeler büyük harcamalar yapmakta ve bu durum tüm ülkelerin kamu harcamalarına ciddi biçimde yük getirmektedir. Savunma harcamalarının had safhada olduğu günümüz dünyasında, küresel kamusal mallar konusunda ülkelerin belirli işbirliklerini samimiyet çerçevesinde yapmaları her ne kadar ütopya gibi görünse de dünya barışına ve dünyadaki bireylerin daha sağlıklı bir ortamda, temel hak ve özgürlüklerini yaşayabilmelerine olanak sağlayacaktır. Global kamusal malların çevresel mal ve hizmet sınıfı kapsamına giren küresel iklim değişiklikleri buna bağlı olarak ortaya çıkan kuraklık gibi durumlar ile ozon tabakasında meydana gelen tahribatların ne derece doğru olduğu bilgisi sadece belirli ülkelerin araştırmalarına bırakılmamalı ve tüm devletlerin doğru bilgiye ulaşmaları sağlanmalıdır. Böyle bir durumda kamu harcamalarının ülkeler bazında daha doğru bir şekilde yapılması ülke ekonomilerine olumlu anlamda katkı sağlayacaktır.

Anahtar Kelimeler: Küreselleşme, Global Kamusal Mallar, Uluslararası İşbirliği

**THE PROCESS OF UNDERSTANDING THE IMPORTANCE OF GLOBAL PUBLIC
GOODS IN PUBLIC FINANCE**

Abstract

Global public goods, which have a very important place in reducing poverty and ensuring development, gain meaning when many countries act together. In the absence of cooperation, the desired goal cannot be achieved due to the effect of externalities. Countries make large expenditures for global public goods in the economic, social, environmental and health fields, and this puts a serious burden on the public expenditures of all countries. In today's world, where defense expenditures are at the highest level, countries' sincerity in certain collaborations regarding global public goods may seem like a utopia, but it will enable world peace and individuals in the world to enjoy their fundamental rights and freedoms in a healthier environment. Information on the extent of global climate changes, droughts, and ozone layer damage, which fall within the scope of the environmental goods and services class of global public goods, should not be left to the research of only certain countries, and all states should be provided with access to accurate information. In such a case, making public expenditures more accurately on a country basis will contribute positively to the country's economies.

**NUMERICAL DESIGN OF ALUMINUM-DOPED LIPON SOLID-ELECTROLYTES
FOR SiCO-BASED SOLID-STATE BATTERIES**

Dr. Yang DUO

Wenzhou University

Prof. Ningbo LIAO

Wenzhou University

Abstract

As an emerging battery technology, all-solid-state lithium battery (ASSB) has attracted extensive attention and research. Compared with traditional liquid lithium batteries, all-solid-state lithium batteries show advantages of higher safety, higher energy density and faster charging and discharging speed. The main challenges for ASSBs are poor interfacial stability and high interfacial impedance. This work focuses on overall design of new solid-state electrolyte for SiCO-based ASSBs. The charge transfer, adhesion energy, adsorption energy, interfacial formation energy, diffusion barrier and density of state changes are calculated to evaluate the compatibility and stability of the interfaces. The results show that LiPON solid-state electrolytes exhibit excellent interfacial properties with SiCO, and the interfacial performances are further improved with doping of Al in LiPON.

Keywords: emerging battery technology, all-solid-state lithium battery

Abstract

In this study the antimicrobial activity of Carway (*Carm carvi*) extracts was evaluated against three species of Gram negative bacteria (*Pseudomonas putidi*, *Escherichia coli*, and *Klebsiella* species of Gram positive bacteria (*Bacillus subtilus* and (*Staphylococcus aureus*) and three species of molds pneumonia) and two *Aspergillus flavus* *Fusarium oxysporium*, and *Penicillium digitatum*). MIC, MBC and MFC of the extracts were determined at 37°. The aqueous and alcoholic extracts didn't have antibacterial and antifungal activity while the essential oil has antimicrobial effects. Among the tested Gram-positive bacteria *Bacillus subtilus* was the most sensitive strain among the tested Gram-negative bacteria *Klebsiella pneumonia* was the most sensitive strain and among all bacteria tested in this study *Staphylococcus aureus* was the most resistible. The concentrations (2000, 1000, 500 and 250 ppm) of essential oil has antifungal activity while the concentration 125 ppm showed simple inhibition activity on molds used and 60 ppm concentration has no antifungal activity on any of the fungi used in the study. The results obtained expanded the possibilities for application of studied oils not only as flavour enhancers, but even as natural antimicrobials in chilled meat products.

Keywords: caraway seeds, ground meat, Essential oils, *Carm carvi* L., natural antimicrobial, plant extract

PHYTOCONSTITUENTS ADVANCEMENT IN CANCER TREATMENT

Abstract

Cancer is intense fitness trouble that is still considered to be the main reason for its demise worldwide. Nanotechnology considered as rising disciplines in technology and generation, which may be implemented to synthesize new materials on the nanoscale level. The application of nanotechnology in the treatment of several types of cancers has acquired a significant interest in current years. Cancer nanotechnology is an upcoming unique technique with vast application towards most cancers thru in time diagnosis, estimation and inhibition with the help of personalized medications. Plant occurring natural compounds considered as phytochemicals, crucial assets for most cancers remedy. Some traditional examples consist of curcumin, resveratrol, flavonoids, celastrol, berberine, camptothecins, vinca alkaloids (vincristine & vinblastine), taxol derivatives, and podophyllotoxin derivatives. These phytoconstituents directly act on molecular pathways that are inhibiting in increase and development of several cancers. Phytochemicals used in foods, supplements, and prescribed drugs is inadequate because of lower bioavailability, low solubility, less therapeutic efficacy, and stability problem. To get rid of these issues a modern and advanced novel delivery technique has been developed. These naturally occurring phytochemicals can be incorporated in the form of liposomes, niosomes, nanosomes, nanoparticles, and nanoemulsions to produce better therapeutic efficacy against cancer. This review focuses on the recent advancement and development of nanophytoconstituents in cancer therapy.

Keywords: Phytochemicals, Nanotechnology, Cancer therapy, Nanocarrier, Medicinal plants, Drug delivery.

Abstract

Mycotoxins are secondary metabolites of filamentous fungi, capable of producing toxic effects to humans and animals. Since they are naturally occurring, their potential presence in food, beverages and feed causes a significant concern worldwide. Currently detection of mycotoxins include analytical and immunological screening methods, which are rapid but expensive and limited by the availability of antibodies. In recent years, there have been considerable efforts to develop alternative methods of detection based on molecular biology techniques. This research focuses on real-time PCR detection and quantification of *Fusarium spp.*, potential producer of class *B fumonisin* mycotoxins in mature corn kernels using primers designed to genes FUM1 and FUM6, involved in mycotoxin biosynthesis. Three pairs of primers specific to genes involved in the synthesis of mycotoxin FB known to contaminate maize and maize products were developed and a pair of primers specific to a conserved *Fusarium* beta-tubulin gene, aimed at detection of most *Fusarium* species. There has been applied quantitative PCR assay for quantification of total *Fusarium* spp. and potentially mycotoxigenic *Fusarium verticillioides*. As a result of this work we developed three pairs of primers specific to genes involved in the synthesis of mycotoxin FB known to contaminate maize and maize products. We also developed a pair of primers specific to a conserved *Fusarium* beta-tubulin gene, aimed at detection of most *Fusarium* species. We set the quantitative PCR assay for quantification of total *Fusarium* spp. and potentially mycotoxigenic *Fusarium verticillioides*. We tested four maize samples and compared the amount of *Fusarium* spp.

and *Fusarium verticillioides* in those samples. The real-time PCR assay can be used for detecting and quantifying potentially mycotoxigenic *Fusarium* in the maize kernels by the genes involved in mycotoxin synthesis. This can be a step towards establishing a possible correlation between the amount of mycotoxigenic pathogen and amount of mycotoxin in food sample.

Keywords: mycotoxins, qPCR, *Fusarium*, fumonisin, specific primers, corn kernels.

ALTERNATIVE PLANT-BASED SOURCES FOR THE PRODUCTION OF MEAT ANALOGUES

Abstract

Consumer concern about food choices and their possible health and environmental implications have led to noticeable changes in dietary patterns, including the consumption of meat products. Nowadays, consumers are becoming aware of the importance of adopting plant-based foods due to ethical concerns, campaigns to reduce meat consumption by animal rights/welfare organizations, and increased emissions of environmentally harmful greenhouse gases. In this context, legumes and some cereals can serve as a significant source of protein in obtaining meat analogues with the use of ecofriendly technologies. The varieties of chickpea and soryz were used for the research. The content of dry matter, proteins, amino acids profile, mass per 1000 grains, grains hectolitre mass, acidity of dried grains were determined. The results obtained, regarding the chemical composition, demonstrated that all the analyzed chickpea and soryz varieties are potential sources of valuable macronutrients. For analyzed plant based sources, close values were obtained for the dry matter content. The chickpea varieties presented the highest protein content compared to the soryz samples. Significant amounts of amino acids were obtained for (in descending order): glutamic acid, aspartic acid, arginine, lysine, leucine, proline. Glutamic acid is the major amino acid in the soryz proteins. It constitutes 34% of all amino acids, followed by the content of asparagine, alanine, leucine and arginine. The 1000 grains mass and hectolitre mass showed that analyzed samples were of high quality, well developed, grown in appropriate conditions. The legumes acidity was low, it could be influenced by the amino acid content. The obtained results demonstrate that the analyzed varieties of chickpea and soryz are rich sources of proteins, essential amino acids, important in human nutrition and can be used as vegetable sources to replace animal origin proteins in composite food products, also improving their nutritional and biological value.

Keywords: meat analogues, legumes, proteins, chickpea, soryz.

Acknowledgment: Moldovan-Turkish Bilateral Project Sustainable Nutrient-Rich New Generation Food Products Development: evaluating the relationship between ingredients, processing methods used, and techno- and bio-functional properties.

**THE EFFECT OF HYDROLYSIS TIME ON THE FUNCTIONAL PROPERTIES OF
PROTEIN HYDROLYSATES FROM DOLPHINFISH (*Coryphaena hippurus*) HEAD**

Huong Thi My NGUYEN

Faculty of Food Technology, Nha Trang University 2 Nguyen Dinh Chieu, Nha Trang, Vietnam

Email:huongntm@ntu.edu.vn

Abstract

The effect of hydrolysis time on the functional properties of protein hydrolysates from dolphinfish head such as solubility, foaming capacity and emulsifying capacity was studied. Six protein hydrolysates were obtained by enzymatic hydrolysis of dolphinfish head with Protamex 0.5% at the temperature of 50°C and different hydrolysis times (1h, 2h, 3h, 4h, 5h, 6h). The study results showed that the dolphinfish head protein hydrolysate obtained after 6h of hydrolysis had the contents of protein 71.5 %, lipid 1.8 % and ash 8.4 %. The hydrolysis time had a significant effect on the functional properties of protein hydrolysates. The solubility of protein hydrolysates from dolphinfish head increased when hydrolysis time increased. The protein hydrolysate with hydrolysis time of 6 h had the highest solubility (97.4%) at pH 8. The foaming capacity and emulsifying capacity of dolphinfish head protein hydrolysates decreased with increasing hydrolysis time and reached the highest values of 43.8% and 26.2 ml/g respectively after 1 h of hydrolysis. The study results suggested that with the important functional properties, the protein hydrolysate from dolphinfish head could be used as a protein source in food systems and was a promising potential food ingredient.

Keywords: Dolphinfish head, fish protein hydrolysate, functional properties, hydrolysis time.

**UNRAVELLING THE GENETIC WEALTH OF TURKISH DURUM WHEAT
LANDRACES (*Triticum Turgidum* Ssp. *Durum*) FOR THE CREATION OF NOVEL
CULTIVARS**

Assist. Prof. Uğur SESİZ (ORCID: 0000-0003-1234-4276)
Şırnak University, Faculty of Agriculture, Department of Field Crops, Şırnak
Email:usesiz47@gmail.com

Abstract

Durum wheat (*Triticum turgidum* ssp. *durum*) is a significant cereal in human consumption, mostly utilized in Mediterranean countries for various foods such as pasta, flatbread, couscous, and bulgur. It accounts for approximately 5-10% of the total global wheat production. Turkey is a leading producer of durum wheat, making it critical to maintain a sustainable yield not only in the region but also globally. Selection has resulted in a genetic bottleneck in wheat diversity over thousands of years, resulting in the loss of many vital genes/alleles and a narrowing of genetic diversity. Wheat geneticists and breeders are currently working to reintroduce these lost genes into wheat by utilizing wild relatives and abandoned landraces. Wheat landraces, cultivated by humans for thousands of years, have been overshadowed by the emergence of modern cultivars, especially with the widespread adoption of dwarf wheat after the Green Revolution. Consequently, many farmers abandoned their cultivation. These landraces, however, harbor crucial genes related to plant resistance as well as other agro-morphological and phenological traits. These valuable traits can be transferred to modern cultivars through hybridization programs. This study compared agro-morphological and phenological traits of 42 Turkish landraces and 84 modern cultivars in a durum wheat population. The study was conducted under both field and greenhouse conditions, with the trials set up according to randomized complete block design (RCBD). The statistical analyses revealed significant variability in the population as well as within the landraces. The population was divided into two distinct subpopulations, P1 and P2, using the Silhouette clustering method. Except for one landrace, all of the landraces and 26 cultivars were classified as P1, while rest of the cultivars were classified as P2, indicating a significant difference between landraces and modern cultivars. Furthermore, the population was divided into three groups using principal component analysis (PCA) based on the evaluated traits: G1 (plant height and peduncle height), G2 (spike length and spikelet numbers per spike), and G3 (spike weight, grain number per spike, spike yield, and heading date). This division enabled a clear separation of genotypes based on their respective traits, providing valuable insights into the characteristics of the durum wheat population under study.

Abstract

Sweet potatoes, widely recognized for their nutritional benefits, play a significant role in promoting community well-being and sustainable agriculture. This research underscores the significance of sweet potatoes in improving dietary quality through their abundant vitamin, mineral, and antioxidant content, thereby contributing to overall public health. The paper explores sustainable agriculture practices linked to sweet potato cultivation, highlighting their contribution to both food security and environmental sustainability. Sweet potatoes' adaptability to diverse climatic conditions makes them a resilient crop that can support sustainable farming initiatives. The paper covers integrated product management strategies for sweet potatoes, focusing on maximizing yield and quality while minimizing losses and environmental impact. Methods for cultivation, harvest, storage, and marketing are outlined in clear, concise language to ensure comprehension. The application of these strategies is crucial for maintaining the sustainable production and supply chain of sweet potatoes, supporting their role as a burgeoning trend in healthy food and regional development. In conclusion, this paper highlights the various advantages of sweet potatoes, such as promoting public health, supporting sustainable agricultural practices, and contributing to local economic growth. It calls for increased focus and investment in sweet potato cultivation to attain multiple developmental objectives.

Keywords: Sweet potatoes, healthy food, economic growth

EDIBLE CHITOSAN FILMS AND COATINGS CONTAINING ESSENTIAL OILS: USE IN CHEESE PRODUCTS

Abstract

Edible films and coatings have become an important choice in packaging technology to overcome polymer recycling issues and meet the demands for safe food. These biodegradable materials aim to extend the shelf life of foods and preserve their quality. Particularly, chitosan is a significant component of edible film technology that can replace synthetic polymers and is effective against both gram-positive and gram-negative bacteria. In the literature, it has been observed that chitosan coatings containing essential oils such as peppermint oil, thyme oil, bay leaf oil, and lavender oil exhibit antioxidant, antifungal, and antibacterial effects, thereby extending the shelf life of food products. Dairy products, particularly cheeses, are sensitive during storage and distribution processes. Plant essential oils not only contribute additional flavor layers to cheeses but also stand out for their ability to prevent oxidative deterioration. Several studies have demonstrated that chitosan coatings loaded with thyme essential oil extend the shelf life of cheese, and the antibacterial effects of *M. longifolia* essential oil are evident. These effects have been reported to be particularly associated with the concentrations of thymol and p-cymene in thyme and pulegone organic compounds in *M. longifolia* essential oil. The advanced research in this field has the potential to pave the way for the development of novel and effective methodologies in cheese preservation. Particularly, the optimization of chitosan film and coating processes loaded with essential oils holds critical significance in obtaining products with desired characteristics. The homogeneous integration of essential oils into the chitosan matrix stands as a pivotal factor determining product quality. Future research in this domain holds promise in offering innovative solutions for food preservation.

Keywords: Edible films and coatings, chitosan, cheese, food preservation, antibacterial effect, antioxidant effect

**DETERMINATION OF CHILLING FULFILMENT OF KABARCIK (*Vitis Vinifera* L.)
FOR KAHRAMANMARAS**

Assistant Professor Dr. Turhan YILMAZ (ORCID:0000-0002-3756-4497)

Abstract

It is known that grapevines can come up with week, nonuniform and late bud break phenology when not chilling fulfilment performed, which highlights the importance of chilling in grapevines. Chilling requirement under room temperature was tested both hours (nine) and days (fourteen) main effects. The effect hours which were control (no chilling), 48, 96, 144, 192, 240, 288, 336 and 384 treatments and the effect days, which were 28 days (with every 2 days record and 14 times) totally were analyzed for chilling accumulation. Bud break score was not different from 2 to 18 days while it was gradually increased from day 18, and ended up days 28. Therefore, days 20, 22, 24, 26 and 28 (which were different each other) were statistically different than days from 2, 4, 6, 8, 10, 12, 14, 16 and 18 (which were not different each other). The best bud break score of Kabarcık had obtained under 240 hours; and, it was not statistically different than 192- and 298-hours. The less bud break scores had acquired the hours 48 and 384. Although 384 hours had more chilling than 48 hours, they were not statically different each other which means the samples started to decay in 4 °C after some hours. There was the same scenario in that the buds started to be had less broken buds after the hours 240 treatment. Therefore, in this study, it was reported the chilling requirement of Kabarcık is between 192 and 298 hours, at least 240 hours, for Kahramanmaraş province.

Keywords; grapevine, chilling requirement, Kabarcık, bud break, Kahramanmaraş

ASILIR TİP DİSKLİ TIRMIKLARDA MEYDANA GELEN ARIZALAR VE NEDENLERİ

Özet

Bu çalışmada, Manisa ili, Salihli ilçesinde yaygın olarak kullanılan asılıp tip diskli tırmıklarda meydana gelen arızalar ve nedenlerinin belirlenmesi amaçlanmıştır. Bu amaçla, asılıp tip diskli tırmıkların kullanımı sırasında en sık rastlanan arızalar saptanarak bunların kullanım mı veya imalat kaynaklı hatalar mı olup olmadıkları ayrı ayrı belirlenmiştir. İmalat ve kullanıcı hatalarının asgariye çekilmesi için dikkat edilmesi gereken konular ele alınmıştır. Arıza sebebiyle makinelerin kullanım dışı kalması, birim zamanda alınacak ürün miktarını kısıtlayan en önemli faktörlerden biridir. O halde üretim maliyetini ve bunu doğrudan etkileyen üretimin aksamasını azaltmak için işletmelerde onarım amacıyla harcanan sürenin en aza indirilmesi gerekmektedir. Araştırma materyali olarak tarım makineleri tamiratı yapan bir torna atölyesinin imkânları ile müşteri kitlesi dikkate alınmıştır. Tamir için işyerine 2022 ve 2023 yılı bitkisel üretim sezonlarında arızalanarak gelen 100 adet asılıp tip diskli tırmığın arızaları tek tek incelenerek arıza tipi ve nedenleri tespit edilmeye çalışılmıştır. Belirlenen en sık arızaların rulman yataklarının düzenli yağlanmaması, diskli tırmık bataryalarının sorunsuz dönüp dönmediğinin kontrol edilmemesi ve bağlantı elemanlarının gevşeme durumunun düzenli olarak kontrol edilerek giderilmemesi gibi kullanıcı hataları şeklinde olduğu tespit edilmiştir. Kullanıcının rulman yataklarını yağsız bırakmaması, özellikle batarya somunları gevşediğinde bunun bakımını yapması ve yaptırmaması, bozuk ve hasarlı durumda kullanmayıp daha fazla arızaya sebep vermemesi gerekir. Ayrıca diskli tırmık üzerine fazla ağırlık konularak oluşturulan zorlamaların disk ve şasede kırılmalara yol açtığı da saptanmıştır.

Anahtar Kelimeler: Diskli tırmık, Diskli tırmık arızaları, Arıza analizi

MOUNTED TYPE DISC HARROWS OCCURRING DEFECTS IN AND THEIR CAUSES

Abstract

In this study, it is aimed to determine the malfunctions and their causes in the mounted type disc harrows, which are widely used in the Salihli district of Manisa province. For this purpose, the most common faults during the use of the mounted disc harrows were determined and it was determined separately whether they were usage or manufacturing errors. The most common malfunctions during the use of the suspended type disc harrow are determined, and the issues that need attention in order to determine whether they are user or manufacturing faults and to minimize manufacturing and user errors are discussed. Stopping the machines due to a malfunction is one of the most important factors limiting the amount of product to be purchased per unit time. In that case, the cost of production and the production cost that directly affects it. In order to reduce the downtime, the time spent for maintenance in industrial enterprises should be minimized. As the research material, the possibilities of a lathe workshop that repairs agricultural machinery and the customer base were taken into consideration. The malfunctions of 100 mounted disc harrows, which came to the workplace for repair in the 2022 and 2023 crop production seasons, were examined one by one, and the type and causes of the malfunction were tried to be determined. According to the results of the research, the most common causes of failure are the lack of regular lubrication of the bearings, the failure to regularly check whether the disc harrow groups rotate smoothly, and the failure to eliminate the looseness of the fasteners by regularly checking. The user should not leave the bearings without oil, especially when the disc harrow group nuts are loosened, they should be maintained and made, and they should not cause more malfunctions by not using them in a broken and damaged way. It has been determined that forcing too much weight on the disc harrow causes breakage in the disc and chassis.

Abstract

Natural gas is an indispensable non-renewable energy source for many countries. It is used in many different areas such as heating and kitchen appliances in homes, and heat treatment and electricity generation in industry. Natural gas is an essential component of the transportation sector, providing a cleaner alternative to traditional fuels in vehicles and fleets. Additionally, its versatility extends to petrochemical production, where it acts as a feedstock for manufacturing various essential products such as fertilizers, chemicals, and plastics. Moreover, natural gas plays a vital role in boosting energy efficiency through the development of combined heat and power (CHP) systems. These systems produce electricity and useful heat concurrently. As nations move towards more sustainable energy solutions, natural gas has gained prominence as a transitional fuel. This is due to its lower carbon emissions when compared to coal and oil, thus making it an essential component of the global energy framework. In this study, monthly natural gas consumption data of 28 different European countries between 2014 and 2022 are used. Symbolic Aggregate Approximation (SAX) method is used to analyze the data. Analyses are made with different numbers of segments and numbers of alphabet size, and alphabet vectors of each country are created. These letter vectors are used in hierarchical clustering and dendrogram graphs are created. Furthermore, the elbow method is used to determine the appropriate number of clusters. Clusters of countries are created according to the determined number of clusters. In addition, it is interpreted according to the consumption trends of the countries in the determined clusters.

Abstract

Background: Antibiotics still maintain their importance as the first treatment method used in the treatment of microbial diseases, where many new treatment approaches continue to be investigated. Studies conducted with various derivatives of medically important Schiff bases provide clues that these compounds may have antibacterial properties. Materials and Methods: The antibacterial effects of five-fluorine Schiff base derivatives were tested on *Klebsiella pneumoniae*, *Proteus mirabilis* and *Streptococcus pyogenes* bacterial strains with a high risk of developing drug resistance. Compounds (1-6) were dissolved in ethanol and then added in triplicate to 96-well culture plates at 1, 10, 100 and 1000 μM . Ethanol was used as a negative control and gentamicin was used as a positive control. After the bacteria were adjusted to 0.5 McFarland standard in nutrient broth, they were added to each well in an amount of 100 μL and incubated for 24 hours at 37 $^{\circ}\text{C}$. Then, 10 μL of MTT solution (250 μM) was added to each well and incubated for another 4 hours. After adding 100 μl of dimethyl sulfoxide to each well to dissolve MTT-formazan crystals, the culture plates were read in an ELIZA microplate reader at a wavelength of 570 nm and optical density (OD) values were determined for each well. The MIC₅₀ value for each compound was calculated by linear regression analysis using OD values. Results: The strongest effect on *Klebsiella pneumoniae* was provided by compound 1 (F₅ SAL MIC₅₀ value 2.95 μM and gentamicin MIC₅₀: 2.02 μM). The effect of the compounds on *Proteus mirabilis* was observed to be weak (MIC₅₀ values of compounds 1-6 are 8.72-21.9 μM while gentamicin's MIC₅₀: 2.95 μM). The strongest effect on *Streptococcus pyogenes* was obtained with compound 2 (F₅ 3TBS MIC₅₀ value 4.01 μM and gentamicin MIC₅₀: 2.85 μM). Discussion: Due to their antibacterial capacity against antibiotic-resistant bacteria, fluorinated derivatives of Schiff bases may provide medical benefits as an alternative antibiotic source in the treatment of diseases caused by these infectious agents.

Keywords: Schiff base, fluorine, antibacterial, MIC₅₀, MTT assay.

**(KAZAKISTAN/SAGA VE MACARISTAN/BUGAC)'DA DÜZENLENEN
TURAN-BÜYÜK KURULTAYLARIN COĞRAFI VE TARİHİ YÖNDEN İNCELENMESİ**

Dr. Kürşat YURDİGÜL (ORCID: 0000-0003-2499-1358)

Email:kyurdigul1@gmail.com

Özet

Türk Kurultaylarının farklı yerlerde farklı isimlerle düzenlenip adlandırıldığı bilinmektedir. Bu kurultaylar Türk Dünyası'nın coğrafi ve tarihi açıdan önemli yer tutan şehirlerinde düzenlenmektedir. Bunun da sebebi Türk Dünyasını bir araya getirmek ve canlı tutmaktır. Bu kurultaylardan biri 2007 yılında Kazakistan Saga'da başlayan 2008 yılından itibaren her 2 yılda bir düzenlenen Macaristan Budapeşte'de düzenlenen Turan-Büyük Kurultay'dır. Bu gibi kurultaylar, özellikle 1992 Yılında SSCB'nin dağılmasıyla beraber Türk Devletlerinin bağımsızlıklarını ilan etmesiyle birlikte kurultaylar düzenlenmeye başlamış ve sayıları artmıştır. Önce Kazakistan daha sonra Macaristan'da düzenlenen bu kurultay Türk devletleri arasındaki sosyal, kültürel, siyasi vb. gibi konularda ilişkilerin gelişmesine ve güçlenmesine katkı sağlamaktadır. Turan-Büyük Kurultay'ı Macar-Turan Vakfı ve bu vakıf tarafından kurulmuş Turan Birliği tarafından düzenlenmekte olup, sadece bağımsız Türk Devletleri değil özerk Türk toplulukları da davet edilmekte ve katılım sağlanmaktadır. Her kurultayda katılımcı sayısı artarak devam etmektedir. Çalışmanın amacı; Kazakistan ve Macaristan'da düzenlenen Türk Dünyası kurultaylarından olan Turan-Büyük Kurultayın Türk Devletleri açısından coğrafi ve tarihi değerlendirilmesidir. Böylelikle Türk Dünyasının bütünleşme sürecindeki önemli unsur olan kurultaya vurgu yapılacaktır.

Anahtar Kelimeler: Kurultay, devlet, coğrafya, tarih.

**GEOGRAPHICAL AND HISTORICAL INVESTIGATION OF TURAN-GRAND
CONGRESSES (KAZAKİSTAN/SAGA VE MACARİSTAN/BUGAC)**

Abstract

It is known that Turkish Congresses are organized and named under different names in different places. These congresses are held in geographically and historically important cities of the Turkish World. The reason for this is to bring the Turkish World together and keep it alive. One of these congresses is the Turan-Grand Congress, which started in 2007 in Kazakhstan Saga and has been held every 2 years since 2008 in Budapest, Hungary. Such congresses began to be organized, especially after the collapse of the USSR in 1992 and the Turkish States declared their independence, and their numbers increased. This congress, which was held first in Kazakhstan and then in Hungary, discussed social, cultural, political, etc. issues between the Turkish states. It contributes to the development and strengthening of relations on issues such as. Turan-Grand Congress is organized by the Hungarian-Turan Foundation and the Turan Union established by this foundation, and not only independent Turkish States but also autonomous Turkish communities are invited and participated. The number of participants continues to increase with each congress. Purpose of the study; It is the geographical and historical evaluation of the Turan-Great Congress, one of the congresses of the Turkic World held in Kazakhstan and Hungary, from the perspective of the Turkish States. Thus, emphasis will be placed on the congress, which is an important element in the integration process of the Turkish World.

Abstract

In today's diverse tourism industry, gastronomy tourism is quite significant. Due to their interest in food and drink, many people today base their trip plans on the nations and locations where the gastronomy culture is strong. Cyprus, the third-largest island in the Mediterranean, has a tremendously developed culinary and alcoholic tradition. The primary goal of this research is to introduce the flavors of taverns 'meyhanes' in Cyprus' eating and drinking culture and to explain the notion of gastronomy tourism, which has gained popularity worldwide. The promotion of tastes, which are highly valued in Cyprus's culinary tradition, serves as a secondary goal. It also invites visitors who are coming to Cyprus for gastronomy tourism and want to know what flavors they should try when they get there. There was no thorough academic investigation on Cyprus meyhane tastes in the literature review. A very fine illustration of Cyprus's tastes and food, where many different civilizations converge, will be provided by the study of gastronomy tourism, which will also add to the body of literature. The study will clarify the terms "gastronomy" and "gastronomy tourism," and it will be the first academic examination of Northern Cyprus's food, culture, and preferences. It is intended to undertake a literature review on the Cyprus cuisine generally in order to ensure the validity of the study. On the other hand, it's important to preserve the Cypriot culinary tradition and pass it on to future generations.

Keywords: Gastronomy Tourism, Cyprus Culinary Culture, Northern Cyprus Tavern Taste

Abstract

In the pursuit of advanced dermatological treatments, polymeric nanoparticles, especially those derived from poly(lactic-co-glycolic acid) (PLGA), have emerged as a promising technology. This study focused on the preparation of PLGA nanoparticles using the spontaneous emulsification solvent diffusion (SESD) method. We meticulously investigated the parameters that influence nanoparticle synthesis, such as polymer concentration, choice of solvent, and selection of emulsifying agents—namely Polyvinyl Alcohol (PVA), Tween 80, and Sodium Dodecyl Sulfate (SDS)—to fine-tune the particle size and maximize drug loading efficiency. The surface morphology and particle size were characterized using optical microscopy and laser light scattering techniques. The resulting nanoparticles were spherical in shape, with sizes ranging from 250 to 350 nm, and exhibited an optimal zeta potential that suggests a stable colloidal system. PVA, in particular, was identified as a superior emulsifier for the production of nanoparticles, markedly improving the encapsulation efficiency of hydrophobic drug representative to a commendable 65.63-88.52%. These results highlight the adaptability of PLGA nanoparticles and their significant potential in enhancing dermatological treatments. The successful development of these nanoparticles marks a step forward in the field of targeted therapy, signaling a future of improved therapeutic outcomes for skin-related ailments.

Keywords: PLGA Nanoparticles, Emulsification, Polyvinyl Alcohol (PVA), Hydrophobic Drug Encapsulation, Dermatological Drug Delivery

THE ROLE OF EXPACTATIONS IN MACROECONOMIC POLICY

Abstract

In macroeconomic policy, it is important how the public's expectations about the economy are formed and how these expectations affect the economy. In this study, rational expectations and policymaking, Lucas criticism, the role of reliability and nominal anchor, evaluation of aggregate demand and supply shocks in the context of reliability and finally approaches to ensuring the reliability of central banks are examined. The accommodationist expectations put forward by economists in the 1950s and 60s, benefiting from experiences, lost their reality over time and were replaced by rational expectations. Rational expectations include the same as optimal predictions obtained using all available information. The Lucas administration, on the other hand, investigates whether rules or precaution are important in policy management. The time inconsistency problem is associated with conservatism. An important way to limit conservatism is to apply a nominal diameter. The importance of reliability in positive and negative aggregate shocks is also discussed in the study. The effects of oil shocks on inflation and unemployment are again explained by the reliability of central banks. Finally, approaches to the reliability of central banks are inflation targeting, nominal GDP targeting, appointment of conservative people to the central bank and increasing its independence.

TÜRKİYE'DE TARIMSAL ÖRGÜTLENME ÜZERİNE BİR BAKIŞ

Doç. Dr. Görkem ÖZTÜRK
Siirt University

Özet

Tarım kooperatifleri, bitkisel üretim, hayvansal üretim, sera işletmeciliği, depolama, pazarlama, taşımacılık ve girdi temini gibi çeşitli temel tarımsal faaliyetleri bünyesinde barındırarak, tarımsal işletmelerin gelirlerini doğrudan etkileyen organizasyonlar olarak öne çıkar. Türkiye'de, tarım işletmelerinin çoğunluğu küçük ölçekte faaliyet göstermektedir. Bu küçük işletmeler ürünlerini düşük fiyatlarla satmak zorunda kalmaları ve girdileri yüksek maliyetlerle temin etmeleri nedeniyle pazarlarda rekabet gücü eksikliği yaşamaktadır. Türkiye'de 2022 yılında toplam 12501 tarımsal amaçlı kooperatif bulunmaktadır. Bu kooperatiflerin toplam 3677946 ortağı bulunmaktadır. Tarımsal Kalkınma Kooperatifleri ve diğer kooperatiflerdeki bölge birliği içinde yer alan kooperatiflerin üst örgütlenmesinde; KÖYKOOP, TARIMKOOP, HAYKOOP, ORKOOP, ÇAYKOOP, SÜRKOOP, PANKOBİRLİK ve Tarım Kredi Kooperatifleri Merkez Birliği yer almaktadır. 12501 tarımsal amaçlı kooperatif bulunmasına rağmen tarımsal kooperatiflerin tarımsal ürün alımlarında payı özellikle AB ülkelerine göre hala düşük kalmaktadır.

Anahtar Kelimeler: örgütlenme, kooperatif, tarımsal pazarlama

ULUSLARARASI TURİSTLERİN HARCAMA EĞİLİMLERİNİN GELDİKLERİ KİTA COĞRAFYASI ÖZELİNDE ARAŞTIRILMASI: TÜRKİYE İÇİN EKONOMETRİK BİR UYGULAMA

Business Management. Istanbul Türkiye

Email: ersin.sunbul@nisantasi.edu.tr

Özet

Çalışmanın amacı Türkiye'ye turizm tüketimi amacıyla gelen ve transit giriş yapan insanların harcama eğilimlerini geldikleri kıta coğrafyası özelinde araştırmaktır. Bu maksatla harcama değişkeni olarak toplam harcama miktarı (y_1), turist amaçlı gelenlerin harcamaları (y_2) ve transit yolcu harcamaları (y_3) olarak üç bağımlı değişkenden oluşmaktadır. Toplam harcama miktarı toplam turizm geliri olarak da değerlendirilebilir. Diğer tarafta turistlerin geldikleri kıta coğrafyasına göre sekiz kategoride değerlendirilmiş (x_1 ; x_8) ve bağımsız değişkenleri oluşturmuştur. (x_8) değişkeni milliyeti bilinmeyen yolcuların harcama miktarını göstermesi açısından çalışmayı önemli kılmaktadır. Verilere Birleşik Milletler Dünya Turizm Örgütü'nün (UNWTO) Web sayfasından ikincil kaynak olarak ulaşılmıştır. Araştırma örneklemini 1995'ten 2021 yılına kadar 27 gözlemlilik yıllık zaman serisi verilerinden oluşmaktadır. Çalışmada zaman serisi analizleri kapsamında; durağanlık kontrolü için Augmented Dickey-Fuller, Phillips-Perron ve Kwiatkowski-Phillips-Schmidt-Shin (KPSS) birim kök testleri birlikte kullanılmıştır. Seriler arasındaki ilişki için Engle-Granger Nedensellik analizi ve Granger Eşbütünleşme testleri yapılmıştır. Çalışma sonucunda, bağımlı değişkenler (y_1 ; y_3) ile bağımsız değişkenlerin tamamı (x_1 ; x_8) arasında nedensellik ilişkisi belirlenmiştir. Diğer taraftan yine bağımlı değişken (y_1) ile bağımsız değişkenler (x_1 ; x_7) arasında eşbütünleşme ilişkisi belirlenmiştir. Ancak (x_8) milliyeti bilinmeyen turist sayısı ile (y_1) turistlerin toplam harcamaları arasında herhangi bir eşbütünleşme ilişkisine rastlanmamıştır. Çalışmadaki önemli bulgulardan birisi de 2007 yılında milliyeti bilinmeyen turist sayısında (x_8) yaşanan %15,5'lik artışın büyük oranda %13,19'luk artışla turist harcamalarında (y_1) yansımalarıdır.

Anahtar kelimeler: Uluslararası Turist, Turizm Harcamaları, Hizmet Sektörü, Zaman Serisi, Nedensellik, Eşbütünleşme.

AN ECONOMETRIC ANALYSIS OF SPENDING PATTERNS OF INTERNATIONAL TOURISTS IN TURKEY: A CONTINENTAL GEOGRAPHICAL PERSPECTIVE

Abstract

The aim of this study is to investigate the spending patterns of individuals entering Turkey for tourism consumption and transit purposes based on their continental geographical origin. For this purpose, the expenditure variable consists of three dependent variables: total expenditure amount (y1), expenditures of those coming for tourism purposes (y2), and transit passenger expenditures (y3). The total expenditure amount can also be considered as total tourism revenue. On the other hand, tourists were categorized into eight categories (x1; x8) based on their continental geographical origin, forming independent variables. The variable (x8) is crucial in indicating the spending amount of passengers whose nationality is unknown. Data were accessed as secondary sources from the United Nations World Tourism Organization's (UNWTO) website. The research sample consists of 27 annual time series observations from 1995 to 2021. In the scope of time series analyses in the study, Augmented Dickey-Fuller, Phillips-Perron, and Kwiatkowski-Phillips-Schmidt-Shin (KPSS) unit root tests were used together for stationarity control. Engle-Granger Causality analysis and Granger Cointegration tests were conducted for the relationship between the series. As a result of the study, a causal relationship was determined between all dependent variables (y1; y3) and all independent variables (x1; x8). On the other hand, a cointegration relationship was found between the dependent variable (y1) and independent variables (x1; x7). However, no cointegration relationship was found between the unknown nationality of tourists (x8) and total tourist expenditures (y1). One of the significant findings in the study is the substantial impact of a 15.5% increase in the number of tourists with unknown nationality (x8) in 2007, reflecting largely in a 13.19% increase in tourist expenditures (y1).

Keywords: International Tourist, Tourism Expenditures, Service Sector, Time Series, Causality, Cointegration.

KAMUDA ÖRGÜTSEL VATANDAŞLIK SERGILEME MOTİVASYONU

Sezgin ALTINEL

Email: sezgin.altinel@ogrenci.yalova.edu.tr

Prof. Dr. Senay YÜRÜR (ORCID: 0000-0002-3859-9827)

Yalova Üniversitesi Lisansüstü Eğitim Enstitüsü İşletme Anabilim Dalı, Yalova
Email: senay.yurur@yalova.edu.tr

Özet

Bu araştırmanın amacı, kamu çalışanlarının örgütsel vatandaşlık davranışı (ÖVD) gösterme motivasyonlarını araştırmaktır. ÖVD, biçimsel ödül sisteminde doğrudan tanımlanmayan, zorlayıcı olmayan ve bir bütün olarak örgütsel etkinliği yükselten, çalışanın iş rollerinin ötesinde gönüllü veya ilaveten gerçekleştirdiği davranışlardır (İşbaşı, 2000). Eğitim kurumlarında görev alarak geleceğin bireylerini yetiştiren öğretmenlerin ÖVD sergilemeleri bu kurumların amacına ulaşmasında kritik bir öneme sahiptir. Bu bağlamda araştırmanın örneklemini devlet okullarında görev yapan öğretmenlerden oluşturulmuştur. Araştırmada nitel ve nicel yöntemler birlikte kullanılmış, nicel veriler anket aracılığıyla, nitel veriler ise katılımcı gözlem tekniği ve mülakatla toplanmıştır. İnsanın sosyal alandaki dinamik değişkenlere verdiği tepkilerin karmaşıklığı dikkate alındığında nicel ve deneysel araştırmaların yetersiz kaldığı düşüncesiyle katılımcı gözlem ve mülakat yoluyla da öğretmenlerin ÖVD gösterme durumları incelenmiş ve yapılan anket sonucunda elde edilen nicel veriler ile nitel verilerin arasında farklılıklar olduğu anlaşılmıştır. Nicel verilerin analizi neticesinde öğretmenlerin ÖVD boyutlarının (özgecilik, vicdanlılık, sportmenlik, nezaket, sivil erdem) tamamında yüksek seviyede (4.09) ÖVD gösterdiği bulgusuna ulaşılmıştır. Katılımcı gözlem tekniğiyle toplanan verilere göre ise öğretmenlerin ÖVD gösterdiği sonucuna ulaşılmış, ancak yapılan içerik analizi sonucunda ÖVD boyutlarına ait temalar ele alındığında öğretmenlerin nicel verilerin aksine ÖVD boyutlarındaki davranışları yüksek seviyede sergilemediği bulgusuna ulaşılmıştır. Öğretmenlerin özellikle sportmenlik boyutuna karşıt davranışlar sergilediği gözlemlenirken, sivil erdem boyutunda da örgüt faaliyetlerine aktif katılım göstermedikleri gözlemlenmiştir. Nicel ve nitel verilerin arasında farklılıkların ortaya çıkmasının nedeninin, katılımcıların bazı sorulara dürüst ve tam yanıt verme eğiliminde olmamalarından kaynaklandığı düşünülmektedir (Arıkan, 2018) Mülakatlar, öğretmenlerin örgüt bürokrasisini angarya ve gereksiz olarak değerlendirdikleri için ÖVD sergileme eğiliminde olmadığını, ancak öğrenci ile ilişkilerinde yüksek derecede ÖVD sergilediklerini ortaya koymuştur. Sosyal mübadele kuramına dayalı olarak, sevgi ve statü kaynaklarının öğretmenlerde ÖVD motivasyonu oluşturduğu tespit edilmiştir (Foa ve Foa, 1980; 2012) Ayrıca, araştırma, ÖVD algısının kültürel farklılıklar çerçevesinde değişebileceğini göstermiştir. Bazı durumlarda, rol davranışlarının ÖVD olarak algılandığı ve bu algının kültürler arası değişiklik gösterebileceği belirlenmiştir (Hofstede, 1980).
Anahtar Kelimeler: Örgütsel Vatandaşlık Davranışı, Kamu sektörü, Sosyal değişim

MOTIVATION FOR ORGANIZATIONAL CITIZENSHIP BEHAVIOR IN THE PUBLIC SECTOR

Abstract

The aim of this research is to investigate the motivation of public sector employees to exhibit organizational citizenship behavior. The demonstration of Organizational Citizenship Behavior (OCB) by teachers, who play a crucial role in shaping the future individuals by working in educational institutions, holds critical importance in achieving the goals of these institutions. In this context, the sample of the research consists of teachers working in public schools. Both qualitative and quantitative methods were employed in the research. Quantitative data were collected through surveys, while qualitative data were gathered through participant observation technique and interviews. Considering the complexity of human reactions to dynamic variables in the social domain, and the perceived inadequacy of quantitative and experimental research, participant observation and interviews were also used to examine teachers' OCB situations. The analysis of quantitative data revealed that teachers exhibited high levels (4.09) of OCB in all dimensions (altruism, conscientiousness, sportsmanship, courtesy, civic virtue). However, qualitative data gathered through participant observation suggested that teachers exhibited OCB, but when the themes related to OCB dimensions were analyzed, it was found that teachers did not exhibit behaviors at a high level compared to the quantitative data. Particularly, teachers were observed to exhibit contrary behaviors in the sportsmanship dimension, and they did not actively participate in organizational activities in the civic virtue dimension. The discrepancy between quantitative and qualitative data is thought to be due to participants not being inclined to provide honest and complete answers to certain questions (Arıkan, 2018). In the interview study, it was found that teachers were not inclined to exhibit OCB because they perceived most bureaucratic tasks and responsibilities related to the organization's functioning as "burdensome and unnecessary." However, it was determined that they exhibited a high tendency to exhibit OCB in their relationships with students. In the interviews, it was found that abstract sources such as love and status, which are subject to social exchange theory, motivated teachers to exhibit OCB (Foa and Foa, 1980; 2012). Furthermore, it was concluded that the perception of organizational citizenship behavior varies within the cultural differences of countries. In some cases, the fulfillment of role behaviors was observed to be perceived as OCB, and as a result, it was concluded that the perception of OCB could vary across cultures (Hofstede, 1980).

Abstract

In this study, the effect of corporate social responsibility perception on organizational commitment in the banking sector was investigated. Four sub-dimensions of corporate social responsibility, namely economic, legal, ethical and discretionary, and three sub-dimensions of organizational commitment, namely affective, continuance and normative, were examined within the scope of the research. In addition, the relationship between demographic variables and organizational commitment was also discussed within the scope of the research. As a result of the analyses, a high level of relationship was found only between general corporate social responsibility and affective organizational commitment. A moderate relationship was found between general corporate social responsibility and general and normative organizational commitment. When we look at the other dimensions with a medium level relationship, it is seen that there is a medium level relationship between economic, ethical, legal and discretionary corporate social responsibility and general, affective and normative organizational commitment. On the other hand, a weak relationship was found between general corporate social responsibility and all its sub-dimensions and the organizational commitment continuance dimension. A relationship was determined between business seniority, which is one of the demographic variables, and general organizational commitment, and between business seniority, age and gender variables and affective organizational commitment. No relationship could be detected between the variables of marital status, total job seniority and type of bank worked at and organizational commitment. As a result, in studies on organizational commitment in the banking sector, the impact of corporate social responsibility perception and its sub-dimensions, which have been found to have an impact on organizational commitment and its sub-dimensions, should be taken into consideration. Likewise, the relationship between organizational commitment and its sub-dimensions and demographic variables should also be taken into consideration in studies on organizational commitment concept.

Abstract

Aytekin, Medine. Investigation of the Effect of Unfinished Business and Psychological Resilience Levels of Psychological Counselors' Loss Experiences, Master Thesis, Ankara, 2022

The aim of this study is to examine the effect of unfinished business and psychological resilience levels of psychological counselors in their loss experiences. For this purpose, the average scores of psychological counselors' unfinished business and psychological resilience in loss experiences, gender, age, education level, professional seniority, time passed after the loss, the cause of the loss and the disappeared person variables were examined. This research is suitable for the relational screening model. The research was carried out with the data obtained from 211 (150 girls, 61 boys) who provided psychological counseling in the 2022-2023 academic year. In the research, the data were collected through the "Unfinished Business in Lost Experiences Scale-Short Form", "Short Psychological Resilience Scale" and the "Personal Information Form" prepared by the researcher. The analysis of the data was provided by pearsoncorrelation, t test, one-way analysis of variance (ANOVA) and regression tests. Research findings; According to the data obtained, it was found that the level of unfinished business and psychological resilience in the loss experiences showed a significant difference according to the cause of the loss and the person who was lost. The average scores of unfinished business in their lost life; It was seen that there was no significant difference according to the variables of gender, age, education level, professional seniority, time passed after the loss. The mean scores of psychological resilience; It is seen that there is no difference according to gender, age, education level, professional seniority, and the type of time passed after the loss. Various suggestions have been presented to colleagues and researchers who provide psychological counseling in order to increase the psychological resilience level of psychological counselors and to reduce their unfinished business in their loss experiences.

“TÜRKİYE’DEKİ YABANCILARIN ENTEGRASYONLARINDA TÜRKÇENİN VE TÜRKÇE ÖĞRETİMİNİN ÖNEMİ”

Öğr. Gör. Murat KILIÇ

Gaziantep Üniversitesi, Fen –Edebiyat Fakültesi Türk Dili ve Edebiyatı Bölümü

Email: mkilic@gantep.edu.tr

Özet

1999-2012 yılları arası (13 yıl) Gaziantep Üniversitesi ile Halep Üniversitesi arasındaki işbirliği protokolü çerçevesinde Halep Üniversitesi bünyesinde açılan Yüksek Diller Enstitüsü Türk Dili Öğretimi Merkezinde, aynı zamanda Halep Üniversitesi Edebiyat Fakültesinin çeşitli bölümlerinde 2. Seçmeli yabancı dil olarak Türkçe öğretimi görevinde bulunduk. 1999’dan günümüze kadarki 24 yıllık süre içerisinde başta Suriyeliler başta olmak üzere Türkiye’de yaşayan bütün yabancılara yönelik Türkçe öğretimi çalışmalarımız devam etmektedir. Türkiye’deki bütün yabancılardan Türkiye’ye entegrasyonlarını sağlayacak ve kolaylaştıracak unsur iletişim ve anlaşma aracı olan Türkçedir. Hedef dil Türkçenin dinleme, konuşma, okuma, yazma olarak 4 becerisiyle en iyi şekilde öğrenilmesi, yabancılardan Türkiye’ye, Türklere, Türk Kültürüne entegrasyonu kolaylaştıracaktır. Yabancılardan Türkçe öğrenimi, aynı zamanda Türklerin de yabancılara daha iyi tanımlarını, yabancılardan daha iyi anlaşmalarını, yabancılardan hakkındaki ön yargılardan kurtulmalarını da sağlayacaktır. Bütün yabancılara en başta, Türkçe öğrenimlerinin ne kadar önemli olduğu algısının verilmesi gerekir. Her şey Türkçe öğrenimiyle başlayacaktır. Türkiye’deki bütün yabancılara; çocuklara, gençlere, ihtiyarlara, okuma yazma bilenlere ve bilmeyenlere, ev hanımlarına vb. Türkçenin doğru öğretimi yapılması çok önemlidir. Halk ağzından, televizyonlardan, Türkçeyi doğru düzgün konuşamayan insanlardan Türkçe öğrenimi, Türklerle iletişimde ileriki zamanlarda büyük sıkıntılara yol açacaktır. Türk anaokulu, ilkokulu, ortaokulu ve liselerinde öğrenim gören yabancılardan Türkçe öğrenimleri çok daha kolay ve hızlı olmaktadır. Ağaç yaşken eğilir. Türk Üniversitelerinde okuyan ve okuyacak Suriyelilerin Türkçe öğrenimleri biraz daha yavaş olmaktadır. Okul çağında olmasına rağmen okula gidemeyen, çalışan ya da çalışmak zorunda olan bütün yabancılardan; buldukları ortamda konuşulan Türkçeyi öğrenmektedirler. Okuma yazma bilmeyen yabancılardan, yaşlılar, ev hanımları, iş adamları vb. Türkçe öğrenirken çok sıkıntılar yaşamakta ve çoğunlukla da Türkçeyi öğrenememekteyiz. Türkçe öğrenmekte zorluk yaşayan ya da Türkçe öğrenmek istemeyenlere, “Dil Arkadaşı Uygulaması” gibi özel Türkçe öğrenim/ öğretim metotları uygulanmalıdır. Yabancılardan Türkiye’ye uyumu, Türklerle daha iyi anlaşabilmeleri, Türkiye’de daha rahat yaşayabilmeleri, Türkiye’de her alanda daha başarılı olabilmeleri; aynı zamanda da Türklerin yabancılara daha iyi tanıyıp onlarla daha iyi geçinmeleri, onlar hakkındaki ön yargılardan kurtulabilmelerinin yolu yabancılardan Türkçeyi ne kadar doğru ve iyi öğrendikleriyle doğru orantılı olarak artacak ya da azalacaktır. Türkçe öğrenmeyen ya da öğrenemeyen yabancılardan, kendi aralarında kapalı bir ortam oluşturacaklar ve toplumsal uyum ve kaynaşma sıkıntılarını yaşayarak ileriki zamanlarda önü alınamayacak sorunlar yaşayacak ve sorunlarla karşılaşacaklardır. Türkçe öğretimi uzmanlarının rehberliğinde Türkçe öğretiminin yabancılara en iyi şekilde yapılacağına inanıyoruz.

Anahtar kelimeler: entegrasyon, Türkçe öğretimi, Türkiye’ye ve Türklere uyum, dört dil becerisi,

**THE IMPACT OF DISCRIMINATION ON THE PSYCHOLOGICAL WELLBEING
AND ETHNIC IDENTITY OF INTERNATIONAL STUDENTS IN NORTH CYPRUS**

Samuel Obinna OKOLIE

Near East University

Gloria MANYERUKE

Near East University

Abstract

The social categorization theory suggests that ingroup bias is a common cognitive bias that can result in discrimination against outgroup members. Considering the recent increase in the number and diversity of international students around the globe, attention should be drawn to how this affects intergroup dynamics. The aim of the current study is to investigate the influence of discrimination and ethnic identity on the psychological well-being of international students. A sample of 386 students was recruited from 2 universities in Northern Cyprus using a convenience sampling technique. The findings show a positive relationship between discrimination and psychological distress. The findings also show that ethnic identity is negatively correlated with discrimination and psychological distress. Discrimination was also associated with higher levels of stress and depression. This can be attributed to the isolation and social exclusion characteristics of discrimination. Discrimination was also found to be negatively correlated to ethnic identity scores among international students. The study shows that ethnic identity does not mediate the impact of discrimination on psychological well-being (psychological distress, depression, anxiety, stress). The findings also show that there are significant differences in discrimination based on race and religion this may be linked to cultural distance between the host and home countries. There are also significant differences in discrimination according to educational institutions where schools with more diversity have lower discrimination scores. Considering these findings, educational institutions should increase support services offered to international students in order to help and offer awareness and sensitivity training for multicultural interactions.

Abstract

Electricity is the most important part of modern life and has an important place in human life. Electricity is used in many areas such as lighting, heating and operating machines, and its use is increasing day by day with the rapidly growing industry. It is a type of energy obtained using oil, renewable energy sources, hydraulics and coal. However, since this energy cannot be stored and natural resources in production are limited, companies aim to meet future electricity needs and produce sufficient amounts of electricity. This study focuses on the development of deep learning models to predict future electricity consumption. Two different datasets, annual and household, were used in the study. The dataset used in the annual electricity consumption prediction model is between 01.06.2007-01.04.2021, and the dataset used in the household electricity consumption prediction model is between 08.05.2017-01.04.2021. Long Short Term Memory (LSTM), one of the time series based deep learning algorithms, has been used in the development of electricity consumption prediction models. Mean Absolute Percentage Error (MAPE) has been used to evaluate the performance of the developed models. The results show that LSTM can be used in electricity consumption forecasting with an acceptable margin of error.

Abstract

Within the realm of materials science, Janus-type transition metal dichalcogenides (TMDs) have emerged as a pivotal area of research. Their distinct electronic, optical, and spintronic properties, which exhibit considerable tunability through dimensional and compositional modifications, render them ideal for extensive scientific inquiry and technological innovation. This investigation primarily focuses on elucidating the electronic transitions in H phase monolayer VSeTe, a Janus-type TMD, under applied biaxial tensile strains. Employing density functional theory (DFT), this study methodically subjected VSeTe to incremental biaxial tensile strains ranging from 1% to 5%. The initial characterization identified the unstrained H phase monolayer VSeTe as an II-type spin gapless semiconductor. Subsequent application of tensile strain induced notable alterations in its electronic configuration. Incremental strain augmentation from 1% to 5% resulted in a diminution of the energy gap in the up-spin channels, concurrently with an expansion in the down-spin channels. This dual modulation of spin channels reached a pivotal transition at a strain threshold of 5%. At this juncture, the up-spin channel transitioned into a metallic state, accompanied by the emergence of a 0.57 eV energy gap within the down-spin channel, signifying a metamorphosis into a half-metal phase from its intrinsic II-type spin gapless semiconductor. This transition bears profound implications for technological applications, especially in the domain of spintronics and advanced electronic devices. The capacity to modulate the electronic structure of Janus-type VSeTe through controlled tensile strain paves the way for the development of materials with bespoke electronic and spintronic characteristics. Such advancements hold the potential to revolutionize material technologies.

Keywords Janus-Type Transition Metal Dichalcogenides (TMDs), VSeTe, Density Functional Theory (DFT), Straintronics, Spin Gapless to Half-Metal Transition.

Özet

Sumak bitkisinin yaprak ve meyveleri, içerdikleri çeşitli maddelerden dolayı uzun yıllardır ilaç hammaddesi olarak kullanılmaktadır. Sumak yapraklarının antiseptik, ishal ve kan kesici özellikleri ile ateş düşürücü özelliklerinden yararlanılarak enfüzyonu ilaç sanayinde kullanılmaktadır. Hazmı kolaylaştırma ve içeriğinde bulunan tanen ile şeker hastalarındaki şekeri düşürme ve ishali durdurma etkisine sahiptir. Ayrıca sumak boya sanayide kumaş ve derilerin sarı renge boyanmasında değerlendirilmektedir. Baharat olarak meyve ezilerek toz hale getirilir ve yemeklere ekşi bir tat vermesi için kullanılmaktadır. Türün bu geniş kullanım alanları gibi önemli özelliđi de deri, boya, tıp ve gıda endüstrisinde yaygın bir kullanım alanının olmasıdır. Ülkemizde birçok tıbbi ve aromatik bitki doğadan toplanmakta ve bir kısmının da belirli ölçüde tarımı yapılmaktadır. Sumak türünün ormancılıđımızda ve kamuoyunda hak ettiđi konuma ulaştırılması ve beklenen ekonomik, sosyal ve kültürel faydaları yerine getirebilmelerini sağlanması için türün öncelikle ülkemizdeki doğal yayılış alanları, ekolojik istekleri, birlikte bulunduğu türlerle olan ilişkileri ile tohum ve fidan üretim esaslarının daha kapsamlı bilimsel araştırmalarla ortaya konulması gerekmektedir.

THE IMPORTANCE AND USAGE AREAS OF SUMAC (*Rhus coriaria* L.)

Abstract

The leaves and fruits of the sumac plant have been used as pharmaceutical raw materials for many years due to the various substances they contain. The infusion of sumac leaves is used in the pharmaceutical industry, taking advantage of their antiseptic, diarrheal and anticoagulant properties, as well as their antipyretic properties. It facilitates digestion and has the effect of reducing blood sugar and stopping diarrhea in diabetic patients with the tannin it contains. Additionally, sumac dye is used in the industry to dye fabrics and leather in yellow color. As a spice, the fruit is crushed into powder and used to give a sour taste to dishes. An important feature of the species, such as its wide usage areas, is that it is widely used in the leather, dye, medicine and food industries. In our country, many medicinal and aromatic plants are collected from nature and some of them are cultivated to a certain extent. In order to bring the sumac species to the position it deserves in our forestry and in the public opinion, and to ensure that it can fulfill the expected economic, social and cultural benefits, the natural distribution areas of the species in our country, its ecological demands, its relationships with the species it co-occurs with, and the principles of seed and sapling production must be revealed through more comprehensive scientific research.

Özet

Kronik böbrek yetmezliği (KBY), nerdeyse her yaş grubunu etkileyen, ancak en çok genç erişkinleri etkilemekte olan, dünyada ve ülkemizde de en çok karşılaşılan kronik hastalıklar arasındadır. Hastalığın morbidite ve mortalite oranları yüksektir ve yaşamı olumsuz etkilemektedir. Dünyada yetişkin bireylerin %13,4'ünde farklı evrelerde böbrek yetmezliği hastalığının bulunduğu belirtilmektedir. Ülkemizde ise Türk Nefroloji Derneği tarafından erişkinlerin %15,7'sinde KBY bulunduğu açıklanmıştır. Böbrek yetmezliğinde erken tanı, hem hastalığın gerilemesine hem de önlenmesine önemli katkılar sağlamaktadır. Ancak erken tanılanma oranının düşük olması nedeniyle, hastalık geri dönüşü olmayan evreye kadar ilerleyebilmektedir. Bu evreye 'Son Dönem Böbrek Yetmezliği' (SDBY) evresi adı verilir. Bu evrede kişilerde en çok kullanılan tedavi yöntemi hemodiyaliz (HD) tedavisidir. Hemodiyaliz sürecinde olan bireylerde yaşam kalitesini artırmak ve mortaliteyi azaltmak için tedaviye uyum göstermeleri önemlidir. Kronik bir hastalığa uyum gösterirken, hastalığın ve tedavinin özellikleri büyük bir öneme sahiptir. Özellikle birey ve ailesinin yaşam biçiminde değişikliklere, maddi ve manevi kayıplara sebep olan ve bireyi başkalarına bağımlı hale getiren kronik bir hastalığa uyum daha güçtür. Çünkü hastalık; fizyolojik, psikolojik ve sosyal boyutlarda hayatı etkiler ve beden bütünlüğünü tehlikeye sokar. Birey bu dönemde stres, korku, anksiyete, çaresizlik ve yalnızlık gibi olumsuz duygular yaşayabilmektedir. Hemodiyalizin ertelenmesinin veya ara verilmesinin neredeyse imkansız olması, tedavinin süresi, kullanılan ilaçlar, sıvı alımı ve yiyeceklerin kısıtlanması hastaya sürekli hastalığını hatırlatmaktadır. Kronik HD hastasının yaşamında değişiklikler yapması, kendisinin yanı sıra ailesinin de bu düzenlemelere uymasını gerektirmektedir. HD hastalarında uyum, tedavi programında ele alınan alanlara (diyet, sıvı alımı, ilaçlar, atılan/kısıtlanan seanslar) ve kullanılan kriterlere bağlı olarak farklı oranlarda sonuçlar verebilmektedir. Ancak genellikle HD hastalarında tedaviye uyumsuzluğun yaygın bir durum olduğu bilinmektedir. Yapılan çalışmalarda HD tedavi programlarının farklı yönlerine uyumsuzluğun %50 veya daha yüksek oranlara sahip olduğu saptanmıştır. Bununla beraber kronik HD hastalarında tedaviye uyum; sağlık durumu, iyilik hali, yaşam kalitesi ve yaşam süresi yönünden hayati öneme sahiptir. Hastalarda tedaviye uyumsuz olma durumu, sağlık hizmetlerinde maliyeti de arttırmaktadır. Hasta merkezli bir yaklaşım kullanılarak tedaviye uyuma engel teşkil eden faktörler giderilmeli, hasta ile ailesine eğitim verilmeli ve bilişsel davranışsal stratejiler geliştirilmelidir. Gelecekte tedaviye uyumu sağlayan daha etkin girişimlerin geliştirilmesi ile hem hasta hem de sağlık personeli açısından daha faydalı sonuçların elde edileceği düşünülmektedir.

KEMOTERAPİ ALAN MEME KANSERLİ HASTALARDA SEMPTOM KONTROLÜNDE MOBİL UYGULAMALARIN KULLANIMI

Nazlı BAŞARAN

Fırat Üniversitesi, Sağlık Bilimleri Fakültesi, Hemşirelik Bölümü, Elazığ
Email: basarannazl@gmail.com

Dr. Öğretim Üyesi Gül DURAL

Fırat Üniversitesi, Sağlık Bilimleri Fakültesi, Hemşirelik Bölümü, Elazığ
Email: gulkaya@firat.edu.tr

Özet

Meme kanseri dünyada ve ülkemizde kadınlarda görülen mortalitesi ve morbiditesi en yüksek olan kanser türüdür. Dünya Sağlık Örgütü (DSÖ) 2020'de dünya genelinde 2,3 milyon kadına meme kanseri teşhisi konulduğunu ve 685 bin kadının meme kanseri nedeniyle hayatını kaybettiğini belirtmiştir. Erken tanı ve gelişmiş tedavi sayesinde meme kanseri hastalarında hayatta kalma oranı artmaktadır. Meme kanseri hastalarının neredeyse %88'i 5 yıl veya daha uzun süre hayatta kalmaktadır. Meme kanserinin tanısı ve ardından gelen tedavi, hastanın yaşamının tüm yönlerini etkiler, hastanın yaşamını zorlar ve kişinin fiziksel ve zihinsel yeteneğini önemli ölçüde etkiler. Meme kanseri tedavisinde sıklıkla kemoterapi tedavisi kullanılmaktadır. Kemoterapi, tedavi edici etkilerinin yanında birçok istenmeyen semptomla da neden olmaktadır. Bu semptomlar arasında kemik iliği depresyonu, bulantı-kusma, mukozit, diyare, konstipasyon, nefes darlığı, alopesi, uykusuzluk, ağrı, halsizlik, anemi, yorgunluk, nörolojik, üriner, hematolojik, cilt, göz ve cinsellikle ilgili semptomlar yer almaktadır. Hastalar tarafından yaşanan bu semptomların iyi yönetilmesi hastaların tedaviye uyumlarını artırmakta ve tedavinin seyrini olumlu yönde etkilemektedir. Son yıllarda hastaların yaşadığı bu semptomları iyileştirmek için mobil destekli uygulamalar gündeme gelmiştir. Mobil destekli uygulamalar; telefon, tablet ve bilgisayar gibi iletişim araçlarıyla kullanılan ve bilişim alanında hizmet almak isteyen kişilerin ihtiyaçlarına yönelik eğitim ve sağlık gibi birçok alanda kullanılmak üzere geliştirilen yazılımlardır. Bu mobil uygulamalar hastaların yaşadıkları semptomların bildirilmesi ve bu bildirilen semptomların sağlık profesyonellerince değerlendirilmesi sonucu bakım ve tedavi uygulamalarının planlanmasına katkı sağlar. Böylece hastaların daha iyi bir bakım almasını destekler. Aynı zamanda plansız hastaneye yatışların azalmasına, yaşam kalitesinin artmasına yol açar. Hastaların mobil uygulama kullanarak kemoterapinin yan etkilerine ilişkin farkındalıklarının artırılabilceğini, mobil uygulamalar ve telefon danışmanlıkları ile kötüleşen semptomların azaltılabileceğini belirten çalışmalar bulunmaktadır. Mobil teknolojideki bu gelişmeler hemşirelik hizmet sunumunu da etkilemektedir. Hemşireler mobil uygulamaların farkındalığını ve kullanılabilirliğini artırarak hastaların kendi bakımlarını proaktif bir şekilde yönetmelerinde rol oynar. Ayrıca hemşire mobil uygulamalar ile bireyleri eğitebilir, danışmanlık yapabilir ve kronik hastalığı olan hastalarla iletişimi sürdürebilmektedir.

Anahtar Kelimeler: Meme kanseri, kemoterapi, mobil uygulama, semptom kontrolü, hemşire

THE USE OF MOBILE APPLICATIONS IN SYMPTOM CONTROL IN BREAST CANCER PATIENTS UNDERGOING CHEMOTHERAPY

Abstract

Breast cancer is the type of cancer with the highest mortality and morbidity observed in women in the world and in our country. The World Health Organization (WHO) stated that 2.3 million women were diagnosed with breast cancer worldwide in 2020 and 685 thousand women died due to breast cancer. Thanks to early diagnosis and advanced treatment, the survival rate of breast cancer patients is increasing. Almost 88% of breast cancer patients survive for 5 years or longer. The diagnosis of breast cancer and the subsequent treatment affect all aspects of the patient's life, strain the patient's life and significantly affect a person's physical and mental ability. Chemotherapy treatment is often used to treat breast cancer. Chemotherapy, in addition to its therapeutic effects, also causes many undesirable symptoms. These symptoms include bone marrow depression, nausea-vomiting, mucositis, diarrhea, constipation, shortness of breath, alopecia, insomnia, pain, weakness, anemia, fatigue, neurological, urinary, hematological, skin, eye and sexual symptoms. Decapitation is the most common type of symptoms. Good management of these symptoms experienced by patients increases patients' compliance with treatment and positively affects the course of treatment. In recent years, mobile-supported applications have been on the agenda to improve these symptoms experienced by patients. Mobile supported applications are software used with communication tools such as phones, tablets and computers and developed for use in many areas such as education and health for the needs of people who want to receive services in the field of informatics. These mobile applications contribute to the planning of care and treatment practices as a result of reporting the symptoms experienced by patients and evaluating these reported symptoms by health professionals. Thus, it supports patients to receive better care. At the same time, it leads to a decrease in unplanned hospitalizations and an increase in quality of life. There are studies indicating that patients' awareness of the side effects of chemotherapy can be increased by using mobile applications, and worsening symptoms can be reduced by using mobile applications and telephone consultations. These developments in mobile technology also affect the provision of nursing services. Nurses play a role in proactively managing patients' own care by increasing the awareness and availability of mobile applications. In addition, the nurse can train individuals with mobile applications, provide counseling and maintain communication with patients with chronic diseases.

Keywords: Breast cancer, chemotherapy, mobile application, symptom control, nurse

YOĞUN BAKIMDA BASINÇ ÜLSERİ, GÖRÜLME SIKLIĞI VE ÖNLENMESİNDE HEMŞİRELİK BAKIMI

Başak Doğan ARPACI

Abstract

Basınç ülseleri tüm hastalarda ve özellikle yoğun bakım ünitelerinde tedavi gören yatağa bağımlı hastalarda sıklıkla görülen bir sağlık problemidir. Günümüzde gelişen teknoloji ile tedavi ve rehabilitasyonda ilerlemeler yaşanmış, ancak yatağa bağımlılıkta da artış görülmüştür. Bunun sonucunda basınç ülseri görülme sıklığında da artış görülmüştür. Özellikle hareket edemeyen, duyu fonksiyonları azalmış ya da hiç duyu algılaması olmayan bireyler için asıl tedavilerini yanında gelişen bir komplikasyon olan basınç ülselerinin; bakım ve tedavisi güç, uzun ve yüksek maliyetlidir. Basınç ülseri, vücudun özellikle kemik çıkıntılarının bulunduğu bölgelerinde uzun süreli ya da tekrarlanan basınçlara bağlı olarak deri ve deri altı dokularda kapillerin tamamen kapanması ve o bölgedeki dolaşımın tamamen durması sonucu ortaya çıkan ülserasyonlar veya nekroz durumuna denir. Bir başka tanıma göre; Ulusal Basınç Ülseri Danışma Paneli (NPUAP) basınç ülselerini basınç ve/ veya yırtılma sonucu oluşan doku hasarı olarak açıklamaktadır. Hastanede yatan bütün hastalar arasında basınç yarası prevalansı %3.5-29.5 arasında değişmekte; tüm cerrahi hastalarında %66, akut bakımda %10-18, uzun süreli bakımda %23-28, evde bakımda %0-29, yoğun bakımda %20.9-39.5 arasında değişen oranlarda görülmektedir. Basınç yaralarının önlenmesi, hemşirelik bakımının kalitesini ortaya koyan en önemli göstergelerden biridir. Basınç yaralarının önlenmesinde ve yönetiminde hemşirenin rolleri arasında; derinin inspeksiyonu ve risk değerlendirmesi, pozisyon verilmesi, yüzey kontrolü, beslenme ve inkontinans yönetimi gibi uygulamalar yer almaktadır. Yoğun bakım ünitelerinde gerek hastaların klinik özellikleri gerekse üniteye uygulanan bakım ve tedavi girişimleri nedeniyle basınç ülseri gelişme riski diğer yerlere göre daha yüksektir. Bu nedenle Yoğun bakım ünitesindeki özellikle risk grubundaki hastaların belirlenip yakından izlenmesi oldukça önemlidir. Ayrıca hemşirelik bakımının en önemli kalite göstergelerinden biri olduğundan basınç yaralarının önlenmesi tüm hemşirelerin birincil hedefi olmalıdır. Sonuç olarak; hemşireler yoğun bakım ünitelerinde basınç ülselerinin önlenmesinde ve yönetilmesinde kanıta dayalı hemşirelik girişimleri doğrultusunda gerekli girişimleri yapmalıdır.

Anahtar Kelimeler: Basınç ülseri, yoğun bakım, hemşirelik bakımı

NURSING CARE IN PRESSURE ULCER, INCIDENCE AND PREVENTION IN INTENSIVE CARE UNIT

Abstract

Pressure ulcers are a common health problem in all patients, especially in bedridden patients treated in intensive care units. Nowadays, with the developing technology, there have been advances in treatment and rehabilitation, but there has also been an increase in bed dependence. As a result, the incidence of pressure ulcers has increased. Pressure ulcers, which are a complication that develops in addition to their main treatment, especially for individuals who cannot move, have reduced sensory functions, or have no sensory perception; Maintenance and treatment are difficult, long and costly. Pressure ulcer is a condition of ulceration or necrosis that occurs as a result of the complete closure of capillaries in the skin and subcutaneous tissues and the complete cessation of circulation in that area due to long-term or repeated pressures, especially in areas of the body where bone protrusions are located. According to another definition; The National Pressure Ulcer Advisory Panel (NPUAP) defines a pressure ulcer as tissue damage resulting from pressure and/or shear. The prevalence of pressure sores among all hospitalized patients varies between 3.5-29.5%; It is seen in 66% of all surgical patients, 10-18% in acute care, 23-28% in long-term care, 0-29% in home care, and 20.9-39.5% in intensive care. Care of pressure sores is one of the most important indicators of the reliability of certified care. In the protection of pressure sores and the roles of the officer; Applications such as skin inspection and risk assessment, financial relations, surface control, nutrition and incontinence management are included. The risk of pressure increase is stronger than other temperatures due to the care and treatment methods applied in intensive care units and the clinical characteristics of the patients. For this reason, it is very important to share information, especially on risk topics, in the intensive care unit. In addition, the protection of wounds, which is one of the most important quality indicators of Certification care, should be the primary goal of all Certifications. In conclusion; Certificates: In the prevention and continuity of pressure increase in intensive care units, interventions should be made in accordance with the evidence-based Patent identification mark.

KARKAS AĞIRLIĞININ HESAPLANMASINDA BAZI MORFOMETRİK ÖLÇÜMLERİN ETKİSİ

Assist. Prof. Dr. Mehmet KARTAL (ORCID: 0000-0001-7364-0875)

Istanbul Gelişim University, Faculty of Health Sciences

Email: mkartal@gelisim.edu.tr

Özet

Geviş getiren hayvanlarda karkas ve karkas kalitesi, et verimini belirleyen en önemli faktörlerden olup yetiştiriciler ve tüketiciler açısından da önemlidir. Et verimi ve karkas kalitesi arasındaki bu pozitif ilişki, kaliteli karkaslardan kaliteli et ve et ürünlerinin elde edilmesine olanak sağlamaktadır. Karkas ağırlığını tahmin etmek için bazı morfolojik ölçümler ve regresyon analizleri kullanılır. Bu çalışma, Türkiye'deki popüler sığır ve keçi ırklarının genç ve yetişkin bireylerinde ayak bileği kemiklerinin ilk sırasının morfolojik ölçümlerini belirlemek ve bu ölçümlerin karkas ağırlığı, cinsiyet ve yaş arasındaki ilişkiyi ortaya koymak için yapılmıştır. Bu çalışmada, 20 erkek ve 20 dişi yetişkin Simmental ve Angus sığırın, 20 erkek ve 20 dişi genç Simmental ve Angus sığırın, 20 erkek ve 20 dişi yetişkin Kıl Keçisinin, 20 erkek ve 20 dişi genç Saçlı Keçisinin calcaneus ve talus (astragalus) kemikleri kullanılmıştır. Her talus ve calcaneus kemiği için bir indeks ve bir faktör hesaplanmış ve her yaş grubu ve ırk için bir regresyon analizi tasarlanmıştır. Çalışmadan elde edilen veriler IBM SPSS 21 programında incelenmiştir. Sonuçlara göre, calfactor ve talfactor, karkas ağırlığını tahmin etmek için istatistiksel olarak anlamlı bir belirleyicidir. Ancak, calindex ve calfactor, karkas ağırlığını tahmin etmek için istatistiksel olarak anlamlı bir belirleyici değildir. Sonuç olarak, yeni morfometrik ölçümler, indeksler ve faktörler, karkas ağırlığını tahmin etmek için yeni teknikler üretmede faydalı olabilir.

Anahtar Kelimeler: calcaneus, karkas ağırlığı, morfometri, talus

THE EFFECT OF SOME MORPHOMETRIC MEASUREMENTS IN THE CALCULATION OF CARCASS WEIGHT

Abstract

In ruminants, the quality of the carcass is a crucial determinant of the meat yield, making it a significant consideration for both breeders and consumers. The positive correlation between the yield of meat and the quality of the carcass enables the production of high-quality meat and meat products from quality carcasses. In order to predict carcass weight, some morphological measurements and regression analysis are used. This study was conducted to determine the morphological measurements of first row of the ankle bones and the relationship between carcass weight, sex and age in young and adult popular cattle and goat breeds in Turkey. In this study, calcaneus and talus (astragalus) bones of 20 male and 20 female adult Simmental and Angus cattle, 20 male and 20 female young Simmental and Angus cattle, 20 male and 20 female adult Hair Goats, 20 male and 20 female young Hair Goats were used. An index and a factor were calculated for each talus and calcaneus bone to design a regression analysis for each age group and breed. The data obtained from the study were examined in IBM SPSS 21 programme. According to the results, calfactor and talfactor are a statistically significant determinant for predicting carcass weight. However, calindex and calfactor are not a statistically significant determinant for predicting carcass weight. In conclusion, new morphometric measurements, indexes and factors could be a beneficial to produce new techniques to predict carcass weight.

Keywords: calcaneus, carcass weight, morphometry, talus.

DIYABETİK AYAK ÜLSERİ OLAN BİREYLERDE YAŞAM KALİTESİ VE ÖZYÖNETİM İLİŞKİSİNİN BELİRLENMESİ

Özet

Diyabetik ayak bireylerin yaşam kalitesini olumsuz etkilemekte olup, bu süreçte yaşanan sorunlarla baş etmede öz yönetim davranışlarının artırılması önemlidir. Bu araştırma, diyabetik ayak ülseri olan bireylerde yaşam kalitesi ve öz yönetim düzeylerinin belirlenmesi ve aralarındaki ilişkisinin ortaya koyulması amacıyla yapılmıştır. Araştırmanın örneklemini bir üniversitenin eğitim ve araştırma hastanesi genel cerrahi polikliniğine ve/veya diyabetik ayak servisine başvuran, diyabetik ayak ülseri bulunan, majör amputasyon gerçekleştirilmemiş olan araştırmaya katılmaya onam veren 165 birey oluşturmuştur. Çalışma için araştırma verileri Kişisel Bilgi Formu, Diyabetik Ayak Ülseri Ölçeği Kısa Formu ve Diyabet Öz Yönetim Skalası kullanılarak toplanmıştır. Hastaların yaş ortalaması $64,19 \pm 9$, %35,8'i kadın, %55,8'inin diyabet dışında ek kronik hastalığı bulunmaktadır. Yaşam kalitesi ölçeği toplam puanlarının 58,27, Diyabet öz yönetim ölçeği toplam puanlarının 5,10 olduğu saptanmıştır. Bireylerin yaş ortalamaları $64,19 \pm 9,33$ yıl, diyabet tanı süresi ortalama $12,98 \pm 7,75$ yıldır. Bireylerin %55,8'inde diyabet dışında ek kronik hastalığın bulunduğu, %63,6'sının sağlık düzeyini orta olarak değerlendirdiği saptanmıştır. Bireylerin, %20,6'sının ikinci evrede, %48,5'inin üçüncü evrede diyabetik yarası olduğu, %33,9'una minör ampütasyon yapıldığı saptanmıştır. Diyabetik ayak ülseri ölçeği toplam puanlarının yaş, medeni durum, eğitim durumu, çalışma durumu, diyabet tanı süresi, ek kronik hastalık durumu, diyabet tedavisi, diyabetik ayak evresine göre değişiklik göstermektedir. Diyabetik ayak ölçeği toplam puanlarının glikoz yönetimi, diyet kontrolü, fiziksel aktivite, sağlık hizmetleri kullanımı ve öz yönetim ölçeği toplam puanları ile pozitif yönde, orta derecede anlamlı ilişkisi olduğu saptanmıştır. Diyabetik ayak hastalarının yaşam kalitelerinin çok yönlü etkilendiği ve yaşam kalitesinin öz yönetim davranışları ile ilişkili olduğu saptanmıştır. Diyabetik ayak hastalarında yaşam kalitesini artırmaya yönelik müdahale çalışmalarının yapılması önerilmektedir.

Anahtar Kelimeler: diyabetik ayak, öz yönetim, yaşam kalitesi

DETERMINATION OF QUALITY OF LIFE AND SELF-MANAGEMENT IN INDIVIDUALS WITH DIABETIC FOOT ULCER

Abstract

Diabetic foot adversely affects the life quality of individuals, and it is essential to increase self-management behaviours in coping with the problems experienced in this process. This research was conducted to determine the quality of life and self-management levels of individuals with diabetic foot ulcers and to reveal the relationship between them. The study sample consisted of 165 individuals who applied to the general surgery polyclinic and/or diabetic foot service of a university training and research hospital, had a diabetic foot ulcer, had not undergone significant amputation and consented to participate. For the study research data were collected using the Personal Information Form, Diabetic Foot Ulcer Scale Short Form and Diabetes Self-Management Scale. The average age of the patients was 64.19 ± 9 years, 35.8 of them were women, and 55.8 of them had additional chronic diseases other than diabetes. It was determined that the quality of life scale total score was 58.27, and the Diabetes self-management scale total score was 5.10. The average age of the individuals is 64.19 ± 9.33 years, and the average duration of diabetes diagnosis is 12.98 ± 7.75 years. It was determined that 55.8% of the individuals had an additional chronic disease other than diabetes, and 63.6% evaluated their health level as medium. It was determined that 20.6% of the individuals had diabetic wounds in the second stage, 48.5% had diabetic wounds in the third stage, and 33.9% had minor amputations. Diabetic foot ulcer scale total scores vary according to age, marital status, education level, employment status, duration of diabetes diagnosis, additional chronic disease status, diabetes treatment, and diabetic foot stage. Diabetic foot scale total scores were found to have a positive, moderately significant relationship with glucose management, diet control, physical activity, health services utilisation, and self-management scale total scores. It has been determined that the quality of life of diabetic foot patients is affected in many ways and that the quality of life is related to self-management behaviours. It is recommended that intervention studies be carried out to improve the quality of life in diabetic foot patients.

Abstract

In February 2023, two major earthquakes struck Kahramanmaraş, Türkiye, with magnitudes of 7.7 and 7.6, causing unprecedented destruction. This review assesses the aftermath, where the tremors resulted in the collapse of 280,000 buildings, over 50,000 deaths, the displacement of 3 million people, and affected life in 11 cities. The focus is on the extensive psychosocial impacts on survivors, including trauma, the development of PTSD, and the emergence of PTG. The analysis underscores community support as pivotal in the healing process, advocating for sustained psychological care to aid those with PTSD and to nurture PTG. The review illuminates the necessity of such support systems in fostering resilience and enabling recovery. The implications for disaster response and mental health interventions are profound, emphasizing that effective aid is not only immediate but also long-term, addressing the complex emotional and psychological needs that arise from such large-scale natural disasters. The insights offered are critical for shaping policies and practices that ensure comprehensive support for affected populations, aiming to mitigate the psychological toll of such catastrophic events and promote holistic recovery.

Özet

Türk düşüncesinin yaşayan en büyük isimlerinden biri olan İsmet Özel'in şiirleri ya da düzyazıları incelendiğinde görülecektir ki, onun ifade ettiği her şey bir mekanla, bir coğrafyayla ilişkilidir. Onun için somut yaşam pratiği ve bu pratiğin gerçekleştiği yer vazgeçilmezdir. İsmet Özel'in mekân anlayışının cisimleştiği yer ise Türkiye'dir. Hatta İsmet Özel, eserlerinde "ben" diye geçen her şeyin aynı zamanda Türkiye olduğunu söylemektedir. Siyasi bir birlik olan Türklük, İsmet Özel'e göre, Türkiye'de doğmuştur. Bu bakımdan politik fikrin vazgeçilmez unsuru bir mekân olarak Türkiye'dir. Descartes'le başlayan modern düşünce, evrensellik iddiasını taşır. Evrensellik, beraberinde bir ideal olarak insanlık kavrayışını da getirir. Hem evrensel düşüncenin hem de insanlık idealinin spesifik bir zemini yoktur. Mekândan ve coğrafyadan münezzehtir. Bu bakımdan modern düşünce ütöpiktir. Kurgusal ve hayalîdir. İsmet Özel'in politik düşüncesi, modern sistemin karşısında yer alır. Mekânsız bir kozmopolitizm ya da soyut idealleştirmeler yerine somut yaşam dünyasını savunur. Ona göre insan, belli bir toprak parçasını yurt edinen politik bir varlıktır. İsmet Özel'in anladığı şekliyle Türklüğü meydana getiren Türkiye'dir. Bunun sonucu olarak denilebilir ki, "ben kimim?" sorusu, "ben neredeyim?" sorusuyla paraleldir. Kim olduğumuz, nerede olduğumuzda ilişkilidir. Yer'le kurulan bağ talî ya da ikincil değildir; aslî ve varoluşsaldır. Bu çalışmada İsmet Özel'in politik bir mekân olarak Türkiye anlayışı incelenecektir.

Anahtar Kelimeler: İsmet Özel, Türkiye, Türklük, Modernite, Topos.

**THE CONCEPT OF *TOPOS* AS AN EXISTENTIAL BASIS IN İSMET ÖZEL'S
POLITICAL PHILOSOPHY**

Abstract

If we look at the poems or prose of İsmet Özel, one of the greatest figures in Turkish thought, we will see that everything he expresses is related to a place, a geography. For him, the concrete practice of life and the place where this practice takes place are indispensable. The place where İsmet Özel's understanding of space materialises is Türkiye. In fact, İsmet Özel says in his works that everything that is called "I" is also Türkiye. According to İsmet Özel, Turkishness, a political unity, was born in Türkiye. In this sense, the indispensable element of political thought is a place, namely Türkiye. Beginning with Descartes, modern thought has claimed to be universal. Universality brings with it an ideal understanding of humanity. Both universal thought and the ideal of humanity have no specific ground. They are exempt from space and geography. Therefore, modern thought is utopian, fictitious, and imaginary. İsmet Özel's political thought is against the modern system. Instead of a cosmopolitanism without space or abstract idealizations, he defends the concrete living world. According to him, a human being is a political being who makes a certain piece of land his home. In İsmet Özel's understanding, Türkiye constitutes Turkishness. Thus, it can be said that the question of "who am I?" is parallel to the question of "where am I?" Our identity is linked to where we are. The connection established with place is not contingent or secondary; it is essential and existential. This study examines İsmet Özel's understanding of Türkiye as a political space.

Özet

İsmet Özel (1944-), Türkiye'nin önemli şair ve düşünürlerindedir. 1900'lü yılların ikinci yarısında başlayan şiir ve düşünce serüveni, günümüze kadar tüm canlılığıyla devam etmektedir. Özel'in şiirini düşüncesinden, düşüncesini de şiirden ayırmak mümkün değildir. Bu sebeple onu bir şair olarak ele almak, aslında onu bir düşünür olarak ele almayı da gerektirir. Alman düşünür Carl Schmitt (1888-1985), politik felsefesinde "nomos" kavramına özel bir yer verir. Schmitt'e göre nomos, bir topluluğun mekânla kurduğu ilişki temelinde, düzen kurma sürecinin adıdır. Nomos, yasanın da üzerindedir. Zira nomos, yasa gibi soyut bir ölçüt değildir; yasanın temelinde olan tarihsel, kurucu bir edimdir. Nomos, siyasi birliğin ya da topluluğun toprakla ilişki içindeki kuruluşuna gönderme yapar. Nomos, siyasal birliğin diğer topluluklar karşısındaki varlığını mekân ile temellendirmektedir. İsmet Özel'in politik düşüncesinde, politikayla mekân arasında varoluşsal bir ilişki vardır. Zira onun düşüncesinde Türkiye, merkezi konumdadır. Modern felsefenin zeminsiz ve coğrafyasız "insanlık" ve "evrensellik" nosyonlarının karşısında yer alır. İsmet Özel'e göre asıl olan mensubu bulunduğumuz Türk milleti ve Türk milletinin varoluşsal mekânı olarak Türkiye'dir. Bir siyasi birlik olarak Türk milletini Türkiye oluşturmuş; Türkiye'yi de Türk milleti meydana getirmiştir. Bu çalışmada, İsmet Özel'in politik felsefesinde nomos'un belirleyici yönleri tartışılacaktır. İsmet Özel'in politik düşüncesinin merkezi kavramları olan Türklük, Türkiye ve İslamiyet anlayışı incelenecektir.

Anahtar Kelimeler: İsmet Özel, Nomos, Türklük, Türkiye, İslamiyet.

**IN SEARCH OF NOMOS IN A WORLD DEVOID OF NOMOS: THE POLITICAL
PHILOSOPHY OF İSMET ÖZEL**

Abstract

İsmet Özel (1944-) is one of Türkiye's most prominent poets and thinkers. His poetic and intellectual journey, which began in the second half of the 20th century, continues vibrantly to this day. It's impossible to separate Özel's poetry from his thoughts, thus considering him merely as a poet necessitates also considering him as a thinker. German philosopher Carl Schmitt (1888-1985) attributed a particular significance to the concept of 'nomos' in his political philosophy. According to Schmitt, nomos signifies the process of establishing order based on the relationship between a community and space. Nomos is beyond law because it is not an abstract criterion like law; rather, it represents a historical and foundational act underlying legal systems. It denotes the establishment of a political unit or community in terms of territorial relations, which substantiates the existence of a political unit in relation to other communities through space. İsmet Özel's political thought includes an existential correlation between politics and space. From his perspective, Türkiye assumes a pivotal role, standing in opposition to the groundless and geographically detached notions of 'humanity' and 'universality' prevalent in modern philosophy. According to Özel, the essence lies within the Turkish nation to which we belong, and Türkiye embodies the existential space of the Turkish nation. As a political entity, Türkiye has shaped the Turkish nation, and reciprocally, the Turkish nation has shaped Türkiye. This study will explore the defining aspects of nomos in İsmet Özel's political philosophy, by examining the fundamental concepts of Turkishness, Türkiye, and the interpretation of Islam in İsmet Özel's political thought.

Abstract

Weaving fabric is a well known ancient practice that spans both time and culture of various civilizations throughout the centuries. Weaving is the most common way to create cloth as used for clothing fabrics and items we use today. In the simplest terms, it is the process of interlacing two sets of parallel threads at right angles to each other. This unique technique is capable of producing versatile and functional structures as well as decorative items. It is not certain when the craft of weaving began since ancient textiles are rarely found in archaeological excavations. Being of perishable origin, they are subject to rapid decomposition by microorganisms unless special conditions prohibit their destruction. Moreover, most tools used for the production of ancient textiles were also perishable. What is known is, however, that once weaving became widely known, its use and popularity as a way of creating fabrics has been continuing since then. Early trials were believed to be the intertwining of the branches of trees to form shelters or tree huts. The concept of weaving slowly and surely developed and grew in the mind of man until eventually woven cloth was the result. In this article, the evolution of weaving as the transition from loom into weaving machine is discussed with reference to the progress of weaving machine through industrial evolution of 1.0 to 4.0 is also reviewed as a significant feature. A very simple arrangement of threads stretched between two bars to conduct a weaving operation was pictured on the walls of ancient Egypt. During the Neolithic period, weaving began to develop into the process it resembles today with one of the first iterations of the loom. The basic purpose of a loom which is to hold the warp threads under tension to facilitate the interweaving of the weft threads through separated warp threads. The warp-weighted loom was a simplistic weaving tool in which the warp threads were positioned vertically. The backstrap loom is another early loom version that is still widely used in various cultures around the world. The design of the loom began to advance more rapidly during the Middle Ages, with the invention of treadles. This particular part of the loom facilitates lifting specific healds to create a pattern. This invention was believed to have originated in China. Both horizontal and vertical looms were used during the Middle Ages. For a long time, a shuttle was used to insert the weft thread through the warps. In 1733, British weaver John Kay developed the Flying Shuttle. This mechanical system was a major upgrade as it allowed the shuttle to fly from one side to another and sped up the weaving process. The Flying Shuttle was a universal technique for more than two centuries, until the creation of mechanical looms during the Industrial Revolution. The development of the power loom replaced the mechanical loom, as human intervention was partly eliminated. The domination of automatic shuttle loom continued until the middle of the 20th century when alternative methods of weft insertions named shuttleless weaving were introduced. The principles of weaving remained the same while the speed of the production and quality and diversity of the cloth were gradually increased. Nowadays, modern weaving machines run at the speed of 2000 picks per minute while producing very complicated patterns as well as 3D woven structures.

EVALUATION OF THE ENVIRONMENTAL IMPACTS OF TEXTILES AND APPAREL THROUGHOUT THE FULL LIFE CYCLE

Prof. Dr. H. Ziya ÖZEK (ORCID: 0000-0003-3935-6170)

Email: zozek@nku.edu.tr

Abstract

Textiles and apparel industry with subsidiary industries have a significant impact on the environmental and social footprints on our planet, mainly driven by the depletion of resources and labour intensive practices. The manufacturing and distribution of textiles and apparel products are responsible for generating the largest carbon footprint throughout their value chains. Furthermore, the most of final products, specifically fashion items, are used only a number of times and then disposed of within the first year of use. This take-make-use-dispose model relies on the assumption that there is an endless availability of natural sources. In consideration of the resultant impacts of such a model of production and consumption on the environment and climate change, a global attempt to move towards a more sustainable pattern of development was asserted. In this paper, the current state of textile and apparel production is discussed with reference to the environmental impacts of each phase of the product life cycle. The matter is also reviewed in respect of responsible consumption and production which is the 12th goal of the United Nations Sustainable Development Goals. Both production and consumption of textiles and apparel have significant impacts on the environment and climate change. Environmental impacts in the production phase result from the cultivation and production of natural fibres such as cotton, hemp and linen (e.g. use of land and water, fertilisers and pesticides) and the production of synthetic fibres such as polyester and elastane [8]. Manufacturing textiles requires large amounts of energy and water and uses a variety of chemicals across various production processes. After clothing production, the distribution and retailing of apparel are based on worldwide operations and thus responsible for transport emissions and packaging waste. From the consumer point of view, the use phase of textiles and apparel is also liable for environmental impact due to the consumer care activities. A dramatic increase of fibre production in the last 60 years means also a dramatic increase in global textile waste. Reducing waste at the source, recovering and recycling of materials, and repairing and reusing apparel items appear to be simple actions to restrict possible impacts.

Abstract

Micronutrients significantly enhance the healthy growth, yield, and quality of plants. Among micronutrients, zinc, in particular, plays a crucial role in the structure of many mechanisms that regulate the physiological functions of plants. These mechanisms, involving the regulation of functions such as nitrogen's impact on protein, carbohydrate, and energy transfer, make zinc more important as it directly influences both yield and quality. In this study, zinc sulfate ($ZnSO_4$) fertilizer was applied to the soil at different rates to examine its effects on nitrogen uptake and parameters directly influenced by nitrogen in pepper (*Capsicum annuum* L.) plants. The study comprised four treatments, including a control (without $ZnSO_4$ application), and three different rates of $ZnSO_4$ (4 – 8 - 12 kg da⁻¹) applied in 5 kg pots. The results showed that pepper plants grown in soils with different rates of zinc application significantly influenced LAI (Leaf Area Index), canopy, SPAD, leaf NO_3 content, pepper count, and total leaf N content ($P < 0.05$). In the study conducted in a high lime, alkaline soil, zinc application successfully increased both the growth and yield of pepper plants, as indicated by the parameters examined. In summary, this presentation will comprehensively discuss the responses of pepper plants to zinc application in a calcareous and alkaline soil.

Abstract

Agricultural soils generally have a total potassium content ranging from 10 to 20 g kg⁻¹. Since a significant portion of potassium in the soil (90–98%) is incorporated into the crystal structure, it is not directly available to plants. Insufficient potassium in the soil significantly restricts both the growth and the quality and yield of plants. In our study, potassium application at different rates (0 – 80 – 160 – 240 – 320 mg K kg⁻¹) was conducted on maize plants under field conditions. Our results, based on the total element analysis of leaf tissues of maize plants, indicate that potassium application increased the uptake of both certain agronomic and macro-nutrient elements. The application of 240 mg K kg⁻¹ significantly increased the N and Mg content of the plant (P<0.05). The 80 mg K kg⁻¹ application significantly increased the P and Ca content, as well as the cob weight and stem diameter of the maize plant (P<0.05). The application of 160 mg K kg⁻¹ significantly increased the potassium content of the maize plant (P<0.05). While there were no significant changes in the leaf number and cob length of the maize plant, the application of 80 mg K kg⁻¹ significantly increased the cob weight (P<0.05). In summary, in this presentation, we will comprehensively explore the effects of foliar potassium application on both the agronomic and macro-nutrient element uptake in maize plants.

Abstract

In recent years, water has become a limited resource and wastewater problems are increasing. For this reason, the textile industry is also going through an important transformation phase. Water saving, wastewater treatment and recycling are hot topics in the sector. In this study, it was aimed to examine the potential of the electro dialysis method for the recovery of textile wastewater. Electro dialysis is a system based on the separation of cations and anions under an electric field and is a technology that can purify wastewater and recover chemical substances. The electro dialysis method is a remarkable method as it not only recovers water but also recovers chemicals. Although the necessary criteria for the discharge of textile wastewater into nature are met with current practices, technologies for its reuse are still in the development stage. There are studies in the literature on subjects such as dye, salt, acid/base, pure water recovery, color removal and electricity production from textile wastewater based on the electro dialysis method, but there are a limited number of studies. The results obtained in these studies are promising. However, there is a need to conduct different and more scientific studies on this subject, especially on real wastewater and integrated processes. From an industrial perspective, the electro dialysis method is an advantageous method in that it allows the recovery of chemicals along with wastewater recycling and provides material and cost savings with its benefits such as electricity generation potential. However, the industrial applicability of electro dialysis faces some challenges. Particularly in large-scale operations, energy consumption and operating costs can be a significant issue. The need for optimization for continuous operation, contamination effects, high initial installation and operating costs, and the handling of complex chemical components in the electro dialysis process are also major challenges. These factors may restrict widespread adoption of the method and limit its use in the industrial field. In conclusion, considering the advantages and challenges in the current situation, further and advanced studies and improvements are required to optimize the method and make the role of electro dialysis in the textile industry more effective.

Keywords: Textile wastewater, electro dialysis, wastewater recycling, wastewater treatment.

**BIOLOGICAL IMMORTALITY AND ETHICAL ISSUES: AN ANALYSIS BASED ON
THE IMMORTAL FAMILY NOVEL**

Dr. Gülsüm TURHAN (ORCID:0000-0003-3910-6542)

Amasya University, Faculty of Theology, Department of Philosophy and Religious Studies,
Amasya

Email:gulsumturhan15@gmail.com

Abstract

Death and immortality are universal topics that have been the subject of deep thought and debate throughout human history. Death is often filled with uncertainty for people. There are various beliefs and meanings about death in different cultures, religions, and philosophical systems. The immortality we discuss here is the biological immortality in which people will live forever while preserving their biological integrity. Biological immortality refers to the capacity of organisms to halt or reverse cellular aging processes. Some ethical problems may arise with biological immortality. These include many important issues, such as individuals' right to life, distribution of resources, social order and equality, human relations, existential meaning, and emotional and psychological effects. Because the idea of immortality goes beyond being just a biological issue, it is also related to the fundamental values of humanity. The novel *Immortal Family*, written by Natalie Babbit, is about the life story of a family who unknowingly drinks the water of immortality and the choice of Winnie, a young girl who learns the family's secret: between dying or being immortal. Family members hide the water of immortality from everyone because they fear it will cause ethical problems. We aim to discuss death, immortality, and the ethical problems that immortality may bring in the context of religious philosophy and philosophers' views based on the novel *Immortal Family*. As a result, Winnie, who questions her existential meaning, chooses not to drink the water of immortality and decides to be mortal, which shows that life has no meaning without death. Biological immortality has been criticized through Winnie's decision about mortality and the ethical problems that immortality may bring.

Keywords: Philosophy of religion, death, immortality, ethical issues, immortal family.

GÜNEYDOĞU ANADOLU BÖLGESİ KABA VE KESİF YEM ÜRETİM POTANSİYELİ

Özet

Ülkemizde çiftlik hayvanlarının yaşam ve üretim payı için gereken kaliteli kaba yem ihtiyacının karşılanamadı ve ortaya çıkan bu açığın düşük kaliteli kaba yemlerle kapatılmaya çalışılması herkes tarafından kabul görülmüştür. Hayvancılığı gelişmiş ülkelerde toplam tarla arazisinin ortalama %25-30 unda yem bitkileri yetiştiriciliği yapılırken ülkemizde bu oran %13,6 dolaylarındadır. Türkiye'de üretilen 29,6 milyon ton kaliteli kaba yem 17,1 milyon hayvan birimi (HB) varlığının yaşam payı ihtiyacının % 37,6'sını karşılamaktadır. Türkiye'de kaba yem açığı yaklaşık 49 milyon ton seviyelerindedir. Dolayısı ile arzu edilen kaliteli kaba yem üretim hedefine ulaşabilmek için; Pazarın talep ettiği miktar ve kalitede üretimi sağlamak, maliyetlerin azaltılması ve fiyat istikrarı, dışa bağımlılığın azaltılması, mevzuatın düzenlenmesi, etkinliği artırılmış destekleme modellerinin uygulanması, sektörel yapının düzenlenmesi ve işletmelerin güçlendirilmesi, mera geliştirme ve mera yönetimi uygulamalarının uygulanması gerekmektedir. Ülkemizde kesif yem üretiminde ; hayvan varlığının artması ve üreticilerin daha fazla bilinçlenmesi nedeni ile yukarı yönlü bir artış görülmektedir. Nitekim 2001 yılında 5,2 milyon ton olara kesif yem üretimi 2019 yılında 24,9 milyon ton seviyelerine ulaşmıştır.

Anahtar Kelimeler: Güneydoğu Anadolu Bölgesi, Kaba yem, Kesif Yem, Yem üretim kapasitesi

**ROUGHAGE AND CONCENTRATE FEED PRODUCTION POTENTIAL OF
SOUTHEASTERN ANATOLIA REGION**

Abstract

In our country, the need for quality roughage required for the life and production share of livestock could not be met and it has been accepted by everyone that this deficit is tried to be closed with low quality roughage. In countries with developed animal husbandry, forage crops are cultivated on an average of 25-30% of the total land area, while this rate is around 13.6% in Turkey. The 29.6 million tons of quality roughage produced in Turkey meets 37.6% of the life share needs of 17.1 million animal units (HB). The roughage deficit in Turkey is approximately 49 million tons. Therefore, in order to reach the desired quality roughage production target; it is necessary to ensure production in the quantity and quality demanded by the market, to reduce costs and price stability, to reduce foreign dependency, to regulate the legislation, to implement support models with increased efficiency, to regulate the sectoral structure and to strengthen the enterprises, to implement pasture development and pasture management practices. In our country, there is an upward increase in concentrate feed production due to the increase in the number of livestock and greater awareness of producers. As a matter of fact, concentrate feed production, which was 5.2 million tons in 2001, reached 24.9 million tons in 2019.

Abstract

Organic poultry farming appears as a rapidly developing sector, especially in the United States (US) and European Union (EU) countries, because of its great potential for development and to achieve high health and welfare standards. National and international regulations and standards are used for organic poultry farming. In all EU countries, The European Commission Regulation (EC) no 889/2008 regulates the organic farming, although public regulations (BioSwiss, France Regulation) and private standards (Demeter, Naturland, Bioland) may have developed additional, with more restrictions. Other than these, America's National Organic Program 'NOP', Japan's Japanese Agricultural Standards 'JAS' regulations are the most followed regulations. Türkiye is also among the countries that have its own organic agriculture regulation (TR-27676/2010) and this regulation is updated to be equivalent to the EU. Because organic dried fruits, vegetables and olive oil are exported from Türkiye to EU countries and the US. Organic poultry must have access to the outdoors, shelter, exercise areas, fresh air, clean drinking water, shade, and direct sunlight--suitable for the animal's stage of life, climate, and environment. Animals need to express their natural behaviors to maintain good health. The aim of this study is to show the current situation in countries where organic poultry farming is developed and in Turkey. In addition, the legal regulations in organic poultry farming will be discussed under the subheadings of animal selection and conversion period, poultry houses, animal health and welfare, management, feeds and feed additives. Suggestions will be made to adopt the challenges in fulfilling the regulations.

Key words: Organic, poultry, standards, regulations.

AGRICULTURE 4.0 APPLICATIONS IN POULTRY PRODUCTION

Abstract

Agriculture 4.0 technologies offer a compelling alternative in poultry production, providing more efficient, sustainable, and economically advantages. Soon, all of us will explore how the integration of IoT applications, data analytics, robotics, and automation can revolutionize the poultry farming landscape, mitigating existing challenges and laying the foundation for a more resilient and productive industry in near future. As the demand for poultry products surges globally and concerns regarding sustainability and environmental impact intensify, there is a pressing need for a paradigm shift in poultry farming practices. Conventional methods, while longstanding, face limitations in meeting the burgeoning demand while maintaining ecological balance. Positioned at the intersection of technological innovation and traditional husbandry practices, these applications aspire to mitigate endemic challenges in conventional poultry farming, encompassing disease management, resource allocation inefficiencies, and ecological ramifications. Agriculture 4.0 in poultry production will give more opportunities to poultry producers in new decade.

Özet

Katı faz mikroözütleme tekniği (SPME), uçucu organik bileşiklerin (UOB) analizinde yaygın olarak kullanılan yöntemlerden biridir. Hedeflenen bileşiklere göre SPME fiberinin adsorban malzemeleri değiştirilerek daha duyar sonuçlar elde edilebilir. Ticari fiberlerin sınırlı ömürleri, hedeflenen analitlere karşı düşük seçicilikleri ve yüksek maliyetleri gibi dezavantajları nedeniyle yeni fiberlerin geliştirilmesi çok önemli bir konudur. Bu çalışmada, iç ortamlarda benzen, toluen, etilbenzen ve ksilenlerin (BTEX) tayini için metal organik kafes yapılar ile hazırlanan yeni SPME fiberlerinin geliştirilmesi amaçlanmıştır. MOF kaplı SPME fiberin fiziksel ve kimyasal karakterizasyonu Fourier Dönüşümlü Kızılötesi Spektroskopisi (FTIR), Termogravimetrik Analiz (TGA), X-Işını Kırınım Yöntemi (XRD) ve BET (Brunauer-Emmett-Teller Yöntemi) ile yapılmıştır. MOF kaplı fiber tarafından hava numunelerinde BTEX'in belirlenmesi için yöntem geliştirilmesi çalışmaları gaz kromatografisi-kütle spektroskopisi (GC-MS) ile gerçekleştirildi. Desorpsiyon sıcaklığı ve süresi, adsorpsiyon süresi, adsorpsiyon sıcaklığı ve numune hacmi gibi yöntem parametreleri optimize edildi. Optimum desorpsiyon sıcaklığı ve süresi 250°C ve 3 dakika olarak bulundu. Örnekleme aşamasından önce SPME fiberinin 250°C'de 15 dakika şartlandırılması gerektiği bulunmuştur. Optimum adsorpsiyon süresi ve numune hacmi sırasıyla 10 dakika ve 1 L olarak bulunmuştur. Deneysel sonuçlar, geliştirilen fiber ile BTEX örneklemesinin 15°C ile 35°C arasında yapılabileceğini göstermektedir. Nem, BTEX'in tespit edilmesinde ciddi bir engelleyici etkiye sahiptir ve bu nedenle etkin bir şekilde kontrol edilmelidir. Optimum koşullar altında, hedeflenen bileşiklerin kalibrasyon eğrileri oluşturulmuş ve saptama limiti (LOD), lineer aralık, gün içi ve günler arası tekrarlanabilirlik ve ayrıca fiberden fibere tekrarlanabilirlik gibi validasyon parametreleri 12,4 - 48,3 µg/m³, 41,3-17660 µg/m³, %2,66-4,05, %3,77-6,34 ve %7,51-11,17 olarak bulunmuştur. Geliştirilen yöntemle iç ortam havasında BTEX analizi kabul edilebilir geri kazanım değerleri ile başarıyla gerçekleştirilmiştir.

Anahtar kelimeler: Metal organik kafes yapılar, BTEX, katı faza mikroözütleme fiberi, iç ortam hava analizi

DETERMINATION OF VOLATILE ORGANIC COMPOUNDS IN AIR SAMPLES BY METAL ORGANIC FRAMEWORKS

Abstract

The solid phase microextraction technique (SPME) is one of the widely used methods in analyzing of volatile organic compounds (VOC). According to targeted compounds, more sensitive results can be obtained by changing the adsorbent materials of the SPME fiber. Therefore, the development of new fibers is a very important issue, due to the disadvantages of commercial ones such as their limited lifetime, low selectivity to targeted analytes and also high cost. This study aimed to the development of new SPME fibers prepared with metal-organic frameworks for determining benzene, toluene, ethylbenzene and xylenes in the indoor environment. Physical and chemical characterization of metal organic frameworks coated SPME fiber were performed by Fourier Transform Infrared Spectroscopy (FTIR), Thermogravimetric Analysis (TGA), X-Ray Diffraction Method (XRD) and BET (Brunauer-Emmett-Teller Method) methods. The development of a method for the determination of BTEX in air samples by MOF-based fiber was performed by gas chromatography-mass spectroscopy (GC-MS). Method parameters such as desorption temperature and time, adsorption time, adsorption temperature and sample volume were optimized. The optimum desorption temperature and time were found as 250°C for 3 min. It was found that the SPME fiber should be conditioned for 15 minutes at 250°C before the sampling step. The optimum adsorption time and sample volume were found as 10 min and 1 L, respectively. Experimental results show that the sampling of BTEX by developed fiber can be performed between 15°C and 35°C. Humidity has a serious interfering effect on the determination of BTEX and so it should be controlled effectively. Under optimum conditions, calibration curves of targeted compounds were performed and validation parameters such as limit of detection (LOD), linear range, intraday and interday repeatability, and also fiber-to-fiber reproducibility were found as 12.4 µg/m³ to 48.3 µg/m³, 41.3-17660 µg/m³, 2.66-4.05%, 3.77-6.34% and 7.51-11.17%. The analysis of BTEX in indoor air was successfully carried out with the developed method with acceptable recovery values.

Abstract

This study examined the impact of web-based instructional software on the attitudes of secondary school students toward the subject of biology in the Katsina Zonal Quality Assurance region. The research was guided by two key research questions and a corresponding null hypothesis. To conduct this investigation, a survey research design was employed. The study encompassed all senior secondary school students within the Katsina Zonal Quality Assurance region, totaling 15,420. For the research, a sample size of 375 students was selected using a combination of cluster and simple random sampling techniques respectively. Data was collected using a questionnaire named the "Biology Student Attitude Questionnaire (BSAQ)," which consisted of two sections: demographic information and response sections. The content validity of the instrument was ensured and its reliability was assessed through a pilot test in a secondary school outside the sample. The instrument demonstrated good reliability, with a Cronbach's Alpha Reliability Coefficient of 0.79. Data was analyzed using descriptive statistics, specifically mean and standard deviation, to address the research questions. To test the null hypothesis, a Mann-Whitney Independent test was employed. The study's results revealed that gender significantly influences students' attitudes towards web-based instructional software when learning biological concepts. Consequently, the null hypothesis was rejected. The study's findings contribute to our understanding of the influence of web-based instructional software on students' attitudes toward biology. It is recommended that biology teachers in all secondary schools within the Katsina Zonal Quality Assurance region consider integrating web-based instructional software to positively impact students' attitudes towards biological concepts.

Abstract

Salmonella is an important food safety issue. Many researchers have shown that antibiotic-resistant Salmonella strains were detected in poultry production. This increase in the resistance of Salmonella to antibiotics is a major threat to human health.[6-7]A publication from Brazil “indicated that Salmonella ser. Minnesota is the second most common serotype in poultry carcasses in Brazil, in both 2014 and 2017, accounting for 11.6% (17/146) and 23.3% (38/163) of isolates, respectively.” Of the 204 biochemically identified Salmonella isolates, 152 were molecularly confirmed as Salmonella through PCR detection of the invA marker gene [8]. Another study conducted on 200 frozen chicken carcasses in Egypt showed that almost all of the 11 Salmonella species detected were resistant to antibiotics and classified as pan-drug resistant, extensively drug-resistant (XDR), or multi-drug resistant (MDR). [9] Chicken livers were contaminated with MDR S. Anatum and included serovars that could be extremely dangerous to human health, according to a study conducted in small-scale poultry processing plants in Cairo and Giza governorates, Egypt[10].The widespread use of ARB in production and the damage to the environment once again emphasizes that this issue is a global problem.[14] When looking for alternative treatments to reduce the use of antibiotics in poultry, additional scientific articles show that flora-introducing factors that affect gut flora's health may reduce the need for antibiotics. Material and Methods The samples (2355) were collected from 19 small and large commercial farms persons between September-October 2023. The samples were processed in the bacteriology laboratory of the Azerbaijan Poultry Company. Different mediums (TSB, TSA, Mueller-Hinton Agar, and MacConkey Agar) were used for isolation and counting the number of colonies.2355 nasopharyngeal swabs were taken from the broiler production workers and bacteriological research was carried out.Cefotaxime, Ceftriaxone, Cefapim, Rifampicin, Vankomicin, Levofloksacin, Oflaksacin, Levofloksacin, Erytromycin, Oleandomycin, Arithromycin, Claritromycin, Chloramphenicol, Clindamicin, Tetracycline, Benzilpenicillin, Ampicillin antibiotic discs were used for identification to AMR ability to isolated Staphylococcus aureus. and E.coli.Results The acquired results showed that 558 (13%) personnel were found to have E.coli, 732 (17%) personnel were found to have Staphylococcus aureus. The results of the antiprogram tests are as follows: sensitivity to 1-2 antibiotics (10-12%) from 16 antibiotic groups, and resistance to others (88-90%) was observed.During the survey, it was found that the use of antibiotic groups with resistance was at a non-existent level, but more than 3-4 times chicken meat was used in the diet per week.

Conclusion Antibiotics used in chicken production not only created persistent outbreaks of *Salmonella* spp and other microorganisms in chickens, but also created resistance to a wide range of antibiotics in humans, causing a serious impact on health.

I would call it "The Silent Weapon against Humanity".

Key words: salmonella, serotype, pan-drug resistant, extensively drug-resistant (XDR)

ESSENTIAL AND POTENTIALLY TOXIC METALS IN TRADITIONAL SWEETS IN PAKISTAN: EXPOSURE ASSESSMENT AND HUMAN HEALTH IMPLICATIONS

Dr Mahmood AHMED (ORCID:0000-0002-2285-7406)

Department of Chemistry, Division of Science and Technology, University of Education, Lahore-Pakistan,

Email:mahmoodresearchscholar@gmail.com

Abstract

In recent years, there has been a growing concern about the negative impact of unforeseen contaminants like metals in commonly consumed food items, posing a threat to human well-being. The goal of the current research is to determine the levels of essential (EMs: Mg, Ca, Mn, Fe, Co, Cu, Zn) and potentially toxic metals (PTMs: Al, Cr, Ni, As, Cd and Pb) in various brands of wheat-based sweets. Also, the current study was to investigate the distribution, correlation and multivariate analysis of 13 metals (Mg, Ca, Mn, Fe, Co, Cu, Zn, Al, Cr, Ni, As, Cd, and Pb). Hierarchical cluster analysis (HCA) and principal component analysis (PCA) were used to interpret the metals association. The concentration (mg/kg) range of EMs were in order Mg (12.70-65.67), Ca (24.02-209.12), Mn (1.32-9.61), Fe (4.55-111.23), Co (0.32-8.94), Cu (2.12-8.61), and Zn (2.60-19.36). While, the concentration (mg/kg) range of PTMs were in order Al (0.32-0.87), Cr (0.17-5.74), Ni (0.36-1.54), Cd (0.16-0.56), and Pb (0.14-0.92), whereas As was not detected in any sample under investigation. The HCA data revealed that the Co, Al and Ni form the cluster with other metals. Tolerable dietary intake (TDI) values for Ni was higher than the value established by European Food Safety Authority (EFSA). The CR value found for the Ni and Cr at threshold level of cancer risk if used an amount of 25 g throughout the life time period. In nutshell, this study highlights the monitoring of EMs and PTMs levels in wheat-based sweets and from food safety perspective, the study is important for users of wheat-based sweets.

**THE PRODUCTION OF THE GASOLINE WITH HIGH QUALITY WITH HIGH
OCTANE NUMBER BY THE USE OF THE BIFUNCTIONAL CATALYST Pt / Re IN
THE CATALYTIC REFORMING PROCESS.**

Menouar HANAFI

Faculty of Chemistry The University of Science and Technology of ORAN (ALGERIA)

Email:hanafi951@yahoo.com

Abstract

The original function of the process of platforming is to develop heavy naphtha (HSRN), coming from the atmospheric unit of distillation with a weak octane number (NO = 44), to obtain a mixture of fuels whose octane number is raised by catalytically supporting specific groups of chemical reactions. The installation is divided into two sections: Section hydrobon. Section platforming. The raffinate coming from the bottom of column 12C2 to feed the section platforming, is divided into two parts whose flows are controlled and mixed with gas rich in hydrogen. Bottom of the column, we obtain stabilized reformat which is aspirated by a pump to ensure the heating of the column whereas a part is sent towards storage after being cooled by the air cooler and the condenser. In catalytic reforming, there is voluntarily associated a hydrogenating function - dehydrogenating, brought by platinum deposited, with an acid function brought by the alumina support (Al₂O₃). The mechanism of action of this bifunctional catalyst depends on the severity of the operation, of the quality of the load and the type of catalyst. The catalyst used in the catalytic process of reforming is a very elaborate bifunctional catalyst whose performances are constantly improved thanks to the experimental research supported on an increasingly large comprehension of the phenomena. The American company Universal Oil petroleum (UOP) marketed several series of bimetallic catalysts such as R16, R20, R30 and R62 consisted of Platinum / Rhenium on an acid support consisting of the alumina added with a halogenous compound (chlorine).

University of science and technology of Oran, Orany, Algeria

Abstract

Generally, the pollution makes a lot of problems for the environment. The natural gas (N.G.) is a compound of the light hydrocarbons, methane, ethane, propane, butane and other trace elements, like Helium, Nitrogen, Carbon Dioxide and others. After the different zones of the natural gas treatment, a problem of pollution of water is appeared. In this plant there are eight zones, six units of process, one for the energy production and another for the storage. It exists a system to treat all the effluents contamination coming from these zones. The treatment of this waste water consists in the separation of the oil and the sludge to satisfy the standard environmental protection. There are six separators, pools of concrete are connected with a collector for supply which is connected with each separator by three conduits. A diffusion apparatus is put in front of every nozzle of entry in the separator, and this is for a suitable distribution of the liquid in the separator. In reason of the decrease speed of the liquid when it passes through the separator, the particles carried, deposit in the bottom of the separator. The suspended matters are collected by a chain collector. The float matters up the liquid of the separators, mainly oils, are removed through the creaming tubs.

Abstract

One of the objectives of a modern society is the improvement of the living conditions of the Man. If one goes up the course of the centuries, the history teaches us that the water pollution accompanied all civilizations and that it was always a concern for the legislator until the beginning of the century. Nature, thanks to its intrinsic capacities of regeneration managed to overcome the misdeeds of the man. The pollution developed because of the concentration of the population and the development of her industrial activities. Another time, the pollution water was primarily of organic nature biodegradable never not exceeding the purifying capacities car of the rivers, but the industrial evolution contributed to the marketing . Molecules polluting, that micro the organizations cannot always metabolize and of which some constitute a danger to the Man and his environment. An awakening of an alarming situation as regards quality of water dates from the Seventies. All the types of water were concerned, the subsoil waters, until there with the shelter, are also reached and from now on, one does not cease speaking about nitrates, micro mineral and organic pollutants. Vis-a-vis with this very critical situation at the same time for the health of the man and the environment, the resources water; a vast program of prevention and fight launched out to Algeria in the Seventies/80 and which aimed, the construction of several stations of purification in the most important cities, generally of a size higher than 20. 10' living Following an assessment of this effort of investment established in 1989, it appears clearly that objectif stations of purification was unfortunately not reached but on the contrary the situations developed well , then it appears very important to us to draw up through this modest work, a point of topicality on the state of the quality of water in our area of West of Algeria, with an analysis of the causes of the pollution and the search for the solutions to decrease by its impact.

Email: zain.ss@pu.edu.pk

Abstract

Chromium is classified as a dangerous heavy metal. Elevated quantities of chromium have been found to disrupt metabolic processes in plants, animals, and humans. Plant Growth-Promoting Rhizobacteria (PGPR) play a significant role in various aspects of plant biology, including seed germination, enhancement of growth, facilitation of metabolic activities, and involvement in numerous physiological processes within plants. The inclusion of press mud in soil serves as a substrate for microbial organisms. Plant growth-promoting rhizobacteria (PGPR) have the ability to transform the highly poisonous hexavalent chromium (Cr (VI)) into a less harmful trivalent chromium (Cr (III)). The purpose of this investigation was to determine the reducing potential of pre-isolated rhizobacteria and their impact on enhancing plant development and physiological characteristics. Prior to sowing, the soil obtained from the designated research location was artificially contaminated with a concentration of 20 mg kg⁻¹ of hexavalent chromium (Cr (VI)). This contamination was achieved by introducing potassium dichromate (K₂Cr₂O₇) salt into the soil. The findings of the study indicate that the presence of Cr (VI) had a strong inhibitory effect on the shoot length, root length, and photosynthetic rate of okra, resulting in reductions of up to 19%, 37%, and 31% correspondingly. Nevertheless, the process of inoculation has been seen to result in a reduction in the absorption of Chromium (VI) in both the root and shoot by approximately 37% and 31% respectively. Similarly, the application of press mud has been found to lower the uptake of Chromium (VI) in the root and shoot by approximately 33% and 20% respectively. The simultaneous utilization of inoculation and press mud effectively mitigated the adverse effects of chromium, resulting in plant development that was comparable to the polluted treatment without inoculation.

Abstract

Certain physiological-biochemical processes were comprehensively studied in the etiolated barley sprouts grown in water culture under daylight conditions at different time intervals. The amount of photosynthetic pigments (Xla, Xlb, carotenoids) in 7-day-old barley sprouts grown in water culture under daylight conditions (1-3-6-12-18-24 hours) is found by the spectrometric method to be sharply increased. During the transition of plant sprouts from heterotrophic nutrition to phototrophic nutrition, the amount of oxygen in the root system of sprouts was determined by the polarographic method in order to study the dependence of the respiration rate on the amount of carbohydrates. It was found that as the duration of daylight increases, the absorption of oxygen in the root system of sprouts increases along a straight line compared to etiolated sprouts. This can be attributed to the activation of the alternative respiration pattern after daylight. The rate of oxidation processes in the cell is limited among other factors by the amount of the substrate - reduced products. It was found by photocolometric method that the reduction activity in the root system of sprouts increases dramatically as the daylight duration increases. In order to clarify the nature of respiration rate in plant roots under the impact of external environmental factors, the activity of alternative enzymes of the respiratory cycle - peroxidase and catalase was determined by spectrophotometric method. It is known that the activity of peroxidase in the root system of sprouts increases as the period of daylight increases. A positive correlation was found between the increase in the amount of photosynthetic pigments and the respiration rate, reduction activity and peroxidase activity of the sprouts. The activity of catalase weakened as the daylight duration increased. This can be attributed to the peroxidase function of catalase.

Key words: daylight, photosynthetic pigments, reduction activity, peroxidase, catalase.

Abstract

Background and Objectives: In pre-eclampsia, restricted blood supply due to the lack of trophoblastic cell invasion and spiral artery remodeling is responsible for adverse pregnancies and maternal outcomes, which is added to by maternal under nutrition. This study was designed to investigate the effects of lipid-based supplements (LNS-PLW) on pregnancy and maternal outcomes in underweight primigravida pre-eclamptic women. **Materials and Methods:** A total of 60 pre-eclamptic, underweight primigravida women from the antenatal units of tertiary care hospitals in the Khyber Pakhtunkhwa Province, Pakistan, were randomly divided into two groups (Group 1 and Group 2). The participants of both groups were receiving routine treatment for pre-eclampsia: iron (60 mgs) and folic acid (400 ug) IFA daily. Group 2 was given an additional sachet of 75 gm LNS-PLW daily till delivery. The pregnancy outcomes of both groups were recorded. The clinical parameters, hemoglobin, platelet count, and proteinuria were measured at recruitment. **Results:** The percentage of live births in Group 2 was 93% compared to 92% in Group 1. There were more normal vaginal deliveries (NVDs) in Group 2 compared to Group 1 (Group 2, 78% NVD; group 1, 69% NVD). In Group 1, 4% of the participants developed eclampsia. The frequency of cesarean sections was 8/26 (31%) in Group 1 and 6/28 (22%) in Group 2. The number of intrauterine deaths (IUDs) was only 1/28 (4%) in Group 2, while it was 2/26 (8%) in Group 1. The gestational age at delivery significantly improved with LNS-PLW supplementation (Group 2, 38.64 ± 0.78 weeks; Group 1, 36.88 ± 1.55 weeks, p-value 0.006). The Apgar score (Group 2, 9.3;

Group 1, 8.4) and the birth weight of the babies improved with maternal supplementation with LNS-PLW (Group 2, 38.64 ± 0.78 weeks; Group 1, 36.88 ± 1.55 ; p-value 0.003). There was no significant difference in systolic blood pressure, while diastolic blood pressure (Group 2, 89.57 ± 2.08 mmHg; Group 1, 92.17 ± 5.18 mmHg, p-value 0.025) showed significant improvement with LNS-PLW supplementation. The hemoglobin concentration increased with the LNS-PLW supplement consumed in Group 2 (Group 2, 12.15 ± 0.78 g/dL; Group 1, 11.39 ± 0.48 g/dL, p-value < 0.001). However, no significant difference among the platelet counts of the two groups was observed. Conclusions: The pregnancy and maternal outcomes of underweight pre-eclamptic women can be improved by the prenatal daily supplementation of LNS-PLW during pregnancy, along with IFA and regular antenatal care and follow-up. Registration: ISRCTN15485068, April 2018:<https://doi.org/10.1186/ISRCTN15485068>.

Abstract

Combined Oral Contraceptives Pills (COCs) are effective and widely used method for contraception. There is a positive relationship between COCs and lipid and carbohydrate metabolism in previous studies. We have seen the effect of duration of COCs (0.3mg norgestrel and 0.03mg ethinyl estradiol) used in tertiary care hospitals of Peshawar Khyber Pukhtunkhawa Pakistan on the lipid and carbohydrate metabolism in women taking combined oral contraceptives. Study Design: This cross sectional analytical study included 100 participants women of child bearing age 14-49yrs using COCs divided in three groups according to the duration of use group A at least 6 month COCs users, group B were 1 year COCs users , group C more than 1 year COCs users. Serum Total cholesterol (TC), triglyceride (TG), high density lipoprotein cholesterol (HDL-C), low density lipoprotein cholesterol (LDL-C), very low density lipoprotein cholesterol (VLDL-C), fasting blood sugar(FBS) were determined by using standard colorimetric techniques BMI and BP were also measured in all subjects. Results: we estimated the effect of duration of use of combined oral contraceptives on the levels of different biochemical parameters. Their levels were found gradually increasing from 6months to those who are using it for 1 year and more than 1 year. The results showed significant elevation of cholesterol (p-0.0003), HDL-C (p-0.0229), LDL-C (p-0.0271), VLDL-C (p- 0.0004), Triglycerides (p- 0.0006) levels in the group of more than 1 year users females when compared with 6 months users. Conclusion: The levels of cholesterol, HDL, LDL, VLDL and Triglyceride levels were found to be increased with the duration of use in the women of child bearing age of KP province of Pakistan.

Abstract

Public transportation is a system with multidimensional challenges, and traditional evaluation methods may fall short in capturing the diverse experiences of its users, limiting thereby the understanding of the full depth of its complexity. It is conceivable that the generated knowledge and solutions based on those methods may not adequately address the problems of public transportation. Therefore, our research introduces a new instrument designed not only to collect data but also to create an interactive and enjoyable experience for the participants. This is an attempt to explore more viable evaluation methods capable of producing a better understanding of the complexity of public transportation. The methodological foundation of this study is based on the analysis of various documents and cartographic data about the new city of Sidi Abdellah (in Algeria) and leading interviews with various stakeholders. This process allowed us to design and implement a comprehensive playful survey instrument. By incorporating a playful approach in the design of this survey, we aim to enhance participants involvement and acquire elicited responses to the nuanced complexities of public transportation. The analysis of the data currently collected will enable the identification of primary focus areas for the development of public transportation in the new city of Sidi Abdellah, ultimately improving the quality of life for 60% of its citizens who use public transportation for daily commuting. Furthermore, this study contributes to enhancing knowledge related to the impact of playfulness on the development of public transportation and urban planning in general, enabling a more holistic understanding of urban systems complexities.

**THE MOST COMMON COLEOPTERS FROM THE SCARABIDA FAMILY WHICH
ARE TRANSITIONAL HOSTS OF MACRACANTARCHYNCHOSIS**

Prof. Dr. Ivan PAVLOVIC (ORCID:0000-0003-4751-6760)

Scientific Institute of Veterinary Medicine of Serbia

Email: dripavlovic58@gmail.com

Abstract

Macracanthorhynchosis is a parasitosis caused by the acanthocephalus *Macracanthorhynchus hirudinaceus*. Parasites are 10-30cm long and 4-10mm wide (depending on sex). They parasitize in the small intestines of pigs and can infect many species of mammals, including humans. Females lay oval eggs, 60-100 micrometers long and 50-56 micrometers wide, which reach the external environment through feces. They contain an embryo surrounded by four membranes and armed with several small hooks. Their further development takes place in transitional hosts - coleopterans from the Scarabaeidae family. These are most often the beetles *Melolontha melolontha* and *Melolontha vulgaris*, the rose beetle - *Cetonia aurata*, the marble beetle - *Polyphylla fullo*, the may beetle - *Anomala vitis*, the rolling *Scarabeus (Ateuchus) sacer*, the rue beetle - *Tropinota (Epicometis) hirta* Poda, the wheat beetle - *Anisoplia segetum*, *Amphimallon solstitialis*, *Phyllophaga vehemens* and others. Coleoptera infection occurs in the larval stage. Scarabidae larvae have mouthparts adapted for nibbling that are basically the same as adults. When the scarab larvae eat the eggs of the *macracanthorhynchus*, which have reached the soil with the excrement of the pigs, larvae (acanthor) are released from them in the digestive tract, which soon attach themselves to the wall of the intestine with their hooks. The acanthor fully develops in 5-20 days, becoming the developmental form known as the acanthella. In this form it becomes a parasite of scarab larvae feeding and growing and developing to the cystacanth stage which is infective to the true hosts. They remain in that stage throughout the entire metamorphosis of the coleoptera. Pigs are most often infected by larval forms of Scarabaeids. The larvae live in the ground at a depth of 12-15 cm, and pigs come to them while digging in search of food. Pigs can also become infected with scarab adults during their unhygienic or grazing diet.

Abstract

The unprecedented changes experienced in the fields of education are signs brought by the evolving trends of information and communication technology (ICT). These dynamic innovations have immensely impacted vivid developments in school system but are yet to take firm footholds on Teacher Education. Despite all of the foregoing, findings have revealed that many Teachers were unable to use these Technologies to impact knowledge within the four walls of the classroom and other teaching and learning environments. This paper is a content review of the use of ICT among High School Teachers as it applies to the 21st Century Teaching and learning Structure. Questionnaires were drafted and given to 60 respondents using online Google form questionnaire instrument. The responses were collated and subjected to reliability analysis. Conclusively, recommendations were made to Government, School Administrators and other stake holders in educational sectors.

STUDY OF THE EFFECTS OF EMOTIONAL STRESS ON SIMPLE SENSORIMOTOR RESPONSE TIME

Assist. Prof. Dr. Lalanda AGAYEVA

Azerbaijan State Pedagogical University, faculty of chemistry and biology

Email: lala.agayeva@gmail.com

Abstract

The examination period is a very strong psychoemotional stress factor for applicants, and the functional state of the body changes under the influence of this stress. Currently, final exams are held by the State Test Center through the common testing system. Unfortunately these exams are not held in the school where applicants study, which creates an additional stress situation. The tension is created not just by the upcoming final exams, but also with preparation to pass the exams for higher education schools, and test exams. So all of these are strong stress factors for applicants. Taking into account all of these, the purpose of our research was the development of emotional tension and to study simple sensorimotor reaction time for the applicants in the process of preparing for the general test exams to be held in the final 11th grade of secondary schools and also passing exams for admission to higher education schools. As a result, we investigated the effect of the exam preparation process on the students' emotional state, as well as the effect of emotional stress on the simple sensorimotor response time and obtained statistically reliable results. Simple sensorimotor response time was determined by computer method along with sound signal. The emotional state evaluation methodology was developed by A. Wesman and D. Ricks. Our research was conducted based on this methodology, and it was determined that at the beginning of the academic year, the level of emotional individual indicators of applicants is higher, which means their level of emotional tension is lower. The main goal of the research was to investigate the effect of emotional stress on reaction time. The results showed that due to the effect of emotional stress, the average value of the students' response time is increased. During the first measurement conducted at the beginning of the academic year, the statistical average value of the sensorimotor response times of the applicants was 165.8 ms. , and at the end of the academic year, before the final exam, as well as in a period when the test exams for universities were held, the simple sensorimotor response time of the applicants was 197.6 seconds. Thus emotional stress lengthened the latent period of response time and increased variability. The sensorimotor response time of the applicants was directly proportional to the level of emotional tension, that is, as the emotional tension increased, the response time increased.

Keywords: emotional stress, response time, exam stress, applicants

Abstract

Being able to produce and serve based on high knowledge, skills and technology allows countries to keep up with the requirements of the age in many areas such as eliminating income injustice, having a market power in international trade, financial and economic development, digitalization in their management to an effective and efficient management system in line with the interests of citizens. Having a capability in terms of produce and serve based on high knowledge and skills can also make an important contribution to the improvement of public administration. It is seen that the countries that are at the top of the Economic Complexity Index (ECI) are able to produce and serve high-tech products. Based on the literature review, this study aims to reveal its effects on public administration, based on the idea that being able to provide high-tech services contributes to the economic development of countries, and that they can achieve an effective and efficient management system in line with the interests of their citizens. In the study carried out for this purpose, it was concluded that producing and providing services based on high technology have a positive effect on the economic development of countries and contribute to the effective and efficient functioning of public administration. In addition, the impact of economic complexity on public administration will help the public to adopt a more efficient and technology-based management style based on knowledge and skills. This research paper will be pointed out this important issue.

Abstract

In light of contemporary sociocultural dynamics and the attendant augmentation in life expectancy, an imperious need arises to confront various medical difficulties, encompassing cancer, neurological disorders, and microbial infections, thereby underscoring the exigency for efficacious therapeutic modalities [1,2]. Antimicrobial peptides (AMPs), constituting peptides endowed with the inherent capability to eliminate microorganisms, represent a promising avenue for therapeutic interventions across a spectrum of pathologies, ranging from neoplastic conditions and genetic disorders to cardiovascular afflictions, infectious diseases, and inflammatory pathophysiology. This investigative endeavor comprised the synthesis of six novel derivatives of buforine, realized through the judicious application of solid-phase peptide synthesis (SPPS) and the strategic utilization of the labile fluorenylmethyloxycarbonyl group (Fmoc chemistry). The resultant peptides underwent rigorous scrutiny via Matrix-Assisted Laser Desorption/Ionization Time-of-

Flight Mass Spectrometry (MALDI-TOF-MS), with their purity meticulously evaluated through high-performance liquid chromatography (HPLC). Subsequent determination of antimicrobial activity was conducted by determination of minimum inhibitory concentration (MIC) utilizing the broth microdilution method. Observations revealed commendable efficacy against a spectrum of microbes, including *Staphylococcus aureus* and *Klebsiella pneumoniae*. Furthermore, assessments employing microscopy and Alamar Blue assays were undertaken to gauge cytotoxicity, cellular proliferation, and metabolic activity of the peptides, explicated in the context of MDA-MB-231 and MCF-7 breast cancer cells alongside mesenchymal stem cells. In the broader context of expediting the evolution of peptide-centric pharmaceutical paradigms, the strategic design imperatives encompass the orchestration of peptides characterized by multifaceted attributes, including the adept traversing of cellular membranes or biological barriers, protracted circulatory persistence, and intrinsic non-toxicity and non-immunogenicity vis-à-vis the intricate milieu of the human physiological landscape. Acknowledgment: This work was supported by a grant of the Ministry of Research, Innovation and Digitization, CNCS - UEFISCDI, project number PN-III-P4-PCE-2021-0639, within PNCDI III.

Abstract

In the Earth's atmospheric dynamics, carbon dioxide naturally participates as a vital component of the planet's carbon cycle. The advantages bestowed upon plants by elevated levels of CO₂ are significant, fostering enhanced photosynthetic carbon fixation and a consequent increase in biomass production. However, this atmospheric boon is not without its ecological nuances, as the rise in carbon dioxide concentrations often coincides with the unwelcome presence of insects, introducing a complex interplay that profoundly influences plant growth parameters and the synthesis of secondary metabolites. Within the spectrum of the highly polymorphic *Brassica oleracea* species, encompassing varieties such as brussels sprouts, cabbage, kale, broccoli, cauliflower, and kohlrabi, lies a vital source of vegetable plants crucial for both human sustenance and animal feed. In the pursuit of understanding plant responses to the dual influences of elevated carbon dioxide levels and the feeding activities of *Eurydema ventralis*, this study aims to unravel the intricacies of plant signaling. The focal points of investigation include changes in

photosynthetic parameters, volatile organic compound emissions, chlorophyll levels, and concentrations of polyphenols and flavonoids. For the experimental framework, *Brassica oleracea* var. *botrytis* was cultivated under varying concentrations of carbon dioxide (400, 800, and 1200 ppmv). Subsequently, these meticulously cultivated plants underwent a four-day infestation period by *Eurydema ventralis* bugs, introducing a controlled biotic stress scenario to mimic real-world ecological dynamics. Results of the study revealed that the intrusion of cabbage bugs had a discernible and adverse impact on cauliflower plants. Photosynthetic parameters, including chlorophyll *a* and *b* content, zeaxanthin, and β -carotene levels, were notably affected. Intriguingly, the study observed a significant increase in the emissions of monoterpenes, sesquiterpenes, and 2-hexenyl acetate, along with heightened concentrations of polyphenols and flavonoids across all plants subjected to the cabbage bug infestation. This indicates a noteworthy disruption in the secondary metabolite cycle, suggesting that plants grown in environments with elevated carbon dioxide levels become more vulnerable to the detrimental effects of biotic stresses. In essence, this comprehensive investigation sheds light on the intricate ecological relationships unfolding in response to rising atmospheric carbon dioxide levels and the complex interplay with insect-induced stress. The findings underscore the vulnerability of plants, particularly those within the *Brassica oleracea* family, to disruptions in their physiological processes and secondary metabolite production under the dual influence of heightened CO₂ and insect infestation. As we unravel these intricacies, we gain valuable insights into the potential challenges that plant ecosystems may face in the ongoing context of climate change. Acknowledgment: This work was supported by a grant from the Romanian National Authority for Scientific Research, CNCS – UEFISCDI, project number PN-III-P4-ID-PCE-2020-0410.

Abstract

The undeniable reality of human-induced global warming has manifested in a remarkable temperature increase of approximately 1 degree Celsius, surpassing the range of 0.8 to 1.2 °C above preindustrial levels by the year 2017. As of 2022, our planet's global mean temperature has surged to an alarming 0.86 degrees Celsius above the 20th-century average of 13.9 °C. In tandem with this climatic shift, atmospheric carbon dioxide levels have experienced an unprecedented escalation, surging from 385 ppmv in 2010 to a concerning 416 ppmv by December 2022, signifying a substantial 47 percent increase since the dawn of the Industrial Age. This research delves into the intricate relationship between elevated carbon dioxide concentrations (400, 800, and 1200 ppmv) and plants belonging to the *Brassicaceae* family, specifically *Raphanus sativus* varieties (Johanna, Helga, Rozaria). The primary objective is to unravel the combined impact of elevated CO₂ and heat stress on crucial physiological parameters, terpene emission patterns, and biochemical characteristics within these plant species. To scrutinize these interactions, plants were meticulously cultivated under varying carbon dioxide concentrations (400 ppmv, 800 ppmv, 1200 ppmv) and

subsequently exposed to a controlled regimen of heat stress, lasting 5 minutes and spanning temperatures from 25 to 60 °C. The intricate nuances of plant response were explored using state-of-the-art techniques. Gas-exchange systems were employed to measure essential photosynthetic parameters, including net assimilation rate and stomatal conductance to water vapor, for both control and treated plants. Furthermore, gas chromatography-mass spectrometry was utilized to analyze volatile organic compound emissions, specifically monoterpene profiles. In addition, comprehensive assessments were conducted to quantify the total phenolic compounds, total flavonoid concentrations, and the abundance of photosynthetic pigments within the plant specimens. The study uncovered a noteworthy decline in key photosynthetic parameters—such as assimilation rates and stomatal conductance to water vapor—in plants cultivated under elevated CO₂ conditions. Additionally, the concentration of primary and secondary metabolites in plant leaves exhibited a diminishing trend with escalating heat stress levels. Intriguingly, volatile organic compound emissions decreased post-heat stress. The assessment of total phenols, total flavonoids, and photosynthetic pigments indicated a substantial decrease following a brief period of exposure to elevated temperatures. Through this comprehensive investigation, we have provided empirical evidence that heightened carbon dioxide levels can detrimentally impact plant physiology, diminishing their capacity to withstand heat stress. The intricate interplay observed among photosynthetic parameters, biochemical characteristics, and volatile organic compound emissions underscores the complexity of the challenges plants face in an environment marked by elevated CO₂ and increasing temperatures. These findings contribute valuable insights into the intricate dynamics shaping the responses of plant life to the dual stressors of elevated CO₂ and heat stress, highlighting potential vulnerabilities in the face of ongoing climate change. Acknowledgment: This work was supported by a grant from the Romanian National Authority for Scientific Research, CNCS – UEFISCDI, project number PN-III-P4-ID-PCE-2020-0410.

Özet

Doğal kaynakların ekolojik boyutları da dikkate alarak verimli kullanımı sürdürülebilir kalkınma için oldukça önemlidir. Doğal kaynaklar; su, ormanlar, biyolojik çeşitlilik, mineraller ve enerji kaynakları gibi birçok unsuru içerir. Bunların verimli kullanımı, gelecek nesillerin kendi ihtiyaçlarını karşılama kabiliyetinden ödün vermeden, mevcut ihtiyaçları karşılayacak şekilde yönetilmesini içerir. Su kaynaklarının korunması ve verimli kullanılması önemlidir. Sürdürülebilir su yönetimi, su kaybının azaltılmasını, tarımda verimli sulama tekniklerinin uygulanmasını, su kaynaklarının kirlilikten korunmasını ve tasarruf tedbirlerinin teşvik edilmesini içermektedir. Minerallerin ve enerji kaynaklarının çıkarılması ve kullanılmasının çevre üzerinde önemli bir etkisi vardır. Verimlilik, yenilenebilir enerji kaynaklarına yatırım yapmayı, daha temiz üretim teknolojilerini benimsemeyi, fosil yakıt kullanımından kaynaklanan emisyonları azaltmayı ve enerji verimliliği önlemlerini teşvik etmeyi içerir. İklim değişikliğinin çözümü, sera gazı emisyonlarının azaltılmasını gerektirir. Buna düşük karbon teknolojilerine geçiş, ağaçlandırmanın teşvik edilmesi ve karbon azaltımını teşvik eden politikaların uygulanması da dahildir. Doğal kaynakların verimli ve sürdürülebilir kullanımı ekonomik, sosyal ve çevresel hususları bütünleştiren entegre bir yaklaşımı içerir. Kaynak verimliliğini ve çevre yönetimini teşvik eden politikaların, düzenlemelerin ve uygulamaların benimsenmesi, mevcut ve gelecek nesiller için daha sağlıklı ve daha sürdürülebilir bir gezegen sağlamak açısından çok önemlidir.

Anahtar kelimeler: Enerji elde etme, su kullanımı, temizlik, iklim, su depolama

**STUDY THE EFFECT OF DOPING WITH SILVER NANOPARTICLES ON THE

Abstract

In this research, zirconium dioxide ZrO_2 thin films were prepared by pulsed laser deposition method. The deposition process was carried out on glass bases at a temperature of 300°C and a vacuum pressure of 10^{-3} mbar. The structural, optical and sensitive properties of the prepared films were studied. The structural properties were studied using X-ray diffraction and finding structural parameters. It was found that the prepared films were of a quaternary phase. It was also found that the process of adding impurities led to improving the crystalline structure of the prepared films. When calculating the structural parameters such as lattice constants and crystal size, it was observed that there was an increase in the grain size from (30 – 100 nm) after adding impurities (nano-silver), also it was found that the preferred plane for crystal growth is (011). The surface topography was also studied through the results of the scanning electron microscope, where the results showed that the surfaces of all the membranes were uniform, homogeneous, and free of cracks, in addition to the presence of spherical-shaped grains on the surface, and that the doping process led to an increase in the surface roughness. The results of the atomic force microscope showed that the doping process led to an increase in the surface roughness rate. The optical measurements showed that the transmittance value of the membranes reached 95% and decreased when increases the impurities ratio to 15% at a doping percentage of 9%. There was also an increase in optical absorbance when doping percentages increased. After studying the optical energy gap, it was found that its 4.31 eV for pure films and it was decreased when impurities were added to reach (2.9 eV) at a doping rate of 9%. gas sensor for NH_3 gas was prepared from pure and doped (ZrO_2) films, and the sensitivity of the films was studied and found that the maximum sensitivity for pure films was (20 %) and the maximum sensitivity of the ZrO_2 impregnated films was (56 %) at an operating temperature of 250°C when the film was 9% impregnated.

Abstract

For EFL learners, PVs become as crucially important part of English lexicon in every day of language of English speakers. This study seeks to prove the difference knowledge of learning phrasal verbs. To achieve the purpose of this study, 120 students were selected from Andishesazan language institute in Ahvaz. To homogenize the participants, interchange placement test (Richards, 2008) was administered that divided them into four groups. Two groups were selected as experimental group and the others as control group (both separable and inseparable) randomly. At the beginning of the study, a separable and inseparable phrasal verbs test as pre-test was given to students. Then during the study, the experimental groups received treatment that was teaching PVs selected from textbook '*making sense of phrasal verbs*' (Shovel, 1992) via WhatsApp. But control groups received no treatment and they were taught by traditional approach. After five weeks, a post-test was administered to the groups. By comparing the pre- and post-tests of each group separately and also four groups with each other, it was revealed that the difference between the post-test of experimental and control (separable) groups is significant. Results showed using WhatsApp application for learning of separable phrasal verbs was effective in improving students' knowledge of them. The finding of this study may inspire teachers to use mobile application and also course developers to modify and improve not only the curriculum, but also the methodology of the vocabulary learning.

Abstract

The Global Islamic economy is gaining momentum with the empowerment of Muslim consumers. According to the latest statistics, the value of the global Islamic economy reached US\$2 trillion excluding the Islamic finance sector which is worth \$3.6 trillion. A surge in the Global Islamic Economy triggers countries to create a favorable ecosystem for the Islamic economy. Availability of a robust Halal certification system is a number one priority for the establishment of a favorable ecosystem for the development of the Islamic Economy in the country. Although Azerbaijan is a Muslim-majority country with more than 90% of the residents practicing Islam, the country lags behind most Muslim-majority countries when it comes to the availability of a favorable ecosystem for the development of the Islamic Economy in the country. According to the Global Islamic Economy, Azerbaijan only captures a seventh place in the halal tourism sector and is not represented in other sectors. However, as a Muslim-majority country, local consumers are very sensitive towards consuming halal products, especially halal foods. Also, there is huge potential, both natural, financial, and human, for the transformation of the local economy to one of the leading Hub for the Islamic economy. Serious problems with the halal certification process in the country are the main culprit and serious impediment to the creation of a favorable ecosystem and infrastructure. The primary target of the chapter will be an analysis of the current halal certification procedures, primary impediments to the establishment of the robust certification process as well as a discussion of the possible policy directions for the development of the Islamic Economy in Azerbaijan.

Abstract

Natural gas contains impurities, the most important of which are carbon dioxide and hydrogen sulfide. These corrosive impurities, known as acid gases, must be removed from natural gas. Their removal is motivated by operational, economic, and environmental factors. Various technologies have been developed to remove acid gases, including absorption using physical and chemical solvents, adsorption, membrane processes, etc. The method used in this research for sweetening sour natural gas is chemical absorption using ternary mixtures of amines. Previous studies have mainly focused on single- and binary-component absorbents, and the role of component percentages in an absorbent of ternary mixtures has not been investigated and optimized. Therefore, in this thesis, for the first time, the natural gas sweetening process using two ternary mixtures of amines, including monoethanolamine/ diethanolamine/methyldiethanolamine (MEA/DEA/MDEA) and sulfolane/piperazine/ methyldiethanolamine (Sul/PZ/MDEA), was simulated using Aspen Hysys software. Initially, simulation results were validated by comparing them with the experimental data from an industrial unit. To optimize the component percentages in these ternary blends, a mixture design of experiment was conducted. Statistical models for six response variables, including the mole fraction of H₂S and CO₂ in the absorber outlet, and the reboiler and condenser duty and solvent price and corrosion rate, were developed for both blends with a high coefficient of determination (R²) close to one. For the first time, a multi-objective function was defined to simultaneously minimize all six response variables. The optimization results showed that the optimal composition for the MEA/DEA/MDEA blend is 60 and 40 mass percent of MEA and MDEA, respectively. Also, in the Sul/PZ/MDEA blend, the optimal composition is 2, 11, and 12 mass percent of sulfolane, piperazine, and MDEA, respectively. For both optimal blends, the absorber flow rate was varied between 300 and 1500 Sm³/h, and it was found that after a flow rate of 900 and 1100 Sm³/h for the MEA/DEA/MDEA and Sul/PZ/MDEA blends, respectively, the mole fraction of H₂S and CO₂ in the absorber outlet reached approximately ppm and increasing the flow rate had no significant effect on H₂S and CO₂ absorption, but increased the duty of the reboiler and condenser.

Abstract

Utilizing thermochemical methods for converting biomass and waste tires offers a hopeful solution to address the challenges of energy security and environmental problems. Initially, the impact of temperature, the weight ratio of rubber to cigarette filters, and the heating rate on the co-pyrolysis of these two materials was investigated. The experimental results showed that all three variables studied had a significant effect on the product yield. The optimal conditions were found to be a temperature of 577°C, a weight ratio of 0.32 for rubber to cigarette filters, and a heating rate of 21°C/min, resulting in the highest biodiesel yield of 60.68%. The thermal decomposition of the waste tyre and cigarette filters with mass blend ratios of 1:0, 0.32:0.68, and 0:1 was investigated using thermogravimetric analysis. Co-pyrolysis of cigarette filters and waste tyre showed positively synergetic effect in terms of (1) increasing bio-oil yeild and heating value; (2) improving product yields and composition. Next, under the obtained optimal conditions, the co-pyrolysis of these two materials was repeated using pre-treatment and the HZSM-5 catalyst. The results obtained from gas chromatography-mass spectrometry for the pyrolysis of each feedstock individually, co-pyrolysis under optimal conditions, and catalytic co-pyrolysis showed positive effects. Firstly, the amount of bio-oil produced increased, and its heating value also increased. Additionally, using a potassium persulfate solution and hydrogen peroxide in the pre-treatment process for rubber in co-pyrolysis improved the product yield. Furthermore, the results from catalytic co-pyrolysis showed a decrease in product yield when using the catalyst, which could be compensated by using pre-treated rubber. Moreover, the heating value of the bio-oil increased to 4/28in catalytic pyrolysis. Oxygen-containing compounds in the bio-oil were significantly reduced, resulting in reduced pollution compared to the individual pyrolysis of cigarette filters. These findings suggest that the simultaneous co-pyrolysis of rubber and cigarette filters can have positive effects, including increased bio-oil production and heating value, as well as reduced pollution. Pre-treatment and the use of catalysts can further enhance the efficiency of this process.

Abstract

V₂O₅ catalysts, enhanced with Cs, are gaining momentum for reducing pollution in expanding sulfuric acid production plants. However, systematic research on this specific type of Cs-promoted catalyst has not been conducted. The disposal of unused V₂O₅ catalysts poses a serious environmental threat, and its recycling not only brings economic benefits but also prevents environmental damage. Approximately, one hundred tons of unused V₂O₅ catalyst annually require recovery in the country, but it is either stored or improperly disposed of with no utility. In this study, the recycled industrial V₂O₅ catalyst, promoted with Cs, obtained from a sulfuric acid production plant, was characterized using XRD, XRF, BET, SEM, TEM, ATR-FTIR, and EDX mapping. The response surface method was employed to investigate the effects of concentration, solid-to-liquid ratio, and time on the efficiency of solid-liquid extraction with sulfuric acid. The results indicated that a second-degree model with R²=0.98 was the best statistical model for predicting efficiency concerning these factors, all of which had a significant impact. Solid-liquid extraction for the binary mixture of tartaric acid and phosphoric acid was performed using the Mixture method (one of the design of experiment (DOE) methods), revealing that tartaric acid outperforms phosphoric acid and their mixture. The solid-liquid extraction with a three-component system of nitric acid, hydrochloric acid, and citric acid was also evaluated through the Mixture method demonstrating that the mixture of nitric acid with hydrochloric acid and citric acid performs better than pure nitric acid and hydrochloric acid. Vanadium pentoxide purification with sodium sulfate at various ratios was investigated using TGA-DSC, with the optimal ratio identified as 1:1. Finally, sulfuric acid, a common factor in vanadium solid-liquid extraction with acceptable efficiency, was employed as a suitable extraction agent. Coupled with additional purification, precipitation, oxidation, purification, and multiple filtration steps, a vanadium pentoxide precipitate with 99% purity and 47% yield was obtained.

DIFFERENCES IN THE RESPONSES OF BIOCHEMICAL CHARACTERISTICS AND RELATED CAT, MAPK6 AND P5SC GENES EXPRESSION BETWEEN IRAQI WHEAT GENOTYPES TO SINGLE AND COMBINED DROUGHT AND SALINITY STRESSES

Muhammaed Jawad HUSAIN

Institute of Genetic Engineering and Biotechnology for Postgraduate Studies-University of Baghdad

Kamil M. AL-JOBORI

Institute of Genetic Engineering and Biotechnology for Postgraduate Studies-University of Baghdad

Abstract

In economically significant crop plants, such as wheat (*Triticum aestivum* L.), abiotic stresses like drought and salinity are among the most significant environmental stressors. These stresses result in the generation of reactive oxygen species (ROS), which in turn triggers molecular and biochemical reactions that are crucial in determining the degree of plant tolerance to stresses. Two wheat genotypes, Latifya and Iba99 were used to examine the responses of gene expression of *CAT*, *MAPK6* and *P5CR* genes, root, shoot and plant dry weights, antioxidant enzymes (*CAT*, *SOD* and *POD*) and proline content traits to combined drought (simulated by polyethylene glycol (PEG) 6000 solutions) and salinity (simulated by NaCl solutions) stress with 0, -0.05, -0.1, -0.15, and -0.2 MPa osmotic potentials, in addition to single stresses of drought(-0.6)Mpa and salinity(-0.6)Mpa. The genotypes were planted in a randomized complete block design (RCBD) with three replicates. The findings demonstrated that the initial plant response to stress resulted in notable changes in the expression of *MAPK6*, *CAT* and *P5CS* genes. They also demonstrated that root, shoot, and whole plant dry masses decreased with the decrease of the osmotic potential. With the osmotic potential dropping, the *CAT*, *POD*, and *SOD* activities as well as the proline content in seedlings increased. Iba99 had considerably higher *SOD*, *POD*, and *CAT* activities with values of 60.22 unit.ml⁻¹, 145.5 unit.g⁻¹, and 52.92 unit.g⁻¹, respectively, nonetheless, shown less impressive growth features than Latifya at -2.0Mpa. While Latifya had higher *CAT* gene expression and more dry biomass at -2.0Mpa. In wheat plants, the proline content and activity of *SOD*, *POD*, and *CAT* were significant strategies for maintaining stress tolerance. Due to the regularity and concordance between the accumulation of dry matter and other observed features, dry weight can be a reliable indicator of plant growth.

Abstract

Research background: Marketing and its importance is visible in many spheres of our society. There is no exception in tourism services either. Companies that want to progress must first of all provide quality services, be able to present them well to the public, and then not forget their continuous innovation, without which many companies have already lost their competitive advantage in the past. Purpose of the research: The interest of the study was to find out more detailed information about marketing tools that are used in present at the example of tourism companies. In concrete, the main aim of the paper is to evaluate the current situation of the use of modern marketing tools on the example of heritage objects in the tourism industry and their accommodation services. Methods: Primary data was obtained by using author's questionnaire method and self-collection of information by addressing respondents in a personal way. The research sample consisted of heritage object providing accommodation services beyond the services of their standard cultural portfolio (exhibitions, events, guided tours, etc.). The results of the survey based on interviews were statistically recorded and evaluated in the program MS Excel. The obtained primary data were subsequently evaluated in Statistica software program. Findings & Value added: From the results of conducted survey it can be possible to conclude, that heritage object also perceive innovations in marketing as their inevitable part of future operation. Especially after pandemics they rely on digital tools of current rich market. Scientific research grant FPPV-37-2023 "Innovation Management in Historic Hotels" UCM Trnava. Email:jaroslava.gburova@ucm.sk

Abstract

Research background: Innovation Heritage object play an important role in tourism and its attractiveness. They provide a wide scale of option how to combine the tourism services with historical potential. On the other hand, although they are related to the ancient potential they must not forget to advance hand in hand with the modern trends of the present time. Purpose of the research: The paper aims to find out, evaluate and describe in more detail the perception of the importance of innovation application in accommodation objects, operating in historical buildings, listed as heritage objects in Slovak conditions. Methods: To find out the perception of tourism participants the questionnaire method was used. The questionnaire was prepared as an author's questionnaire having in total 25 question with concentrated attention to the accommodation services in heritage object and their quality. The selection of the research sample was done by random sampling at the Slovak respondents. The results of the research were evaluated and verified by selected statistical methods. The primary data obtained were subsequently processed in Statistica statistical software program. Findings & Value added: Based on the results obtained from questionnaire research it follows that tourism participant expect the implementation of new, modern digital tools in their operation while using their services. They expect, that also those heritage building need to „catch” the digitalization wave while respecting that the condition of operating services often in protected object is more technically demanding. The paper is a part of the outputs of the projects: Scientific research grant FPPV-37-2023 “Innovation Management in Historic Hotels” UCM Trnava. Abstract

Seeing the importance that companies have in the growth and economic development of our country as the main goal of the paper of this topic is to emphasize once again the importance of managerial decision making which is also the main key to the success of a company. Successful leadership is a challenge at all levels of management in institutions, especially in large companies such as our case study at the Elkos Group Company. In this way successful leadership means successful decision making, which is impossible to achieve without applying standard procedures for collecting, processing, analyzing and interpreting results. Managing a project may seem like an unmanageable task, which requires a lot of experience, knowledge and work practice. Often, this task may seem difficult to understand, followed successfully and successfully completed. In everyday life, in one way or another, everybody is, at all times, a project manager. The decision-making process is a sequence of activities in a logical way to obtain reliable and valuable information for decision-making. The decision-making process is modeled as a phased process, which provides high security and reliability for solving certain problems. The main purpose of this paper is to show the role and importance of managerial decision-making in the performance of a company. Where and as we know that these decisions are very important and in most cases are vital for the successful future of the company, where case study in this paper we took managerial decision-making in the Elkos Group Company. The main objective and purpose of this paper will be to determine the role and importance of managerial decision-making in the performance of the company, where case study in this paper i have obtained data on managerial decision-making in Elkos group company, and how this decision-making affects performance of compensation.

Keywords: managerial decision-making, management, company, management practices.

Abstract

Wicking property gives the information about the transport properties and water absorbency. Air permeability tells about the insulation of the fabric Both the properties predict the comfort properties of the fabric. In this study four different fabric of cotton and banana blend are produced with a constant blend proportion of 70 : 30 to analyse the wicking and air-permeability of the fabric. The results showed that the canvas fabric with 2ply yarn (20s Ne) showed more wicking rate than the single ply yarn plain (40s Ne) and twill weave (30s Ne) fabric. The air permeability of the twill weave showed the maximum value followed by canvas weave and plain weave. The results gave an idea that the cotton/banana blended fabrics have good wicking and air-permeability properties and suitable for sportswear application.

Keywords: air-permeability, banana, cotton, insulation, wicking rate.

Abstract

Policymakers in developing and recently industrialized countries have hurdles in attaining sustainable development as a result of the international system's issues in different environmental, financial, technical, economic, and social domains in the context of globalization. The importance of digitization in harnessing economic and social globalization to promote and accelerate the economic growth of developing nations has not been sufficiently addressed in theoretical and applied economic research. This study examines the effects of economic and social reliance, as well as the significance of digital technology and its role in supporting economic and social transformation policies that promote growth and long-term development. As a result, the purpose of this research is to investigate the causative and cointegration relationships between digitalization, socioeconomic globalization, and economic growth. The study also wants to know how globalization and digitization have affected GDP per capita. Our research analyzes actual data from the Saudi economy as an example of a developing country undergoing large structural alterations and fast economic and social growth. The purpose of this research is to look into the causal relationship and shared integration of socioeconomic globalization and digitalization, as well as their impact on economic growth. Take Saudi Arabia as an example of a remarkable global economic transformation strategy from 1990 to 2022. During this period, Saudi Arabia implemented various economic reforms, such as the Vision 2030 plan, which aimed to diversify the economy and reduce its dependence on oil. These reforms included initiatives to attract foreign investment, develop non-oil sectors like tourism and entertainment, and enhance digital infrastructure. As a result, Saudi Arabia experienced significant economic growth and an increase in GDP per capita.

Abstract

The purpose of this paper is to see the impact of cultural heritage on the development of tourism in different regions, and in our topic the mountains of Sharr in the region of Ferizaj, Prizren and Kaçanik. The purpose of this paper is to present a summary of knowledge on cultural heritage and its impact on the development of tourism in the territory of Kosovo, with a special focus on the Prizren region, given the great importance of these industries in economic development. We know that methods in the social sciences are indispensable research tools that enable us to achieve new results and knowledge, or to correct existing ones. In this article we have applied almost all methods little by little, but we will single out: the historical method which consists of techniques and guidelines with which historians use primary sources and other data, such as: archaeological data, to made studies on past stories for cultural heritage. This paper offers a theoretical approach to cultural heritage and tourism, as well as the impact of effective and efficient management in increasing the number of tourists and visitors and increasing the use of cultural heritage capacities in Kosovo, in the mountains of Sharri in the region of Ferizaj, Kaçanik. and Prizren. Based on the cultural heritage data in the country, such as various historical monuments built centuries ago, which local and foreign tourists show special interest in visiting, through which the development of tourism in the country is enabled, Investment in the further development and promotion of these tourist products, it would be of particular importance, as it would inform the public about the monuments of historical importance and heritage of our country, which should be visited in Kosovo. Based on this, based on the available data on the topic in question, we can conclude that the development of tourism depends on the promotion of products, therefore our recommendation is that local institutions pay great attention to the strict implementation of the long-term development strategy of tourism, thus investing in preserving the rich cultural heritage that our country has and promoting it through various cultural and artistic activities, as well as informing the general population.

Abstract

Chat-GPT, an AI chatbot, is transforming the way we engage with technology. Its capacity for human-like conversations, essay generation, and various tasks has prompted inquiries into its implications for education. Some educators posit that integrating Chat-GPT into classrooms could offer valuable personalized tutoring and aid for students in their assignments. Conversely, there are reservations about the potential misuse of Chat-GPT for cheating or plagiarism, raising concerns about a potential decline in critical thinking skills. Preliminary assessments indicate that Chat-GPT can surpass many students in English assignments. Additionally, the bot can produce high-quality content, including cover letters and literary summaries. It's crucial to acknowledge that Chat-GPT is an evolving technology, still in development with constantly advancing capabilities. The integration of AI in education is a swiftly progressing domain, necessitating educators to stay abreast of the latest advancements. This article delves into the prospective influence of Chat-GPT on education, advocating for responsible use of the tool. In essence, the impact of Chat-GPT on education remains uncertain, yet it is evident that the technology holds the potential to both benefit and pose risks to students. Educators must exercise responsible use of Chat-GPT and be cognizant of potential drawbacks.

Abstract

This paper explores the challenges tied to infrastructure, pedagogical considerations, and the effective integration of technology to enrich the learning experience. Technology integration is viewed as a means to augment learning, not as a replacement for educators. Both educators and students grapple with the ramifications of eLearning. Universities face increasing demands for quality and flexibility to cater to diverse student needs, necessitating tailored course designs to align with varied educational requirements. Educators must adapt their teaching styles to accommodate changing student learning preferences, which can result in heavier workloads necessitating proactive management. Furthermore, eLearning poses a potential challenge to the traditional university structure. As institutions confront pressure to depart from traditional facilities and lecture-centric teaching methods, they must carefully navigate this transition. While the benefits of eLearning are eagerly anticipated, thoughtful assessment of the implications of eLearning program implementation is imperative. In the UK, many universities are embracing technology for eLearning solutions, yet some costly implementations fall short in terms of engaging learners and promoting active participation. These implementations often function as content repositories, lacking robust pedagogical practices. When institutions adopt eLearning without a strong pedagogical foundation, activities may prioritize technology over student progress and engagement.

Abstract

Globalization of the economy and European integration processes provide for a number of changes in the field of the fuel and energy complex. The agreement on the accession of Ukraine to the Energy Community was signed in 2005, which provides for the unification of European energy systems and the formation of a single market for electricity and gas, the achievement of information support, and the openness of energy resource markets (coal, gas, electricity, utility services); creation of conditions for fair competition; ensuring effective control at the state and regional levels. Taking into account the fact that excessive consumption of fuel and energy resources increases risks in the spheres of socio-economic activity, energy security, energy, and trade balances, it is advisable to monitor energy costs, prices, and tariffs. Therefore, according to the results of the survey of the structure of expenses of Ukrainian households (according to the methodology of the International Labor Organization), over the past 12 years, the share of expenses on food products has decreased from 55% to 48.9% and non-consumer expenses (savings, charity, helping relatives, housing construction, etc.) from 10.1% to 8.7%. This indicates the low standard of living of the average Ukrainian, since according to the criterion of the EU countries, poor people spend more than 30% on food in the general structure of expenses for a household. At the same time, the share of expenses for fuel and energy, housing and communal services, and transport services of the Ukrainian household increased significantly from 12.9% in 2010 to 20% in 2022. This happened primarily due to price and tariff increases, which were significantly ahead of the growth rate of inflation in Ukraine. The state and local authorities constantly regulate and coordinate the formation and approval of prices and tariffs for fuel, housing and communal services, and transport public services. The State Agency for Energy Efficiency and Energy Saving of Ukraine publishes approved weighted average tariffs for thermal energy produced using natural gas for population needs; institutions and organizations financed from the state or local budget, as well as tariffs for transportation and supply of thermal energy. In practically all regions of Ukraine, tariffs for heat from natural gas for budgetary institutions and organizations are one and a half times higher than tariffs for the population. However, natural gas prices for enterprises and businesses exceed the approved prices for the population by 4.3 times in 2021, 5.3 times in 2022, and 2.2 times in 2023. Regionally, tariffs differ by 2.5 times. High prices for fuel and energy resources negatively affect the payment obligations of both the population, especially in wartime, and enterprises. In addition, economic risks are growing for business: they increase the level of cost price, worsen the price competitiveness of the products of Ukrainian producers, and reduce their volumes and assortment. The share of the transport component in the structure of the cost of production of Ukrainian enterprises is marked by intensive dynamic growth (up to 20%), primarily due to a significant increase in fuel prices, which are mainly imported; restrictions on the activities of water and air transport because of the war; devaluation of the hryvnia in relation to the freely convertible

currency; a steady trend of growth in world prices for fuel and energy resources. Ukraine's integration into the European Community and its strategic guidelines for strengthening socio-economic and energy security in wartime conditions provide for increased transparency and reliability of data on the movement of material, technical, energy and relevant financial flows in the state. The state and local self-government bodies are obliged to stimulate the transition to alternative sources of energy in local territories, to regulate the prices of fuel and energy resources, communal and transport services through taxes (excise duty, value added tax), trade allowances (markups), to ensure the stability of the exchange rate of freely convertible currencies, etc.

Keywords: fuel and energy resources, energy costs, prices, tariffs, alternative energy sources.

CHARACTERIZATION OF ION EMISSION IN A MATHER PLASMA FOCUS DEVICE 20 KJ

Nooshin PISHBIN

Nuclear Science and Technology Research Institute

Abstract

In this research, the ion emission of the Mather type plasma focus device 20kJ has studied. According to the functional parameters of pressure, voltage and the gas composition used, at first, by performing numerous tests, the optimal pressure and voltage of the device have been determined and then the emission of ions and hard X-rays has been evaluated in the optimal conditions. In order to record the current and derivative of the current signal a Rogowski coil detector and for recording the ion signals, a plastic scintillator and a Faraday cup were used. Examination of the graphs and data analysis show that the strongest pinch, and ion signals were obtained with neon gas at a voltage of 14 kV and a pressure of 6 Torr. The maximum of energy of the emitted ion is 420 kJ. These types of ions have their own applications as layer forming ions in layering processes. In addition, the high energy of ions makes them a suitable source for destructive testing of materials.

Figure 1 shows the image of the plasma focus device 20kJ.

Abstract

This review explores how Benzotriazole (BTA) and its derivatives protect copper artifacts and excavated objects treasures from corrosion. It looks at how these substances react to copper and create shields that stop corrosion. We check different ways to put these shields on ancient copper artifacts & excavated objects, like soaking and using special methods. We will be observed the parameters like as pH, conductivity, temperature etc affects the copper artifacts and excavated objects & how the protective shield develops around the surfaces. The review ends by talking about new ideas and what still needs figuring out. It will be concluded after entire course of work that BTA & its derivatives can be use to develop a protective layer for protection of ancient copper artifacts and excavated objects.

Keywords: Copper Artifacts, Copper excavated objects, Corrosion inhibitor, Preservation, Benzotriazole and its derivatives.

**ECONOMETRICS ANALYSIS OF INDUSTRIAL SECTOR AND ECONOMIC
GROWTH IN NIGERIA**

Abstract

The industrial sector remains one of the key sectors of any economy, be it developed or developing nations. This however makes it necessary to examine the effect of this sector on economic growth by most nations, in view of several challenges faced by the sector which might have limited its potential contribution to the national development. The study revealed that some of the sub-sectors has a positive and significant effect on economic growth within the time frame examined (1981 - 2022). Likewise, the study indicated that the industrial sector provides employment opportunities, thereby contributing to the country's growth. The study recommended that the government should provide an enabling environment for this sector to thrive by investing more in infrastructure, providing access to finance and improving of human security. The private sector should also be encouraged to invest in this sector to enhance more productivity and competitiveness. The study therefore emphasizes the importance of this sector in driving economic growth in Nigeria with implementation of policies and investments. Thus, the prosperity of this nation to a large extent is seen to be dependent on the development and sustenance of the industrial sub-sector in this study.

**INCLUDING INCLUSIVE TEACHING PRACTICES FOR PEOPLE WITH
DISABILITIES IN THE DEVELOPMENT, ORGANIZATION, AND
IMPLEMENTATION OF SCIENCE LABORATORY LESSONS**

Dr Chhavi SINGLA*

J P College of Pharmacy, Mohanlalganj, Lucknow- 226301, UP, INDIA

Abstract

Integrating inclusive teaching strategies for differently abled persons into laboratory lessons is not only important, but it is also crucial for creating an accessible and inclusive learning environment. When designing, planning, and executing lessons, it is imperative to consider the diverse needs of students and provide necessary accommodations and assistive technologies. By doing so, educators can ensure that all students, regardless of their abilities, have equal opportunities to learn and succeed in the laboratory setting. Additionally, inclusive teaching strategies promote a sense of belonging and foster a supportive and collaborative learning environment for all students. This approach not only benefits differently abled persons but also enhances the overall educational experience for everyone involved. Therefore, it is of utmost importance for educators to prioritize inclusivity and actively integrate inclusive teaching strategies into their laboratory lessons.

Keywords: Accessible, Differently abled, Inclusive, Laboratory lessons.

**CONSUMER BEHAVIOR IN KOSOVO: UNDERSTANDING FACTORS
INFLUENCING WATER SELECTION AND SUSTAINABLE PRACTICES**

Abstract

The consumer decision-making process is intricate and influenced by various factors when selecting a product. Product quality stands out as a pivotal aspect, often holding the power to sway decisions. Consumers gravitate towards high-quality products that not only meet but exceed their needs. Their motivation, driven by factors such as quality, brand, price, reputation, and personal experience, contributes significantly to shaping well-informed decisions tailored to their preferences. This study concentrates on the pivotal factors that influence water selection, analyzing their significance in consumer decision-making. Leveraging the Fishbein model aids in identifying and assessing the dominant factors that impact consumers' choices of water and brands. Moreover, the research offers recommendations aimed at enhancing water usage policies, emphasizing the imperative of sustainable and efficient utilization of these key factors to ensure future sustainability. This research holds the potential to advance water processing strategies, facilitating more effective and sustainable use of the factors that influence consumers' choices and evaluations regarding water.

Abstract

Chalcones are chemical compounds belonging to the flavonoid group. They are characterized by their structure composed of two aromatic rings linked by three carbon α and β -unsaturated carbonyl system. These compounds are known for their diverse biological activities and are commonly found in various plants. The purpose of this study was to synthesis some new substituted chalcones derivates starting from 4-nitroacetophenone as the main substance. The synthesis is based on the aldol reaction to obtain aromatic ketones or substituted aromatic ketones with benzaldehydes or substituted benzaldehydes. The synthesis compounds was then subjected to filtration, recrystallization and physical parameters such as melting point, thin layer chromatography (TLC), and followed by spectroscopic analysis. Melting points values ranged from 136.4⁰C to 188.6⁰C, while the retention factor ranged from 0.37 to 0.58. By interpreting IR spectra we were able to confirm the presence of some functional groups such as: NO₂ and OCH₃.

Keywords: chalcone, aldol condensation, 4-nitroacetophenone, thin layer chromatography.

Abstract

Chalcones (1,3-diaryl-2-propen-1-ones) are a collective group of flavonoids found in fruits and vegetables, which display several pharmacological activities that are very important. They can be used as an initial compound for synthesis of many compounds. Therefore, many researchers have synthesized these compounds and evaluated their biological activities. On this study we synthesized some new substituted chalcones derivate starting from 3,4-dimethoxyacetophenone, and putting in reaction with different compounds such as benzaldehyde and substituted benzaldehydes. The obtained compounds were subjected to several processes such as filtration, recrystallization, determination of the melting point, thin layer chromatography (TLC) and spectroscopic analysis. Melting points values ranged from 114,5°C to 149.8°C , while the retention factor ranged from 0.2 to 0.66. Based on the measurements made in the infrared spectrophotometer we identified the presence of functional groups like: -NO₂, -OCH₃.

Keywords: chalcone, 3,4-dimethoxyacetophenone, thin layer chromatography.

**PARASITOLOGICAL, MOLECULAR, AND EPIDEMIOLOGICAL INVESTIGATION
OF TRYPANOSOMA EVANSI INFECTION AMONG DROMEDARY CAMELS
IN BALUCHISTAN PROVINCE**

Waseem KHAN

University of Veterinary & Animal Sciences

Mian ABDUL HAFEEZ

Muhammad WAHAB

University of Veterinary & Animal Sciences

Abstract

Trypanosomiasis “Surra” is a zoonotic disease caused by *Trypanosoma evansi* (*T. evansi*), affects a wide variety of animals globally. The disease has a severe impact on the productivity, health, and working capacity of camels. Surra causes mortality and extensive economic losses if not diagnosed early. This is the first comprehensive report on the prevalence of *T. evansi* infection in dromedaries in Baluchistan province. In the present study, 393 blood samples (indigenous, n = 240; imported, n=153) were collected from one-humped camels (*Camelus dromedarius*) and were tested by molecular methods to estimate the prevalence in three districts (Pishin, Nushki, and Lasbella) of Baluchistan province. The overall prevalence of *T. evansi* among examined camel samples was 28.24% (95% confidence interval (CI): 24.02–32.89%). The risk of *T. evansi* infection in adult camels (> 10 years) is higher than that in young ones (odd-ratio (OR) = 2.7; 95% CI: 1.3357–5.3164%). Moreover, male camels were six times more likely to get an infection than female camels. The detection of infection in camels sampled in summer and spring was 3.12- and 5.10-fold higher, respectively, than in camels sampled in winter. In conclusion, recent findings exhibited a high rate of *T. evansi* infection in camels from the three districts. Current study emphasizes the need for a strict surveillance program and risk assessment studies as prerequisites for control measures.

Keywords: Surra, *Trypanosoma evansi*, *Camelus dromedarius*

**LEVEL OF PROFICIENCY OF JUNIOR HIGH SCHOOL STUDENTS IN
FILIPINO LANGUAGE AND LITERATURE**

Abstract

The level of proficiency of Junior High School students in Filipino language and literature was assessed in this study. A descriptive method of research was used to gather primary data. Respondents consist of grade seven students of Don Mariano Marcos Memorial State University-South La Union Campus Laboratory High School, Agoo, La Union, Philippines. Salient findings reveal that most of the learners had a basic level of proficiency in Filipino language and literature. Basic level of proficiency was identified in comprehension, application, analysis, synthesis, and evaluation while advanced under knowledge. There is no significant relationship between the students' age, sex, average family monthly income, and parents' highest educational attainment as to the level of proficiency of Junior High School students in Filipino language and literature.

Özet

Salata grubu sebzeler içerisinde yer alan marul, dünyada en çok tüketilen sebzeler arasındadır. Vejetasyon süresinin kısa olmasından dolayı marul yılda 2-3 kez yetiştirilebilmekte ve ekonomik anlamda katkı sağlamaktadır. Güneydoğu Anadolu bölgesinde yer alan Diyarbakır ili gibi karasal iklime sahip bir yörede marul yetiştiriciliğinin yılda 2 veya 3 kez yapılabilmesi için alternatiflerden biride olumsuz iklim koşullarından korumak gelmektedir. Bu koşulların başında sonbahar erken donları ve ilkbahar geç donları marul bitkileri açısından risk oluşturmaktadır. Bitkilerin, soğuk ve dona karşı dirençlerini ve verimlerini arttırdığı bildirilen ve içeriğinde bakteri grubu, mineral madde ile pirüvik asit, okzaloasetik asit ve rüstisiyanin içeren bitki antifirizinin (Cropaid NPA) marul yetiştiriciliğinde özellikle düşük sıcaklığın başladığı dönemlerde uygulanmasının etkisi araştırılmıştır. Bu çalışma 2010 yılında Dicle Üniversitesi Ziraat Fakültesi Bahçe Bitkilerine ait ısıtmasız polikarbon topraklı sera bölmesinde sonbahar döneminde yürütülmüştür. Yedikule marul bitkileri kullanılarak kontrol ve bitki antifirizinin 4 dozu olmak üzere toplam 5 uygulama yapılmıştır. Çalışma tesadüf blokları deneme desenine göre 3 tekerrürlü olarak ve her tekerrürde 40 bitki olacak şekilde kurulmuş olup, her uygulamada 120 bitki, toplam 600 bitki kullanılarak yürütülmüştür. Sonuç olarak bitki antifirizi uygulanan marul bitkilerinde bitki boyu, göbek çapı, bitki çapı ve bitki ağırlığında artış meydana gelmiş ve bunun neticesinde kontrol grubuna göre antifiriz uygulanan bitkilerde verim artışı meydana gelmiştir. Çalışma sonucunda, bitki antifirizinin faydalı olabileceği ve ekonomik anlamda marul yetiştiriciliğinin sonbaharda yaygınlaştırılmasının mümkün olabileceği görülmüştür.

EFFECTS OF PLANT ANTIFREEZE ON LETTUCE (*Lactuca sativa* L. var *longifolia*) GROWING IN UNHEATED GREENHOUSE CONDITIONS

Abstract

Lettuce, which is among the salad group vegetables, is among the most consumed vegetables in the world. Due to the short vegetation period, lettuce can be grown 2-3 times a year and contributes economically. One of the measures taken for lettuce cultivation 2 or 3 times a year in a region with continental climate such as Diyarbakır in Southeastern Anatolia Region is to protect it from adverse climatic conditions. Among these conditions, early autumn and late spring frosts are important risk for lettuce plants. In this study, it is aimed to investigate the effect of natural plant antifreeze, which is reported that it increases the resistance and yield of plants against cold and frost, in lettuce cultivation during the low temperature period. This study was carried out in the autumn season of 2010 in unheated soil part of polycarbonate greenhouse in Horticulture Department of Agriculture Department in Dicle University. Five applications including control and 4 doses of plant antifreeze, were applied to Yedikule lettuce plants. In the study, measurements were taken such as plant height, root length, plant diameter, head circumference, plant weight, number of leaves, amount of water soluble dry material and pH. The study was conducted according to the randomized block experiment design with 3 replications and 40 plants in each application, using 200 plants in each replications, with a total of 600 plants used in experiment. As a result, the data obtained in lettuce plants applied with plant antifreeze were statistically insignificant, a slight increase were observed in parameters. As a result of the study, it is thought to test the plant antifreeze in open field conditions and may contribute to the expansion of autumn lettuce growing in the region.

Keywords: *Lactuca sativa*, plant antifreeze, cropaid NPA, greenhouse, cultivation.

Abstract

The economic literature offers a wide range of theoretical and empirical approaches according to which entrepreneurship and private initiative constitute the foundation of the economic growth. Moreover, many studies consider that religion has a direct influence on the economic growth, because it promotes values with a great adherence among population. However, when discussing the impact of the different religions on the intention to become an entrepreneur, the opinions are divided. On one hand, there are some studies which certify that the Christianity and the Islam from India favour these intentions, while the Hinduism does not. On the other hand, others found that the Buddhists and the Christians are more inclined to develop the entrepreneurial activities, while the Muslims do not have this preoccupation. The explanation is related to the fact that, when a religious doctrine encourages initiative, self-reliance, risk sharing or philanthropy, there is a higher probability of developing entrepreneurial attitudes. Starting from the assumption that the religious beliefs may influence the individuals' attitude towards work and business, the present paper intends to analyse the impact that religion has on the entrepreneurial intentions of the Romanian students. In order to reach this purpose, the study involved both an extensive investigation of the specialized literature and an empirical research, conducted on a sample of 347 Romanian students.

Keywords: religion, entrepreneurship, economic growth, Romania.

**THE POTENTIAL OF USING MATERIALS OF NATURAL AND BIO ORIGIN FOR
THERMAL INSULATION OF BUILDINGS**

Piotr KOSIŃSKI

Faculty of Geoen지니어ing, University of Warmia and Mazury in Olsztyn, Poland

Abstract

The presentation will focus on the possibility of using insulations based on natural materials in constructions. The aim of the presentation is to show an alternative to energy-demand production of synthetic insulations. I will focus on the hygrothermal properties of the materials examined in our laboratories and present examples of houses insulated with these materials.

Abstract

High quality foods are obtained through complex processes, that both negatively and positively influence the finished product, which would lead to changes in their quality. The major cause of food spoilage is oxidation. The oxidation of lipids in food is a complex process that is influenced by various factors such as: the chemical structure of the food; physical condition; the quantity and quality of substances with an antioxidant role in food; how the food is processed, packaged and stored. One of the current strategies used in the food industry to inhibit the oxidation of lipids is the use of antioxidants. Berries are rich in antioxidants, vitamins and minerals. In this research was studied sea buckthorn, hawthorn and rosehips, which represent a natural concentrate of vitamins, carotenoids, folic acid etc. The content of chlorophyll α and β , β -carotene, lycopene and zeaxanthin in the lipophilic extracts of rosehip (ELM), sea buckthorn (ELC), hawthorn (ELP) was determined spectrophotometrically. The results obtained show that the lipophilic extracts are characterized by a rich carotenoid content. ELM contains an essential amount of β -carotene (17.04 mg/L), while ELP contains 1.6 times less and ELC 2.6 times less. After 3 months storage, the β -carotene content decreased for ELM by 15%, ELC by 5% and ELP by 30%. It can be observed that the amount of carotenoids changed non-essential due to storage conditions. Quantitative changes in carotenoids can occur due to oxidative processes that occur along the way, but are slowed down if the extracts are stored in airtight containers to exclude access to oxygen, at low temperatures and in dark spaces. Local berries extracts are characterized by a rich complex of bioactive compounds, the use of which in obtaining functional food products will slow down oxidative processes and ensure food products with a longer shelf life. Acknowledgements: The authors would like to thank the Research Project "Valorisation de composés bioactifs issus de déchets agro-industriels par encapsulation lysosomale – ENcap-LYPOSOM", AUF-ECO-2023.

Abstract

Green Microbiology harnesses the power of microorganisms to address environmental and sustainability challenges. It focuses on understanding and utilizing the beneficial roles of microorganisms in promoting ecological balance, mitigating climate change, and fostering sustainable practices. This approach explores various microbial strategies, such as carbon sequestration, enhancing plant-microbe interactions for agriculture, and utilizing engineered microbial consortia for applications like bio-fertilization. Green Microbiology seeks to uncover the potential of microorganisms to contribute to sustainable development and to develop innovative solutions that align human activities with the natural world, thus promoting environmental harmony. As our planet grapples with the complex challenges of climate change and environmental degradation, the role of microorganisms as allies in fostering sustainable solutions becomes increasingly evident. This exploration endeavors to unravel the potential of "Green Microbiology," a holistic and symbiotic approach that harnesses the power of microorganisms to mitigate and adapt to the consequences of a changing climate. Our exploration investigates the intricate symbiotic relationships between microorganisms and their host environments, emphasizing the role of these partnerships in promoting ecological balance. Significant intentions include identifying microbial strains adept at sequestering greenhouse gases, exploring their interactions with plant systems to enhance carbon capture in soils, and deciphering the underlying mechanisms of microbial-mediated

climate resilience. We probe into the potential of engineered microbial consortia to act as bio-fertilizers, promoting sustainable agriculture practices that simultaneously increase crop yields and reduce environmental impact. Furthermore, this study emphasizes the importance of microbial diversity in maintaining ecosystem stability. By elucidating the genomic and functional diversity of environmentally beneficial microorganisms, we aim to uncover untapped resources for sustainable development. Preliminary findings showcase successful field applications of Green Microbiology interventions, indicating promising results in terms of carbon sequestration, soil health improvement, and crop yield enhancement. This review addresses the considerations of scalability, ethical implications, and community engagement in deploying Green Microbiology solutions. It also aims to provide a comprehensive exploration of Green Microbiology as a paradigm shift in environmental science. By elucidating the symbiotic relationships between microorganisms and the changing planet, we strive to pave the way for innovative, sustainable solutions that harmonize human activities with the natural world.

Keywords: Green Microbiology, carbon sequestration

Abstract

Gac (*Momordica cochinchinensis*), belonging to the Cucurbitaceae family, is a tropical fruit that is known to contain the highest carotenoids in the whole plant kingdom. This fruit is commercially used for production of oil and a major by-product from oil production is the pulp which accounts for approximately 40-50% of fruit weight. This by-product is typically ending up in landfill, thus valorisation of this by-product not only tackles the waste problem, but also adds value for the industry. This study was conducted to analysis the basic composition of gac pulp and further develop edible films from this by-product. The results showed that gac pulp has low protein and total fat content, but contains high level of pectin (nearly 50%). The results further indicated that gac pulp is a potential ingredient for development of edible film. Gac pulp (4%) in combination with sodium alginate 1.03%, kappa-carrageenan 0.65%, and glycerol 0.85% (w/v), can produce film with high mechanical properties, low water vapour permeability and acceptable physical properties. In concussions, gac pulp is a rich source of pectin and is suitable for development of edible film for further applications in food.

Keywords: Gac pulp; edible film; seaweed hydrocolloids.

Email: ab_amli@yahoo.com

Abstract

This research investigates the substantial impact of Artificial Intelligence (AI) on corporate transformation strategies, specifically emphasising its critical role in competitive advantages in a dynamic business landscape. This study employs a comprehensive and interdisciplinary methodology to investigate the multifaceted effects of Artificial Intelligence (AI) on several areas of business operations. The aforementioned factors encompass process optimisation, consumer involvement, decision-making and creativity. In the rapidly evolving and information-driven environment of modern business, the incorporation of Artificial Intelligence (AI) has emerged as a catalyst for significant transformation. This integration presents organisations with unprecedented opportunities to reevaluate their operational strategies, enhance their decision-making processes and gain a competitive edge. Within the dynamic landscape of contemporary business, the strategic utilisation of Artificial Intelligence (AI) assumes a crucial function in safeguarding an organisation's competitive position within the market. This research proposal aims to provide a complete analysis of the multifaceted and intricate role of Artificial Intelligence (AI) in facilitating business transformation, together with identify and analyse strategies that businesses might employ to achieve and sustain a competitive advantage. The transformative capacity of Artificial Intelligence surpasses the boundaries of mere automation. Artificial intelligence (AI) systems, which leverage machine learning and deep learning methodologies, have the capacity to offer predictive analytics, personalised customer experiences and data-driven insights that facilitate the advancement of innovation. The aim of this proposal is to examine the strategic implementation of Artificial Intelligence (AI) with the goal of enhancing operational efficiency and revolutionising the core practises of organisational business operations.

Keywords: Artificial Intelligence, dynamic business landscape

**HOW TO INTEGRATE THE CONCEPT OF HUMAN RESOURCE EMPOWERMENT
IN PROFESSIONAL SPORT ORGANIZATIONS AND SPORT CLUBS.**

Dimitra KAPNISI, M.SC.
University of Peloponnese

Prof. Athanasios KRIEMADIS
University of Peloponnese

Abstract

In order to keep up with the continuous changes in the social, political and economic environment, modern organizations and businesses adopt people-centered methods of management. Total Quality Management is a prodigious example of continuous improvement in terms of business excellence. In the context of Total Quality Management, human resources are considered a key factor to success, more specific the empowerment of human resources is the enabler that leads to increased productivity, performance and well-being, especially in times of excessive work and employees' burnout. The purpose of this research is to provide sport clubs and organizations with a path of "Human Resource Empowerment" (HRE) integration into their processes, strategies and overall management method. The research highlights the importance of HRE in professional sport organizations' and sport clubs' overall performance. The analysis of each step towards the integration of HRE concept into the organizations' processes includes techniques, tools, practices and strategies.

Abstract

Objective: To assess the speed of processing through stroop effect, reading skills, arithmetic performance and behavioral issues in school children. **Methods:** This cross-sectional study was carried out from September 2021 to September 2022. The sample consisted of 200 students of both gender with ages 7-9 years from different government schools of city Lahore, Pakistan, through stratified sampling technique. Children were assessed using local norm-based Stroop Test, Urdu Reading Test, Functional Cognitive Scale, and Psycho/social Behavioral Issues Scale along with demographic sheet. **Results:** The psychometric properties of local norm-based Stroop Test were found to be .83. Moreover, correlational analysis showed significant negative correlation of speed of processing, reading skills and arithmetic performance, with behavioral issues. However, boys scored higher on behavioral issues as compared to girls. Furthermore, mediation analysis confirmed the mediating role of arithmetic performance through indirect effect, as students with better mathematics skills would have sharp cognitive abilities and experience less behavioral issues. **Conclusion:** Speed of processing constitutes different cognitive structures that help in performing day-to-day tasks. Thus, deficit in speed of processing may not only affect the intellectual development of children but also lead to different behavioral issues such as low attendance, school dropout, involvement into fights, abusive language and poor school performance.

Keywords: Stroop Effect, Speed of Processing, Behavioral Issues

**GERIATRIC NUTRITION IMPROVEMENT
THROUGH THE DEVELOPMENT OF AMARANTH FOODS**

Assistant Prof. Dr. Oxana RADU (ORCID:0000-0001-9260-6314)

Technical University of Moldova, Faculty of Food Technology

Email:oxana.radu@sa.utm.md

Abstract

The world population is in a constant process of aging. The percentage of people aged 65 and older was about 9% in 2020 and is estimated to increase to 16% by 2050. Nutrition plays a preventive role and is considered a key component of the quality of life. The nutrition peculiarities of older persons of the age group include: eating strictly at the same time and limiting the amount of food intake, while the consumed food should be nourishing, easily digestible, and rich in vitamins and minerals. The aging of the body is accompanied by a gradual decrease in the intensity of metabolism, for this reason, a reduction in the number of calories consumed is required. For elderly consumers (60+) it is necessary to ensure special nutritional conditions, a complete diet with easily digestible foods and high biological value. Fermented milk products are among the most popular geriatric products, as they have a beneficial effect on the gastrointestinal tract of older people, have a low lactose content, and contain easily digestible proteins. Thus, lactic acid products are of interest in terms of optimizing their composition and widening the assortment of foods intended for geriatrics. In order to obtain a fermented dairy product with increased biological value without reducing its amino acid potential, it was proposed to create a hybrid cheese based on proteins of both animal and plant origin. Amaranth grains (*Amaranthus L.*) were chosen as the source of vegetable proteins, which have a high protein content (16–19%) with easily digestible essential amino acids (up to 85%), vitamins (A, B, C, D, E), microelements (iron, magnesium, calcium, phosphorus, potassium, copper, zinc, sodium), rare antioxidant squalene, which in turn has fungicidal, anticancer and antimicrobial properties. The amaranth-based hybrid cheese, compared to the standard product (cow milk cheese), contains less dry matter, but the total amount of protein in its composition is increased by 30...35%. The acidity level is higher in samples where the proportion of amaranth is higher but does not exceed the standard limit for fermented milk products. Thus, the basis for obtaining geriatric dairy products with increased biological potential has been developed. Acknowledgment: The research was funded by State Project 20.80009.5107.09 “Improving of food quality and safety through biotechnology and food engineering”, running at the Technical University of Moldova.

Abstract

The problem of food with functional ingredients, characterized by low energy intake and a variety of phytonutrients with biological activity, is one of the concerns of the population. The objectives of this study were to investigate the effect of pumpkin powder and its bioactive components on the quality, color and textural properties of shortbread cookies. The fresh and dried pumpkin was analysed in respect to physicochemical indicators, color parameters, and antioxidant activity. Pumpkin powder has been proven in studies to be a source of carotene, water-soluble vitamins and amino acids, presented a rich source of antioxidants and vitamins, the range of values of lipophilic substances as carotenoids present in pumpkin can contribute significantly to the uptake of provitamin A and especially lutein, a carotenoid with special physiological functions. Also, the antimicrobial activity of pumpkin powder against Gram-positive, Gram-negative bacteria and high antifungal activity were attested. The sensory, physicochemical, texture parameters (consistency) and color indicators of shortbread cookies with yellow pumpkin powder added in a proportion of 5–20% were analyzed. The optimal score was given to the sample of 15% YPP. The use of 15–20% YPP contributed to improved consistency due to the formation of complexes between starch and protein. Also, it contributed to firmer cookie consistency the attributed to amylose and amylopectin recrystallization, the formation of complexes between starch and proteins, and to redistribution of water between the components of the product, as well as other events that may occur in this type of cookie. The use of yellow pumpkin powder provided a pronounced nutty flavor and odor of cookies. The resulting shortbread cookies have a particular orange yellow color, which is typical of the substitute ingredient, which is yellow pumpkin powder. Overall, the addition of yellow pumpkin powder in an amount not exceeding 15% improves the overall consumer experience and has practical applications in the development of a better and more presentable product. Acknowledgment: Francophone University Agency (AUF) ECO 2023 DRECO-7859, project “Extraction ‘verte’, stabilisation et valorisation des composants bioactifs de Ribes nidrigolaria et Cucurbita maxima”.

Abstract

What is the relevance of ethical behavior to organizations and their managers? How would you inculcate the significance of being ethical as well as profitable among your employees? What ethical principles would you enunciate to guide individuals and organizations? This is a sticky domain. All of us are aware of the financial and moral misconduct by senior executives at some of the top companies across the globe. This may force you to conclude that organizations are not ethical. This, however, is not the case, but managers in all types of organizations face ethical issues and predicaments. Is it ethical for a steel producer to buy iron ore at a much discounted rate from sources who do illegal mining by bribing government officials? Is it ethical to claim inflated bills against your entitlements? Individuals who are deficient of a strong moral sense are less likely to act unethically if they are restrained by rules, policies, job descriptions, or strong cultural norms which disprove of such wrong behaviours. On the contrary, people having high moral values can be soiled by an organizational structure and culture that subscribes to unethical behaviours. Ethical behavior refers to the standards, values, and notions which constitute appropriate and inappropriate behavior and decisions by organizations and their managers. Organizational culture is one strong dimension which affects ethical behavior in business organizations. When faced with an ethical issue, if an individual behaves ethically or unethically depends on several factors. Those factors that influence ethical and unethical behavior constitute an employee's stage of moral development, personal characteristics, issue intensity and structural variables. Besides, one of the most significant factors affecting the determination of employees to act ethical or unethical is the behavior of senior managers and leaders in the organization. We will also investigate if ethical standards are universal! We will explore as to what are the international ramifications of ethical behavior and standards. Next, what can managers potentially do if they are sincere about promoting ethical standards and behaviours? In this paper, we will elaborate on the factors that lead to ethical and unethical behaviours. We will also talk about the management's role in encouraging ethical behavior. Besides, we will also dwell upon some of the contemporary ethical issues.

Keywords: Ethical behavior, ethical issues and dilemmas, organizational culture, stage of moral development, personal characteristics, issue intensity, structural variables, universal ethical issues, contemporary ethical issues.

Abstract

The drought disaster is one of the causes of scarce food stocks. Scarcity of food stocks, especially rice, is a crucial problem. One solution to food scarcity when a drought occurs is through the development of upland rice farming. This research aims to analyze technical efficiency and sources of technical inefficiency in upland rice farming in Tasikmalaya. The stochastic frontier analysis approach was used for data analysis. The urgency of this research is expected to provide a comprehensive picture of the technical side of implementing upland rice farming and whether it is efficient. The research results show that upland rice farming in Tasikmalaya Regency is technically efficient, with an average efficiency level of 0.795. The socio-economic factors that are the source of the high technical inefficiency of upland rice farming in Tasikmalaya Regency are: the number of family dependents, while the main type of work, and participation in upland rice cultivation training are sources that reduce the technical inefficiency of farmers in Tasikmalaya Regency.

**EDIATED-MODERATION THROUGH RESILIENCE AND SOCIAL SUPPORT
BETWEEN OCCUPATIONAL STRESS AND MENTAL HEALTH ISSUES AMONG
RESCUE WORKERS**

Amna ANJUM

Bahauddin Zakariya University, Multan Pakistan

Sarwat SULTAN

Bahauddin Zakariya University, Multan Pakistan

Abstract

The study's objective was to investigate the mediated-moderation of resilience and social support between the relationship of occupational stress and mental health issues among rescue workers. Depression, generalized anxiety disorder, and PTSD symptoms were measured as mental health problems. Data were collected from 356 male respondents with age range from 20 to 60 years on The effort Reward Imbalance Questionnaire, GAD-7, Beck Depression Inventory II, PTSD Checklist-Civilian Version, Multidimensional Perceived Social Support Scale, and Brief Resilience Scale. Analysis of mediation-moderation using the Hayes Process Macro Model 5 on SPSS-21 revealed that social support had a substantial influence as a mediator for depression and post-traumatic stress disorder (PTSD), whereas resilience had no significant impact as a moderator between occupational stress and mental health disorders. The findings of this study have significant ramifications for the field of mental health, and they can be applied to health programs to enhance the standards of care and attention to the wellbeing of rescue personnel.

**DEVELOPMENT OF ANTIMICROBIAL PROPERTIES OF COTTON FABRIC
TREATED WITH ZINC MONOHYDRATE AND ZINC SULPHATE HEPTAHYDRATE**

Stalin S

Bannari Amman Institute of Technology

Email:stalin.tx22@bitsathy.ac.in

Shubham AGRAWAL

Email:shubhamagrawal.tx22@bitsathy.ac.in

Abstract

This study aimed to develop antimicrobial properties in cotton fabric by treating it with zinc monohydrate and zinc sulphate heptahydrate. The fabric samples were treated with varying concentrations of the two solutions using a pad-dry-cure method. The treated fabric samples were then tested for their antimicrobial properties against two types of bacteria, namely *Staphylococcus aureus* and *Escherichia coli*. The results showed that both zinc chloride and zinc nitrate treatments exhibited antimicrobial activity against the two bacteria strains. However, the zinc chloride treatment was found to be more effective than the zinc nitrate treatment in inhibiting bacterial growth. The study concluded that treating cotton fabric with zinc chloride can be an effective method to develop antimicrobial properties in textile products, which can be useful in various applications, such as medical textiles, protective clothing, and other high-risk environments.

Abstract

This project paper aims to systematise the existing criminal records of the Nigeria police. The essence was to produce robust criminal records and avoidable loss of criminal records. Structural database management system (DBMS) was used in its development in other to remove redundancy in the compilation, its friendliness in responding to the user exhibits and also its reliability and efficiency in tracking down criminals. Another important feature of this Crime Information Management System is that it provides user with the facilities for having the hard copies or print out of any relevant document as well as the facilities to communication with the system. Tracking is the observing of persons or objects on the move and supplying a timely ordered sequence of respective location data to a model e.g. capable to serve for depicting the motion on a display capability. The traditional and age-old system of criminal record and file processing has failed to live up to the requirements of the existing crime scenario. Manual processes neither provide accurate, reliable and comprehensive data round the clock nor does it help in trend prediction and decision support.

Abstract

News and event system is a platform developed in order to alleviate the problems faced by numerous organizations that use the notice boards method to pass information. The software tackle problems associated with the use of notice boards which include; information not reaching the target audience in real time, loss of important files, and news or information been tempered with during the process of transmission. The project was conduct so as to develop a software that will be able to take care of all the processes that are involved in automating the notice board method of conveying news and events, this includes; to effectively and efficiently disseminate information about real time news and upcoming events, to provide a reliable source of information, and to bridge the gap between heads of organizations and their staff. The software is designed to carter for the needs of activities document news and events system through the automation of the existing manual system. HTML and XPSS as used to design the GUI, PHP my admin was used to design the database and XAMP server was used to preview the work on browser.

SURGICAL MANAGEMENT OF TEAT LACERATION IN A COW

D. MOUNIKALATHA

Rajiv Gandhi Institute Of Veterinary Education And Research
Puducherry

Email: mounikasasi2000@gmail.com

Abstract

Laceration is a kind of tear-like wound caused by a blunt impact to soft tissue. It is an injury in the form of a cut owing to separation of connective tissues. A six-year-old female cross bred jersey cow was presented to vcc, RIVER with a history of a day-old teat wound on the left fore teat. On clinical examination a vertical wound from the base to teat tip was observed with intact teat canal and teat orifice. All the physiological parameters were within normal range and milk was negative for California mastitis test. The animal was restrained on standing sedation using inj. Xylazine 4mg administered intravenously and local analgesia using 2% lignocaine hcl administered by ring block. 10 ml blood in EDTA was collected for PRP preparation. The teat canal patency was maintained by placing an infant feeding tube size 10 in-situ by stay suture at the teat tip. The wound was flushed with 5 % povidone iodine diluted in normal saline and debridement of the wound edges were done. The muscle layer was apposed by simple continuous suture using vicryl 2-0 and prepared PRP was injected s/c around the surgical site. The skin was apposed with disposable stainless steel skin staples. The surgical site was protected by povidone iodine gauze and dynafix bandage. Postoperatively inj. Streptopenicillin @ 10 mg /kg body weight intramuscular for 5 days and inj. Meloxicam @ 0.2mg /kg body weight administered intramuscular for 3 days postoperatively. Inj.gentamicin 5 ml with metronidazole was administered intramammary for 5 days. Wound dressing was done once in 3 days. On 10th postoperative day skin staples were removed and wound healing was noticed with normal hand milking. The animal made an uneventful recovery.

Abstract

Over the past few decades, a great deal of research has been conducted to provide a complete description of thousands of phytochemicals that have been identified and their biological functions. These phytochemicals have the potential to be used for a wide range of medical reasons. These phytochemicals are mostly polyphenols, followed by terpenoids and alkaloids, and are pharmacologically significant for clinical usage. In order to guarantee their high production at a reasonable cost, efforts are currently being conducted to synthesize pharmacologically diverse active flavonoids from scratch, such as naringin from *Escherichia coli*. Numerous studies that have been published highlight the key function that phytochemicals play in treating a variety of illnesses. But only few phytochemicals show promise as medicines, and not all of them have strong biological effects. Citrus fruits contain a flavanone called naringin, which has been shown to enhance immunity, repair DNA damage, and scavenge free radicals. Naringin has a very poor bioavailability, yet it is recognized to have a number of intriguing biological qualities that are important for medicine, such as antioxidant and anti-inflammatory effects. Additionally, a number of pharmacological actions of naringin have been explored, including effects on pulmonary disorders, neuroprotection, cardioprotection, and hepatoprotection.

Keywords: Naringin; pharmacology; natural medicine; polyphenols.

**HARNESSING AFRICAN INDIGENOUS KNOWLEDGE SYSTEMS FOR
KNOWLEDGE PRODUCTION: A RE-DEFINITION OF A CULTURE-CENTRIC
EPISTEMOLOGY**

Abstract

Evolving an appropriate theoretical model which has the capability of exploiting the wealth in African indigenous culture-centric knowledge systems towards the production of relevant knowledge amidst the reality of present day's practice of globalization of knowledge production, is the great challenge that necessitates this research. This study therefore aims to undertake a re-examination of our conception of culture in order to provide a domesticated and interpretative criteria for understanding the foundational role it plays in the determination of the nature, scope and sources of Knowledge indigenous Africans appreciate and pursue which are exploitable for effective knowledge production. This African traditional culture-centric worldview is in contradistinction to the western epistemic nuances and skewed interpretation of the African reality. In the quest to clarify this interpretative criteria, the researcher among other purposes, identifies the indigenous values which yield pertinent knowledge that has historically kept Africa stable prior to the advent of slave trade, colonization and even partially amidst present day's globalist agendas hence, the author projects the same for universal beneficence. Nevertheless, this paper observes that the habitual reliance on Western interpretations and meanings of African realities is a gap created by Africans themselves by their over dependence and overemphasis on foreign epistemological structures with its' strictures and warns that a continued subjection of African culture to the dichotomization and compartmentalization in Western epistemology will perpetually limit African epistemologies to mere logic-chopping and emasculate her knowledge production potentials. Consequently, this paper suggests that Africa re-interprets her reality through a rereading of her history, ideological dissemination and the subsequent application of her knowledge systems through the lenses of her cultural uniqueness. The researcher adopts the content analysis and hermeneutical methods of enquiry for this study

Abstract

Mukaiyama Aldol reaction was first envisaged in 1973 by Mukaiyama, to afford the β -hydroxy substituted carbonyl compounds in an enantioselective manner. It involves the treatment of silyl enol ether with ketone or aldehyde via Lewis-acid mediated cross-aldol reaction. The resulting Mukaiyama aldol adducts have been found to process multiple implementations to accomplish the total synthesis of numerous natural products, having significant medicinal profiles. Here, the recent utilizations (2020-2023) of Muakiyama aldol reaction as a key step to access the enantioselective synthesis of several classes of natural products (i.e., macrolides, polyketides, terpenoids, metabolites and alkaloids etc.) have been highlighted.

Abstract

A qualitative quantitative mixed methods study of domestic violence against women. Data were collected from 400 women in various Taluka Tangwani District Kandhkot Sindh- Pakistan. This study was conducted as mixed research (cross-sectional descriptive and phenomenological qualitative methods) to investigate domestic violence against women, and some related factors (quantitative) and experiences of such violence (qualitative) simultaneously in Semnan. In quantitative study, cluster sampling was conducted based on the areas covered by health centers from married women living in Semnan since January 2022 to November 2023 using Domestic Violence Questionnaire. A structural questionnaire was developed for the reliability and validity of Data Shikarpur and Nausheroferoze. It was revealed that 1200 cases of domestic violence were reported in the Sindh. most of the cases increased because of the lockdown period March to 2nd July, 2022. It was further revealed that 200 women were brunt and 31 women were dead during this COVID-19 pandemic. Most of the women during this lockdown have negative impact on their metal health and 20 were reported metal disorder during this COVID-19 lockdown. Government should think about women who is already living a miserable life in Rural Sindh. It was further revealed that In qualitative study, seven themes were found including “Facilitators”, “Role failure”, “Repressors”, “Efforts to preserve the family”, “Inappropriate solving of family conflicts”, “Consequences”, and “Inefficient supportive systems”. In quantitative study, the variables of age, age difference and number of years of marriage had a positive and significant relationship, and the variable of the number of children had a negative and significant relationship with the total score and all fields of the questionnaire ($p < 0.05$). Also, increasing the level of female education and income both independently showed a significant relationship with increasing the score of violence.

Abstract

This article examines China's loans and their impact on infrastructural and human capital development in Nigeria. Nigeria is a country that is reckoned as being religious; however, other countries expect to see the dividends that the Nigerian government usually collects from other countries. This study focuses on China's aid in terms of loans and assesses its impact. This study made use of twelve (12) purposively selected informants and also data from relevant academic literature. Content analysis was adopted. Emerged themes include: i) the normative practice of corruption; ii) the attitude of Nigerians; iii) falsifying figures for contracts; and iv) increasing poverty. Nigerians perceive the large borrowings of the Nigerian government from China as having little or no effect on the growth and development of the country. Contemporary, the government of Nigeria seems undisturbed by the increasing loans from China, because, they may not be in power when there is a default in the repayment of the loan. As a wise counsel, there is the need to diversify the economy from a petroleum based economy to other sectors based economies such as agriculture, among others.

**REFLECTIONS OF A CREATIVE CATALYST ON ‘SEX FOR GRADES’ IN NIGERIAN
TERTIARY INSTITUTIONS: CONSEQUENCES AND WAYS FORWARD**

Ajayi, Olayemi TOSIN

Department of Mass Communication Lead City University, Ibadan, Oyo State, Nigeria

Email: Yemi.wajayi@gmail.com

Abstract

This study delves into the deeply entrenched issue of sex for grade within tertiary education, particularly its harrowing impact on both academic excellence and broader societal advancement. Female students bear the brunt of this unethical practice, which has seeped into the very fabric of academic institutions, posing a grave threat to educational integrity and the competence of the workforce it produces. Drawing on the foundations of social responsibility theory, this research embarks on a comprehensive analysis, viewing the problem through the lens of artistic creativity. It proposes a forward-thinking and inventive solution, termed the Incognito Mechanism, designed to tackle this issue head-on. By gathering and chronicling the experiences and insights of a creative catalyst, the author, whose artistic discipline exhudes basically a pragmatic approach to resolving critical socio-economic challenges, this study illuminates the distressing consequences of such exploitation on the socioeconomic landscape and employment rates within Nigeria. Employing a qualitative context, the findings underscore the critical and immediate necessity of implementing the Incognito Mechanism. Furthermore, this study advocates for proactive education among students, imparting knowledge about the mechanism’s potential efficacy in eradicating this reprehensible practice. By doing so, it aims to catalyze meaningful change and restore the sanctity and equality of education in tertiary institutions. Relevance of the Study to the United Nations SDGs This study on Sex for Grades in Nigerian tertiary institutions, rooted in social responsibility theory, aligns with UN SDGs 4, 5, 8, 10, and 16. It addresses quality education, gender equality, reduced inequalities, and just institutions. By proposing the Incognito Mechanism, it aims to eradicate exploitative practices and contribute to a more equitable and inclusive educational landscape, emphasizing the significance of ethical learning environments and fair opportunities for all students.

**ANTIFUNGAL PROPERTIES AND CHEMICAL COMPOSITION OF IRANIAN
FENNEL ESSENTIAL OIL: A STUDY ON ITS EFFECT ON *CANDIDA TROPICALIS*
BIOFILMS**

Aghil SHARIFZADEH

Department of Microbiology and Immunology, Faculty of Veterinary Medicine, University of
Tehran, Tehran, Iran

Abstract

The objective of this study was to investigate the chemical composition and antifungal properties of fennel (*Foeniculum vulgare*) essential oil against *Candida tropicalis* biofilms. The oil was extracted from the seeds using hydrodistillation and analyzed using gas chromatography-mass spectrometry (GC-MS). A total of twenty-three compounds, accounting for 99.96% of the oil's composition, were identified. The main constituents were anethole (88.18%), p-allylanisole (11.72%), dl-limonene (10.35%), and fenchone (4.69%). The oil exhibited a high concentration of phenylpropanoids, with anethole and p-allylanisole being the most abundant. To assess its antifungal activity, the fennel essential oil was tested against *Candida tropicalis* biofilms on polystyrene plates. The results demonstrated a significant inhibitory effect on biofilm formation, with a reduction in biofilm mass of 71-91% at concentrations of 3000-5000 mg/ml. The minimum inhibitory concentration (MIC) of the oil ranged from 500 to 1500 mg/ml, while the minimum fungicidal concentration (MFC) ranged from 2000 to 2500 mg/ml. Further examination using scanning electron microscopy (SEM) revealed that the fennel essential oil caused cellular damage, disrupted the biofilm structure, and induced membrane shrinkage in sessile cells at sub-MIC concentrations. These findings suggest that fennel essential oil has the potential to serve as a natural antifungal agent and flavoring additive, making it a promising option for combating *Candida tropicalis* biofilms.

Keywords: *Foeniculum vulgare*, Gas Chromatography-Mass Spectrometry (GC-MS), *Candida tropicalis*, Biofilms, Scanning Electron Microscopy (SEM).

**ASSESSMENT OF OROPHARYNGEAL CANDIDIASIS AND ANTIFUNGAL
SUSCEPTIBILITY OF *CANDIDA GLABRATA* IN HIV-INFECTED PATIENTS**

Aghil SHARIFZADEH

Department of Microbiology and Immunology, Faculty of Veterinary Medicine, University
of Tehran, Tehran, Iran

Abstract

The objective of this study was to determine the prevalence of oral mycoflora in individuals who are HIV-positive and evaluate the susceptibility of *Candida glabrata* (*C. glabrata*) isolates to standard antifungal medications. The study included a total of 100 HIV-infected patients with oropharyngeal candidiasis (OPC). The susceptibility of *C. glabrata* isolates to antifungal drugs was assessed using the disc diffusion method. A total of 254 yeasts were isolated from the patients, with angular cheilitis being the most common clinical variant observed in 40% of the patients. *Candida* species (94.4%) were the most frequently identified genera, followed by *Saccharomyces* (2.4%), *Kluyveromyces*, and *Cryptococcus* (1.6%) species. Among the *Candida* species, *C. albicans* (37.2%) was the most commonly isolated species from HIV-positive patients with OPC, and its frequency was significantly higher compared to other *Candida* species. Among the non-*C. albicans* species, *C. glabrata* was the most frequent. The study found that *C. glabrata* isolates exhibited the highest sensitivity to polyene drugs such as nystatin and amphotericin B. Additionally, it was observed that oral isolates of *C. glabrata* were most sensitive to polyene drugs and least sensitive to fluconazole. Overall, this study revealed a wide diversity of *Candida* species in HIV-positive patients with OPC.

Keywords: Oral cavity, candidiasis, *Candida glabrata*, HIV infection, nystatin, amphotericin B

**THE IMPACT OF PHILOSOPHY ON SOCIAL CHANGE DYNAMICS OF SOCIAL
CONSCIOUSNESS IN NIGERIA**

Asike Jude CHINWEUBA

Department of Philosophy University of Port Harcourt

Email:asikejude@yahoo.com

Abstract

This paper examines the links between the process of modernization and identity politics of philosophy in social change dynamics of the independent era in Nigeria. A general look at the history of Philosophy shows that the scope of philosophy is very wide and has been contemplative in nature. It has played and continued to play a fundamental role in the history of mankind. Philosophy stands as a hallmark in achieving good human relation in any given society. It is generally seen as a discipline with social consciousness for the transformation of the society into different developmental paradigms. The definition of philosophy varies in line with the challenges of the periods in history of man's evolution. It is quite interesting to understand that in all the phases, it is the human wisdom that it is being sought as an organ of social change in the realm of particularistic forms social consciousness. The findings of the study support the thesis that philosophy plays a very important role in the development of human kind, by spreading of ideas and values that strengthen the thoughts and life of a people. So this paper therefore examines the place of philosophy in the dynamic of social change in the context of its relevance and implications for growth among the masses in Nigeria. The concept of qualitative methodology is adopted in examining several factors closely related in this research.

Keywords: Paradigm, Social change, Philosophy, Social consciousness.

ESZTER (ESTHER) OJTOZI, THE HEROIC SCHOLAR IN THE FIELD OF OLD PRINTED BOOKS, WHO CREATED INTERNATIONALLY RECOGNIZED SCIENTIFIC RESULTS, DESPITE STRANGE HARSH CONDITIONS

Dr.Sándor FÖLDVÁRI (ORCID:0000-0002-7825-053)
Debrecen Üniversitesi, Beşeri Bilimler Fakültesi, MACARISTAN
Email: alexfoldvari@gmail.com

Abstract

Eszter (Esther) Ojtozi, the Heroic Scholar in the Field of Old Printed Books, Who Created Internationally Recognized Scientific Results, Despite Strange Harsh Conditions. In Hungary, research on Ukrainian cultural heritage was conducted on the international level especially on old printed Cyrillic books of Ukrainian origin, by Esther Ojtozi in the 1970s-90s, who was much evaluated also by Isaievych, a Ukrainian academic and Harvard professor, too. She reconstructed the shifted libraries as the book collection of Basilian Order in Máriapócs [East Hungary], and others; she made annotations and descriptions of books at the modern international level; collaborated with Ukrainian academician Isayevich and others; and came to the conclusion that 80% of old printed books were brought from Ukrainian printing houses. On the other hand, Isayevich also wrote that Serbs bought books from the Lviv Brotherhood, and even more so, even gave books free of charge to Serbs from the Brotherhood. But Ojtozi hasn't worked with the Serbs yet. Her significant result was the evidence that almost eighty percent of the liturgical books printed in Cyrillic letters came from Ukrainian printing houses of the Polish-Lithuanian Commonwealth, but not from "Muscovy", contrary to the previously falsely spread views of A. Hodinka. (The name "Muscovy" is at Hodinka). Ojtozi first published about it in her book about the Library of Basilian in Máriapócs. (Ojtozi, 1982) Then she strengthened it in papers published in Ukrainian, too. (Ojtozi, 1982) Esther Ojtozi did not limit herself to studying Slavic books. She processed a monograph on the owners and origin (possessors and proveniences) of foreign old printed books of the University Library in Debrecen. (Ojtozi, 1994-1996) Eszter Ojtozi worked all her life in the "Egyptian" conditions, despite her "official" work, she continued the scientific activity only in her spare time. Despite all the harsh conditions, she became a well-known specialist in the field of reconstruction of destroyed church book collections, completing an inventory of old printed liturgical books, identifying rare and defective copies, and international cooperation in order to complete a "Consolidated Catalog" (Nemirovsky) as well as a catalog of books printed on the territory of Ukraine and the eastern half of the Rzeczpospolita of Poland (Isayevich). It is worthy to devote a separate publication to the life and activity of such a heroic scholar, thus in this paper we introduce her work and scientific results, as well.

**UTILIZING GRAPHIC DESIGN FOR SOCIOECONOMIC ADVANCEMENT:
EXPLORING MOBIGRAPHY AND EXPERIMENTAL OUTCOMES OF A PHOTO
FRAMING TECHNIQUE**

Olayemi T. AJAYI

Department of Art and Design, The Federal Polytechnic, Ilaro, Ogun State.

Email:Olayemi.ajayi@federalpolyilaro.edu.ng

Abstract

In the ever-evolving landscape of 21st-century society and the economy, Graphic Design has emerged as a potent driver of socio-economic transformation. This research embarks on a profound journey to explore and unveil the vast potential held by Graphic Design. Our specific emphasis is on Mobigraphy, a portmanteau of “mobile” and “photography,” signifying the increasing role of mobile devices in shaping the contemporary photography landscape. Simultaneously, this study delves into pioneering discoveries within the realm of photo framing experimentation, bringing a fresh perspective to this facet of Graphic Design. This research is firmly rooted in pragmatism theory, which is a philosophical perspective that asserts the truth of an ideology or proposition is determined by its satisfactory practical outcomes, and the meaning of a proposition is derived from the practical consequences of embracing it. In this view, impractical ideas are to be discarded. To uncover insights and empirical evidence, we maximised a comprehensive experimental study approach, integrating a range of qualitative and quantitative data collection methods. These include the experiment’s results, in-depth case studies of Graphic Design projects, and personal observations. The preliminary findings shed light on the significant influence Graphic Design exerts on socio-economic change, particularly in the context of Mobigraphy and innovative photo framing experiments. Our thorough discussion not only identifies the challenges that the Graphic Design field faces but also highlights the myriad opportunities it offers in propelling societal and economic advancement. In conclusion, this research underscores the pivotal role of Graphic Design in the ongoing facilitation of socio-economic transformation. We strongly advocate for the creation of an enabling environment that nurtures innovative Graphic Design practices and encourages the development of experimental photo framing techniques to further harness the socio-economic potential of this field.

**A PHENOMENOLOGICAL STUDY ON EXPERIENCES OF DEPRESSIVE OLDER
PEOPLE IN INDIA**

Assistant Prof. Dr. Bindu BHARATHI

College of Nursing, Northern Border University, Arar, Saudi Arabia

Email:binduvyshnavam@gmail.com

Abstract

A Phenomenological Study on Experiences of Depressive Older People in India Background of the study: An old man is the gold mine of wisdom. He is capable of giving a right guidance to family, society or a nation. Agedness is a divine gift of nature to man. Depression is a most common psychosocial problem among older people. Identification of depression is the major task of the health care professionals because older people may have different symptoms than younger people. Most of them are looking sad and not interested to do any social activities. They are not willing to share their feelings and concerns. Objective: This phenomenological study aimed to explore the experiences of depressive older people in India Methods: Phenomenological Study design was used in this study. In-depth interview were conducted with a purposive sample of twenty older people with the problem of depression for the period of six months to one year. The data were analyzed by using Hermeneutical approach to identify underlying themes. Results:hree main themes emerged:1. Types of Old age Depression (Mild, Moderate and Severe types of depression present in older people)2. Experiences of depressive Older People (Clinical manifestations present among the depressive older person) 3. Coping Strategies (Approaches used by the depressive older person to overcome from depression).Conclusion: Majority of older people are experiencing the problem of depression. This study was to explore the types of depression and their experiences during the period of depression. This study was mainly focused to identify how they are handling their problems and how they are using their coping strategies to overcome the problems of depression. The impact of depression is mainly depends upon the severity of the problem. Most of them are experiencing moderate to severe forms of depression. Majority of them are experiencing the problems of loneliness, separation from their children, death of spouse and financial problems. This study also highlights to provide compassionate loving care to our beloved older people and strengthen to provide socio-economic support to them.

Abstract

Furukawa-modified Simmons-Smith cyclopropanation (an impressive synthetic protocol) gains significant importance in medicinal chemistry as it is widely utilized to build structurally complex natural products such as terpenoids, alkaloids, amino acids, drugs etc. This is a highly stereospecific reaction which utilizes diethyl zinc and diiodomethane for the conversion of olefins into

cyclopropane. Here, the synthetic importance of Furukawa-modified Simmons-Smith cyclopropanation (for the synthesis of various natural products) has been presented.

Keywords: Furukawa-modified Simmons-Smith cyclopropanation, diethyl zinc, natural products.

**CROSSROADS OF CULTURES: EXAMINING HUMAN RIGHTS PRACTICES IN THE
CONTEXT OF MIGRATION AND MULTICULTURALISM**

Dr. Rida ZULFIQAR
University of Szeged

Abstract

This research paper aims to explore the dynamic interplay between migration and human rights practices within multicultural societies. The primary focus is to understand how the influx of migrants influences the application and perception of human rights, both by the host society and the migrants themselves. This inquiry is significant in the current global context, where migration is increasingly shaping cultural and social landscapes. The research will adopt a comparative analysis approach, examining different national and regional policies related to migrant rights and integration. Special attention will be given to the cultural elements that dictate these policies and their implementation. This approach helps in identifying both the commonalities and the disparities in how different societies manage the challenges and opportunities posed by migration. A crucial aspect of this study is to identify gaps in the existing legal frameworks and societal practices concerning migrant rights. These gaps are indicative of the areas where human rights are either inadequately protected or misunderstood in the context of cultural diversity. The methodology involves qualitative analysis, primarily through the examination of case studies, legal documents, and interviews with key stakeholders, including policymakers, human rights activists, and migrants themselves. This methodology ensures a comprehensive understanding of the complexities involved. The findings of this research will provide insights into how cultural understanding and sensitivity can enhance the protection and respect for human rights in a multicultural setting. It will also suggest ways to bridge the identified gaps, offering recommendations for policy and legal reforms that are sensitive to the needs of a diverse population. The ultimate aim is to contribute to the development of a more inclusive and human-rights-focused approach to migration and multiculturalism.

Abstract

The shift and developments experienced in telecommunication industry in recent years are unprecedentedly remarkable. Over past few decades, the world has enjoyed second-generation (2G), third-generation (3G) and fourth-generation (4G) mobile networks respectively as a result of the unique innovations that took place in telecommunication industry. Studies have shown that this spectrum is taking a lead amongst other paradigms of technology in terms of infrastructure and utility utilization. In order to maintain this frontier pace, telecommunication industry deployed fifth-generation (5G) network to meet-up with the growing demands of data from consumers and industrial users. According to Cherry (2004), 5G network has the capacity that provides faster and higher transmissions of massive amount of data required by consumers and that industrial users. This paper discussion is focused on the technology behind 5G mobile networks. The significant of 5G networks was discussed in the paper. The paper also highlighted some of the benefits of 5G networks in the write-up. In order to gather useful data for the paper work, online Google form questionnaire instrument was used to collect vital information from respondents. The gathered data were collated and subjected to reliability analysis. Conclusively, the paper inferred that 5G networks have the potentials that could support Internet of Things (IoT) device markers to develop new IoT systems and also help create new streams for telecommunication industry.

Abstract

We study the standard notations of the Nevanlinna value distribution theory of meromorphic function on the complex plane and in the unit disc. In addition, for the n -iterated order of meromorphic function in is defined by

$$\sigma_n(f) = \limsup_{r \rightarrow 1^-} \frac{\log_n^+ T(r, f)}{-\log(1-r)},$$

where and is the Nevanlinna characteristic function of. For an analytic function in we have also

$$\sigma_{M,n}(f) = \limsup_{r \rightarrow 1^-} \frac{\log_{n+1}^+ M(r, f)}{-\log(1-r)},$$

where. If f is analytic in, Tsuji [[tsu], p.205] gives that

For example, the function satisfies and $\sigma_{M,1}(f) = \mu$.

Obviously, we have

The inequalities (00) are the best possible in the sense that there are analytic functions and h such that and. However, it follows by Proposition 2.2.2 in [lain] that for. The type of a meromorphic function in with is defined by

$$\tau_n(f) = \limsup_{r \rightarrow 1^-} (1-r)^{\sigma_n} \log_{n-1}^+ T(r, f);$$

and if f is an analytic function in with we have also

$$\tau_{M,n}(f) = \limsup_{r \rightarrow 1^-} (1-r)^{\sigma_n} \log_n^+ M(r, f).$$

We signal that also by Proposition 2.2.2 in [lain], we have for .

Definition meromorphic function in the unit disc is called admissible if

$$\limsup_{r \rightarrow 1^-} \frac{T(r, f)}{-\log(1-r)} = \infty$$

and nonadmissible if

$$\limsup_{r \rightarrow 1^-} \frac{T(r, f)}{-\log(1-r)} < \infty.$$

The growth index of the iterated order of a meromorphic function in is defined by

We will use the notation to denote the n -iterated exponent of convergence of the zero-sequence of meromorphic function and to denote the n -iterated exponent of convergence of distinct zero-sequence of , which are defined as the following:

$$\lambda_n(f) = \limsup_{r \rightarrow 1^-} \frac{\log N(r, \frac{1}{f})}{-\log(1-r)} \quad \text{and} \quad \bar{\lambda}_n(f) = \limsup_{r \rightarrow 1^-} \frac{\log \bar{N}(r, \frac{1}{f})}{-\log(1-r)}.$$

SUSTAINABLE DEVELOPMENT GOALS: A GLOBAL CHALLENGE

Süreyya YİĞİT (ORCID:0000-0002-8025-5147)

International Relations, School of Politics and Diplomacy,
New Vision University, Tbilisi, Georgia.

Email: syigit@newvision.ge

Abstract

In September 2015, governments worldwide adopted a sustainable development program structured around 17 sustainable development goals that must be achieved by 2030. The goals are noble and very ambitious: eradicate all forms of poverty, tackle inequality, tackle climate change and ensure no one is left behind. There is inherently a duty towards oneself and the international community to play a leading role in implementing the Sustainable Development Goals. There are a multitude of issues and topics that need to be addressed. To highlight one example, the importance of forests in achieving these goals cannot be underestimated. These should not be seen as purely environmental problems; protecting forests and the communities that depend on them is as much about eradicating poverty as food security, climate change, social justice, and sustainable consumption and production patterns. This research investigates and highlights the challenges facing meeting the 17 Sustainable Development Goals. Keywords: Sustainable Development Goals, Sustainable Development, Environment, Global Governance, United Nations, Sürdürülebilir Kalkınma Hedefleri: Küresel Bir Mücadele Özet Eylül 2015'te Birleşmiş Milletler'e üye olan hükümetler, 2030 yılına kadar ulaşılması gereken 17 sürdürülebilir kalkınma hedefi etrafında yapılandırılmış bir sürdürülebilir kalkınma programını kabul ettiler. Hedefleri asil ve oldukça iddialı: her türlü yoksulluğu ortadan kaldırmak, eşitsizlikle mücadele etmek, iklim değişikliğiyle mücadele etmek ve kimsenin geride kalmamasını sağlamak. Sürdürülebilir Kalkınma Hedeflerinin hayata geçirilmesinde öncü rol oynamak hem kendilerine hem de uluslararası topluma karşı doğası gereği bir görev olarak görülmekte. Ele alınması gereken birçok konular var. Bir örneği vurgulamak gerekirse, bu hedeflere ulaşmada ormanların önemi göz ardı edilemez. Bunlar salt çevresel sorunlar olarak görülmemelidir; Ormanları ve onlara bağımlı olan toplulukları korumak, gıda güvenliği, iklim değişikliği, sosyal adalet ve sürdürülebilir tüketim ve üretim kalıpları kadar yoksulluğun ortadan kaldırılmasıyla da ilgilidir. Bu araştırma, 17 Sürdürülebilir Kalkınma Hedefine ulaşmada karşılaşılan zorlukları araştırıyor ve vurguluyor.

Anahtar Kelimeler: Sürdürülebilir Kalkınma Hedefleri, Sürdürülebilir Kalkınma, Çevre, Küresel Yönetişim, Birleşmiş Milletler,

Abstract

Background and Objectives: In pre-eclampsia, restricted blood supply due to the lack of trophoblastic cell invasion and spiral artery remodeling is responsible for adverse pregnancies and maternal outcomes, which is added to by maternal under nutrition. This study was designed to investigate the effects of lipid-based supplements (LNS-PLW) on pregnancy and maternal outcomes in underweight primigravida pre-eclamptic women. **Materials and Methods:** A total of 60 pre-eclamptic, underweight primigravida women from the antenatal units of tertiary care hospitals in the Khyber Pakhtunkhwa Province, Pakistan, were randomly divided into two groups (Group 1 and Group 2). The participants of both groups were receiving routine treatment for pre-eclampsia: iron (60 mgs) and folic acid (400 ug) IFA daily. Group 2 was given an additional sachet of 75 gm LNS-PLW daily till delivery. The pregnancy outcomes of both groups were recorded. The clinical parameters, hemoglobin, platelet count, and proteinuria were measured at recruitment. **Results:** The percentage of live births in Group 2 was 93% compared to 92% in Group 1. There were more normal vaginal deliveries (NVDs) in Group 2 compared to Group 1 (Group 2, 78% NVD; group 1, 69% NVD). In Group 1, 4% of the participants developed eclampsia. The frequency of cesarean sections was 8/26 (31%) in Group 1 and 6/28 (22%) in Group 2. The number of intrauterine deaths (IUDs) was only 1/28 (4%) in Group 2, while it was 2/26 (8%) in Group 1. The gestational age at delivery significantly improved with LNS-PLW supplementation (Group 2, 38.64 ± 0.78 weeks; Group 1, 36.88 ± 1.55 weeks, p-value 0.006). The Apgar score (Group 2, 9.3; Group 1, 8.4) and

the birth weight of the babies improved with maternal supplementation with LNS-PLW (Group 2, 38.64 ± 0.78 weeks; Group 1, 36.88 ± 1.55 ; p-value 0.003). There was no significant difference in systolic blood pressure, while diastolic blood pressure (Group 2, 89.57 ± 2.08 mmHg; Group 1, 92.17 ± 5.18 mmHg, p-value 0.025) showed significant improvement with LNS-PLW supplementation. The hemoglobin concentration increased with the LNS-PLW supplement consumed in Group 2 (Group 2, 12.15 ± 0.78 g/dL; Group 1, 11.39 ± 0.48 g/dL, p-value < 0.001). However, no significant difference among the platelet counts of the two groups was observed. **Conclusions:** The pregnancy and maternal outcomes of underweight pre-eclamptic women can be improved by the prenatal daily supplementation of LNS-PLW during pregnancy, along with IFA and regular antenatal care and follow-up. **Registration:** ISRCTN15485068, April 2018: <https://doi.org/10.1186/ISRCTN15485068>.

Abstract:

Biogas has been generally accepted as an alternative energy source but its commercial use has never been realized due to challenges in its storage and transportation. This research presents the study on the production, scrubbing, compression, and storage of biogas. It was found that scrubbing of biogas to remove major impurities i.e. carbon dioxide, hydrogen sulfide, and water must be carried out before compression and storage of biogas to improve its versatility. Chemical scrubbing of carbon dioxide was done with sodium hydroxide (NaOH). Hydrogen sulfide was scrubbed using iron fillings while water vapour was scrubbed using silica gel crystals. The result shows that after biogas production from co-digestion of cow dung and camel dung, methane content has improved from 62 % before scrubbing to 92 % after scrubbing, while carbon IV oxide has reduced from 37 % to 6 % after scrubbing. H₂S shows no traces after purification. Compression of biogas (CBG) was carried out by a 3hp two-stage air compressor and bottled into a 12.5kg LNG cylinder. The compressed biogas had an average volume of 0.233 m³, a total mass of 0.10 kg, and a mean density of 2.216 kg/m³. While 0.40 MJ was utilized for compression, the CBG in the cylinder has an energy content of 5.25 MJ. The compressor produces 2.52 MJ of heat energy and 1.63 MJ of electrical energy. Raw biogas was compressed to an absolute pressure of 6 bar during the course of an average compression duration of 2.57 minutes. Using the water boiling test and the food cooking

test, it was also discovered that the CBG's methane content was higher than that of raw biogas.

Abstract

In response to the significant human and material devastation caused by seismic events, it is crucial to develop new design approaches to mitigate the impact of this natural phenomenon. Seismic insulation techniques present an attractive solution to this challenge. The objective of this paper is to enhance the performance of structural elements by introducing a combined passive system (LRB-FPS) capable of effectively absorbing high levels of seismic energy. Each of these systems offers distinct advantages. The LRB system exhibits a damping rate exceeding 30%, utilizing elastomeric layers for flexibility and restoring force, while the lead core serves as an additional energy dissipation mechanism, reducing lateral displacement. On the other hand, the FPS system utilizes a sliding interface in the form of a bowl, which dissipates seismic energy through friction, providing the structure with pendulum-like movement characterized by highly nonlinear behaviour. A methodology based on the American IBC 2000 regulations has been employed to design both systems, enabling the determination of optimal parameters. To achieve this, an extensive parametric study was conducted, considering various isolator placement configurations. Nonlinear dynamic analysis was performed, revealing the effectiveness of integrating these artificial systems in reducing structural response, particularly in terms of quasi-rigid displacement, top floor displacement, inter-drift displacements, top floor acceleration, and shear base force. As a result, the integration of this combined system significantly enhances structural performance and improves the overall reliability of the building.

Abstract

This study investigates the role of spiritual health in the lives of students aged 16 to 25, examining its correlation with mental and emotional well-being. The research underscores the importance of incorporating spiritual health into educational curricula, providing essential guidance for youth in this critical area. It reveals that engagement in spiritual practices plays a significant role in students' daily life, fostering mental stability and emotional balance. The paper also highlights the potential of these findings to inform future research and contribute to enhancements in this field. A comprehensive and accessible questionnaire was distributed to high school and college students through a Google Form. The survey aimed to understand the impact of spiritual health on managing stress, enhancing mental wellness, and procuring physical advantages. The results indicate a prevalent engagement in spiritual practices among students, which aids in task completion, mental tranquillity, and emotional steadiness. The study emphasizes that spiritual health is as crucial as mental and physical health, enabling individuals to gain a deeper understanding of their role in the world, sense of purpose, and self-worth. Fostering spiritual health not only offers peace in stressful times but also enhances mental well-being and yields physical benefits. The research aims to deepen the understanding of spiritual health by closely examining its definitions, characteristics, origins, effects, and empirical references, ultimately proposing a comprehensive definition that encapsulates its multifaceted nature.

Keywords: Mental health, spiritual health, managing stress, educational inclusion

ON QUASI-FAT AND PSEUDO-FAT SETS IN RELATOR SPACES

Dr. Muwafaq Mahdi SALIH

Department of Mathematics, College of Basic Education, University of Duhok, Iraq.

Email: muwafaq.salih@uod.ac

A family \mathcal{R} of relations on a set X is called a relator on X , and the ordered pair $X(\mathcal{R}) = (X, \mathcal{R})$ is called a relator space. Relator spaces of this simpler type are already substantial generalizations of not only ordered sets and uniform spaces, but also topological, closure and proximity spaces.

As it is usual, for any $x \in X$ and $A \subseteq X$, we write

- (1) $x \in \text{int}_{\mathcal{R}}(A)$ if $R(x) \subseteq A$ for some $R \in \mathcal{R}$;
- (2) $x \in \text{cl}_{\mathcal{R}}(A)$ if $R(x) \cap A \neq \emptyset$ for all $R \in \mathcal{R}$;
- (3) $\text{res}_{\mathcal{R}}(A) = \text{cl}_{\mathcal{R}}(A) \setminus A$.

Moreover, we may also naturally define

- (4) $\mathcal{T}_{\mathcal{R}} = \{A \subseteq X: A \subseteq \text{int}_{\mathcal{R}}(A)\}$;
- (5) $\mathcal{F}_{\mathcal{R}} = \{A \subseteq X: \text{cl}_{\mathcal{R}}(A) \subseteq A\}$;
- (6) $\mathcal{E}_{\mathcal{R}} = \{A \subseteq X: \text{int}_{\mathcal{R}}(A) \neq \emptyset\}$;
- (7) $\mathcal{D}_{\mathcal{R}} = \{A \subseteq X: \text{cl}_{\mathcal{R}}(A) = X\}$.

Results:

We have introduced that a subset A of the relator space (X, \mathcal{R}) will be called (1) quasi-fat if there exists $V \in \mathcal{E}_{\mathcal{R}}$ such that $V \subseteq A \subseteq \text{cl}_{\mathcal{R}}(V)$; (2) pseudo-fat if there exists $V \in \mathcal{E}_{\mathcal{R}}$ such that $A \subseteq V \subseteq \text{cl}_{\mathcal{R}}(A)$. And, the families of all such subsets A of $X(\mathcal{R})$ will be denoted by $\mathcal{E}_{\mathcal{R}}^q$ and $\mathcal{E}_{\mathcal{R}}^{ps}$, respectively. We prove that for a relator \mathcal{R} on X , if $A, B \subseteq X$ such that $A \subseteq B \subseteq \text{cl}_{\mathcal{R}}(A)$, then $A \in \mathcal{E}_{\mathcal{R}}^q$ implies $B \in \mathcal{E}_{\mathcal{R}}^q$. Also, we could show that for a quasi-topological relator \mathcal{R} on X , if $A, B \subseteq X$ such that $A \subseteq B \subseteq \text{cl}_{\mathcal{R}}(A)$, then $B \in \mathcal{E}_{\mathcal{R}}^{ps}$ implies $A \in \mathcal{E}_{\mathcal{R}}^{ps}$.

Abstract

Geopolymers are modern, inorganic aluminosilicate materials that, through their high mechanical properties, are used in many industries and can be an excellent alternative to concrete based on Portland cement. The purpose of this study is to determine the effect of the addition of microsilica on the properties of geopolymer composites. Reference samples were made by mixing pozzolanic material such as fly ash (50 wt.%) with sand (50% wt.%). The effect of the additive was analysed by introducing microsilica (T180) into the material in shares of 5%, 10% and 15% by weight, each time replacing part of the fly ash with microsilica. The samples were activated with 10 M sodium hydroxide solution mixed with an aqueous solution of sodium silicate. Laser particle size analysis, mineralogical analysis and SEM observations were carried out on the raw materials. Phase identification analysis, SEM observations, density tests, compressive and flexural strength tests, water absorption and thermal conductivity tests were carried out on the produced geopolymer composites. The results obtained on the basis of the compressive strength test showed that the strength of the material decreases with the increase of the silica content in the material. Increasing the silica addition by each subsequent 5% resulted in a decrease in strength of about 20-30%. The addition of silica at 5 wt.% resulted in an decrease in flexural strength compared to the reference sample by over 15%. However, the addition of 10% and 15% causes a decrease in flexural strength by more than 50% compared to the value for the reference sample. The thermal conductivity coefficient decreases with increasing silica content in the composite, which means that the introduction of this additive improves the thermal insulation properties of geopolymer composites. The addition of microsilica introduced into the geopolymer matrix in an amount of 10% ensures a good correlation between thermal conductivity and strength. The compressive strength of this composite is over 25 MPa, which makes it a construction material with improved thermal insulation by approximately 15% compared to the reference material. The investigated materials are dedicated to application in the construction industry. Acknowledgements: This research was supported by

Abstract

The aim of this paper is to determine the presence and amount of trace metals in sachet water sold in Kazaure Local Government Area (LGA), Jigawa State, Nigeria. The brands of sachet water are obtained from local supermarkets and water vendors in kanti area of kazaure LGA. Nine popular commercial brands of sachet water that often enter the local government from Dambatta local government area, Kano state, Daura local government area, Katsina state and Kazaure Local Government Area, Jigawa State were randomly sampled. All the nine samples of a particular brand of sachet water were bulked together to form a composite sample, which is stored in a liter sterilized screw-capped polythene bottle. The samples were refrigerated at 4⁰C and analyzed within 24 hours of collection. Water samples were digested prior to trace metals [Zn, Mg, Cu, Fe and Pb] determination using Atomic Absorption Spectrophotometer (AAS). The analysis was conducted in three replicates. The results of the analysis show that all the brands of sachet water studied are colourless, odourless, tasteless and lack presence of suspended solids. The outcome of the trace

metal analysis posited that Kazaure LGA based brands have the range of values, 0.03 mg/l – 3.34 mg/l, while Dambatta LGA based brands gave the range 0.09 mg/l – 4.67 mg/l and Daura LGA based brands produced the range 0.05 mg/l – 10.02 mg/l. The case study for this work is Sachet water sold in Kazaure Local Government Area, Jigawa State Nigeria. The implications are relevant for all sachet water sold in Kazaure municipality. The concentrations of trace metals assayed in sachet water are below the maximum allowed limit recognized by World Health Organization (WHO) for safe drinking water as follows; NS (Ca), 0.10 mg/l (Pb), 3.0 mg/l (Zn), 2.0 mg/l (Cu), 3.0 mg/l (Fe) and 0.05 mg/l (Cr). Trace metals are metals in extremely small quantities that are present in animal and plant cells and tissue. Ingestion of excess quantities of these metals is often toxic. The emergence of sachet water in Nigeria is to provide safe hygienic and affordable instant drinking water to the teeming population and to checkmate the soaring water-related challenges. Such challenges may give rise to health hazards among the growing population of the federal republic of Nigeria. The study concludes that all the assayed brands of sachet water pose zero health risks to the consumers and display compliance to international standards.

Abstract

A lubricant is a substance, usually organic, introduced to reduce friction between surfaces in mutual contact, which ultimately reduces the heat generated when the surfaces move. It is undoubted that engine is the most important and crucial operating mechanism in a car. In order to protect the engine of the car from breakdown and maintain its performance, the engine needs to be lubricated with the appropriate lubricant. The usage of certain type of lubricants may affect the performance of the engine of automobiles. The study of automotive lubricating is important in order to predict the type of lubricant which is more suitable and cost-efficient within the current economic situation. In order to predict the overall health and performance of a lubricant, the properties of the lubricant need to be determined accordingly. This work does access the physical and chemical properties of neat lubricating or lube oil, using approved standard methods. The

results unveiled the following: physical tests; Density (0.9104 g/dm^3), viscosity (89.4), refractive index (1.4753), flash point (94°C), pH (8.5), aqua test (absent); spot tests; Area of spot (3.803 cm^2), Area of diffuse zone (25.531 cm^2), Colour of spot (colourless), Colour of diffuse zone (colourless), Optical property (translucent); chemical test (FTIR); O – H , C – H, C – N, N – O, N – H bond types stretching were detected.

Abstract

Background: Neck pain, being a multifactorial condition, poses a significant problem in modern society. While it may not be the most prevalent musculoskeletal disorder, its impact should not be underestimated. Currently, there is no universally accepted treatment for neck pain, and various treatment options exist for patients with chronic non-specific neck pain. Objective: The pilot study aimed to investigate the effects of different treatment techniques on patients with chronic non-specific neck pain. Methods: The sample selection was conducted using the convenience randomized sampling method to ensure an unbiased representation of patients. Participants included individuals who had received a diagnosis and required physiotherapy sessions as recommended by their physicians. A total of 20 patients were chosen and divided into two groups. A group (10 participants) received dry needling treatment, while the B group (10 participants) received the Maitland technique. Various variables were assessed using routine

methods, and additional evaluations, such as VAS (Visual Analog Scale) and ROM (Range of Motion) measurements, were conducted before and after treatment to compare the outcomes and achieve the study's objectives. 3 sessions per week for 2 weeks for each group; dry needling was applied for 10 minutes per session. Result: In the Maitland technique group, the analysis revealed significant differences at $\alpha=0.05$ for the levels of flexion, extension, lateral flexion (right and left), lateral rotation (right and left), and VAS. The post group demonstrated favorable differences compared to the pre group, with mean values indicating improvement in each of these measures. Similarly, in the dry needle group, significant differences at $\alpha=0.05$ were observed for the levels of flexion, extension, lateral flexion (right and left), lateral rotation (right and left), and VAS. The post group had lower mean values compared to the pre group, indicating improvement in these measures as well. Furthermore, the t-test analysis comparing the effects of Maitland mobilization and dry needling techniques in reducing pain and improving range of motion among patients with chronic nonspecific neck pain did not show any significant differences at $\alpha=0.05$. This suggests that both techniques yielded similar outcomes in terms of pain reduction and range of motion improvement. Conclusion: The results of this study revealed that the Maitland mobilization and dry needling techniques were effective in reducing pain and enhancing range of motion in patients with chronic nonspecific neck pain.

Key words: Maitland technique, dry needling, chronic non specific neck pain, Disability.

**SIGNE, SENS ET SYMBOLE POUR UNE SEMIOTIQUE DU DEVELOPPEMENT
CHEZ L'ARTISTE SLAMEUR HAMANI KARIMOU ALIAS JOHNEL AU NIGER**

Résumé

La quête du sens, de symboles dans les textes verbaux et non verbaux africains comme objets essentiels des champs disciplinaires comme la sémiotique et la littérature orale reste toujours d'actualité. La symbiose entre l'oralité et la sémiotique favorisent ainsi la construction de la signification dans les sociétés africaines confrontées aux assauts de la modernité occidentale et son corollaire du nouvel ordre mondial. En ce sens, les chansons des artistes africains, sous toute leur forme n'échappent pas à l'analyse de ces disciplines. La compréhension du sens en termes de contenu sémiotique d'une part et dans le contexte de son emploi dans les textes oraux (la chanson pour le cadre de cette étude) d'autre part, est indispensable pour le développement durable en Afrique. Ici, le sens surpasse l'ordinaire. Mieux, « le sens revêt un pouvoir » (M. L. Ouédraogo : 400) car il s'élargit pour s'élever au-delà du signe afin de faire symbole et image. Il en est ainsi du Slam de HAMANI KARIMOU alias JOHNEL intitulé « *Il ne sont que des pauvres* ». Cette étude analyse ce texte en interrogeant sa quête de sens pour aboutir à sa part dans la sémiotique du développement de l'Afrique en général et celui du Niger en particulier. Les théories du signe, symbole et de la sémiotique perçienne et Greimasienne sont exploitées dans l'analyse du corpus objet de la méthodologie de cet article. Celui-ci est à la fois analytique et suggestive.

Mots-clés : sémiotique du développement, littérature orale, symbole, Jonhel, Niger.

**SIGN, MEANING AND SYMBOL FOR A SEMIOTICS OF DEVELOPMENT IN THE
SLAM ARTIST HAMANI KARIMOU ALIAS JOHNEL IN NIGER**

Abstract

The quest for meaning, for symbols in African verbal texts and non-verbal texts as essential objects of the disciplinary fields of semiotics and oral literature still remains relevant. The symbiotic encounter between orality and semiotics promotes the construction of meaning in African societies faced with the assaults of the Western world and the new world order. In this vein, the songs of African artists, in whatever form, do not escape the analysis of these disciplines. Understanding meaning in terms of semiotic content on the one hand and in the context of its use in oral texts (song for the context of this study) on the other hand is essential for sustainable development in Africa. Because the meaning goes beyond common understanding. Better, “meaning takes on power” (M. L. Ouédraogo: 400). It widens to rise beyond the sign to become a symbol and an image. This is the Slam of HAMANI KARIMOU alias JOHNEL entitled “They are only poor people”. This study attempts to study it by questioning its quest for meaning to arrive at its part in the semiotics of the development of Africa in general and that of Niger in particular. The theories of sign, symbol and Peircian and Greimasian semiotics are exploited in the analysis of the corpus subject to the methodology of this article. This one is both analytical and suggestive.

Abstract

Corrosion in reinforced bars is a major cause of structural deterioration in concrete structures, leading to reduced structural integrity and increased maintenance costs. Corrosion in concrete structures become a very serious issues as buildings age. In Nigeria and most developing African countries were majority of building structures are more than 40 years old, this constitutes a major issue as building collapse has been on the increase. This paper will focus on the use of potential corrosion techniques to diagnose concrete structures in the bid to identify areas under corrosion threat thereby stalling the total failure of these structures. In this paper, full-scale reinforced concrete beams were corrosion analysed. Corrosion was stimulated by the Modied Immersion Accelerated Corrosion - CAIM method, at three levels of mass loss: 10, 15 and 20%. The diagnostic technique through the corrosion potential was applied, in which it was observed that there is uncertainty in the corrosion evaluation for the mass loss levels of 15 and 20%, resulting in a corrosion uncertainty interval, but at 15%, the potential technique proved to be satisfactory.

Abstract

This study was conducted to assess the relationship between environmental factors and the composition of fish assemblages from four interconnected rivers traversing several communities of Bayog Watershed comprising two provinces of Zamboanga in the Philippines. The distribution, abundance, and diversity of fish species in relation to the physicochemical parameters of the Sibugay, Dipili, Depore, and Guinoman rivers were obtained. A total of 1,004 fish individuals were collected during the field sampling and distributed into 11 families, 13 genera, and 18 species. The genus *Oreochromis* and *Barbodes* had the highest abundance and were prevalent in all the sites. Sibugay river obtained the highest Shannon-Weiner diversity index value ($H' = 2.05$) and several species (14), while Guinoman has the lowest (species=11; $H' = 1.671$). Sibugay river has the highest pH value (7.53), while Depore has the most deficient and acidic sites. Water temperatures were higher in Depore and significantly different from all other sites except in Guinoman. Influenced of environmental factors on the assemblages of freshwater fishes showed that depth (-0.894), pH (-0.813), and water temperature (0.859) were the three factors that are highly correlated with the first ordination axis in the CCA while dissolving oxygen (-0.250), and pH (-0.308) were positively associated with the second ordination axis. The biplot obtained from abundance and environmental data revealed that *P. disjunctivus* and *T. trichopterus* are positively associated with elevated water temperature and low pH. These introduced species can tolerate high temperatures and slightly acidic water. As observed in the study, channel water from the residential area, industrial waste, and effluents from agricultural activities are of most concern among the activities that affect the ecosystem.

Keywords CCA; fish assemblages; environmental factors; Bayog watershed.

Abstract

Mammary gland tumors are the common neoplasms in female cats and comedocarcinoma is malignant epithelial neoplasm. In June 2023, a 10-year-old female cat with a left thoracic mammary gland mass was referred to veterinary hospital. Based on owner information, within the previous 6-month period the mass had become evident. On gross examination, the mass was approximately 3×3×2 cm in size. Finally, complete surgical removal was selected. Anesthesia was induced by intravenous injection of ketamine (0/5 mg/kg) and diazepam (0.5 mg/kg) and maintained with 1%-2% isoflurane in oxygen. The mass was removed for histopathological evaluation. Tissue samples of the mass were fixed in 10 % neutral buffered formalin and stained with Hematoxylin and Eosin. Microscopically, the mass was composed of necrotic area within the center of the neoplastic cell aggregates. The necrotic foci were consisted of amorphous eosinophilic material admixed with cell debris and necrotic cells. The peripheral tissue of the affected area was consisted of aggregates of closely packed cells arranged in nests, cord and tubules supported by a fine fibrovascular connective tissue stroma. Infiltration of lymphoplasmacytic inflammatory cells was seen at the periphery of neoplasm. In addition, multifocal hemorrhages and invasion of neoplastic cells between the muscle fibers and adipose tissue were observed in the sections. The mass was diagnosed comedocarcinoma. In the cat, the incidence of mammary gland tumor rate varies with geographic location and is related to ovariectomy. However, there are many other factors that influence the incidence, including breed popularity, husbandry, and socioeconomic factors.

Abstract

Squamous cell carcinoma (SCC) is relatively more common and highly malignant neoplasm in dog. SCC is an invasive epithelial neoplasm with varying degrees of squamous differentiation. A six-year-old female dog with an oral mass on the right side was referred. Finally, complete surgical removal was selected. The dog was anesthetized with intravenous injection of diazepam (0/5 mg/kg) and ketamine (0/5 mg/kg) and maintained with 1%-2% isoflurane in oxygen. The mass was removed for histopathological evaluation. Tissue samples of the mass were fixed in 10% neutral buffered formalin and stained with Hematoxylin and Eosin. Histopathology of the oral mass revealed a proliferation of epithelial cells. Microscopically, the mass was composed of trabeculae and nests of epithelial cells. The small clusters and individual neoplastic cells were infiltrated adjacent connective tissue, but salivary glands were not affected. The neoplastic cells were surrounded by lymphoplasmacytic inflammatory cells. Cells at the periphery of the nests were smaller and more basaloid with cells in central areas larger with eosinophilic cytoplasm. Cellular pleomorphism and mitotic figures were marked. The mass was diagnosed Squamous cell carcinoma. Oral neoplasia represents around 5% of all neoplasia in dogs and around 65% of canine oral neoplasms were malignant. Squamous cell carcinomas (SCCs) represent 17–25% of oral malignant neoplasms.

Abstract

Unilateral polycystic kidney disease is caused by obstruction of a ureter anywhere throughout its length or at its entrance into the urinary bladder. In April 2023, a five-year-old female sterilized Yorkshire terrier dog with severe unilateral abdominal swelling and a clinical history of lethargy, anorexia, polyuria, and polydipsia was referred to the veterinary clinic. Physical examination, blood cell counts, serum biochemistry tests, urinalysis radiography and ultrasonography were performed. Hematology and biochemistry results showed mild leukocytosis and mild azotemia. Radiograph showed left unilateral abdominal distention. Ultrasonography revealed enlargement of left kidney with multiple anechoic or hypoechoic cysts. Finally, nephrectomy was selected. The left kidney was removed for histopathological evaluation. Tissue samples were fixed in 10% neutral buffered formalin and stained with Hematoxylin and Eosin. Histopathological examination of the kidney revealed cystic structures. The cystic tubules were lined by cuboidal or squamous epithelium and separated by a fibrous connective tissue. Based of clinical, radiological and histopathological findings, this disease was diagnosed polycystic kidney disease. Similar to our case, ultrasound as a noninvasive technique is the most commonly used imaging modality for diagnosis of PKD in dog. PKD is considered a progressive disease, and the prognosis is guarded.

Abstract

The intersection of Artificial Intelligence (AI) and Transportation has ushered in a paradigm shift, fundamentally altering the dynamics of route optimization and logistics efficiency. This research delves into the transformative impact of AI, particularly in the context of route optimization, and explores the integration of autonomous vehicles as a catalyst for revolutionizing safety and efficiency in the transportation sector. In this paper, we develop a multi-objective mathematical model (MOMM) of Travel Time and CO_2 Emissions as well as subject to the constraints, i.e., Flow conservation constraint, Capacity constraint for each vehicle, and Dynamic Adjustments constraint for Travel Time and CO_2 Emissions. This mathematical model is solved using ortools.Linear_solver in Python programming language. The study elucidates the tangible benefits and challenges of AI-driven advancements through a multidimensional approach encompassing mathematical modeling, algorithmic analyses, and practical implementations. The investigation begins with meticulously examining route optimization algorithms, leveraging machine learning and optimization techniques to adapt to real-time traffic conditions dynamically. Subsequently, we expand its focus to autonomous vehicles, elucidating how they, guided by sophisticated AI systems, enhance logistics efficiency and safety metrics. Furthermore, this research contributes to the ongoing discourse on the confluence of AI and transportation, offering insights into the transformative potential and challenges associated with route optimization and autonomous vehicles.

Abstract

Although the use of yeasts as starters is common in the food industry, it can lead to product corruption and poor quality of food in some cases. This study was assessed the anti-yeast impacts of two phenolic compounds; menthol and eugenol against 7 yeast species contaminating food products (*Candida albicans*, *Candida kefir*, *Candida famata*, *Rhodotorula glutinis*, *Kluyveromyces fragilis*, *Debaryomyces hansenii*, *Saccharomyces cerevisiea*). The anti-yeast impacts of two mentioned compounds and the minimum inhibitory concentration (MIC) were investigated using disk diffusion method and micro-dilution method, respectively. The findings showed that both compounds had anti-yeast effects on the tested isolates. Eugenol had the anti-yeast properties at the lower concentration (50µg/ml) in comparison with the other compound. Furthermore, the MIC of menthol and eugenol were *Rhodotorula glutinis* (58.3µg/ml), *Saccharomyces cerevisiea* (58.3µg/ml) and *Candida albicans* (50µg/ml), respectively. In conclusion, it could be stated that the natural phenol compounds; menthol and eugenol, have toxic and anti-yeast effects and are able to prevent the growth of tested yeast contaminating foods at the lower concentrations.

**AN ANALYSIS OF SHARE OF WOMEN IN MSME SECTOR - A COMPARATIVE
STUDY OF RAJASTHAN AND UTTARAKHAND**

MS. Deepali TOMAR

Govt. Arts College, University Of Kota, Kota Near PNB Bhaniyawala Dehradun ; 8126113799

Email:kittytomar52@gmail.com

Abstract

MSMEs continue to be the backbone of the economy for countries like India where the problem of unemployment is steadily escalating and the agriculture land holdings continue to shrink. With the limited data and information, this paper aims to examine the recent developments in women participation / entrepreneurs in India. This paper focuses on women entrepreneurs in micro, small and medium enterprises. The objective of the paper is ; a) to estimate the ratio of women labour force in micro, small and medium enterprises, b) women share in registered and unregistered MSMEs, c) to identify the socio-economic problems faced by women, d) credit availability, e) development of women entrepreneurship under planning. The State of Uttarakhand and Rajasthan in India is looking at sustainable and inclusive industrial growth as it faces an acute problem of migration from the hilly terrain to the plains due to lack of employment and business opportunities. The purpose of this paper is to comprehensively analyse the role of women participation in micro, small and medium enterprises in Rajasthan and Uttarakhand and to explore the reasons responsible for hindering their growth. A descriptive study was conducted with the help of secondary data and is based on extensive review which significantly contributes in directing the stakeholders to take appropriate measures for speedy development of the region. The recent trends show that when women are better educated and have better paid employment opportunities, then participation of women might decline in SMES and they may move towards large scale industries.

Keywords: MSME, Unemployment, Business opportunities, Migration, Socio-economic.

**APPLICATION OF OPTIMAL CONTROL TO *PLASMODIUM KNOWLESI* MALARIA
IN HUMAN AND MACAQUES**

Mohammed Baba ABDULLAHI*

Universiti Sains Malaysia 11800 USM Penang, Malaysia.

Abstract

This study sought to determine the most effective means of preventing *Knowlesi* malaria in both humans and macaques. The model, which was built with a deterministic differential equation system, now includes an ideal illness control. The optimal control model was studied both dynamically and quantitatively. If the cost of biological control against mosquito larvae, forest dwelling mosquitoes, and chemical control against adult mosquitoes is greater than the cost of treating the infected human, the control strategy produces an increase in susceptible people, a decrease in infected humans, infected macaques, and mosquito population. Although this is one of the most effective strategies, medication is required to eradicate *Plasmodium knowlesi* malaria in a community. According to computational representations of the issue, implementing the three control strategies can reduce, if not eliminate, a community's probability of developing the disease.

Universiti Sains Malaysia 11800 USM Penang, Malaysia.

Abstract

The parasite *Plasmodium knowlesi* causes malaria in humans and other primates. It is prevalent in Malaysia and is found throughout Southeast Asia. Like other *Plasmodium* species, *P. knowlesi* has a life cycle that necessitates the infection of both a mosquito and a warm-blooded host. The fractional order model of Seasonal Forcing of *Plasmodium Knowlesi* Malaria Model will be established in this study. To build the model scheme of the fractional order differential equations, the Caputo fractional derivative operator of order (0,1) will be employed. The Laplace-Adomian Decomposition Method was used to compute an estimated solution to the system of nonlinear fractional differential equations. As solutions to fractional differential equations, infinite series were generated. The model's proposed series solution swiftly converges to its precise value. The results obtained are compared to the standard case.

Keywords: Seasonal Forcing; *Knowlesi* malaria; Macaques; Transmission dynamics; fractional order.

PREDICTING OIL PRODUCTION: A MACHINE LEARNING APPROACH

Omarkhan SAMARKANOV

School of Mining and Geosciences, Nazarbayev University, Kabanbay Batyr 53, Astana,
Kazakhstan, 010000

Masoud RIAZI

School of Mining and Geosciences, Nazarbayev University, Kabanbay Batyr 53, Astana,
Kazakhstan, 010000

Abstract

With a vast repository of well production data available in the oil and gas sector, this study explores the creation of data-driven models for validating empirical correlations, particularly crucial in the volatile oil market. Given the extensive reservoir of well production data at our disposal in the oil and gas sector, this study investigates the development of data-driven models to forecast the oil production. Using machine learning (ML) methodologies, can be developed to forecast hydrocarbon production with an acceptable level of accuracy. This paper employs a range of ML techniques, including Artificial Neural Network (ANN), to develop models for predicting well production within an oil field. These models effectively estimate well production over time, considering various parameters such as on-stream hours, downhole pressure and temperature, choke size percentage, wellhead pressure and temperature, daily gas and water production. All the models exhibit outstanding performance in training, validation, and testing phases, characterized by high correlation coefficients (R^2) and strong predictive capabilities. The paper also conducts a comparative analysis to assess the predictability of different models.

Keywords: Hydrocarbon Production, Prediction, Data-driven, Machine Learning, Artificial Neural Network

VERNACULAR CONTENT IN TOPONYMY AND ITS LINGUISTIC AND COGNITIVE-COMMUNICATIVE FEATURES

Davletova SALTANAT

L.N.Gumilyov Eurasian National University

Email:salt77@list.ru

Abstract

Vernacular in toponymy, the study of place names, unveils a fascinating interplay between language, culture, and geography. This exploration delves into the linguistic and cognitive-communicative peculiarities found in toponyms, drawing examples from both English and Kazakh languages. The toponyms, or place names, offer a linguistic lens through which we can understand the historical, cultural, and environmental tapestry of a region. Vernacular or local language contrasts with the standard language. This usually refers to a native speaker of a language or dialect that is spoken informally, not in writing, and which is considered less status than codified or institutional forms. It can differ in different ways from authoritative forms of speech, since a spoken language can be a separate stylistic register, a regional dialect, a sociolect, or an independent language. Vernacular is a term denoting a type of speech commonly used to refer to a local language or dialect, as opposed to a standard language. Vernacular is compared with more authoritative forms of language, such as national, literary, liturgical or scientific idiom or lingua franca, which are used to facilitate communication over a large area. The article considers the comprehensive approach to the study of vernacular content in toponymy presented it possible to trace the patterns of formation and functioning of the toponymy of the English and Kazakh languages in their most marked territorial variants, as well as to establish the connection of toponymic nominations with other layers of vocabulary. The study tries to find out what features of language and thinking are present in "place names", especially in different parts of these countries. The main attention was paid to: cultural connotations, associations, symbolism in toponyms and links with vocabulary. This research delves into the symbiotic relationship between vernacular content and toponymy, investigating how local languages influence the naming of places and exploring the ensuing linguistic, cognitive, and communicative dimensions. The study meticulously examines the linguistic underpinnings, unraveling the cultural nuances embedded in toponyms shaped by regional languages. Simultaneously, it delves into the cognitive aspects, probing how vernacular toponyms contribute to collective memory and community identity. The communicative features of these toponyms are scrutinized, shedding light on their role in facilitating meaningful interaction within communities. By illuminating the interplay between language, cognition, and communication in toponymy, this research provides valuable insights into the profound meanings encapsulated in the names of places, enriching our understanding of cultural heritage and linguistic diversity. Ultimately, it contributes to the broader discourse on the intricate tapestry of vernacular expression and its significance within the context of toponymy.

Keywords: toponymy, vernacular, content, informal, geography.

**VASCULITIS SYNDROMES SHOULD BE CONSIDERED AS A PATHOGENESIS
MECHANISM IN SEVERAL SYSTEMIC DISEASES - A CASE REPORT OF
TAKAYASU ARTERITIS.**

Giorgi ZHORZHOLIANI

Tbilisi State Medical Univerisity Cardiologic Clinic GULI

Abstract

Background: Takayasu Arteritis - Aortic arch syndrome, also known as pulseless disease, manifests as an uncommon, nonspecific granulomatous vasculitis that frequently affects the aorta. Irregular fibrosis of the blood vessels occurs as a result of chronic vasculitis, leading to substantial intimal fibrosis (fibrosis of the inner section of the blood vessels) with complete obstruction in some cases. This condition predominantly impacts young or middle-aged women of Asian descent. Takayasu's arteritis shares similarities with other vasculitis clinical conditions, such as giant cell arteritis, which typically afflicts older individuals. Case presentation: This article delineates Takayasu arteritis in a 41-year-old woman under our surveillance since 2020. Her medical history includes cerebral circulation disruption, coronary artery stenting, myocardial infarction, left carotid artery stenting, and coronary angiography with angioplasty. She also has diabetes mellitus, encephalopathy, and Parkinson's syndrome. The patient reported intense, pressing pain behind the sternum, radiating to the left ring, along with a dry cough, shortness of breath, sensation of pulse disappearance in the right upper limb, mild ataxia, and tremors in the upper limbs. Various laboratory and instrumental studies were conducted, encompassing ECG, cardiac ultrasonography, Doppler ultrasonography of the aortic arch and its emanating blood vessels, upper limbs, and chest radiography. Additionally, contrast angiography and a CT scan with contrast were performed. A blood test for the autoantibody panel (ANCA, FR, ANA) and anticardiolipin antibody test were also carried out. Treatment was prescribed with ongoing monitoring. The patient underwent six hospitalizations over three years. Currently, the disease shows no progression, allowing for effective management without additional complications. Conclusion: This case presents Takayasu's arteritis, the complications of which may provoke other systemic diseases. The six hospitalizations over three years indicate the recurrent nature of the disease, but the current stability of the patient's condition suggests effective therapeutic intervention and a favorable response to treatment.

Therefore, timely intervention, correct selection of treatment tactics, and its subsequent management are required.

**MACHINE LEARNING APPROACH TO PREDICT WELD ASPECT RATIO AND
TENSILE STRENGTH IN LASER WELDING OF UNS S32750 STEEL**

S. SARAVANAN

Department of Mechanical Engineering, Annamalai University, Annamalainagar, Tamilnadu,
India

K. GAJALAKSHMI

Department of Mechanical Engineering, Annamalai University, Annamalainagar, Tamilnadu,
India

Abstract

This study aims to develop a framework for predicting the weld bead aspect ratio (depth/width) and tensile strength of Nd: YAG laser welded UNS S32750 steel (SDSS), employing four machine learning techniques (k-Nearest Neighbor, Decision Tree, Random Forest and Extra Trees). The need to create a model is driven by the nonlinear relationship between the initial system variables (laser power, welding speed, laser focal position, and pulse frequency) which reflect the variation in the outcomes (weld aspect ratio, tensile strength). The development of computational approaches helps to optimize the welding and reduce man hours in doing trial and error experimentation. Python-based machine learning technique aids in the creation of predictive models by leveraging the process parameters deduced from the outcomes of experiments. The outcomes showed these algorithms are capable of predicting laser weld aspect ratio and tensile strength, with a deviation less than 10%, and holds the ability to automate prediction process. Of the attempted architectures, the Random Forest model exceeds the other three in terms of accuracy (>5%) in predicting the aspect ratio and tensile strength of the weld joints.

Abstract

In an increasingly interconnected digital landscape, the role of artificial intelligence (AI) in bolstering cybersecurity has become paramount. This paper delves into the dynamic relationship between AI and cybersecurity, focusing on the identification, understanding, and mitigation of cyber threats and attacks. The synthesis of AI's cognitive capabilities with the intricacies of cybersecurity creates an innovative approach to fortify digital defenses. It also embarks on an exploration of the multifaceted threats that assail the digital realm, spanning from sophisticated hacking endeavors to stealthy infiltrations. It underscores how AI-driven technologies provide a transformative framework to comprehend the evolving threat landscape, enabling proactive detection, prediction, and analysis of potential vulnerabilities. Moreover, this paper delves into the strategic application of AI in thwarting cyber attacks. It elucidates the ways in which AI-driven algorithms can autonomously decipher patterns, anomalies, and unusual behaviors that signify potential breaches. This real-time analysis, coupled with AI's adaptability, empowers cybersecurity systems to respond swiftly and effectively, minimizing damage and loss. Finally, this paper underscores the indispensability of leveraging artificial intelligence for cybersecurity. It encapsulates how AI serves as a vanguard against ever-evolving threats, enhancing the capacity to safeguard digital landscapes. As AI continues to evolve and adapt, its integration into cybersecurity remains instrumental in fostering a safer, more resilient digital future.

**INCORPORATING EFFECTIVENESS AND ACCOUNTABILITY FOR MEMBER
GOOD: POSSIBLE CHOICES FOR COOPERATIVES IN SUB-SAHARA AFRICA**

Ojiagu, NKECHI C.

Department of Co-operative Economics & Management
Nnamdi Azikiwe University, Awka, Anambra State, Nigeria.

Email:nc.ojiagu@unizik.edu.ng

Abstract

Cooperatives are multifaceted phenomena that add value to the members, communities and economies at large. Cooperatives in comparison with profit-maximizing investor-owned firms are considered better at coping with economic crises, driving economic development and promoting social inclusion among communities. However, cooperatives are saddled with several imperatives challenging their effectiveness, accountability, transparency and organisational integrity for the provision of member goods. Members remain the foundation of the cooperatives. Despite, the cooperative organisational structure, the model has come under blistering criticism for not living up to the "member good maximization", a situation which undermines cooperative good governance and sustainability. Thus, this paper, accordingly, proffers some possible choices in the paper, choices in the area itemized to cooperative stakeholders for incorporating effectiveness and accountability for the common member good in cooperatives in the region.

Keywords: Cooperatives, sub-Sahara, member good, possible choices

Abstract

A novel ternary Z-scheme photocatalyst (designated as SC1/SC2/SC3) was synthesized by facile coprecipitation method and subjected to characterization through XRD, FTIR, SEM, and UV-vis DRS techniques to describe its morphology, structure, and photocatalytic efficacy. The characterization results indicate the successful formation of a composite SC1/SC2/SC3, showcasing improved performance and stability attributable to favorable electron transfer capabilities and an appropriate band structure. Under sunlight, the SC1/SC2/SC3 composite exhibited a remarkable 98.48% degradation rate of 10mg/L malachite green (MG) dye within 45 minutes. Even after four cycles of use, the photocatalyst maintained robust degradation efficiency, underscoring its advanced photocatalytic properties and enhanced stability. Reactive species trapping experiments with the SC1/SC2/SC3 composite unveiled distinctive roles played by holes (h^+) and $\cdot O_2^-$ in the photodegradation process. Through an investigation of the photocatalytic mechanism, a Z-scheme was proposed as a plausible explanation for the observed processes.

Keywords: Z-scheme, Sunlight, Photocatalyst, Degradation, Malachite green (MG) dye.

Abstract

Analysis is one of the greatest achievements in the history of mathematics. The achievement opens a new era of mathematical progress and plays an important role in the development of physics, astronomy, signal processing and other disciplines. At the end of the 19th century, mathematicians deduced many properties of continuous functions on closed intervals, which undoubtedly promoted the development of analytical theory. Bolzano's Function Theory gives the earliest proofs of the Boundedness theorem and the Extreme value theorem and Weierstrass proved the Extreme value theorem in Berlin lecture. The Intermediate value theorem was first proved in 1817 by Bolzano, and then Cauchy gave a proof in 1821. The definition of uniform continuity is proposed by Heine, and he published a proof of the Uniform continuity theorem. There are some important properties of continuous functions on closed intervals including Weierstrass second theorem: Boundedness theorem, Weierstrass first theorem: Extreme value theorem, Bolzano-Cauchy second theorem: Intermediate value theorem, Cantor theorem: Uniform continuity theorem. Continuous functions have four fundamental properties on closed intervals: Boundedness theorem, Extreme value theorem, Intermediate value theorem, Uniform continuity theorem. These theorems are the basis of mathematical analysis and the direct expression of real number theory in functions. In 2018, R.S. Suriya and T. Shyla Issac Mary introduced a new class of sets which is called Alpha weakly semi closed (briefly α_{WS} -closed) and investigated properties of this set. Also, they studied and discussed some of its properties and compared this new notion with some other classes of sets and investigated some of their basic properties in topological spaces. We introduce α_{WS} -continuous function and α_{WS} -irresolute function and investigate several properties and characterizations of these new types of mappings in topological spaces. Mathematics Subject Classification (2020): 54C05, 54C08, 54C10.

Keywords and Phrases: Topological space, α_{WS} -open set, α_{WS} -closed set, α_{WS} -interior set, α_{WS} -closure set, α_{WS} -continuous function, α_{WS} -irresolute function.

**STRATEGIC FRAMEWORKS FOR NURTURING SUSTAINABLE COMPETITIVE
ADVANTAGE THROUGH INNOVATION MANAGEMENT ACROSS DIVERSE
INDUSTRIES WITHIN NIGERIA**

Zainab Onozare MAIYAKI

Department of Business Administration Federal University Gusau, Nigeria.

Email:zainabdullahi1012@gmail.com

Abstract

This paper explores the pivotal role of strategic frameworks in fostering and sustaining competitive advantages through innovation management across diverse industries within the Nigerian business landscape. With globalization and technological advancements shaping the competitive terrain, the pursuit of sustainable competitive advantage remains a strategic imperative for organizations. This paper focuses on elucidating various strategic frameworks tailored to the Nigerian context, emphasizing their efficacy in leveraging innovation management as a means to achieve and maintain competitive edges in diverse industries. Drawing upon theoretical models and empirical studies, it delineates the nuanced interplay between innovation strategies and sustainable competitive advantage. Moreover, this paper underscores the need for adaptable and industry-specific approaches, considering the intricacies inherent in Nigeria's multifaceted business environment. By offering insights into strategic frameworks that integrate innovation management, this conceptual paper aims to equip practitioners and policymakers with a comprehensive understanding of the pathways to nurture and sustain competitive advantages within Nigeria's diverse industrial landscape.

A SURVEY ON CHANNEL CAPACITY ESTIMATION FOR MASSIVE MULTIUSER MIMO SYSTEMS

Vaibhav YAVALKAR
A. P. Shah Institute of Technology

Abstract

As the need for high-speed data grows in current wireless communication systems, new ways must be found to make the best use of bandwidth. Massive Multiuser Multiple-Input Multiple-Output (MU-MIMO) systems have become a potential way to improve spectral efficiency and link reliability. But as these systems get bigger, they get more complicated, especially when it comes to estimating channel capacity, which is an important job for getting the most out of a system. This study paper gives a detailed look at the methods and techniques used to estimate channel capacity in large-scale MU-MIMO systems. Traditional methods like Least Square (LS) and Linear Minimum Mean Square Error (LMMSE) as well as newer methods that use machine learning are talked about. The paper also talks about the current problems with estimating channel capacity, such as how to deal with channels that are getting old, how to estimate in settings that change a lot, and how to deal with interference. Lastly, the field's future is looked at, with a focus on how it might be possible to use artificial intelligence methods and tap into new frequency bands.

Abstract

This review provides a comprehensive analysis of the potential of antibiofilm agents of plant origin in controlling antimicrobial resistance. A systematic literature search was conducted using various databases, including PubMed, Scopus, and Google Scholar. The keywords used for the search included “antibiofilm agents,” “plant-derived compounds,” “antimicrobial resistance,” and related terms. Studies published in the past decade were considered for inclusion in this review. The selected studies were analyzed and categorized based on the plants used, extraction methods, biofilm inhibition assays, and potential mechanisms of action against biofilms. Numerous studies have reported the effectiveness of plant-derived compounds in inhibiting biofilms formed by various pathogenic microorganisms. Several plant species, including but not limited to, Aloe vera, Curcuma longa, Zingiber officinale, and Punica granatum, have shown promising antibiofilm properties. The extracts obtained from these plants have demonstrated significant inhibition of biofilm formation, as well as disruption of established biofilms. Various mechanisms have been proposed, including interference with quorum sensing, disruption of extracellular polymeric substances, and adhesion mechanisms.

Abstract

Sorghum bicolor (L.) Moench (English/common name: great millet/Guinea corn/Indian millet/sweet sorghum, and Hausa name: *dawa*), is regarded as the 5th most important cereal crop globally, and the 2nd in Africa, respectively. FAOSTAT estimated its production as 58.92 million tonnes, worldwide, with Nigeria accounting for 6.73 million tonnes. Valorisation involves enhancing and utilising the socioeconomic/environmental value of crops, e.g. using food crops in non-food sectors, and is a current area of focus in agriculture. The phenotypic/genetic versatility, fast growth and stress tolerance of this crop extends its usage beyond traditional cultivation for food/feed, extending it to realms of bioenergy production and synthesis of useful chemicals/value-added products. Moreover, considering its high biomass production and hyperaccumulation ability, it is among the 20 plants commonly applied in phytoremediating persistent environmental pollutants, especially heavy metals (HMs). This review involved a literature search (articles, theses and conference papers) spanning the last twenty years (2004-2023) to provide a comprehensive snapshot of HMs phytoremediated by this crop, the mechanisms involved, effects exerted by the HMs on the crop and residue utilisation after the phytoremediation process. The results revealed the successful application of this crop in phytoremediating: Al, As, Cd, Co, Cr, Cs, Fe, Mg, Ni, Pb, Sr, U and Zn in Africa, the Americas, Asia and Europe. Furthermore, recent trends/areas of current research in phytoremediation using this crop include: exploring the molecular principles behind HM tolerance in the plant and the use of microbial consortia in microbially-assisted phytoremediation. Further research shall focus on additional efforts to valorise phytoremediation end-products, and developing phenotypically and genetically resilient varieties for improved outcomes. The review highlighted the massive potentials of this crop to be utilised as a successful phytoremediation agent especially in areas where HMs are rampant, and where the crop is indigenously cultivated in substantial amounts, e.g. Nigeria, towards a healthier environment.

Keywords: Heavy metals, Phytoremediation, *Sorghum bicolor*, Valorisation

**EXAMINATION OF THE CORRELATION BETWEEN THE AGE OF TOURISTS AND
WILLINGNESS FOR INTERNAL TOURISM IN ALGERIA**

Chems Eddine BOUKHEDIMI (ORCID:0000-0003-1728-1809)

University of Tizi Ouzou, Department of commerce. Management Marketing. Algeria

Email:chemsrko@gmail.com

Abstract

This study aims to measure the nexus or correlation between the age of respondents and their willingness to do tourism in Algeria. This type of research wants to check the behavior toward intern tourism and assess which category is affected. The method used is quantitative, through an online questionnaire between June and October 2023. It should be mentioned that our sample is composed of 51 respondents. The result based on the use of Kendall's tau b test shows that there is no correlation between the two variables ($p\text{-value: } 0.107 > 0.05$) and the correlation coefficient is negative (-0.214).

Keywords: Tourism - Kendall's tau b test- Alegria.

Xülasə

Müasir postsənaye cəmiyyəti qeyri-xətti inkişaf mərhələsinə qədəm qoymuşdur və bu gün sənaye cəmiyyətinin sadə davamı qismində dəyərləndirilə bilməz. Öz növbəsində, mədəniyyət də həmçinin mürəkkəb təkamül strukturundan ibarət olmaqla yanaşı həmçinin elementlərin transformasiya və struktur yenidən qruplaşma imkanı nəzərdə tutur ki, burada transformasiya təzahürlərindən biri dəbdir. Hazırda postsənaye dövründə baş verən dünyagörüşü istiqamətlərin və əhəmiyyətli dəyərlərin dəyişməsi nəticəsində yeni dəb təmayüllərinin konstruksiyası əmələ gətirilir ki, onun vəziyyəti, əsas əlamətləri, xarakterik xüsusiyyətləri onun haqqında özünü təşkilədıcilik elementlərinə malik sistem kimi danışmağa imkan verir. Onun məhz belə vəziyyəti tədqiqatçı üçün böyük maraq kəsb edir. İmic anlayışı satış məfhumu ilə sıx bağlıdır. İnsanların qarşılıqlı fəaliyyəti nəticəsində meydana gələn istənilən aksiya bu və ya digər şəkildə birbaşa yaxud dolayı satışla bağlıdır. Gələcəkdə bir-birinə faydalı olmaq üçün insanlar bir-birinin rəğbətini qazanmağa, xoşuna gəlməyə çalışır. Bu baxımdan ancaq yaxın dostlar və ailə üzvləri istisna təşkil edir. Bütün qalan insanlar məhz özləri üçün bu və ya digər fayda əldə etmək üçün bir-birilə, bəzən hətta düşünülməmiş də olsa ünsiyyət qurur. Odur ki, biznes aləmində imic məfhumu kifayət qədər geniş yayılmışdır. İmic – hər hansı insanın şəxsiyyəti və fəaliyyəti haqqında digər insanların təsəvvürüdür. Bir qayda olaraq, imic məfhumu daha çox bu və ya digər şəxsiyyətə aid edilir. Dəbin mürəkkəb təbiəti cəmiyyətin dinamikası ilə birgə inkişaf edir, buna görə dəbin sosial şərtlənməsi və yönəldilməsi, solum daxilində onun möhkəmlənməsi tədqiqat işləri üçün dəyişməz olaraq aktual mövzu kəsb edir. Dəbin ekstensiyaları, bir qayda olaraq, fasiləsiz baş verən dəyişikliklərdə, yeniliyə və gözlənilməzliyə oriyentasiyasında ifadə olunur. Bununla əlaqədar, dəbli innovasiyalar sahəsində fərqlərin seçimi problemi daha da kəskinləşir. Dəbin tənzimləyici təsirini qeyd etməmək mümkün deyil, dəb insanın şüurunu determinasiya etmək iqtidarındadır, bu da kütləvi ifrat istehlak cəmiyyəti üçün xüsusilə aktualdır.

Açar sözlər: dəb, imic, geyim, dəbli innovasiyalar

IMAGE AS A MEANS OF COMMUNICATION IN THE MODERN POST-INDUSTRIAL SPACE

Summary

The modern post-industrial society has entered the stage of non-linear development and today it cannot be evaluated as a simple continuation of the industrial society. In its turn, culture also consists of a complex evolutionary structure and also implies the possibility of transformation and structural regrouping of elements, where one of the manifestations of transformation is fashion. As a result of the change of worldview directions and traditional values, which is currently occurring in the post-industrial era, the construction of new fashion trends is formed, whose condition, main signs, and characteristic features allow us to talk about it as a system with elements of self-organization. Its very situation is of great interest to the researcher. The concept of image is closely related to the concept of sales. Any action that occurs as a result of human interaction is directly or indirectly related to sales in one way or another. In order to be useful to each other in the future, people try to win each other's sympathy and be liked. From this point of view, only close friends and family members are exceptions. All other people communicate with each other, sometimes even without thinking, just to get one benefit or another for themselves. Therefore, the concept of image is quite widespread in the business world. Image— is the perception of other people about the personality and activities of any person. As a rule, the concept of image is mostly attributed to one or another personality. The complex nature of fashion develops together with the dynamics of society, therefore, the social conditioning and direction of fashion, its consolidation within society, is an invariably relevant topic for research. Existences of fashion, as a rule, are expressed in continuous changes, orientation to novelty and unpredictability. In this regard, the problem of the choice of individuals in the field of fashionable innovations becomes even more acute. It is impossible not to mention the regulatory effect of fashion, fashion is able to determine the consciousness of a person, which is especially relevant for a society of mass extreme consumption.

Email:youngjoo@inha.ac.kr

Young Joo NA

Department of Clothing & Textiles, Inha University, Incheon, Korea

Abstract

In 1973, the world's most beautiful glass bead, measuring 1.8 cm in diameter, was unearthed in Gyeongju of Korea. This small glass bead is delicately inlaid with four human faces, six birds, and four flowering trees (Fig. 1). The inlaid glass beads, which demonstrate the high level of technological sophistication of the period, are partly unexplained, although there are various opinions about their origin and makers. There is a hypothesis that the figures inlaid in the glass are Roman kings and queens, or that there is an inlaid glass bead workshop in Java, Indonesia, and that they are the four faces of the Hindu Brahman. There are many records showing that ancient Korea revered white and blue, and preferred white animals and Goryeo celadon. Therefore, the purpose of this study is to investigate the symbolism of the inlaid glass bead design, its relationship to Silla culture, and the conditions under which the glass beads could be produced, and to reveal of Silla's own production of inlaid glass beads that converge artistic and technical skills. Research methods include relics and literature. There are written records that the people of Mahan, Buyeo, and Silla considered beads as treasures and used them as ornaments. In the patterned part of the beads, the sangtu and gold crowns are traditional elements of ancient Korea that cannot be explained by other cultures (Fig. 2). The six white birds can be seen as ducks or chickens, and bird figures such as ducks and chickens were often used in ancient Korea for religious purposes (Fig. 3). In addition, Silla is closely related to birds, as the early Silla was referred to as the 'country of birds'. The flower tree, with its symmetrical branches branching out from the trunk, is found in many Silla artefacts (Fig. 4). The figures in the inlaid glass beads are the king and queen of Silla, the white birds are ducks or chickens, and the flower trees can be seen as spiritual trees revered by northern peoples. In addition, the Silla people had excellent iron skills and produced a variety of glass beads from the slag produced by ironworking, as evidenced by the ruins and artefacts. In addition, various inlaid glass beads excavated in Korea and inlaid glass beads excavated alongside Silla-style tombs at Doganmori Tumulus in Japan support the theory of Silla's own production. The history of beads and the Silla's ability to produce glass beads can be gleaned from excavated gold tubes and metal inlaid artefacts, revealing the environment in which the Silla were able to produce their own.

Abstract

This abstract outline a focused investigation in to the promising potential of pyrazole-based compound such as di phenyl pyrazole and their derivatives as biologically active compound. Diphenyl pyrazole is a chemical compound that has been studied for its potential biochemical impact in biological systems. One example of its application is in the field of medicinal chemistry, where it has been investigated for its potential as a pharmacologically active compound. The central aim of this study is elucidating the different biological activity of di phenyl pyrazole such as anticancer, anti-inflammatory, antimicrobial, antimalarial, antiparkinsonian, antitubercular, antiviral, neuroprotective etc. In a biological system diphenyl pyrazole and their derivatives may interact with specific molecular target such as enzyme or receptors influencing various biochemical pathways. For instance, they might modulate signalling pathways involved in inflammation, leading to a therapeutic effect. Through these investigations, we aimed to elucidate the which mechanism responsible for its pharmacological effects. This study contributes to the growing body of knowledge surrounding the biochemical impact of diphenyl pyrazole in biological systems, offering valuable insights for researchers and pharmaceutical developers seeking innovative solutions in the pursuit of novel therapeutics.

Abstract

The complexity of the behavior of some species of the causative vectors for malaria disease contributes to the challenges on malaria elimination. Livestock are known to play a role in the disease prevalence as they serve as the preferred host for bloodmeal for some species of the causative vector. Based on a system of differential equations, the dynamics of malaria under optimal control was explored. The basic reproduction number, a threshold parameter for the disease incidence was estimated and the local stability of the disease-free equilibrium point is asymptotically stable provided the basic reproduction number is less than unity. Analysis of the local stability of the endemic equilibrium shows that the malaria model undergoes a forward bifurcation. The presence of livestock was found to influence the malaria incidence and prevalence based on sensitivity analysis. Based on optimal control analysis, the best control tools to be combined with the potential of contributing significantly to the disease elimination within a minimal time frame was recommended.

Abstract

Dermatophytosis is a fungal infection with severe incidences reported every year. To treat this, terbinafine loaded oil in water nanoemulsion (TH-NE) was fabricated using aqueous microtitration method with olive acid (oil phase), Span 80 (surfactant), and propylene glycol (co-surfactant). Pseudo-phase ternary diagrams and thermodynamic studies revealed the stability of TH-NE. TH-NE was optimized by Box-Behnken Design (BBD) and recorded a particle size of $28.07\text{nm} \pm 0.5$, PDI 0.1922 ± 0.1 and zeta potential $-41.87\text{ mV} \pm 1$. Furthermore, TH-NE was incorporated into 1.5% Carbopol and nanoemulgel (TH-NEG) was formed. TH-NEG was subjected to texture analysis which showed firmness (168.00g), consistency (229.81g.s), cohesiveness (-83.36g), work of cohesion (-107.02g.s). In vitro drug release for TH-NEG and TH-NE showed an initial burst effect followed by sustained release of 88% and 74% respectively for 48 h when compared with the marketed formulation (66%). Similarly, ex-vivo release studies showed that TH-NEG and TH-NE have sustained release of 86% and 71% respectively when compared with marketed formulation (67%). Moreover, TH-NEG and TH-NE showed $30\mu\text{m}$ and $25\mu\text{m}$ penetration into the epidermal layer respectively as seen in Confocal microscopy. Moreover, the dermatokinetic study demonstrated enhanced drug penetration through mouse skin with the drug-loaded emulgel compared to the TH-NE. Hence, TH-NEG proved to be potential carrier of TH for dermatophytosis treatment.

Abstract

The decreasing availability of fuel woods has made it necessary that efforts be made towards efficient utilization of agricultural wastes, some of these agricultural wastes include coconut shell, wood pulp, and wood waste (sawdust). In this study, briquettes were produced using coal and sawdust in different proportions using cornstarch as binder, this was evaluated by the amount of fixed carbon which was determined through proximate analysis, the calorific value, and some physical tests. The briquettes produced using cornstarch as binder had fixed carbon of 76.75% and, a calorific value of 28.5 MJ/kg, the briquette ignited at 34sec and burned for 14.02 min. This result suggests that cornstarch is a very good binder for briquette production. The coal blend in sawdust biomass yielded a bio-coal briquette with shorter ignition time, superior combustion sustaining properties, decreased the generation of dust and soot, and emitted less SO₂. The briquettes obtained in this study are efficient and environmentally friendly.

MICROSTRIP PATCH ANTENNA: BRIDGING CONNECTIVITY IN THE LTE AND WIMAX ERA

Adnane GHIAT

Antenna Subsystems INPT Rabat

Abstract

This paper presents a printed antenna with multiple bands, fed by a microstrip line and featuring different slots for increased bandwidth. The study involves thorough experimental analysis of impedance, radiation, and gain characteristics associated with this antenna design. Experimental results show significant enhancement in impedance bandwidth, with an operational range of 1.8 GHz observed around 2.8 GHz. This operational bandwidth marks a substantial fourfold improvement over conventional microstrip-line-fed printed wide-slot antennas. Moreover, the antenna's gain within this operational band is studied, resulting over 2-dB gain bandwidth achieved over at least 1.8 GHz.

Index Terms : Microstrip Patch, Antenna, LTE, WiMAX .

Abstract

Despite significant advancements in the field of pharmaceutical microbiology, the challenge of bacterial resistance to drugs, emerging and re-emerging infections remain an issue of global concern, hence, the need for alternative methods of treatment. *Buchholzia coriacea*, also known as wonderful kola, is a good option among several other options because of its many phytochemical components. The wonderful kola sample used for this study was purchased from Mobil Market in Niger State, Nigeria. The powdered plant materials were extracted using cold maceration method with aqueous and ethanol. Using standard methods, the antibacterial susceptibility test, minimum inhibitory concentration (MIC), minimum bactericidal concentration (MBC), and phytochemical screening were carried out. Flavonoids, tanins, alkaloids, steroids with the exception of saponins were found in the phytochemical analysis. Wonderful kola seed exhibits antibacterial activity, producing a zone of inhibition against all tested bacteria, and has the highest zone of inhibition at 250 mg/ml concentration. The zones of inhibition ranging from 14±0.00mm to 16±0.00mm. Minimum inhibitory concentration of the two extracts against *Streptococcus pyogenes*, *Streptococcus pneumonia*, and *Klebsiella pneumonia*, were all at 20mg/ml, with a minimum bactericidal concentration (MBC) of 50mg/ml against all the test isolates. The antibacterial activity of wonderful kola is demonstrated against some oral bacterial pathogens, including *Streptococcus pyogenes*, *Streptococcus pneumonia*, and *Klebsiella pneumonia*, which were isolated from General Hospital, Minna, Nigeria. The study's findings indicate that wonderful kola seed may have applications in both antibacterial and therapeutic drug development for the management of oral infections linked to the test organisms.

Keywords: Aqueous, ethanol, *Buchholzia coriacea*, oral pathogens

THE EFFECT OF WORK-LIFE BALANCE, JOB SATISFACTION AND ORGANIZATIONAL COMMITMENT ON EMPLOYEE PERFORMANCE IN NIGERIAN INSTITUTE OF LEATHER AND SCIENCE TECHNOLOGY, ZARIA

Abstract

This study is to assess the Effect Of Work-Life Balance, Job Satisfaction And Organizational Commitment On Employee Performance In Nigerian Institute Of Leather and Science Technology, Zaria: from 2016- 2023. The problem investigated revolves around the effect of work-life balance, job satisfaction and organizational commitment on employee performance. The Objective of the study is to assess the effect of work-life balance, job satisfaction, and organisational commitment on employee performance at the Nigerian Institute of Leather and Science Technology zaria. Literature were review on work-life balance, job satisfaction and organisational commitment. Vroom's Expectancy Theory (1964) was used for the study. The data for the study were generated from primary and secondary sources. The instruments of the primary data collection used were questionnaire and interview, while secondary sources made use of reports, books, gazettes, journals, research theses and dissertations. Questionnaires were distributed on a sample of 163 respondents selected from 238 population of the study through a stratified and simple random sampling techniques to test the hypotheses. Data were analysed using descriptive, inferential and thematic statistical tools. Regression analysis tests result revealed that the variables under study has a significant effect on employee performance also the result from the interview indicate that work-life balance, job satisfaction and organizational commitment has significant effect on employee performance. It was recommended among other things that employees were able to balance time, work-life and personal life and more attention should be given to them in terms of incentives and working conditions. This will further enhance their performance.job satisfaction brings the best out of an employee and that organizations should use the best motivational tools that suit the organization to make the employees give more in the service of the organization which will lead to employees' performance and NILEST should encourage employees to improve in their competence at work so that they can be committed to the organization performance.

Abstract

The extensive synthetic applications of the Mitsunobu reaction make it an essential component of organic chemistry. The essential components of the Mitsunobu reaction are azodicarboxylate, which acts as an oxidizing agent, and phosphines, which act as reducing agents. Both these components work together to convert alcoholic groups to ester groups. It is a well-known stereoselective process that provides the final products with an inverted stereochemical configuration. The synthesis of natural compounds is one of the most significant uses of the Mitsunobu reaction. Here, the Mitsunobu reaction's recent contributions to the overall synthesis of natural products, emphasizing their biological potential have been presented.

Keywords: Mitsunobu reaction; Natural products; Stereoselective synthesis.

Özet

Yaşamımızın önemli bir kısmını oluşturan matematik becerileri, erken çocukluk dönemindeki matematiksel deneyimlerin ürünüdür. Erken yaşlarda kazanılan matematik becerileri, çocukların ileriki yıllarda karşılaştıkları matematiksel kavramlar için temel oluşturmaktadır. Çocukların matematikle ilgili sahip oldukları beceriler ev ortamındaki matematik yaşantılarıyla doğrudan bağlantılı bir süreci işaret etmektedir. Çünkü çevresel uyaranlara karşı en hassas dönemlerden biri olarak nitelendirilen okul öncesi dönemde ev yaşantılarının her biri çocuklar için birer eğitim deneyimidir. Bu deneyimler aileler tarafından çocuklar için bir eğitim fırsatı olarak kullanılabilir. Bu sayede erken matematik becerilerini geliştirme potansiyeli üst noktalara ulaşabilmektedir. Araştırmada, ev ortamındaki matematik yaşantılarının okul öncesi çocukların matematik becerilerine etkisinin incelenmesi amaçlanmıştır. Araştırmada karma yöntem desenlerinden açılımlı sıralı desen kullanılmıştır. Araştırmanın çalışma grubunu Ankara ilinde Milli Eğitim Bakanlığına bağlı bağımsız bir okul öncesi eğitim kurumuna devam eden yirmi çocuk ve ebeveynleri oluşturmaktadır. Araştırmanın nicel verileri Aydoğan, Akkaya ve Özyürek (2020) tarafından geliştirilen Erken Matematik Testi (EMAT) ile Aydoğan ve Özaslan tarafından geliştirilen Ev Ortamı Değerlendirme Ölçeği (EV-DE) aracılığıyla elde edilmiştir. Nitel veriler ise araştırmacılar tarafından geliştirilen Aile Görüşme Formu ile elde edilmiştir. Araştırmada EMAT ve EV-DE değerlendirme araçları ile elde edilen veriler SPSS paket programı ile analiz edilmiş, ardından en yüksek ve en düşük puana sahip beş çocuğun ebeveynleri ile Aile Görüşme Formu aracılığıyla yarı yapılandırılmış görüşmeler gerçekleştirilmiştir. Görüşmelerden elde edilen veriler içerik analizi yöntemi ile incelenmiştir. Araştırma sonucunda, EMAT ve EV-DE arasında pozitif yönde anlamlı ilişki bulunmuştur ($p < 0,01$). Aile Görüşme Formu bulgularında ise, erken matematik becerisi yüksek olan çocukların ailelerinin matematiği ev yaşantılarına daha fazla dahil ettikleri görülürken; erken matematik becerisi düşük olan çocukların ailelerinin ev yaşantılarında matematiğe daha az yer verdikleri görülmüştür.

Anahtar Kelimeler: Ev ortamında matematik, erken matematik eğitimi, matematik becerilerinin desteklenmesi, okul öncesi.

THE IMPACT OF MATHEMATICAL EXPERIENCES IN THE HOME ENVIRONMENT ON PRESCHOOL CHILDREN'S MATHEMATICAL SKILLS

Abstract

Mathematical skills, which constitute an important part of our lives, are the product of mathematical experiences in early childhood. Mathematical skills acquired at an early age form the foundation for the mathematical concepts that children will encounter in later years. Children's mathematical skills are directly related to their mathematical experiences in the home environment. During the preschool period, which is characterised as one of the most sensitive periods to environmental stimuli, each home experience serves as an educational opportunity for children. These experiences can be used by families as an educational opportunity for children. In this way, the potential for developing early mathematics skills can reach high levels. In this study, it was aimed to examine the effect of mathematics experiences in the home environment on preschool children's mathematics skills. Exploratory sequential design, one of the mixed method designs, was used in the study. The study group consisted of twenty children attending an independent preschool education institution affiliated to the Ministry of National Education (MoNE) in Ankara and their parents. Quantitative data were obtained through the Early Mathematics Test (EMAT) developed by Aydođan, Akkaya, and Özyürek (2020) and the Home Environment Evaluation Scale (EV-DE) developed by Aydođan and Özaslan. Qualitative data were obtained through the Family Interview Form developed by the researchers. In the study, the data obtained with the EMAT and EV-DE assessment tools were analysed with the SPSS package programme, and then semi-structured interviews were conducted with the parents of the five children with the highest and lowest scores through the Family Interview Form. The data obtained from the interviews were analysed by content analysis method. As a result of the study, a significant positive correlation was found between EMAT and EV- DE ($p < 0.01$). In the findings of the Family Interview Form, it was observed that the families of children with high early mathematics skills included mathematics more in their home life, while the families of children with low early mathematics skills included mathematics less in their home life.

Keywords: Mathematics in home environment, early mathematics education, supporting mathematics skills, preschool.

Özet

Aile, çocuğun ilk sosyal ve duygusal çevresidir ve çocuk dünyayı ilk olarak ailenin ilgisi ve desteği ile keşfeder. Aileye katılan yeni bir kardeş desteğin ve ilginin paylaşılmasına neden olur. Yeni doğan bebek temel ihtiyaçlarını gidermek için ailesine bağımlı olduğundan zaman zaman annenin ilgisi yeni doğan bebek üzerine yoğunlaşır. Bu durumda ilgi ve desteği paylaşılan çocuk yeni doğana karşı kıskançlık davranışları sergiler. Kıskançlık davranışları yenidoğana ve anneye karşı saldırgan ve tepkisel olabilmektedir. Kardeş kıskançlığı çocuklarda genellikle 3-6 yaş döneminde görülmektedir. Bu dönemdeki çocuklar gelişimsel olarak benmerkezci dönemde oldukları için her şeyin sebebinin kendileri ile ilgili olduğunu düşünürler. Dolayısıyla yeni bir bebeğin dünyaya gelme sebebini ailenin kendisini sevmediği olarak düşünebilirler. Ayrıca, bu yaş grubu çocukların okul öncesi eğitime başlamasına denk geldiği için çocuklarda ailenin kendisinden kurtulmak istediğine dair düşünceler ortaya çıkabilmektedir. Bu araştırmanın amacı annelerin ve çocukların gözünden kardeş kıskançlığının incelenerek sorunlar ve çözüm stratejilerinin ortaya konmasıdır. Araştırmada nitel araştırma desenlerinden fenomenoloji (olgubilim) deseni kullanılmıştır. Çalışma grubunun belirlenmesinde ölçüt örnekleme tekniği kullanılmıştır. Bu bağlamda Rize ilinde 0-12 ay arası kardeşe sahip olma ölçütünü sağlayan 3-6 yaş grubu sekiz çocuk ve anneleri çalışma grubunu oluşturmuştur. Araştırmanın verileri anneler ve çocuklarla ayrı oturumlar şeklinde gerçekleştirilen odak grup görüşmeleri ile elde edilmiştir. Görüşmelerde anneler ve çocuklar için araştırmacılar tarafından geliştirilen görüşme formları kullanılmıştır. Odak grup görüşmeleri bir moderatör başkanlığında ve iki gözlemci eşliğinde yürütülmüştür. Anneler ile yapılan görüşme 60 dakikalık bir oturumda gerçekleştirilmiştir. Annelere öncelikle araştırmanın amacı açıklanmış, ardından görüşme formunda yer alan sorular sorulmuştur. Veri kaybını önlemek amacıyla annelerin izni alınarak yanıtları kayıt altına alınmıştır. Çocuklar ile yapılan görüşme ise ebeveyn onayı alınarak 30 dakikalık bir oturumda gerçekleştirilmiştir. Çocuklarla tanışmak için buz kırıcı bir oyun oynanmış, ardından görüşme formunda yer alan sorular sorulmuştur. Araştırmadan elde edilen veriler içerik analizi tekniği ile analiz edilmiştir. Bu doğrultuda anneler ile yapılan görüşmeler sorunlar ve çözüm stratejileri açısından; çocuklar ile yapılan görüşmeler ise kardeşlik ve kardeşe uyum bağlamında ele alınmıştır.

Anahtar Kelimeler: Kardeş kıskançlığı, kardeşler arası rekabet, kardeşler arası ilişki

SIBLING JEALOUSY FROM THE PERSPECTIVE OF MOTHERS AND THEIR CHILDREN: PROBLEMS AND SOLUTION STRATEGIES

Abstract

The family serves as the child's primary social and emotional environment, and it is within the family's care and support that the child initially explores the world. The arrival of a new sibling in the family fosters shared parental support and attention. As the newborn relies on the family for basic needs, the mother's focus may shift towards the new baby. In this case, the child who shares the attention and support exhibits jealous behaviors towards the newborn. Jealousy behaviors can be aggressive and reactive towards the newborn and the mother. Sibling jealousy is usually observed in children between the ages of 3-6. Since children in this period are developmentally self-centered, they think that everything is about them. Therefore, children in this age group may perceive the arrival of a new baby as a sign that the family does not like them. In addition, since this age group coincides with the start of preschool education, children may think that the family wants to get rid of them. This study aimed to examine sibling jealousy from the perspective of mothers and children and to reveal the problems and solution strategies. Phenomenology design, one of the qualitative research designs, was used in the study. Criterion sampling technique was used to determine the study group. Eight children aged 3-6 years and their mothers who met the criteria of having siblings between 0-12 months in Rize province constituted the study group. The data of the study were obtained through focus group interviews conducted with mothers and children in separate sessions. Interview forms developed by the researchers for mothers and children were used. The focus group interviews were conducted under the supervision of a moderator and two observers. The interview with the mothers was conducted in a 60-minute session. The purpose of the study was first explained to the mothers, and then the questions in the interview form were asked. In order to prevent data loss, the mothers' consent was obtained, and their responses were recorded. The interview with the children was conducted in a 30-minute session with parental consent. The children were introduced through an icebreaker game, followed by asking questions from the interview form. The data obtained from the research were analyzed with the content analysis technique. Accordingly, interviews with mothers were analyzed in terms of problems and solution strategies, while interviews with children were analyzed in terms of siblingship and sibling adjustment.

Özet

Türkiye'de Millî Eğitim Bakanlığı Öğretmen Yetiştirme Genel Müdürlüğü ile Birleşmiş Milletler Eğitim, Bilim ve Kültür Örgütü (UNESCO) iş birliğinde gerçekleştirilen "Anadolu Masalları Projesi" geleneksel Anadolu masallarının korunması ve gelecek nesillere aktarılmasını amaçlayan bir girişimdir. Proje, Türkiye'nin zengin kültürel mirasını yansıtan masalları toplamayı, belgelemeyi ve öğretmenlere bu masalları eğitim süreçlerine entegre etme fırsatı sunmayı hedeflemektedir. Bu sayede, çocuklara geleneksel değerleri ve kültürel mirası öğretme amacı güdülmektedir. Bu proje kapsamında okul öncesi ve ilkökul çocuklarına yönelik masal kitaplarından oluşan iki eğitim seti yayınlanmıştır. Bu araştırmanın amacı, Okul Öncesi Anadolu Masalları eğitim setinde yer alan masallara yönelik çocukların görüşlerinin incelemesidir. Bu amaç doğrultusunda araştırmada nitel araştırma yöntemlerinden olgubilim (fenomenoloji) deseni tercih edilmiştir. Araştırmanın çalışma grubuna, Ankara'da Millî Eğitim Bakanlığına bağlı bağımsız bir okul öncesi eğitim kurumuna devam eden beş yaş grubu 15 çocuk dahil edilmiştir. Veriler araştırmacılar tarafından geliştirilen Anadolu Masalları Değerlendirme Formu ile elde edilmiştir. İki bölümden oluşan formun birinci bölümde her bir masala ilişkin değerlendirme soruları, ikinci bölümde ise Anadolu Masallarına yönelik genel değerlendirme soruları yer almaktadır. Veri toplama sürecinde çalışma grubuna her bir masal kitabı etkileşimli olarak okunmuş, ardından masal değerlendirme soruları sorulmuş ve çocukların yanıtları kaydedilmiştir. Son olarak, çocuklardan okunan masaldan aklında kalanı çizmeleri istenmiştir. Tüm masalların okuma süreci tamamlandığında çocuklarla bireysel görüşmeler gerçekleştirilerek Anadolu Masallarına ilişkin genel değerlendirmeleri alınmıştır. Araştırmadan elde edilen veriler içerik analizi tekniği ile çözümlenmiştir. Araştırma bulguları masal değerlendirme ve genel değerlendirme olmak üzere iki başlık altında incelenmiştir. Elde edilen veriler alan yazın doğrultusunda yorumlanarak tartışılmıştır.

Keywords: Anadolu masalları, okul öncesi, masal, çocukların görüşleri

ANATOLIAN TALES THROUGH CHILDREN'S EYES

Abstract

In Turkey, the "Anatolian Tales Project," implemented in collaboration with the Ministry of National Education (MoNE), General Directorate of Teacher Training, and the United Nations Educational, Scientific, and Cultural Organization (UNESCO), is an initiative aimed at preserving traditional Anatolian tales and passing them on to future generations. The project seeks to collect and document tales reflecting Turkey's rich cultural heritage and provide teachers with the opportunity to integrate these tales into their educational processes. This way, it aims to teach children about traditional values and cultural heritage. Two educational sets, consisting of fairy tale books for preschool and primary school children, have been published within the scope of this project. This study aimed to examine children's opinions about fairy tales in the Preschool Anatolian Tales education set. For this purpose, a phenomenology design, one of the qualitative research methods, was chosen for the study. The study group comprised 15 five-year-old children attending an independent preschool education institution affiliated with the MoNE in Ankara. The data were obtained using the Anatolian Tales Evaluation Form developed by the researchers. The form, consisting of two parts, includes evaluation questions about each tale in the first part and general evaluation questions about Anatolian Tales in the second part. During the data collection process, each fairy tale book was read interactively to the study group. Subsequently, the fairy tale evaluation questions were posed, and the children's responses were recorded. Finally, the children were asked to draw what they remembered from the fairy tale. Upon completion of the reading process for all fairy tales, individual interviews were conducted with the children, and their general evaluations of Anatolian Fairy Tales were gathered. The data obtained from the research were analyzed using the content analysis technique. Research findings were categorized under two headings: fairy tale evaluation and general evaluation. The data obtained were interpreted and discussed in line with the literature.

Özet

Bu çalışmanın amacı, menü kartlarının yiyecek içecek satın alma davranışlarını ne şekilde etkilediğini saptamak amacıyla planlanmıştır. Çalışma kapsamında müşterilerin menü kartlarında dikkat ettikleri özellikler değerlendirilmiştir. Bu kapsamda İstanbul'da ikamet eden 18-60 yaş arasındaki 151 kişi araştırmanın örneklemini oluşturmuştur. “Menü kartının rengi sipariş tercihim olumlu etkiler” önermesine (%34,4) ve menü kartında yiyecek ve içeceklerin servis süresinin belirtilmesi sipariş tercihim çok etkiler” önermesine büyük çoğunluğu katılıyorum yanıtını vermişlerdir (%39.1). “Menü kartında yiyecek içeceklerin enerji değerlerinin belirtilmesini mutlaka isterim” ve “Menü kartında yiyeceklerin yanında verilecek garnitür ve sosların açıkça belirtilmesi benim için çok önemlidir” önermesi cinsiyet açısından anlamlı olarak farklı bulunduğu ve erkeklerin daha fazla önem verdiği tespit edilmiştir.

**A REVIEW ON CUSTOMER PREFERENCES OF FOOD AND BEVERAGE
ESTABLISHMENTS MENUS IN ISTANBUL**

Abstract

The aim of this study is to determine how the menu cards affect the food and beverage purchasing behaviors, The features noted in the menu cards were evaluated. In this context. 151 people between the ages of 18-60 residing in Istanbul formed the sample of the research. The color of the menu card affects my order preference positively.” (34.4%) and specifying the serving time of food and drinks on the menu card affects my order preference a lot.” majority of them gave the answer I agree (39.1%). In the sub-dimension of the content in terms of gender, the propositions "I definitely want the energy values of food and beverages to be stated on the menu card" and "it is very important for me to clearly indicate the garnishes and sauces to be given on the menu card" were found to be significantly different in terms of gender and men gave more importance.

THE PERCEPTION OF COGNITIVE TRIAD ACCORDING TO ATTACHMENT STYLES WITH PETS AND PARENTS

Bilge Gülen BOYACI

Başkent University, Psychological Counselling and Guidance Centre. Ankara

Email: bgulenboyaci@baskent.edu.tr

Abstract

The aim of this study was to assess whether patterns of attachment to pets and parents were predictive of basic cognitive perceptions which is called negative cognitive triad. Additionally, it also aims to investigate whether some demographic and animal-based variables affect negative cognitive triad. The study sample included 368 (female 67.9% and $N = 250$; male 32.1% and $N = 118$) adult who have pet. The Cognitive Triad Inventory, Lexington Pets Attachment Scale, Three Dimensional Attachment Styles Scale, and a questionnaire including questions to measure demographic variables were administered to the participants. To analyze the relationship between cognitive triad and attachment patters to parents and pets, comparisons of the independent group samples for all variables were examined. For this purpose, cut-off points were determined by dividing the mean score of the Lexington Pets Attachment Scale and the secure attachment subscale of Three Dimensional Attachment Styles Scale according to their cumulative percentages. Groups were decided according to the determined inclusion criteria to the level of the attachment style for each participant. The findings reveal that the attachment styles to the parents has a crucial effect on basic cognition scores which is called cognitive triad. The tendency to negatively perceive view of self, others/world, and the future (cognitive triad) is more likely to one who has strong emotional bound with their pets, and weak emotional bound with others. Additionally, it is also found that the pattern of attachment to parents is more determinant than the pattern of attachment to pets in terms of cognitive triad. The findings of the study were discussed within the context of related theorems, research, and literature.

Keywords: Attachment, Animal attachment, Cognitive triad

FUTURE OF EMPLOYMENT IN THE LIGHT OF GLOBAL TRENDS

Abstract

Nowadays, the concept of employment is constantly gaining importance due to the continuous increase in unemployment. Compared to thirty years ago, there has been a significant decline in employment conditions and the trend continues to intensify, leading to increased concerns about the future of employment. In the future of employment, it is argued that the industrial sector, especially the traditional industries, will lose its weight over time, that the money earned from financial instruments will replace the money earned from industry - which is already the case - and that technological developments and the widespread use of robots in production will eliminate the concept of labour in the present sense. According to the same views, with the change in the content of the concept of worker due to technological developments and the use of robots, the role of the labour factor in production -especially in terms of unskilled labour- will disappear and the spread of unemployment will be inevitable. The main purpose of this study is to find a solution to the question of whether the above-mentioned claims and doubts will be realised in the future. In line with the aforementioned purpose, in the first part, the general trends and tendencies of labour markets and employment have been tried to be determined, and in the other parts, answers have been sought to some questions that we believe to be important for the future, such as unmanned production with robots, the replacement of industry and production by speculations made with financial instruments.

GİRİŞİMCİLERİN UYUMSUZ DAVRANIŞLARI: ASI, BAŞINA BUYRUK VE AYKIRI GİRİŞİMCİLER

Assist. Prof. Dr. Mehmet Ali EKEMEN (ORCID: 0000-0003-3006-0736)
Lefke Avrupa Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İşletme Bölümü, Lefke
Email: mekemen@eul.edu.tr

Özet

Girişimciler yaygın olarak toplum gözünde asi, başına buyruk ve aykırı olarak tasvir edilmektedir. Örgüt ile uyumsuzluk ve normdan kopma isteği girişimciliğin özünde yer alan bir özelliktir (McMullen ve diğerleri, 2021). Hatta bazı akademisyenler, yerleşik standartlara uymamanın girişimciliğe aykırı olduğunu iddia etmektedir (Navis ve Glynn, 2011). Dahası, son yıllarda uygulamalı sosyal bilimlerdeki akademisyenler, asi kişilerin örgütlerde nasıl değişimin aracı olabileceğini (Gino, 2018), aykırı kişilerin sürü karşıtı davranış göstererek nasıl daha özgün bir kimlik yaratabileceğini (Baddeley, 2018), başına buyruk kişilerin yeni fikirleri benimseme cesaretinin takipçilere nasıl ilham verebileceğini (Baddeley, 2018), ve kurallara karşı gelmenin ve kurallara meydan okumanın nasıl özgün fikirleri harekete geçirebileceğini (Grant, 2016) anlatmaktadır. Üstelik farklı davranışların girişimcilik üzerindeki etkisine ilişkin bu kavramlar yeni değildir. Schumpeter (1934; 1942) girişimcileri, "yaratıcı yıkım" veya yerleşik uygulamaların yeni üretim araçlarıyla değiştirilmesi yoluyla yenilik ve ekonomik büyümenin sağlanmasından sorumlu olarak görüyordu. Uyumsuz davranışlar ile girişimcilik çabaları arasındaki bu yaygın ilişkiye ve girişimci inovasyonu için statükodan kopmanın gerekli olduğu varsayımına rağmen, girişimcilik bağlamında uyumsuz bireylerin özelliklerini ve benzersiz etkilerini araştırmak için çok az araştırma yapılmıştır. Bu nedenle, bu çalışmada, girişimcilik alanındaki uyumsuz davranışlara ilişkin anlayışımızı genişletmek, girişimcilikte asilerin, başına buyrukların ve aykıruların rolünü araştırmak, bu üç yapının doğasını kavramsallaştırmak, bunların çeşitli girişimci davranışlar ve sonuçlarla olan bağlantılarını ortaya koymak ve bu davranışsal eğilimleri ölçmek için ölçekler geliştirmek amaçlanmaktadır. **Anahtar Kelimeler:** Girişimcilik, Uyumsuz Davranışlar, Asi Girişimciler, Başına Buyruk Girişimciler, Aykırı Girişimciler

INADAPTIVE BEHAVIORS IN ENTREPRENEURSHIP: REBEL, MAVERICK AND CONTRARIAN ENTREPRENEURS

Abstract

Entrepreneurs are commonly portrayed in society as rebels, mavericks and contrarians. Disharmony with the organization and the desire to break away from the norm is an inherent characteristic of entrepreneurship (McMullen et al., 2021). Some scholars even argue that complying with established standards is anti-entrepreneurship (Navis and Glynn, 2011). Moreover, in recent years, scholars in applied social sciences have studied how rebel individuals can be agents of change in organizations (Gino, 2018), how contrarians can create a more unique identity by displaying anti-herd behavior (Baddeley, 2018), how mavericks' courage to adopt new ideas can inspire followers (Baddeley, 2018), and how going against and challenging the rules can mobilize original ideas (Grant, 2016). Moreover, these concepts regarding the impact of different behaviors on entrepreneurship are not new. Schumpeter (1934; 1942) described entrepreneurs as responsible for driving innovation and economic growth through "creative destruction," or the replacement of established practices with new means of production. Despite this widespread association between inadapative behaviors and entrepreneurial efforts, and the assumption that breaking with the status quo is necessary for entrepreneurial innovation, few research has been conducted to investigate the characteristics and unique effects of inadapative individuals in the entrepreneurial context. Therefore, this study aims to expand our understanding of inadapatability in the field of entrepreneurship, explore the role of rebels, mavericks, and contrarians in entrepreneurship, conceptualize the nature of these three constructs, reveal their connections to various entrepreneurial behaviors and outcomes, and develop scales to measure these behavioral tendencies.

Abstract

When a child is born in family, alongside with happiness, a stressful and exhausting period begin. Parents' are usually worn out physically and emotionally throughout the day struggling with daily parenting. Parental burnout is a chronic stress-based disorder. This disorder may lead to suicidal thoughts, child neglect and violence. Accordingly, this study's aim is to examine parental burnout, parental stress and relationship resilience by socio-demographic variables. Study group of this research is consisted of students' parents from 2020-2021 academic year, all graduation levels (pre-primary-middle-high school) and from private and state schools in Ankara, in total of 510 parents, (%68,6) 350 mothers and (%31,4) 160 fathers. In this research, data was gathered by "Parental Burnout Assessment", "Parenting Stress Inventory" , "Relational Resilience Scale" and "Personal Information Form" which was prepared by the researcher. In this research, this data was analysed on SPSS 25.0 (Statistical, Package For Social Sciences). It is concluded based on the data that parental burnout, parental stress and relational resilience differ between gender. Parental burnout and parental stress was at a higher level on male. But, relational resilience was at a lower level than female. While parental burnout and parental stress differs by age, relational resilience does not. Evidence gathered to put forth the sociodemographic variables that affect parental burnout, parental stress and relational resilience was discussed and commented in scope of this literature. Suggestions were presented by research results.

Abstract

This study investigates the impact of social media on the motivation and academic performance of physics undergraduate students in Kwara State, Nigeria. Data from 200 respondents were collected using a descriptive survey design. The findings reveal that students extensively use social media, with a substantial proportion dedicating over six hours daily. While many use it primarily for entertainment, a notable number also leverage it for educational purposes, showing a positive correlation between such use and academic performance. However, excessive social media engagement, addiction, and poor time management are associated with decreased academic performance. The study underscores the complex relationship between social media and academic outcomes and suggests the need for a balanced approach to maximize its educational benefits while mitigating distractions. These findings offer valuable insights for educators, institutions, and students in the digital age of tertiary education.

Abstract

Renewable energy has become increasingly popular these days, with wind turbines and solar panels being used extensively to store energy. However, energy storage has emerged as a very promising source of electricity, due to its ability to generate large amounts of electricity, which can be used in a variety of applications. Electromechanical energy storage is a method for obtaining electricity from due to mechanical stimulation. This technology works by converting the energy of mechanical stimuli into electricity, which can then be used to power devices and systems. It is a promising source of electricity because it offers many advantages. The automotive industry is one of the areas where electric circuit breakers are being explored as part of the process. For example, power-cutting pedals generate electricity from the driver's movement, which can be used to power the vehicle's electrical system or to charge its battery. This technology can reduce reliance on external power sources to improve the overall energy efficiency of the vehicle. The power cut pedal is driven by a mechanical connection from the driver's throttle or brake pedal, which generates an electric current that can power the vehicle's electrical system or charge its battery. Nevertheless, an electric motor driven harvest the energy. The potential is that we can change the way we produce and energy is used, creating a sustainable source of renewable energy for a wide range of applications.

Özet

Pek çok kişi tarafından bilinen fakat genellikle fazla konuşulmayan bir konu olan kayırmacılık, toplumsal hayatın pek çok alanında insanların karşısına çıkabilir. Kayırmacılık kısaca, bireylere çeşitli gerekçelerle nesnellikten uzak, hak edilmeyen ayrıcalıklar sağlanması olarak ifade edilebilir. Kayırmacılık türleri alanyazında farklı şekillerde ele alınmasına rağmen genel olarak; nepotizm (akraba kayırmacılığı), kronizm (eş-dost kayırmacılığı), partizanlık (siyasi kayırmacılık), hizmet kayırmacılığı ve cinsel kayırmacılık başlıkları altında incelenebilir. Alanyazında işletme, siyaset, spor, otomotiv ve sağlık gibi birbirinden çok farklı alanlarda yapılan çalışmalarda incelenen bir kavram olan kayırmacılık, son yıllarda eğitim alanında çalışan araştırmacıların da ilgi alanına girmiştir. Öğrenme süreci, öğrenci ve öğretmenler arasında yakın bir ilişkiyi gerektirir. Bu öğretmen öğrenci ilişkisinin nesnel ve adil olması beklenir. Bununla birlikte teoride adil olması beklenen bu ilişki, kimi zaman uygulamada beklentilerden uzaklaşabilir. Öğretmen tarafından yapılan herhangi bir kayırmacı uygulama, öğrencilerin adalet algısını doğrudan olumsuz etkilemesinin yanı sıra, pek çok dolaylı olumsuz sonuca sebebiyet verebilir. Bu durum öğrencinin okula ve öğretmene karşı olan tutumu, okula bağlılığı, akademik motivasyonu ve akademik başarısı gibi farklı alanlarda olumsuz sonuçlara yol açabilir. Bu bağlamda bu çalışmada, yükseköğretim kurumlarında akademisyen kayırmacılığının öğrenci algılarına göre incelenmesi amaçlanmıştır. Nitel araştırma yönteminin kullanıldığı araştırma, Türkiye’de bir üniversitede lisans eğitimi gören 4. sınıf öğrencileri ile gerçekleştirilmektedir. Araştırmanın veri toplama süreci devam etmekte olduğundan araştırmanın bulgu, sonuç ve önerileri veri toplama sürecinin ardından sunulacaktır.

Keywords: Kayırmacılık, yükseköğretim, nepotizm, kronizm.

**EXAMINATION OF THE FAVOURITISM OF ACADEMICS IN HIGHER
EDUCATION BASED ON STUDENT PERCEPTIONS**

Abstract

Favouritism, which is known by many people but is generally not talked about much, can be encountered by people in many areas of social life. In short, favouritism can be defined as providing unjustified privileges to individuals on various grounds that are far from objectivity. Although the types of favouritism are discussed in different ways in the literature, they can be generally examined under the headings of nepotism (favouritism towards relatives), cronyism (favouritism of friends), partisanship (political favouritism), service favouritism and sexual favouritism. In the literature, favouritism, which is a concept that has been examined in studies in many different fields such as business, politics, sports, automotive and health, has recently been of interest to researchers working in the field of education. The learning process requires a close relationship between students and teachers. Teacher-student relationship is expected to be objective and fair. However, this relationship, which is expected to be fair in theory, may sometimes move away from expectations in practice. Any favouritism practice by the teacher may cause many indirect negative consequences as well as directly affecting students' perception of justice. This situation may lead to negative consequences in different areas such as student's attitude towards school and teacher, commitment to school, academic motivation and academic achievement. In this context, this study aims to examine academic favouritism in higher education institutions according to student perceptions. The research, in which qualitative research method is used, is carried out with 4th year undergraduate students studying at a university in Turkey. Since the data collection process of the research is ongoing, the findings, conclusions and recommendations of the research will be presented after the data collection process.

Keywords: Favouritism, higher education, nepotism, cronyism.

Abstract

Sturm-Liouville problems play an important role in applied sciences and are of great interest in many branches of natural sciences. The methods of this theory are the most effective for investigating many physical problems such as elasticity, quantum mechanics, acoustics, seismic motion of the earth, transmission of sound in layers of variable density, velocity of large-scale waves in the atmosphere. This theory also is one of the rich branches of the theory of linear operators in Hilbert spaces, especially the theory of differential operators. In this paper, we study a boundary value problem consisting of a two-interval Sturm-Liouville equation, periodic boundary conditions, and additional conduction conditions between the left and right solutions (such conditions are also called transfer conditions). It is shown that the investigated boundary-value problems can be represented by a self-adjoint differential operator. Results obtained in this paper extend and generalize the corresponding classical results. By using a new approaches we obtained some important properties of eigenvalues and eigenfunctions.

Keywords: Multi-interval Sturm-Liouville problems, conduction conditions, boundary conditions.

Introduction

With the notation

$$L[u] = \frac{d}{dx} \left(p(x) \frac{du}{dx} \right) + q(x) u$$

consider the Sturm-Liouville equation

$$L[u] + \lambda r(x)u = 0 \quad (1)$$

where $p > 0$, $r > 0$ and p, q, r are continuous functions on interval $[a, b]$ along with the boundary conditions

$$a_1 u(a) + \alpha'_1 u'(a) + b_1 u(b) + b'_1 u'(b) = 0 \quad (2)$$

$$a_2 u(a) + \alpha'_2 u'(a) + b_2 u(b) + b'_2 u'(b) = 0 \quad (3)$$

where $\text{rank} \begin{bmatrix} a_1 & \alpha'_1 & b_1 & b'_1 \\ a_2 & \alpha'_2 & b_2 & b'_2 \end{bmatrix} = 2$. The problem of finding a complex number μ , if any, such that the BVP (2)-(3) with $\lambda = \mu$, has a non-trivial solution is called a Sturm-Liouville Eigen Value Problem (SL-EVP). Such a value μ is called an eigenvalue and the corresponding non-trivial solutions $u(\cdot; \mu)$ are called eigenfunction. Further, if $p(a) = p(b)$, $p > 0$ and $r > 0$ on $[a, b]$, p, q, r are continuous functions on $[a, b]$, then solving Sturm-Liouville equation (1) coupled with boundary conditions

$$u(a) = u(b), u'(a) = u'(b)$$

is called a periodic SL-EVP. In some areas of physics, including quantum mechanics or frequency and vibration theory, the Sturm-Liouville problems with periodic boundary conditions appears frequently. For example, let us consider the Quantum particle freely moving on a circle. This phenomena is modelled by the familiar differential equation, the so-called Schrödinger equation given by

$$-\frac{\hbar^2}{2m} \psi''(x) = E\psi(x), \quad 0 \leq x \leq L$$

subject to the periodic boundary conditions

$$\psi(0) = \psi(L),$$

$$\psi'(0) = \psi'(L)$$

This is an example of a periodic SL system. The eigenvalues and eigenfunctions are

$$E_k = \frac{2\pi^2 \hbar^2 k^2}{n L^2}, \quad k=0,1,2,\dots$$

and for each eigenvalue E_k (except $k = 0$) there are two linearly independent eigenfunctions $\cos(\frac{2\pi kx}{L})$ and $\sin(\frac{2\pi kx}{L})$. In recent years, Sturm-Liouville problems with periodic boundary conditions have become an important area of applied and theoretical mathematics, because the needs of modern physics and technology (see, for example, [1-10] and references, cited therein).

Main Results

Consider the multi-interval Sturm-Liouville equation

$$-y''(x) + q(x)y = \lambda y, \quad x \in [0, c_1) \cup (c_1, c_2) \cup (c_2, 1] \quad (1)$$

together with periodic boundary conditions, given by

$$y(0) = y(1), \quad (2)$$

$$y'(0) = y'(1) \quad (3)$$

and with interaction conditions (the so-called transmission conditions) given by

$$y(c_i - 0) = \alpha_i y(c_i + 0) + \alpha'_i y'(c_i + 0) \quad (4)$$

$$y'(c_i - 0) = \beta_i y(c_i + 0) + \beta'_i y'(c_i + 0) \quad (5)$$

for $i=1,2$. Throughout the coefficients in the periodic multi-interval Sturm-Liouville problem (p-MISLP, for short) are assumed to satisfy the following conditions:

C.1. The function $q(x)$ is real-valued and continuous on each of the intervals $[0, c_1)$, (c_1, c_2) and $(c_2, 1]$.

C.2. There are finite one-hand limit values $q(c_i \pm 0) = \lim_{x \rightarrow c_i \pm} q(x)$

C.3. $\alpha_i, \alpha'_i, \beta_i, \beta'_i$ are real numbers

C.4. $\theta_i := \begin{bmatrix} \alpha_i & \beta_i \\ \alpha'_i & \beta'_i \end{bmatrix} \neq 0$

C.5 λ is a complex eigenvalue parameter

Theorem 1. Let $(\lambda_0, y_0(x))$ be any eigenpair. Then the eigenfunction $y_0(x)$ can have at most a finite number of zeros in the three-interval $[0, c_1) \cup (c_1, c_2) \cup (c_2, 1]$.

Proof. Suppose that $y_0(x)$ has infinitely many zeros in $[0, c_1) \cup (c_1, c_2) \cup (c_2, 1]$ can select a convergent subsequence $b_k = a_{n_k}, k=1,2,\dots$. Denote by a the limit of this convergent subsequence b_k . The proof for the case $a \in [0, c_1) \cup (c_1, c_2) \cup (c_2, 1]$ follows immediately from the classical results (see, for example, [11]). Therefore it is enough to consider only the

case $a = c_1$ or $a = c_2$. Let $a = c_1$. Since $\lim_{k \rightarrow \infty} b_k = c_1$ there is a subsequence $d_s = b_{k_s}$ $k=1,2,\dots$ such that $d_s \in [0, c_1)$ and $d_1 < d_2 < d_3 < \dots$, or $d_s \in (c_1, c_2)$ $d_1 > d_2 > d_3 > \dots$, Let $d_s \in [0, c_1)$ with $d_1 < d_2 < d_3 < \dots$. Then we have $y_0(c_1 - 0) = \lim_{s \rightarrow \infty} y(d_s) = 0$. By using the well-known mean-value theorem (see, for example, [12]) we have that

$$y'_0(c_1 - 0) = \lim_{s \rightarrow \infty} \frac{y(d_{s+1}) - y(d_s)}{d_{s+1} - d_s} = 0$$

By well-known uniqueness theorem (see, for example, []) we have $y(x) = 0$ for $x \in [0, c_1)$. Applying the transmission conditions (4)-(5) we have

$$y(c_1 + 0) = y'(c_1 + 0) = 0$$

and so $y(x) = 0$ for $x \in (c_1, c_2)$ by uniqueness theorem mentioned above. Again from the transmission conditions (4)-(5) it follows immediately that $y(c_2 + 0) = y'(c_2 + 0) = 0$ and so $y(x) = 0$ also for $x \in (c_2, 1]$. Thus we have contradiction that $y_0(x) = 0$ for all $x \in [0, c_1) \cup (c_1, c_2) \cup (c_2, 1]$. The proof is complete.

By using similar technique used in the proof of the previous Theorem 1 we can prove the next theorem.

Theorem 2. Let $x = x_0$ be zero of the eigenfunction $y_0(x)$. Then $y'_0(x) \neq 0$, that is any zero of the eigenfunction $y_0(x)$ is simple.

Theorem 3. Suppose that $\begin{bmatrix} \alpha_i & \beta_i \\ \alpha'_i & \beta'_i \end{bmatrix} > 0$. Let $y = \varphi(x)$ and $y = \psi(x)$ are two linearly independent eigenfunctions of the problem (1)-(5). Suppose that the eigenfunctions $y = \varphi(x)$ has at least two zero, say x_1, x_2 . Then between x_1 and x_2 the eigenfunctions $y = \psi(x)$ has at least one zero.

Proof. Without loss of generality we can assume that x_1, x_2 are two consecutive zeros of $\varphi(x)$. In the case when both x_1, x_2 belongs to one of the intervals $[0, c_1)$, (c_1, c_2) and $(c_2, 1]$ the proof follows immediately from the classical results (see, for example, [11]). Consider the case $x_1 \in [0, c_1)$ and $x_2 \in (c_1, c_2)$. Suppose to the contrary that between x_1 and x_2 there is no zero of the eigenfunction $y = \psi(x)$. Without no restrictions we can assume that both of the eigenfunctions $y = \varphi(x)$ and $y = \psi(x)$ are positive between x_1 and x_2 . Since $\varphi(x_1) = \varphi(x_2) = 0$ and $\varphi(x) > 0$ between x_1 and x_2 , we have $\varphi'(x_1) > 0$ and $\varphi'(x_2) < 0$. Consequently,

$$W(\varphi, \psi; x_1) = \varphi(x_1)\varphi'(x_2) - \varphi'(x_1)\varphi(x_2) = -\varphi'(x_1)\varphi(x_2) < 0$$

Using the transmission conditions (4)-(5) we have

$$\begin{aligned} W(\varphi, \psi; x_1) &= W(\varphi, \psi; c_1 - 0) \\ &= (\alpha_1 \beta_1' - \alpha_1' \beta_1) W(\varphi, \psi; c_1 + 0) \\ &= (\alpha_1 \beta_1' - \alpha_1' \beta_1) \varphi'(x_2) \psi(x_2) > 0 \end{aligned}$$

Thus we have a contradiction, which completes the proof for the case $x_1 \in [0, c_1)$, $x_2 \in (c_1, c_2)$. The proof for the other cases are totally similar.

By using the Rayleigh method (see, [11]) we can prove the following theorems.

Theorem 4. Assume that the following conditions are satisfied for $i=1$ and $i=2$

- 1) $q(x) \geq 0$ for all $x \in [0, c_1) \cup (c_1, c_2) \cup (c_2, 1]$
- 2) $\alpha_i \beta_i \leq 0$, $\alpha_i' \beta_i' \leq 0$
- 3) $\alpha_i \beta_i' + \alpha_i' \beta_i = 1$

Then all eigenvalues of the problems (1)-(5) are nonnegative.

Theorem 5. Assume that all conditions of the previous theorem are fulfilled and $q(x) > 0$ for all $x \in [0, c_1) \cup (c_1, c_2) \cup (c_2, 1]$ then all eigenvalues of the problem (1)-(5) are positive.

Özet

Türkiye iklim ve toprak yapısı bakımından özellikle kuru baklagiller üretiminde önemli bir potansiyele sahiptir. Yaklaşık 900 bin hektar alanda 1 milyon 295 bin ton kuru baklagil üretilmiş olup mercimek ve nohut üretiminde dünyada dördüncü sırada, kuru fasulye üretiminde ise 19. sırada yer almaktadır. Türkiye kuru baklagiller dış ticaretinde miktar bakımından dış ticaret açığı, değer bakımından ise dış ticaret fazlası vermektedir. Bunun sebebi Türkiye’de üretilen kuru baklagillerin yüksek fiyattan ihraç edilmesi, ithalatın ise daha düşük fiyattan gerçekleşmesidir. Bu çalışmada Türkiye İstatistik Kurumu (TÜİK), Birleşmiş Milletler Gıda ve Tarım Örgütü (FAO) veri tabanından elde edilen verilerle Türkiye tarımı için önemli gıda grubu olan kuru baklagillerde kendine yeterlilik derecesi ortaya koyulmuş olup kendine yeterlilik derecesini artırmak için öneriler geliştirilmiştir. Sonuçlar Türkiye’nin kuru fasulye ve mercimek üretiminde kendine yeterli olmadığını, nohut üretiminde ise kendine yeterli olduğu göstermiştir. Kuru baklagiller grubu açısından değerlendirildiğinde ise kendine yeterli olmadığı tespit edilmiştir. Araştırma bulgularından hareketle Türkiye’de kuru baklagillerde kendine yeterliliğin artırılması için kaliteli ve verimli yeni çeşitlerin geliştirilmesi, sulu tarım alanlarında kuru baklagil üretimi için arazilerin suya eriştirilmesi ve modern sulama sistemleri kullanılması gibi altyapı olanaklarının iyileştirilmesiyle verim ve üretim artışının sağlanması gerekmektedir. Dolayısıyla kuru baklagil üretiminde kendine yeterlilik derecesi istenilen seviyelere gelecektir.

EVALUATING SELF-SUFFICIENCY IN DRY LEGUMES PRODUCTION IN TÜRKİYE

Abstract

Türkiye has an important potential, especially in producing dry legumes in terms of climate and soil structure. Approximately 900 thousand hectares of land produced 1 million 295 thousand tons of dry legumes and ranks 4th in the world in lentil and chickpea and 19th in dry bean production. Türkiye has a foreign trade deficit in terms of quantity and a foreign trade surplus in terms of value in the foreign trade of dry legumes. This is because legumes produced in Türkiye are exported at high prices, while imports are realized at lower prices. In this study, with the data obtained from the Turkish Statistical Institute (TurkStat) and the Food and Agriculture Organization of the United Nations (FAO), the degree of self-sufficiency in dry legumes, which is an important food group for Turkish agriculture, was revealed and recommendations were developed to increase the degree of self-sufficiency. It was determined that Türkiye is not self-sufficient in dry bean and lentil production, while it is self-sufficient in chickpea production. When evaluated in terms of the dry legumes group, it was determined that it is not self-sufficient. Based on the findings of the research, in order to increase self-sufficiency in dry legumes in Türkiye, yield and production will be increased by improving infrastructure facilities such as the development of quality and productive new varieties, access to water for dry legume production in irrigated agricultural areas and the use of modern irrigation systems. Therefore, the self-sufficiency in dry legume production will reach the desired levels.

Keywords: Foreign trade, Self-sufficiency, Legumes, Nutrition

Giriş

Türkiye’de bitkisel üretim içerisinde tahıl üretiminden sonra baklagil üretimi gelmektedir (Gündüz vd., 2009). Baklagiller içerdikleri protein ve aminoasitler sayesinde besin değeri yüksek olması sebebiyle tüketiciler tarafından, kazık kökleri sayesinde toprak verimliliğini artırması ve ekim nöbetine uygun olması sebebiyle üreticiler tarafından tercih edilen önemli temel gıda grubudur (Kadakoğlu ve Karlı, 2022). Türkiye’de Toprak Mahsulleri Ofisi (TMO) ilk kez 1941 yılında nohut, kuru fasulye, kırmızı ve yeşil mercimek alımı gerçekleştirmiş olup bu alımlar 1994 yılına kadar piyasanın ihtiyaçları doğrultusunda devam etmiştir (Kadakoğlu ve Karlı, 2022). Bu tarihler arasında çeşitli projeler (kırsal kalkınma, baklagil-tahıl sistemi, nadas alanlarının daraltılması) uygulanarak kuru baklagil ekim alanları ve üretimi artmıştır (Gül ve Işık, 2002). 1994 yılından 2018 yılına kadar TMO kuru baklagil alımı yapmamıştır. 2018 yılından sonra ise tekrardan kuru fasulye, mercimek ve nohut alımına başlamıştır (Resmî Gazete, 2018). Gıdada kendine yeterlilik ülkeleri savaş veya siyasi gerginlikler, diğer ülkelerdeki üretim eksiklikleri veya gıda fiyatlarındaki ani ve keskin artışlar sonucunda ortaya çıkabilecek uluslararası arz kesintilerinden koruyabilir (FAO, 1996; Clapp, 2017). Bu bağlamda ülkeler açısından tarım sektöründe kendine yeterliliğin sağlanması kaçınılmazdır. Tarım sektörü desteklendiğinde sadece bu sektörde çalışanların gelirleri değil aynı zamanda ülkelerin kendine yeterlilik dereceleri de artacaktır. Bu çalışmanın amacı Türkiye tarımı için önemli gıda grubu olan kuru baklagillerde kendine yeterlilik derecesinin belirlenmesidir. Ayrıca kendine yeterlilik derecesini artırmak için öneriler geliştirilmiştir.

Materyal ve Metot

Çalışmanın ana materyalini Türkiye İstatistik Kurumu (TÜİK), Birleşmiş Milletler Gıda ve Tarım Örgütü (FAO) ve ulusal sektör raporlarından elde edilen ikincil veriler oluşturmaktadır. Ayrıca literatürdeki ulusal ve uluslararası konuyla ilgili bilimsel yayınlardan da yararlanılmıştır. Dünya ve Türkiye’de kuru baklagil ekim alanı, üretim miktarı ve verime ait verilere basit indeks hesabı yapılarak yıllar itibariyle incelenmiştir.

Araştırma Bulguları ve Tartışma

Dünya kuru baklagiller ekim alanı 2007/2008 piyasa yılında 44 milyon 513 bin hektar iken %26,95 artarak 2021/2022 piyasa yılında 56 milyon 511 bin hektar olarak gerçekleşmiştir. 2021/2022 piyasa yılında 35 milyon 921 bin hektar alanda fasulye, 15 milyon 5 bin hektar alanda nohut ve 5 milyon 586 bin hektar alanda mercimek üretilmiştir. Bu ürünlerin toplam kuru baklagil ekim alanı içerisindeki payları sırasıyla %63,6, %26,5 ve %9,9’dur. Dünya kuru baklagil ekim alanları incelenen yıllarda 41 milyon hektar ile 58 milyon hektar arasında dalgalı

bir seyir izlemiştir. Aynı dönemde kuru fasulye ekim alanı %21,68, nohut ekim alanı %33,18 ve mercimek ekim alanı %49,95 artmıştır (Çizelge 1).

Dünyada hektara kuru fasulye verimi 772 kg, nohut verimi 1.058 kg, mercimek verimi 1.004 kg olmak üzere kuru baklagiller verim ortalaması 871 kg'dır. İncelenen 15 yıllık dönemde kuru fasulye verimi %5,24, nohut verimi %22,27, mercimek verimi %12,58 artmıştır. Kuru baklagiller ortalama verimi ise %11,63 artmıştır. Dünya kuru fasulye verimi incelenen 15 yıllık dönemde yatay seyretmiştir. Nohut ve mercimek verimleri ise dalgalı artan bir seyir izlemiştir (Çizelge 3).

Dünya kuru baklagil üretimi 49 milyon 197 bin ton olup kuru baklagil üretiminde önde gelen ülkeler ve payları sırasıyla Hindistan %39,7, Myanmar %6,0, Brezilya %5,9, Kanada 4,2, Avusturalya %4,0, Çin %3,0, Meksika %3,0, Tanzanya %2,9, ABD %2,6, Etiyopya %2,5 ve Türkiye %2,1'dir. Diğer ülkelerin payları toplamı ise %24,1'dir (Şekil 1). Türkiye dünya kuru fasulye üretimindeki payı %1,1 olup dünyada 19. sırada yer almaktadır. Nohut üretimindeki payı %3,0 olup dünyada dördüncü sırada ve mercimek üretimindeki payı ise %4,7 olup dünyada dördüncü sıradadır (FAO, 2023).

Şekil 1. Kuru baklagil üretiminde önemli ülkeler (%)

Türkiye kuru baklagiller ekim alanı 2007/2008 piyasa yılında yaklaşık 1 milyon hektar iken yıllar itibariyle azalarak 2022/2023 piyasa yılında yaklaşık 900 bin hektar olarak gerçekleşmiştir. Bu dönemler arasında kuru baklagiller ekim alanları %10,57 azalmıştır. Kuru fasulye ekim alanı 109 bin 250 hektardan %11,17 azalarak 97 bin 52 hektara, nohut ekim alanı 503 bin 674 hektardan %9,30 azalarak 456 bin 834 hektara, kırmızı mercimek ekim alanı ise 357 bin 233 hektardan %16,07 azalarak 299 bin 812 hektara gerilemiştir. İncelenen yıllar arasında kuru baklagiller içerisinde sadece yeşil mercimek ekim alanları artış göstermiştir. Yeşil mercimek ekim alanı 32 bin 308 hektardan %32,55 artarak 42 bin 825 hektara yükselmiştir (Çizelge 4).

Türkiye kuru baklagiller üretimi 2007/2008 piyasa yılında yaklaşık 1 milyon 195 bin ton iken 2022/2023 piyasa yılında %8,39 artarak 1 milyon 295 bin tona yükselmiştir. İncelenen yıllarda kuru fasulye üretimi %75,05 artarak 270 bin ton, nohut üretimi %14,77 artarak 580 bin ton ve yeşil mercimek üretimi %67,89 artarak 45 bin ton olarak gerçekleşmiştir. Kırmızı mercimek üretimi ise %21,32 azalarak 400 bin tona gerilemiştir (Çizelge 5). Kuru fasulye ve nohut ekim alanları azalmasına rağmen üretim miktarlarının artmasının sebebi verimdeki artıştır.

Çizelge 5. Türkiye’de kuru baklagiller üretim miktarı (ton)

Türkiye kuru baklagiller verim miktarı 2007/2008 piyasa yılında 1.192 kg/ha iken 2022/2023 piyasa yılında %21,14 artarak 1.444 kg/ha olarak gerçekleşmiştir. İlgili yıllar itibariyle kuru baklagiller üretimi dalgalı artan bir seyir izlemiştir. Kuru fasulye verimi %97,03 artarak 2.782 kg/ha, nohut verimi %26,62 artarak 1.270 kg/ha ve yeşil mercimek verimi %26,63 artarak 1.051 kg/ha yükselmiştir. Kırmızı mercimek verimi ise 6,25 azalarak 1.334 kg/ha olarak gerçekleşmiştir (Çizelge 6). Birim alandan verim artışının en önemli kriteri iyi ve kaliteli tohum kullanılmasıdır. İyi ve kaliteli tohum kullanımının verimi %25-30 oranında artırdığı belirlenmiştir (Anonim, 2019). Türkiye’de çeşit geliştirme çalışmalarının temel amaçları tüketici isteklerinin farklılaşması, dengeli ve sağlıklı beslenme istekleri, yüksek verimlilik, yüksek adaptasyon kabiliyet ve hastalıklara-zararlılara dayanıklılıktır (Şener, 2021). Türkiye’de yemeklik tane baklagillerde ıslah çalışmaları 1965 yılında başlamış olup bugüne kadar milli çeşit listesine kayıtlı 55 adet nohut, 45 adet kuru fasulye ve 35 adet mercimek olmak üzere toplamda 135 adet çeşit geliştirilmiştir. Bunun yanı sıra 2 adet nohut, 6 adet kuru fasulye ve 4 adet mercimek üretim izni olmak üzere tescillenmiştir (Anonim, 2023).

Türkiye’de 2007/2008 piyasa yılında kuru baklagiller üretim kayıpları yaklaşık 22 bin ton olup kullanılabilir üretim 1 milyon 173 bin tondur. 2022/2023 piyasa yılında ise üretim kayıpları %26,21 azalarak yaklaşık 16 bin ton, kullanılabilir üretim ise %12,45 azalarak yaklaşık 1 milyon ton olarak gerçekleşmiştir. Yurt içi kuru baklagil kullanımı %12,99 artarak 1 milyon 228 bin ton olup bunun %9,96’sı tohumluk olarak geri kalan %90,04’ü ise insan tüketimi için kullanılmaktadır. Kişi başına kuru baklagil tüketimi incelenen dönemler arasında 10,9 kg ile 15,6 kg arasında değişmekle birlikte ortalama 14,1 kg’dır. 2007/2008 piyasa yılına göre 2021/2022 piyasa yılında kişi başına kuru baklagil tüketimi %11,03 azalarak 12,9 kg olarak gerçekleşmiştir (Çizelge 7).

Türkiye’de incelenen dönemler ortalamasına göre kuru baklagiller yurt içi kullanımının %7,7’si tohumluk olarak %92,3’ü ise insan tüketimi için kullanılmaktadır. Tohumluk kullanım oranı %5,78 ile %11,30 arasında değişmekte olup 2021/2022 piyasa yılında %9,96 olarak gerçekleşmiştir. Kuru fasulyenin tohumluk kullanımı 10 bin 780 ton, nohudun tohumluk kullanımı 68 bin 304 ton, kırmızı mercimek tohumluk kullanımı 36 bin 428 ton ve yeşil mercimek tohumluk kullanımı 6 bin 742 ton olup kuru baklagillerin toplamda tohumluk kullanımı 122 bin 254 tondur (Çizelge 8).

Çizelge 8. Türkiye’de kuru baklagillerin tohumluk kullanımı

Piyasa Yılı	Kuru Fasulye	Nohut	Kırmızı Mercimek	Yeşil Mercimek	Toplam	Tohumluk Kullanım Oranı (%)

Kaynak: TÜİK, 2023b.

Kişi başına kuru baklagil tüketimi 2010-2020 yılları ortalamasına göre Avrupa Birliği (AB)’nde 2,65 kg/yıl, Türkiye’de 14,46 kg/yıl, dünyada ise 7,05 kg/yıl olarak gerçekleşmiştir. İncelenen dönemlerde kişi başına kuru baklagil tüketimi AB’de %10,45 ve dünyada %8,15 artmış, Türkiye’de ise %7,08 azalmıştır (Şekil 2). İncelenen yıllar ortalamasına göre Türkiye’de kişi başına 5,47 kg/yıl nohut, 4,84 kg/yıl kırmızı mercimek, 3,23 kg/yıl kuru fasulye ve 0,56 kg/yıl yeşil mercimek tüketilmiştir (TÜİK, 2023b).

Şekil 2. Kişi başına tüketilen kuru baklagil miktarları (kg/yıl)

Türkiye’de kuru baklagiller ihracat miktarı ve değeri 2021 yılında 650 bin ton ve 608 milyon dolar olarak, ithalat miktarı ve değeri ise 735 bin ton ve 574 milyon dolar olarak gerçekleşmiştir. Türkiye 2021 yılında 86 bin ton kuru baklagil dış ticaret açığı verirken 33,5 milyon ton dış ticaret fazlası vermiştir (Çizelge 9). Türkiye kuru baklagiller dış ticaretinde miktar bakımından dış ticaret açığı vermesine rağmen değer bakımından dış ticaret fazlası vermektedir. Bunun sebebi olarak Türkiye’de üretilen kuru baklagiller yüksek fiyattan ihraç edilirken, ithalat daha düşük fiyattan gerçekleşmektedir. Nitekim yurt içinde tüketimin önemli bir bölümü ithal kuru baklagiller ile karşılanmakta olup yurt içinde üretilen kaliteli kuru baklagiller ihraç edilmektedir.

Çizelge 9. Türkiye’de kuru baklagiller dış ticareti

Dış Ticaret	2007-2009	2010-2012	2013-2015	2016	2017	2018	2019	2020	2021	İndeks (2007/2009=100)

Gıda için kendine yeterlilik kavramı bir ülkenin gıda ihtiyaçlarını kendi yerli üretiminden karşılayabilme derecesidir (Thomson ve Metz, 1999). Türkiye’de kuru baklagiller üretiminde kendine yeterlilik derecesi 2007/2008 piyasa yılında %107,2 iken 2022/2023 piyasa yılında %22,2 azalarak %83,4 olarak gerçekleşmiştir. İncelenen dönemlerde kendine yeterlilik dereceleri %82,9 ile %107,2 arasında değişmekle birlikte ortalama %92,1’dir. Ortalama yeterlilik dereceleri kuru fasulyenin %82,7, nohudun %107,3, kırmızı mercimeğin %83,5 ve

yeşil mercimeğin %56,6'dır. Türkiye nohut üretiminde kendine yeterli olup kuru fasulye üretiminde özellikle son yıllarda kendine yeterliliği yükselmiştir. Kırmızı mercimek ve yeşil mercimek üretiminde kendine yeterli değildir. Özellikle kırmızı mercimek üretiminde yeterlilik derecesi yıllar itibariyle düşüş eğilindedir (Çizelge 10).

Çizelge 10. Türkiye’de kuru baklagiller üretiminde kendine yeterlilik düzeyleri (%)

Sonuç

Türkiye mercimek ve nohut üretiminde dünyada 4. sırada, kuru fasulye üretiminde ise 19. sırada yer almaktadır. Kuru fasulye üretiminde kendine yeterlilik derecesi son yıllarda artmasına karşın henüz istenilen düzeyde değildir. Nohut üretiminde kendine yeterlilik derecesi yıllar itibariye dalgalı bir seyir izlemekte olup kendine yeterli olduğu söylenebilir. Ancak mercimek üretiminde kendine yeterli değildir. Tüm kuru baklagiller için değerlendirildiğinde ise Türkiye’nin kendine yeterli olmadığı belirlenmiştir. Türkiye’de kuru baklagiller açısından kendine yeterliliğin artırılması için aşağıdaki öneriler sıralanabilir.

Kuru baklagiller için kalite standartlarını belirleyerek sertifikalı üretim yapılabilir. Bu sayede Türkiye’nin dünya pazarına rekabet gücü artacaktır. Kuru baklagil üretimi çoğunlukla kuru tarım ile üretilmektedir. Kuru arazileri suya erişirmek, mevcut sulama sistemlerini modernize etmek, depolama olanaklarını iyileştirmek ve kapasitesini artırmak gibi altyapı olanaklarının iyileştirilmesi üreticilerin daha fazla ürün üretmelerini ve ürünlerini korumalarına yardımcı olacaktır. Kuru baklagillerde kaliteli ve verimli yeni çeşitlerin geliştirilmesi için ilgili kurum ve kuruluşlara araştırma ve geliştirme yatırımları yapılabilir. Böylece kaliteli ve verimli çeşitler sayesinde ekstrem geçen yıllarda verimde ve üretimde sert düşüşlerin önüne geçilmiş

olunacaktır. Tüm bu öneriler ile Türkiye’de kuru baklagil üretiminde kendine yeterliliğin istenilen seviyelere geleceği düşünülmektedir.

Özet

Besin içeriği, lezzeti ve ekonomik değeri açısından armut önemli ılıman iklim meyve türlerinden biridir. Bu çalışma ile küresel olarak armut endüstrisinin genel durumu son on yıllık (2012-2021) veriler ışığında ortaya koyulmuştur. Bu amaç için armut üretim ve ticaretinde söz sahibi ülkelere ait veriler değerlendirilmiş, armut üretim ve ticaretine ait gelişmeler irdelenmiştir. Sonuçlar, dünya armut üretiminin son on yılda %5,56 oranında arttığını, bu artışın büyük çoğunluğunun Çin'in armut üretimindeki artışından kaynaklandığını göstermiştir. Son on yılda armut üretimi Asya ve Afrika'da artış gösterirken, Avrupa, Amerika ve Okyanusya'da azalış trendine sahiptir. Armut üretiminde Çin lider konumda olup, Çin'i sırasıyla Amerika Birleşik Devletleri, Arjantin, Türkiye ve Güney Afrika takip etmektedir. Dış ticaret verilerine göre armut ihracatında Çin, Hollanda ve Belçika önemli ihracatçı ülkelerdir. Dünya armut ticareti armut üretimine paralel olarak artmaktadır. Dünya armut üretim ve ticareti başta armut ateş yanıklığı hastalığı olmak üzere çeşitli hastalık ve zararlılar, iklim değişikliği, tüketici tercihleri ve pazarlama gibi faktörlerden etkilenmektedir. Bu faktörlerin analizi, armut sektörünün geleceğini belirlemek için önemlidir. Bu nedenle sektörün sürdürülebilirliği açısından uygun stratejilerin geliştirilmesi gerekmektedir.

PEAR IN A GROWING WORLD: PRODUCTION AND TRADE IN GLOBAL MARKETS

Abstract

Pear is one of the important temperate climate fruit species in terms of nutritional content, flavor, and economic value. In this study, the general situation of the pear industry globally was revealed in the light of the data for the last ten years (2012-2021). For this purpose, the data of the leading countries in pear production and trade were evaluated, and the developments in pear production and trade were analyzed. The results showed that world pear production increased by 5.56% in the last decade, most of which came from China's increase in pear production. In the previous decade, pear production increased in Asia and Africa, while it decreased in Europe, America and Oceania. China is the leader in pear production, followed by the United States, Argentina, Türkiye, and South Africa. According to foreign trade data, China, the Netherlands, and Belgium are the major exporters of pears. World pear trade is increasing in parallel with pear production. World pear production and trade are affected by factors such as various diseases and pests, especially pear fire blight disease, climate change, consumer preferences and marketing. Analyzing these factors is essential for determining the future of the pear sector. Therefore, it is necessary to develop appropriate strategies for the industry's sustainability.

Keywords: Pear, International trade, Market, Trending, Türkiye

Giriş

Küresel ekonominin temel taşlarından biri tarım sektörüdür. Doğrudan insan beslenmesiyle alakası, bu sektörü hayati öneme sahip kılmaktadır. Bu sektör içinde meyvecilik, önemli bir besin kaynağı olması, küresel gıda güvenliği ve ekonomik kalkınma açısından ön plana çıkmaktadır. Son yıllarda soğuk zincirle meyvelerin tazeliğini muhafaza ederek uzak mesafelere taşıma imkanlarının artması, insanların farklı meyve türleriyle tanışmasına ve uluslararası ticaretin gelişmesine neden olmuştur.

Ilıman iklim meyve türlerinden biri olan armut geniş bir alanda yetiştirilmektedir. Kart ve Gül (2021) armudun dünyada ilk kez Yunanistan'da yetiştirilmeye başlandığını ve tarihinin MÖ 1000 yıllarına dayandığını bildirmiştir. Armut çoğunlukla taze olarak tüketilen ve zengin besin içeriği ile öne çıkan bir meyvedir. İyi bir diyet lifi, C vitamini ve antioksidan kaynağı olduğu için armutların besin değeri önemlidir. Armutlar ayrıca K vitamini, potasyum ve diğer mikro besinleri de içerdiğinden sağlıklı bir diyeteye değerli bir katkı sağlar (Albano vd., 2015). Her ne kadar armut geniş bölgelerde yetiştiriliyor olsa bile, ateş yanıklığı hastalığı armut yetiştiriciliğini sınırlayan en büyük neden olmuştur

Genel olarak, armut üretimi ve ticareti; çeşitli hastalık ve zararlılar, iklim değişikliği, tüketici tercihleri, pazarlama besin değeri, bölgesel üretim yoğunluğu, organik ürünlere yönelik pazar talebi ve sürdürülebilir tarım uygulamalarının benimsenmesi gibi çeşitli faktörlerden etkilenmekte olup, bunların tümü armut endüstrisinin şekillenmesinde önemli rol oynamaktadır.

Bu çalışmada küresel armut üretimi ve ticareti değerlendirilmiş, Türkiye'nin bu pazardaki konumu ele alınmıştır.

Materyal ve Metot

Materyal

Çalışmada Türkiye İstatistik Kurumu (TÜİK) ve Birleşmiş Milletler Tarım ve Gıda Örgütü (FAO) tarafından yayınlanan verilerden ve bu konuda yayınlanmış her türlü yayın, rapor ve belgelerden yararlanılmıştır.

Metot

Çalışmada son on yıllık (2012-2021) dünya ve Türkiye armut üretim ve ticaret yapısı değerlendirilmiştir. Elde edilen verilerle basit indeksler hesaplanmış, artış ve azalışlar yorumlanmıştır.

Araştırma Bulguları ve Tartışma

Üretim ve Alan

Armut üretimi 2021 yılında yaklaşık 25,7 milyon ton olarak gerçekleşmiştir. Çin dünya armut üretiminden %73,57'lik bir pay alırken, Çin'i ABD (%2,48), Arjantin (%2,47) ve Türkiye (%2,07) takip etmektedir (Şekil 1). Kıtalarla göre üretim oranları dikkate alındığında armut üretim alanlarının Asya kıtasında bulunması nedeniyle üretimin büyük çoğunluğu (%81,26) Asya kıtasında gerçekleşmektedir. Asya kıtasından sonra Avrupa ve Amerika kıtaları en fazla armut üretiminin yapıldığı kıtalardır (FAO, 2023).

Şekil 1. Armut üretiminde lider ülkeler ve üretimdeki payları

Son on yıllık veriler ışığında dünya armut üretimi %5,56'lık bir artış göstermiştir. Üretimini mutlak olarak en fazla artıran ülke Çin olmuştur. Armut üretiminde lider ülkelerden Türkiye, Güney Afrika ve Hollanda son on yılda armut üretimini artırırken, Arjantin, İspanya, Hindistan ve İtalya'da ise armut üretimi azalmıştır. Özellikle İtalya'da armut üretiminde 2021 yılında 2012 yılına göre %57,64'lük bir düşüş yaşanmıştır (Çizelge 1). Bu durumun başta hastalık ve zararlılar olmak üzere, sel, don, dolu ve rekor düzeyde yaşanan sıcaklıkların yanı sıra üretim alanlarındaki daralmalardan kaynaklandığı düşünülmektedir.

Çizelge 1. Armut üretiminde lider ülkelerin üretim miktarları ve payları

Ülke	Üretim Miktarı (ton)			Pay (%)	Değişim (%)*
	2012	2017	2021		
Çin	17.073.000	16.410.000	18.875.900	73,57	10,56
ABD	778.583	669.000	636.390	2,48	-18,26
Arjantin	825.115	517.754	634.000	2,47	-23,16
Türkiye	442.646	503.004	530.349	2,07	19,81
Güney Afrika	338.584	416.215	459.532	1,79	35,72
Belçika	236.400	301.818	355.680	1,39	50,46
Hollanda	199.000	330.000	340.000	1,33	70,85
İspanya	407.428	360.957	316.270	1,23	-22,37
Hindistan	340.000	346.000	276.000	1,08	-18,82
İtalya	645.540	772.578	273.450	1,07	-57,64
İlk 10 Ülke	21.286.296	20.627.326	22.697.571	88,46	6,63
Diğer Ülkeler	3.020.071	3.195.048	2.961.142	11,54	-1,95
Dünya	24.306.368	23.822.374	25.658.713	100,00	5,56

* 2012 yılına göre 2021 yılındaki değişimi ifade etmektedir.

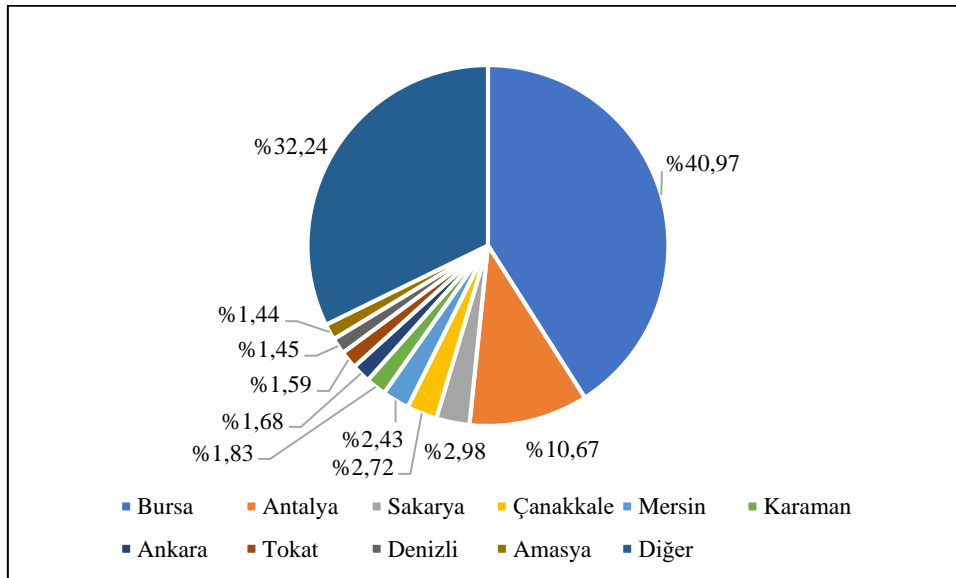

Armut, 2021 verilerine göre dünyada 1,40 milyon hektar alanda yetiştirilmektedir. Yetiştiricilik yapılan armut alanlarının %80,88'i (1,13 milyon ha) Asya kıtasında, %11,15'i (156,10 bin ha) Avrupa kıtasında, %4,22'si (59,11 bin ha) Amerika kıtasında, %3,35'i (46,95 bin ha) Afrika kıtasında ve %0,39'u (5,43 bin ha) Okyanusya kıtasında bulunmaktadır. Çizelge 2'de armut üretiminde lider ülkelerin üretim alanları ve değişimleri verilmiştir. Dünya armut üretim alanları son on yılda %10,52 azalma göstermiştir. Armut üretiminde lider ülkelere Çin, ABD, İspanya, Hindistan ve İtalya'da armut üretim alanları azalırken, Arjantin, Türkiye, Güney Afrika, Belçika ve Hollanda armut üretim alanlarını artıran ülkeler olmuştur. Dünya armut alanlarındaki bu azalmanın özellikle çözümü olmayan armut ateş yanıklığı hastalığından kaynaklandığı düşünülmektedir. Nitekim Kart ve Gül (2021)'ün Antalya'da armut üreticileriyle yürüttükleri çalışmada ateş yanıklığı ve karalekenin armutta mücadele edilen en önemli hastalıklar olduğu bildirilmiştir.

Çizelge 2. Armut üretiminde lider ülkelerin üretim alanları ve payları

Ülke	Üretim Alanı (ha)			Pay (%)	Değişim (%)*
	2012	2017	2021		
Çin	1.088.570	922.780	981.485	70,13	-9,84
ABD	20.275	18.700	16.876	1,21	-16,76
Arjantin	24.284	20.879	24.802	1,77	2,13
Türkiye	23.223	26.000	25.155	1,80	8,32
Güney Afrika	10.645	11.989	11.964	0,85	12,39
Belçika	8.600	10.023	10.450	0,75	21,51
Hollanda	8.169	9.741	10.070	0,72	23,27
İspanya	25.512	21.888	20.020	1,43	-21,53
Hindistan	45.285	44.000	42.000	3,00	-7,25
İtalya	35.195	31.729	26.790	1,91	-23,88
İlk 10 Ülke	1.289.758	1.117.729	1.169.612	83,57	-9,32
Diğer Ülkeler	274.341	235.538	229.872	16,43	-16,21
Dünya	1.564.099	1.353.267	1.399.484	100,00	-10,52

* 2012 yılına göre 2021 yılındaki değişimi ifade etmektedir.

Türkiye özelinde değerlendirildiğinde armut üretimi tüm illerde yapılabilmektedir (TUİK, 2023). Ancak ticari armut yetiştiriciliği başta Bursa olmak üzere Antalya, Sakarya, Çanakkale ve Mersin illerde söz konusudur. Türkiye İstatistik Kurumu (TUİK) verilerine göre 2022 yılında Türkiye’de 551 bin ton armut üretilmiş, bu üretimin yaklaşık %41’ini Bursa tek başına karşılamıştır. Armut üretiminde lider ilk on ilin armut üretimi içindeki payı yaklaşık %68’dir (Şekil 2).

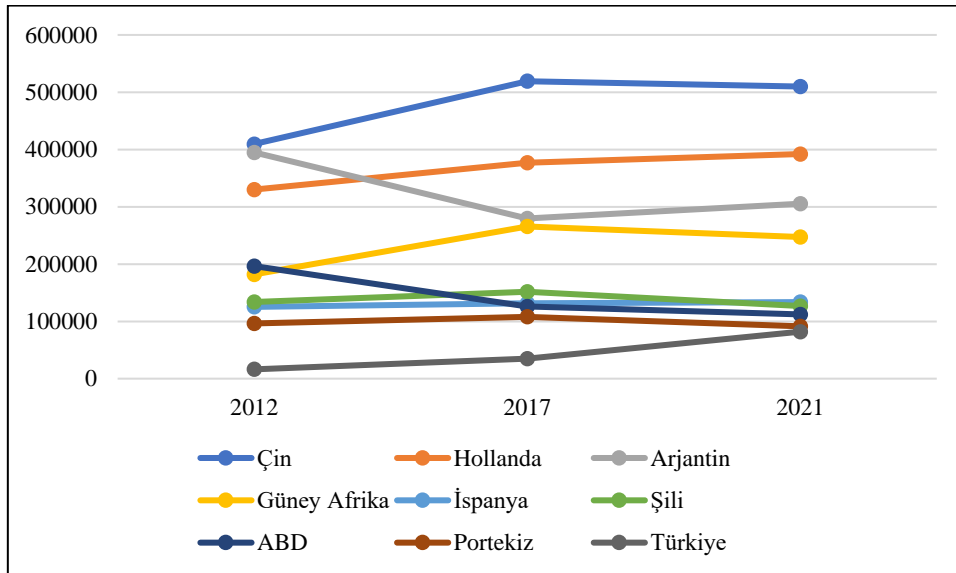

Şekil 2. Armut üretiminde lider illerin üretimdeki payları

Uluslararası Ticaret

Son on yıllık veriler dikkate alındığında küresel armut üretiminin yaklaşık %10-12'si uluslararası ticarete söz konusu olmaktadır. Tüm sektörlerde olduğu gibi dünya armut ticaretinde de gelişmeler yaşanmaktadır. Bu bölümde armut ihracat ve ithalatında söz konusu ülkeler ele alınmış ve değerlendirilmiştir.

İhracat

Armut üretiminde önemli paya sahip ülkeler, armut ihracatında da önde gitmektedir. FAO verileri 2021 yılında armut üretiminin yaklaşık 2,6 milyon tonunun ihracata konu olduğunu göstermektedir. Çin bu ihracattan %18,38'lik pay alarak en fazla ihracat yapan ülke olurken, %14,13'lük payla İspanya, %12,72'lik payla Belçika, %11,00'lik payla Arjantin, %8,90'lık payla Güney Afrika, %4,81'lik payla İspanya, %4,57'lik payla Şili, %4,32'lik payla Polonya ve %4,04'lük payla ABD Çin'i takip eden ülkeler olmuştur (FAO, 2023). Türkiye 82 bin tonluk ihracat miktarıyla ihracatta %2,95'lik paya sahiptir. Burada Şili'ye dikkat çekmek gerekir. Her ne kadar üretim miktarı bakımından ilk on ülke arasında yer almasa da ihracatta ön sıralarda yer edinmiştir. Şili'de ihracatın üretime oranı %58'den fazladır. Şekil 3'te İhracatta lider ülkelerin ihracat miktarları verilmiştir. Şekil 3 incelendiğinde Türkiye'nin son on yılda ihracatını artırma eğiliminde olduğu görülmektedir.

Şekil 3. İhracatta lider ülkelerin ihracat miktarları

İhracatta önde giden ilk on ülke küresel armut ihracatının %86,16'sını gerçekleştirmektedir. Çin ihracatının %42,85'ini Endonezya'ya yapmaktadır. Vietnam, Tayland, Hong Kong, Malezya ve Filipinler Çin'in diğer önemli pazarları olarak karşımıza

çıkılmaktadır. Türkiye ihracatının %36,30'unu Rusya Federasyonu'na, %21,38'ini Irak'a yapmaktadır. Türkiye'nin toplam 56 ülkeye armut ihracatı söz konusu olsa da ihracatının %80'inden fazlasını Rusya Federasyonu, Irak, Romanya, İsrail, Bulgaristan, Almanya ve Ukrayna'ya yapmaktadır.

İthalat

Armut ithalatını en fazla yapan ülkelerin başında Endonezya, Rusya Federasyonu, Almanya, Fransa, Brezilya, Hollanda, Belarus, İtalya, İngiltere ve Vietnam gelmektedir. Çizelge 3'de önemli armut ithalatçı ülkeler ve ithalat miktarları verilmiştir. İthalatta ilk on ülke toplam ithalatın %54,03'ünü gerçekleştirmektedir. En fazla ithalat yapan Endonezya ithalatının %95,6'sını Çin'den, %3,8'ini Güney Afrika'dan yapmaktadır. Türkiye Endonezya pazarından pay alamamıştır. Önemli bir ithalatçı ülke olan Rusya Federasyonu ise ithalatının %32,7'sini Arjantin'den, %21,1'ini Güney Afrika'dan karşılamaktadır. Türkiye'nin Rusya pazarından aldığı pay %14,4'tür. Almanya ise ithalatının büyük çoğunluğunu (%78,44) Hollanda, İtalya ve Belçika'dan karşılarken, Türkiye bu pazardan %0,25 gibi çok küçük bir pay almaktadır.

Çizelge 3. Dünya armut ithalatında önemli ülkelerin ithalat miktarları

Ülke	İthalat (ton)	Pay (%)
Endonezya	227.219	8,76
Rusya Federasyonu	225.553	8,70
Almanya	166.470	6,42
Fransa	125.394	4,83
Brezilya	120.781	4,66
Hollanda	117.747	4,54
Belarus	111.124	4,28
İtalya	110.677	4,27
İngiltere	100.204	3,86
Vietnam	96.262	3,71
İl 10 Ülke	1.401.430	54,03
Diğer Ülkeler	1.192.577	45,97
Dünya	2.594.007	100,00

Sonuç ve Öneriler

Armut önemli bir ılıman iklim meyve türüdür. Besin değeri ve lezzeti ile sürekli talep görmektedir. Ancak bu derece talep gören bir meyvenin üretiminde önemli sorunlar yaşanmaktadır. Dünyada ve Türkiye’de 1985’li yıllarda ortaya çıkan ateş yanıklığı hastalığı armut üretiminde keskin düşüslere neden olmuştur. Günümüzde bu hastalığa hala kesin çözüm bulunamamış olması armut üretiminin artmasının en büyük engelidir. Son yıllarda başlatılan ıslah çalışmaları ümitvar olarak değerlendirilmektedir.

Dünyada yaklaşık 25,7 milyon ton armut üretilmektedir. Bu üretimin büyük çoğunluğu Çin tarafından gerçekleştirilmektedir. Türkiye küresel armut üretiminde dördüncü sırada yer almaktadır. Küresel armut üretimini tehdit eden unsurlar Türkiye için de gündemdedir.

Küresel armut ticareti son yıllarda gelişmektedir. Türkiye ihracattaki payını son on yılda artırma eğilimindedir. Türkiye mevcut pazarlarını koruyarak, elmada olduğu gibi Endonezya pazarından pay alma arayışlarına girmelidir. Önemli armut ithalatçısı olan Almanya pazarına ihracat olanakları araştırılmalıdır.

Özet

Dijital pazarlama stratejilerinin vazgeçilmez bir parçası haline gelen native reklam, reklamın içeriğinin, kullanıldığı platformun doğal içeriğiyle uyumlu bir şekilde tasarlandığı ve sunulduğu bir reklam türüdür. Native reklamcılığın amacı, reklam mesajlarını kullanıcı deneyimini kesintiye uğratmayacak veya bozmayacak şekilde sunmaktır. İçeriklerin, yayın platformlarına uyumlu olarak tasarlanması ve kullanıcılara rahatsızlık vermeden aktarılması, kullanıcı deneyimini olumlu bir şekilde etkiler. Native reklamlar, izleyicinin/dinleyicinin reklam mesajına maruz kaldıkları sırada gözünden kaçmayan, reklamı içerikten ayırt etmekte zorlanmayacakları bir şekilde sunulur. Native reklamların, reklam olmayan içeriklerden açıkça ayırt edilebilmesini sağlamak, hem platformun hem de reklamverenlerin güvenini ve inandırıcılığını koruma noktasında etik değerler açısından önem arz etmektedir. Uygun bir şekilde yapıldığında, native reklamcılık, markaların hedef kitlelerine ulaşmaları ve etkileşim sağlamaları için etkili bir strateji olabilir. Native reklamlar, markalar için bir itibar oluşturma fırsatı sunar. Doğal olarak entegre edildikleri için, tüketiciler reklamları daha az rahatsız edici bulur ve markaya karşı daha olumlu bir tutum geliştirirler. Ayrıca, içeriğiyle uyumlu olarak sunulan reklamlar, izleyicilerin marka hakkında daha fazla bilgi edinmelerine yardımcı olabilir. Bu, tüketicilerin reklamları daha olumlu bir şekilde algılamalarına ve içerikle daha fazla etkileşimde bulunmalarına olanak tanır. Kullanıcı dostu yaklaşımı ve etkili sonuçlarıyla, markalar için vazgeçilmez bir araç haline gelen, reklamları daha keyifli hale getirmeyi amaçlamayan ve reklam sektöründe yükselen bir trend olmaya başlayan native reklamcılık, yüksek kullanıcı ilgisi yaratarak kabul edilebilirliği arttırıp marka ile bir bağ kurmasının önünü açar.

Anahtar kelimeler: Native reklam, Doğal reklam, Bağlantı kurucu reklam.

**FROM DISTRACTING TO ENGAGING ADVERTISING: THE IMPACT AND
ADVANTAGES OF NATIVE ADVERTISING**

Abstract

Native advertising, which has become an indispensable part of digital marketing strategies, is a type of advertising in which the content of the advertisement is designed and presented in a way that is compatible with the natural content of the platform it is used. The purpose of native advertising is to deliver advertising messages in a way that does not disrupt or disrupt the user experience. Designing content in accordance with publishing platforms and transferring content without disturbing the surrogates positively affects the user experience. Native ads are presented in a way that the viewer/listener does not lose sight of when they are exposed to the ad message and they will not have a hard time distinguishing the ad from the content. Ensuring that native ads are clearly distinguishable from non-advertising content is important in terms of ethical values to protect the trust and credibility of both the platform and advertisers. When done appropriately, native advertising can be an effective strategy for brands to reach and engage their target audience. Native ads provide an opportunity to build a reputation for brands. Because they are naturally integrated, consumers find ads less offensive and develop a more positive attitude towards the brand. Also, ads that are presented in line with their content can help viewers learn more about the brand. This allows consumers to perceive ads in a more positive way and engage more with the content. With its user-friendly approach and effective results, native advertising, which has become an indispensable tool for brands, does not aim to make ads more enjoyable and is starting to become a rising trend in the advertising sector, creates high user interest and increases acceptability and opens the way for a connection with the brand.

Giriş

Rekabet ortamının küresel boyuta taşınması, tüketicilerin beklenti ve satın alma davranışlarındaki değişimler, teknolojinin hayatımızı adeta ele geçirmesi, her şeyin çok kısa sürede eskitilip tüketilmesi ve yenilik arayışları, pazarlama ve reklam anlayışlarında da değişiklik yapılmasını da zorunlu kılmıştır.

Tüketicinin, kendisini tükettiği ürünle özdeşleştirilmesi, duygusal bağ kurması; pazarlama ve reklamcılığı, sadece ürün üretip tanıtmaya/satma amacının dışında yeni hedefler belirleme noktasına getirmiştir. Tüketiciyi salt “tüketen” noktasından alıp, onu değer yaratma sürecinin bir parçası olarak konumlandıran işletme/markalar; neyi, nasıl üretecekleri aşamadan başlayarak tüketici katılımını sağlayıp, onların bağ kurma ve özdeşleştirme duygularını kullanarak süreç sonunda “marka savunucusu” kimliği kazandırmayı amaç edinmişlerdir.

Değişimlere adapte olabilmek, ayak uydurabilmek, hedef kitleyi anlama ve onlara ulaşma noktasında hem mesaj hem de mesajın iletileceği ortamı belirleme açısından oldukça önemlidir. Geleneksel medyadan gittikçe uzaklaşan günümüz tüketicisi, bu mecralardan kendisini hedefleyen mesajlara da maruz kalmamaktadır. Reklam iletişiminin önemli bir unsuru haline gelen dijital platformlar, tüketicilere ulaşmak isteyen firma/markaların gözdesi olmaya başlamıştır. Yeni ortam diyebileceğimiz bu dijital ortamlardaki formatlar bile etkisini kaybetmeye, dikkat çekmemeye farkındalık yaratmamaya başlamıştır. Her ortamın kendine has formatı vardır. Bu yüzden yeni ortamlara uygun yeni formatlar gerekmektedir

NATIVE REKLAM NEDİR? TEMEL UNSURLARI NELERDİR?

Native kelimesi İngiliz dilinde yerel, yerli, doğuştan, asıl ve doğal anlamlarına (dictionary.cambridge.org, 2023) gelen bir kelime olmakla beraber, “native advertising” kavramı dilimize “doğal reklam” olarak çevrilmiştir.

Doğal reklam, kendisini barındıran editoryal içerik platformunun, sosyal medya ağlarının ya da web sitelerinin amaçlarına, içerik yapısına ve formatına uygun olarak, içeriğe doğrudan veya dolaylı olarak katkıda bulunan ödenmiş ya da sponsorlu reklam stratejilerini içeren bir uygulamadır. (Arslan, 2017)

Doğal reklamcılık, çevresindeki reklam dışı içeriğin formatına uyan nispeten yeni bir çevrimiçi reklamcılık biçimidir (Campbell & Evans, 2018).

Ücret karşılığında yayınlanan bir reklam içeriği olan ve mecranın kendi özgün içeriğine entegre edilerek yayınlanan doğal reklam (Kazaz, 2022), dışarıdan bakıldığında kolayca fark edilemeyen bir yapıya sahiptir. Reklamın mecradaki içeriğe gömülmesi, onu içeriğin bir parçasıymış gibi algılanmasına yol açmaktadır.

İlgili medyadaki editoryal içeriğinin formatına uyumlu, ücretli bir reklamcılık olan doğal reklamcılıkta (Wojdynski & Evans, 2016) verilen bilgi, algılanan aşinalık ve kabul edilebilirliğe yol açarak olumlu duygulanım yaratacaktır (Mandler, 1982).

Doğal reklamcılık, aslında yeni bir olgu değildir. Geleneksel medya platformlarında zaten kullanılmakta olan ve genellikle dolaylı, gizli, örtülü ya da maskeli reklam olarak adlandırılan; ticari bir mesajın doğrudan reklam olarak değil de bir haber formatında sunulması, doğal reklamcılığın öncülleri olarak kabul edilebilir. Dijital medyadaki doğal reklamcılık bu öncüllerle birçok benzerlik taşısa da, çeşitli özelliklerinden ötürü hala benzersiz bir reklamcılık olgusudur (Wu & Overton, 2021).

Bir bukalemunun bulunduğu ortama göre renk değiştirmesi ve kolayca ortamdan ayırt edilememesi native reklamın ortama uygun formatlarda sunulmasına bir örnek teşkil edebilir. O halde yukarıdaki tanımlamalara ek olarak doğal reklamı bukalemun reklam olarak da ifade edebiliriz.

DİJİTAL REKLAMIN EVRİMİ: NATİVE REKLAMIN YÜKSELİŞİ

Reklamcılığın evrimi, sadece reklam içeriklerinin görsel ve konseptüel özellikleri ile sınırlı kalmayıp, aynı zamanda bu içeriklerin oluşturulma süreçleri, pazarlama stratejileri ve etkileri ölçme metodolojileri gibi faktörleri de içermektedir.

İnternet temelli ortamlarda yürütülen pazarlama ve reklam çalışmaları olarak tanımlayabileceğimiz dijital reklamcılık, video, görsel, metin ve ses formatlarının biri ya da birkaçının birlikte kullanımı ile oluşturulmaktadır.

İnteraktif Reklamcılık Derneğinin ((Interactive Advertising Bureau) Türkiye şubesinin 2023 yılı ilk 6 aylık verilerine göre toplam medya yatırımları içerisinde, dijital platformların payı %65,9 olarak gerçekleşmiştir (iabtr.org, 2023). Bu verileri, reklam verenlerin yönünü dijital platformlara çevirdiğinin bir göstergesi olarak yorumlamak mümkündür.

Özünde, ürün veya hizmetin medya aracılığı ile kitlelere tanıtılması olarak ifade edilebilecek olan reklamın amacına ulaşabilmesi, mesajın hedef kitle tarafından alınmasına ve kabul edilmesine bağlıdır.

İnternet temelli uygulamalarda gezinen kişilerin gittikçe artan oranda reklam engelleme yazılımları kullanması, reklam verenlerin kendilerine ulaşmasını engellemekte (de Haan, 2023) ve bunun sonucu olarak, dijital reklam endüstrisine ciddi anlamda zarar vermektedir (Singh & Potdar , 2009)

NATIVE REKLAM YÖNTEMLERİ

Native reklam, çeşitli metodları kullanarak organik bir biçimde içerikle entegre olmayı hedefler.İçerik Pazarlaması: Native reklamın temelini oluşturan yöntemlerden biri içerik pazarlamasıdır. Markalar, platformun içeriğiyle uyumlu bir şekilde özgün ve değerli içerikler oluşturarak hedef kitlelerine ulaşmayı amaçlar.Sosyal Medya Reklamları: Sosyal medya platformları, kullanıcıların günlük etkileşimde bulunduğu yerlerdir. Native reklam, bu platformlarda özgün ve içeriğe uygun reklamlarla kullanıcılarla etkileşim kurmayı amaçlar.Arama Motoru Reklamları: Arama motorları, kullanıcıların aktif olarak bilgi aradığı yerlerdir. Native reklam, arama sonuçları içinde doğal bir şekilde yer alarak, kullanıcının arama ihtiyacına uygun reklam sunar. Ayrıca ücreti ödenerek reklamın, arama motorunun sonuç sıralamasında üst sıralarda yer alması sağlanır.Görsel ve Videolu Reklamlar: Görsel ve videolu içerik, kullanıcıların dikkatini çeken etkili araçlardır. Native reklam, platformun formatına uygun görsel ve videolarla içerik akışını bozmadan reklam yapmayı hedefler.E-posta Pazarlaması: Doğru hedef kitleye ulaşan içerikle zenginleştirilmiş e-posta kampanyaları da native reklamın bir parçası olabilir. Bu, abonelerin ilgisini çekmek ve markayla bağ kurmalarını sağlamak için kullanılır.Sponsorlu İçerik: Platformun içeriğine doğrudan entegre edilen sponsorlu içerik, native reklamın en temel öğelerinden biridir. Bu içerik, reklam verenin hedef kitleyle etkileşimde bulunmasını ve güven oluşturmasını sağlar.Öneri Eklentileri (Widget): Yayıncının, yayın esnasında izleyiciye bir link önererek marka içeriğine yönlendirmesi şeklinde kullanılan yöntemdir. Konuyla ilgisi olan tüketicinin ye hemen ya da sonra linke tıklaması ile amaç hasıl olmaktadır.

GELENEKSEL REKLAMDAN FARKI: NATİVE REKLAMIN ÖZELLİKLERİ

Native reklam yoluyla verilecek mesaj, zaten konuya eklemlendiği için bilişsel çaba gerektirmeden zaten konunun içinde olan izleyiciyi tutma ve ikna etme çalışmalarında önemli rol oynar. Geleneksel reklam uygulamalarına direnç gösteren izleyici, kendi hür iradesi ile izlediği programda, akışı bozmadan eklemlendirilmiş reklama da olumsuz tepki göstermeyecektir.

Konuyla ilgili olmayan bilgiler/mesajların rahatsız edici bulunması durumunda müdahale olarak algılanması söz konusu olabilmekte ve izleyici buna olumsuz tepki verebilmektedir. Sunulan içerikle ilgisiz görülen reklamlar daha müdahaleci olarak değerlendirileceği, anlamak için daha fazla bilişsel çaba gerektireceği ve olumsuz olarak değerlendirileceği yüksek ihtimaldir (Kononova, Kim, Joo, & Lynch, 2020).

Yerel reklamların ya da tüketicilerin sosyal medya akışında görünen ve çevredeki içerikle uyum sağlayacak şekilde tasarlanmış reklamların, tüketicilerin gezinme deneyimini bozmayacak şekilde reklam karmaşasını aşmanın etkili bir yolu olduğu düşünülmektedir (Evans , Phua , Lim, & Jun, 2017)

Native reklamların temel amacı doğrudan satış arttırmaktan ziyade marka farkındalığı yaratmak ve izleyici/tüketici ile etkileşim oluşturmaktır.

NATİVE REKLAMIN TÜKETİCİ İLGİSİ ÜZERİNDEKİ ETKİLERİ

Native reklam, yayın platformunun doğal içeriğiyle uyumlu bir şekilde tasarlanmış reklamları ifade eder. Bu tür reklamlar, genellikle kullanıcının dikkatini çekmede daha yumuşak bir yaklaşım benimser ve içeriğin akışına daha organik bir şekilde entegre olmaya çalışır.

Native reklam uygulamaları, geleneksel bir pazarlama yaklaşımını benimsemesine rağmen yeni medya ortamlarının yapısal özellikleri doğrultusunda, reklam mesajlarının içerikle doğal bir bütünlük içinde verilmesidir. Bu açıdan bakıldığında, izleyiciye ürünü doğrudan tanıtmak yerine, hikâyenin (içerik, film, dizi vs.) bir parçası haline getirerek daha organik bir tanıtım yapmayı amaçlayan ürün yerleştirmeye benzetilebilir. Temel fark ise native reklamın genel olarak reklamın kendisini içeriğe entegre etmeye odaklanması, ürün yerleştirmenin ise belirli bir ürünün veya markanın içeriğin doğal bir parçası haline getirilmesidir.

Gün içerisinde sayısız reklam mesajına maruz kalan bireylerde görülen reklamdaki kaçınma davranışı, işletmelerin mesajlarının hedef kitleye ulaşmasının önündeki en önemli engellerden

birisidir. Bu engelin aşılması, bireyin reklam kabulüne bağlıdır. Bir kişi reklam kabulü gösterdiğinde, reklamı fark etmiş, içeriği anlamış veya mesajıyla etkileşimde bulunmuş demektir. Reklam kabulü, pazarlamacıların hedef kitlesine ulaşma ve mesajlarını iletmeleri açısından önemlidir. Bu kabul, farkındalık yaratma, ilgi uyandırma, olumlu bir tutum oluşturma ve nihayetinde bir eyleme yönlendirme gibi aşamalarda gerçekleşebilir. Reklam kabulü, tüketici davranışları ve pazarlama stratejileri açısından analiz edilerek, reklam kampanyalarının etkileşim ve başarı düzeyini değerlendirmek için önemli bir ölçüttür. Bu açıdan native reklamlar, reklam kabulünü kolaylaştırıcı formatlar arasında belirgin bir üstünlüğe sahiptir. Doğal reklamcılığın dijital platformlarla kusursuz entegrasyonu, onu geleneksel gizli reklamcılığın yalnızca çevrimiçi bir kopyası olmaktan çıkarmaktadır (Wojdyski B. W., 2016).

Tüketiciye yönelik reklam içeriğinin etkili bir biçimde iletilmesi amacıyla, kullanıcının arama eğilimlerini içeren ve reklam niteliğini taşımadığı şekilde düzenlenmiş bilgiyi sunma amacını taşıyan bir yöntem geliştirilmiştir.

İçeriğin ilgi çekici bulunması durumunda, içeriğe dâhil edilen reklam mesajlarının kullanıcılar tarafından sorun edilmediği ifade edilmiştir (Goldberg, M. akt. Arslan, 2017)

En önemli özelliği, yayınlandığı platformun formatına uyum sağlayabilme olan doğal reklamın etkili olabilmesi için; hangi kanal aracılığı ile iletilecekse o kanala özgü içerik ve format kullanılmasına bağlıdır. Geleneksel medyada verilen bir mesaj aynı şekliyle dijital medyada verilemez. Ya da geleneksel medya içerisinde yer alan gazete, radyo ve televizyon için de ayrı ayrı formatlar gerekmektedir.

SONUÇ

Doğal reklamlarla ilgili bir diğer endişe de, çevredeki içeriğe karışacak şekilde tasarlandıkları için tüketicilerin doğal reklamların ikna edici amacını fark etmemesidir (Boerman , Willemsen, & Van Der Aa, 2017). Bu sayede reklam, hedefine ulaşmasının ilk adımı olan “görünürlük”ü elde edilebilir ve reklama karşı (olan veya olabilecek) direnci kırılabilir. Bu da reklamın sadece yayınlanmış değil aynı zamanda görülebilir olmasını sağlar.

Yapılan araştırmalar, doğal reklamın, tüketicilerin dikkatini çekmede ve kabul etmede etkili bir strateji olduğunu göstermektedir. Doğal reklamın, içerikle organik bir bütünlük içinde tasarlanması ve yayınlanması, izleyicinin reklamı fark etmeden içeriğe entegre olmasına olanak tanır. Bu noktada, reklamın doğal bir parça gibi algılanması, izleyicilerin olumsuz tepkiler

gösterme olasılığını azaltır ve reklamın hedef kitle tarafından daha olumlu bir şekilde algılanmasına katkı sağlar.

Ayrıca, doğal reklamın, tüketicilerin reklamı rahatsız edici bulma eğilimini azalttığı ve reklamdaki kaçınma davranışını engellediği görülmektedir. Geleneksel reklam uygulamalarına direnç gösteren izleyiciler, doğal reklamın içeriğe daha uyumlu bir şekilde yerleştirilmiş olması nedeniyle olumsuz tepki gösterme olasılığı daha düşüktür.

Reklam kabulü, tüketicinin reklamı fark etmesi, içeriği anlaması ve mesajla etkileşimde bulunması anlamına gelir. Bu açıdan doğal reklamlar, içerdikleri formatlar ve içeriklerle tüketicinin reklamı daha kolay kabul etmesini sağlar. Özellikle dijital platformlarda etkili bir şekilde entegre olan doğal reklamcılık, reklam endüstrisinin geleceğinde önemli bir rol oynayabilir. Reklamın, her ortama özgü formatlar kullanarak tüketicilere daha organik ve ilgi çekici bir deneyim sunması, gelecekteki reklam stratejilerinin temelini oluşturabilir.

Reklamcılık ortamı geliştikçe, doğal reklamcılık, özellikle değişen tüketici davranışları ve daha özgün ve ilgi çekici tanıtım yaklaşımlarına duyulan ihtiyaç karşısında hayati bir strateji olarak ortaya çıkmaktadır. Dijital dünyada, doğal reklamcılık çeşitli çevrimiçi platformlara uyum sağlayarak tanıtım içeriğini sunmanın daha az müdahaleci ve daha organik bir yolunu sunmaktadır.

Abstract

In this study, Cu-22.42%Al-4.52%Mn-1.65%Zn (at.%) alloy was used. The surface of the alloy was examined by scanning electron microscopy (SEM), and compressive stress tests were performed by Shimadzu 100 Kn servopulser. As a result of SEM observations, it was observed that martensite morphology such as needle, spear-like, zig zag, V-type appeared in the alloy. In addition, it was found that precipitates were formed in the alloy and they were uniformly distributed between the martensites. Since the importance of martensitic transformation in copper-based alloys is known, the alloy in the martensite phase was subjected to compressive stress until the alloy was ruptured and the maximum stress was evaluated. From the compression tests; the maximum strain was calculated as 0.37 ± 1 (%). The alloy showed strength up to 260.32 ± 5 MPa, but could not withstand this stress and fractured under compressive stress.

Keywords: Cu-based alloys, SEM, Deformation, Martensite.

1. Introduction

The solid that conducts electricity well under the influence of an applied electric field is called "metal", and the substance that consists of two or more elements, at least one of which is metal, and has metal properties is called "alloy". Metals and alloys have many different types of superior properties, and these properties can be increased severalfold by cold forming and heat treatment. For this reason, metals and alloys today constitute the basic group of materials needed in many fields from daily life to transportation, from industry to medical science, and the types of metal alloys used today are thousands. Each of them has been developed for a specific purpose and has been the subject of many researches to understand their properties and to increase their usage areas due to their increasing requirements. In these researches, it has been aimed to improve the quality of metals and alloys by applying various chemical and physical effects. For this reason, metals and alloys today constitute the basic group of materials needed in many fields from daily life to transportation, from industry to medical science, and the types of metal alloys used today are thousands. Each of them has been developed for a specific purpose and has been the subject of many researches to understand their properties and to increase their usage areas due to their increasing requirements. In these researches, it has been aimed to improve the quality of metals and alloys by applying various chemical and physical effects [Askeland, 1990; Nishiyama, 1978; Funakubo, 1987].

Copper-based Shape-memory alloys, in particular, are technologically important and are used in many areas of industry due to their easily correctable deformations and lower cost. Due to their low cost, shape-memory Cu-Al-Ni and Cu-Al-Zn alloys are attractive alloys with a wide range of production applications. However, the large grain, polycrystalline and highly ordered structures of these alloy systems make their production difficult [Sutou and et al, 1999]. In martensitic transformation, the force-effect not only changes the transformation temperature, but also the type of martensite. In martensite phase transformations, austenite-martensite transformations can be observed as well as martensite-martensite transformations [Wayman, 1964]. The effect of force in β -phase alloys is better understood on the force-temperature graph (Figure 1) for Cu-Al-Ni single crystal.

Figure 1. Schematic phase diagram of Cu-Al-Ni alloy.

In this graph, line 1 $\gamma_1'[2H(1 \bar{1})] \rightarrow \beta_1''[18R_2(1 \bar{1}3 \bar{1})_3] \rightarrow \alpha_1'[6R(1)_6]$ consecutive transformations are observed. In this case the transformation order is crystallographically irreversible. When the force is removed $\alpha_1'[6R(1)_6] \rightarrow \beta_1'[18R_1(2 \bar{1})_6] \rightarrow \gamma_1'[2H(1 \bar{1})]$ consecutive transformations are observed. Line 2 shows an irreversible $\beta_1(DO_3) \rightarrow \gamma_1' \rightarrow \beta_1' \rightarrow \alpha_1'$ sequential transformation. The line 3 $\beta_1 \rightarrow \beta_1' \rightarrow \alpha_1'$ shows reversible transformation. While $\gamma_1' \rightarrow \beta_1'$ transformation is mechanically difficult, $\gamma_1' \rightarrow \beta_1''$ transformation is easier. According to the phase diagram; γ_1' , β_1' (or β_1'') and α_1' phases occur with increasing difficulty. The consecutive $\gamma_1' \rightarrow \beta_1'' \rightarrow \alpha_1'$ transformation under the force effect is caused by the sliding of parallel layers in the alloy. In addition, it is insufficient to explain the reversibility of the $\beta_1 \rightarrow \beta_1' \rightarrow \alpha_1'$ successive transformation when the force effect is removed. This phase diagram for Cu-Al-Ni single crystal does not say that this type of transformation will occur only in this alloy. Other β -phase alloys also exhibit this type of successive transformation [Nishiyama, 1978; Wayman, 1964; Miyazaki, 1989].

Deformation effect is important in copper based alloys. Therefore, in this study, the effect of deformation on the transformation of Cu-22.42%Al-4.52%Mn-1.65%Zn (at.%) alloy was investigated. The sample obtained from the alloy was pressed hard until it broken and information about the strength of the alloy was obtained.

2. Experimental

CuAlMnZn alloy, which is the subject of this thesis, was prepared by using 99.9% pure Cu, Al, Zn, and Mn elements, melted in an argon gas atmosphere in an arc furnace at the Gebze Institute of Technology Materials Laboratories and cast into cylindrical rods with a diameter of 1 cm and a length of 10 cm. Quanta 450 SEM systems Energy Dispersive Spectrometry (EDS)

technique was used to determine the percentage (atomic %) of the alloy. The chemical composition of the determined alloy is given in table 1. Arc melting was used to fabricate the alloys. After the homogenizing annealing at 850 °C for 40 min., the alloy sample was subsequently cooled into water at room temperature. To prevent oxidation of the material at high temperatures during heat treatment, the sample was placed in a silica tube that can withstand high temperatures. Different physical experimental measurement techniques were used to study the effect of heat treatment on the sample obtained from the alloy.

Element	(wt.%)	(at.%)
Cu	82.51	71.40
Al	11.00	22.42
Mn	4.52	4.52
Zn	1.97	1.65

Table 1. Chemical composition of the alloy.

In order to examine the effect of deformation on the phase transformations obtained by thermal processing on the samples obtained from the alloy, rectangular prism-shaped pieces of 4 x 4 x 8 mm³ were cut from the samples with diamond blade cutters. Then, these specimens were compressed at room temperature by Shimadzu 100 Kn servopulser. Compression-Tensile test machine at a speed of 0.2 mm/min. and compressive stress was applied on them.

3. Results

3.1. SEM Experiments

SEM images of CuAlMnZn alloy were taken to investigate the phase transformations that occurring in CuAlMnZn alloy due to thermal effect. SEM images of the alloy are given in Figure 2. When the SEM photograph of the alloy was examined, it was observed that the alloy was completely martensite phase at room temperature. In Figure 1; grains and grain boundaries are clearly observed. Martensite plates occurred in different morphologies in each grain. In addition, the martensite plates are sharply cut at the grain boundaries. Martensite plates were observed as groups of plates compatible with each other. Martensite plates are formed as V-

type, zig-zag and rod-shape (Aldirmaz and et. al, 2014; Aldirmaz and et. al, 2018; Aldirmaz and et. al, 2019; Aldirmaz and et. al, 2021; Canbay, 2016).

Figure 2. SEM micrograph of the worked alloy.

In our previous XRD studies, it was determined that two types of martensite structures, β_1' (18R) and γ_1' (2H), formed in Cu-based shape-memory alloys. The formation of two different types of martensite structures is due to the composition of the alloy. In the literature, it has been observed that both γ_1' and β_1' two different types of martensite phase coexist depending on different amounts of manganese and aluminum (Aldirmaz and et. al, 2017; Aldirmaz and et. al, 2021; Canbay, 2016).

3.2. Stress-Strain Experiments

The stress-strain curve showing the compressive stress behavior of the alloy is given in Figure 3. The sample in the martensite phase was subjected to compressive stress until rupture. The maximum strain was then evaluated.

Figure 3. Stress-strain curves.

The fracture strain was found to be about 260.32 ± 5 MPa for the martensite phase. The alloy showed elasticity up to a deformation rate of about 0.2%. It was observed that the elasticity limit was exceeded when the strain exceeded about 120 MPa. When the elasticity limit is exceeded, the material exhibits plastic behavior. With the increase in force, dislocations start to move and shear occurs. The shape change caused by sliding is permanent. The point where slippage starts is the point that separates elastic and plastic behavior. The alloy showed strength up to around 300 MPa, but could not withstand 0.3% stress and fractured under compressive stress. When compared our study with the literature; the Zn element added to the Cu-Al-Mn alloy reduced the tensile strength and strain values (Aldirmaz, 2014). In another deformation study we conducted, the mechanical parameters we found were higher. This result was attributed to the composition of the alloys (Aldirmaz, 2014; Aldirmaz, 2022).

4. Results

In this study, we have investigated the influence of mechanical on the structural properties of the Cu-22.42%Al-4.52%Mn-1.65%Zn (at.%) alloy.

We can draw the present findings as the following:

1. From stress-strain experiments; the maximum strain was calculated as 0.37 ± 1 (%). The alloy showed strength up to 260.32 ± 5 MPa, but could not withstand this stress and fractured under compressive stress.
2. Rapid cooling from high temperatures to below the martensitic transformation temperature resulted in the formation of martensite plates with different orientations. At the end of the surface investigations; it was found that the thermally induced martensites in this sample appeared in different martensite morphologies.
3. As results, the shape memory alloy can be used in applications that do not require high strength.

Abstract

Tetramethylethylenediamine (TMEDA) is widely used as a ligand for metal ions. Pentane-2,4-dionate (acac) is widely used chelate ligands in transition metal chemistry. (TMEDA)metal(acac)₂ complexes are used as valuable starting materials for the preparation of organometallic and coordination compounds. (TMEDA)Cu(acac)₂, geometry parameters (bond length and bond angle), electronic and NMR properties are studied by DFT calculations, all structures have been optimized on the Becke3LYP/6-31G(d,p) level of theory without simplifications. Studied compound is C₁₆H₃₀N₂O₄Cu chemical formula. It's optimized energy value is found -72888 eV. ¹H and ¹³C NMR chemical shifts are calculated by using GIAO method with CDCl₃ solvent.

Keywords: Copper, NMR, electronic, DFT.

1. Introduction

Tetramethylethylenediamine (TMEDA) is widely used as a ligand or cosolvent in organic syntheses, particularly when organolithium reagents are involved. TMEDA forms stable complexes with many metal halides, e.g. zinc chloride and copper(I) iodide, giving complexes that are soluble in organic solvents. It is known from the literature that TMEDA increases product yields and reaction rates and even changes product distributions by dissolving lithium cations [1].

Additionally, TMEDA is also used as an influence on increasing reaction concentration and ambient reaction temperature on a molar scale. The thermochemistry of metal complexes involving the pentane-2,4-dionate (or acetylacetonate = acac) ligand has been the subject of numerous studies [2-5]. Some TMEDA-derived metal complexes are used as starting materials in the preparation of organometallic and coordination compounds. We present DFT calculations on geometry parameters (bond length and bond angle), electronic and NMR properties of (TMEDA)Cu(acac)₂ compound.

2. METHODS

Gaussian 09 software package has been used to perform geometry optimizations and total energy calculations by DFT (B3LYP) method with the 631G(d,p) basis set [6]. Visualization of the structure and the analysis of the outputs have been carried out with Gauss-View software [7].

3. RESULTS AND DISCUSSION

3.1. Structural Properties

(TMEDA)Cu(acac)₂, studied compound is C₁₆H₃₀N₂O₄Cu chemical formula. The initial molecular geometry of ligand compound was taken cif. [8] and added Cu atom by using Gauss-View. We figure out geometry optimizations as seen Fig. 1.

Fig. 1. (a) Chemical structure [8] and (b) theoretical optimized structure.

Optimized energy values of studied compound is found -72888 eV for DFT(B3LYP/631G(d,p) method. The optimized bond length and bond angles were obtained by same method for title compound were listed in Table 1. These values were in agreement with the similar compound experimental values [8]. As can be seen, most of the bond distances are slightly longer than the experimental distances. For the bond angles, there are difference. As known, the biggest differences of bond lengths and bond angles mainly occur in the groups involved in the nitrogen bonds [i.e.,] for the title compound, which is related to intra and intermolecular interactions present in the crystal.

Table 1. Comparative bond lengths and bond angles.

Parameters	Exp [Fe].	B3LYP	Parameters	Exp [11].	B3LYP
<i>Bond lengths (Å)</i>			<i>Bond angles (°)</i>		
Cu—O1	2.0876 (10)	2.2152	O2—Cu—O3	95.84 (4)	87.7282
Cu—O2	2.0497 (10)	1.9529	O2—Cu—O4	174.85 (4)	172.695
Cu—O3	2.0970 (10)	1.9745	O2—Cu—N1	91.04 (5)	92.3164
Cu—O4	2.0520 (9)	1.9456	O2—Cu—N2	84.18 (4)	84.1401
Cu—N1	2.3021 (12)	2.1538	O3—Cu—O4	86.00 (4)	91.1917
Cu—N2	2.3184 (12)	2.5985	O3—Cu—N1	170.93 (4)	172.5095
O1—Cu—O2	85.58 (4)	87.8195	O3—Cu—N2	95.43 (4)	93.252

Table 2. The measured electronic parameters of molecules.

Parameters (eV)	B3LYP
E_{LUMO}	-0.656
E_{HOMO}	-5.218
$\Delta E = E_{LUMO} - E_{HOMO}$	4.562
$I = -E_{HOMO}$	5.218
$A = -E_{LUMO}$	0.656
$\chi = (I+A)/2$	3.087
$\mu = -\chi$	-3.087
$\eta = (I-A)/2$	2.281
$S = 1/2\eta$	0.219
$w = \mu^2 / 2\eta$	2.087
μ_D (Debye)	2.405

Molecular Electrostatic Potential (MEP) mapping is very useful in understanding sites for electrophilic attack and nucleophilic reactions as well as hydrogen bonding interactions.

Fig. 3. (a) Total electron density mapped of the compound and (b) Mulliken charge values in gases phase.

The MEP clearly indicates that the electron rich centres were found around the O atoms, and slightly H atoms. For O atoms, the max. negative $V(r)$ values are $-0.057, a.u.$ and H atoms the max. $V(r)$ values are $0,014 a.u.$ for B3LYP method (Fig. 3 (a)). Atomic charges affect the dipole moment, electronic structure and many other properties of molecular systems. The Mulliken populations provide the simplest picture of the charge distribution, and Mulliken charges render “net” atomic populations in the molecule (Fig. 3 (b)).

3.2. NMR spectra

Gauge including atomic orbital (GIAO) ^1H and ^{13}C chemical shifts were calculated using the DFT/B3LYP method with 6-31G(d,p) basis set [10, 11]. The chemical shifts were converted into the TMS scale by subtracting the calculated absolute chemical shielding of TMS. The values of ^1H and ^{13}C are 31.76 and 191.81 ppm for B3LYP/6-31G(d,p) respectively [12]. The calculated results were given in Table 3 along with the experimental chemical shift values of similar compound [8].

^1H chemical shift values are calculated to be 1.16–5.19 ppm at B3LYP/6-31G(d,p) level, while the experimental results are observed to be 1.85–5.15 ppm. The (CH₃)₂N signals were observed to be 2.31 ppm. The methyl with oxygen of the compound (CH₃C(O)) gave nearly at 1.85 ppm at B3LYP level.

Table 3. ^1H and ^{13}C chemical shift values

^1H	Atom	Exp. (Fe)	B3LYP (scaled 31,76)	^{13}C	Atom	Exp. (Fe)	B3LYP (scaled 191,81)
C(O)CHC(O)	H14, H26	5.15	5.19,5.17	C(O)CHC(O)	C13, C25	98.4	97.1,98.59
	H9-H11	1.85	2.03,2,28,1.75		C8, C16	28.3	28.85,28.83
CH ₃ C(O)	H17-H19	1.85	1.69,1.54,1.32	CH ₃ C(O)	C20	28.3	27.61
	H21-H23	1.85	1.86,1.81,1.5		C28	28.3	27.53
Me ₂ N-CH ₂	H29-H31	1.85	1.75,1.63,1.41	Me ₂ N-CH ₂ (CH ₃) ₂ N)	C32, C50	56.5	57.34,47.57
	H33,H34	2.49	3.2,2		C38, C42	46.6	47.31,44.41
(CH ₃) ₂ N)	H36,H37	2.49	3.57,2.5	C(O)	C46, C50	46.6	42.69,47.57
	H39-H41	2.31	3.09,2.65,1.55		C12	190.9	184.65
	H43-H45	2.31	2.59,1.89,1.16		C15	190.9	178.38
	H47-H49	2.31	3.06,2.49,1.86		C24	190.9	182.99
	H51-H53	2.31	3.67,2.82,2.39		C27	190.9	180.15

^{13}C NMR spectra of the compound show signal at 190.9 ppm due to the C12, C15, C24 and C27 atoms of the C-O group. This signals were calculated at 184.65, 178.38, 182.99 and 180.15 ppm. As can be seen from Table 3 the theoretical ^1H and ^{13}C chemical shift results for the title compound are generally closer to the experimental data.

4. CONCLUSION

The (TMEDA)Cu(acac)₂ compound investigated. The calculated geometric parameters are good agreement with the experimental data. The MEP map indicates that hydrogen atoms is positive while the O atom is the negative. These sites give information about the region from where the molecule can have intermolecular interactions and metallic bonding. NMR properties are studied by DFT method.

Özet

Bu çalışmada, kültürel çeşitliliğin ve kültürel duyarlılığın halkla ilişkiler alanındaki önemi vurgulanmaktadır. Çalışma, halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetimi kavramını ele almakta ve halkla ilişkiler profesyonellerine bu konuda stratejik yaklaşımlar sunmaktadır. Ayrıca çalışmada; günümüzdeki çok kültürlü toplumlarda, halkla ilişkilerin kültürel duyarlılık ve çeşitlilik yönetimi açısından ele alınması gerekliliği vurgulanmaktadır. Farklı kültürlere mensup bireylerin bir arada yaşadığı bu ortamlarda, iletişim stratejilerinin kültürel farklılıklara duyarlı olması gerektiği önemle belirtilmektedir. Halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetiminin neden önemli olduğu ayrıntılı bir şekilde açıklanmış ve kültürel farklılıkların dikkate alınmamasının, halkla ilişkiler faaliyetlerinin başarısını olumsuz etkileyebileceği üzerinde durulmuştur. Kültürel duyarlılığın ve çeşitliliğin halkla ilişkiler faaliyetleri üzerindeki etkisi incelenmiş ve halkla ilişkiler süreçlerinde kültürel faktörlerin başarıya olan katkısı vurgulanmıştır. Halkla ilişkiler çalışanlarının kültürel duyarlılık ve çeşitlilik konularında eğitimi ve liderlik rolünün önemi ele alınmakta ve çalışanların kültürel farkındalığının artırılmasının ve çeşitliliği yönetme becerilerinin geliştirilmesinin önemine vurgu yapılmaktadır. Çalışmanın son bölümünde, halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetiminin etik boyutu ele alınmaktadır. Kültürel farklılıklara dayalı etik zorlukların ve bu zorlukların nasıl üstesinden gelinmesi gerektiğinin tartışıldığı bu bölümde, etik açıdan doğru yaklaşımların benimsenmesinin önemi vurgulanmaktadır. Çalışma, halkla ilişkiler alanında çalışanlara kültürel duyarlılık ve çeşitlilik yönetimi konularında yol gösterici olmayı amaçlamaktadır. Küreselleşmenin arttığı günümüzde, başarılı ve etkili halkla ilişkiler stratejileri geliştirebilmek için bu konuların göz ardı edilmemesi gerektiği vurgulanmaktadır. Halkla ilişkilerde kültürel çeşitliliği anlamak ve uygun stratejilerle yönetmek, topluluklar arasında anlayışı artırıcı ve uzlaşmacı bir rol oynamaktadır.

Anahtar Kelimeler: Halkla ilişkiler, kültürel duyarlılık, çeşitlilik yönetimi, stratejik yaklaşım.

CULTURAL SENSITIVITY AND DIVERSITY MANAGEMENT IN PUBLIC RELATIONS: STRATEGIC APPROACHES

Abstract

This study emphasizes the importance of cultural diversity and cultural sensitivity in public relations. It discusses the concept of cultural sensitivity and diversity management in public relations and offers strategic approaches to public relations professionals. In addition, it is emphasized that in today's multicultural societies, public relations should be handled in terms of cultural sensitivity and diversity management. In such environments where individuals from diverse cultural backgrounds coexist, it is underlined that communication strategies should be sensitive to cultural differences. The importance of cultural sensitivity and diversity management in public relations is explained in detail and it is highlighted that ignoring cultural differences can negatively affect the success of public relations activities. The impact of cultural sensitivity and diversity on public relations activities is examined and the contribution of cultural factors to the success of public relations processes is stressed. The importance of training and leadership role of public relations employees on cultural sensitivity and diversity issues is discussed and the importance of increasing the cultural awareness of employees and developing their skills in managing diversity is stated. The final part of the study discusses the ethical dimension of cultural sensitivity and diversity management in public relations. Discussing ethical challenges based on cultural differences and how to overcome them, this chapter highlights the importance of adopting ethically correct approaches. The study aims to provide guidance to public relations professionals on cultural sensitivity and diversity management. In today's world of increasing globalization, it must be noted that these issues are of vital importance to develop successful and effective public relations strategies. Understanding cultural diversity in public relations and managing it with appropriate strategies can increase understanding and reconciliation between communities.

Keywords: Public relations, cultural sensitivity, diversity management, strategic approach.

Giriş

Günümüzde küreselleşme, göç ve teknolojik gelişmeler gibi etmenler dünyanın dört bir yanındaki toplumları bir araya getirmekte ve etkileşimi artırmaktadır. Bu süreçler, farklı kültürlerle mensup bireylerin bir arada yaşadığı çok kültürlü toplumları giderek daha yaygın hale getirmiştir. Bu kültürel çeşitlilik, toplumların kozmopolit yapılarını zenginleştirirken, halkla ilişkiler alanında önemli bir konu olarak karşımıza çıkmaktadır.

Halkla ilişkiler, bireyler, kurumlar ve toplumlar arasındaki etkileşimi ve iletişimi kolaylaştırmak, olumlu ilişkiler inşa etmek ve sürdürmek için stratejik bir disiplindir. Bu disiplinin temel amacı, organizasyonların ve halkın birbirini anlamasını ve etkileşimlerin sorunsuz bir şekilde gerçekleşmesini sağlamaktır. Günümüzde halkla ilişkiler profesyonelleri kültürel çeşitliliğin arttığı toplumlarda çalışırken, kültürel duyarlılık ve çeşitlilik yönetimi konularına odaklanma gerekliliği ile karşı karşıyadır.

1.Çok Kültürlülük, Kültürel Duyarlılık ve Çeşitlilik Yönetimi Kavramı

Çok kültürlülük, aynı coğrafyadaki ortak yaşantı ve inançları olan insanların çoksesli düşünce sistemine sahip olabilecekleri ve farklı değerleri savunabilecekleri düşüncesinin bir ürünü olarak tanımlanmaktadır (Kervan, 2017: 19). Bunun yanında çok kültürlülük, aynı coğrafyada yaşayan farklı kültür ve yaşam biçimlerinin birlikte saygı içinde varoluşu anlamına gelmektedir (Akkaya vd. 2018:312).

Kültürel duyarlılık ise, farklı kültüre sahip insanların birbiriyle olan iletişiminde etkili ve uygun dili destekleyen, kültürler arasındaki farklılıkları anlayıp hoşgörülü tavır sergileyebilecek olumlu davranışları destekleyici bir kabiliyet (Chen, 1997) olarak tanımlanmıştır. Ayrıca kültürel duyarlılığı, kültürlerarası iletişimin bir parçası olarak görüp kültürlerarası farklılıkları anlamada, kabul etmede ve takdir etmede kendi motivasyonunu sağlamak için gerekli olan aktif istek (Bulduk vd. 2017:74) olarak da tanımlamak mümkündür.

Bunun yanında çeşitlilik yönetimi kavramı ise, farklı özelliklere sahip her bir çalışanın kendini değerli hissettiği, yeteneklerini değerlendirdiği ve örgütsel amaçlara katkıda bulunduğunu düşündüğü, birlikte verimli bir şekilde çalışacakları çevre yaratmak (Strachan, vd. 2004) olarak tanımlanmaktadır. Ayrıca çeşitlilik yönetimi, işletmedeki işgücü çeşitliliğinin anlaşıldığı ve değer verildiği, her bir kişinin sahip olduğu yetenekleri tam olarak kullanabileceği bir organizasyon kültürü oluşturma süreci (Danullis ve Dehling, 2004: 21) olarak da ifade edilmektedir.

Halkla ilişkiler, bir organizasyonun hedeflediği toplumsal kesimlerle aktif olarak iletişim kurmak, onlarla etkileşimde bulunmak ve uyum içinde çalışmak için kullanılan bir araçtır

(Kurtuldu ve Poyraz, 2022). Halkla ilişkiler, toplumsal değerleri anlama ve kurumun itibarını korumak için etkili iletişim tekniklerini yoğun olarak kullanır. Kültürel güvenlik ve çeşitlilik yönetimi (kültürel çeşitlilik yönetimi) halkla ilişkilerin dikkate aldığı önemli bir alandır. Çünkü bir kurumun hedef kitlesinin inançları, değerleri, normları, gelenekleri ve günlük yaşam tarzları, halkla ilişkilerin başarısında önemli bir rol oynar (Koçak ve Akdağ, 2021). Halkla ilişkilerin kültürel güvenlik ve çeşitlilik yönetimiyle ilişkisi, toplumların farklı kültürel arka planlarına sahip olduğu günümüzün küresel dünyasında giderek daha önemli hale gelmektedir.

Kültürel duyarlılık, iletişim yoluyla aktarılan bir anlayış olup etkili halkla ilişkiler stratejisi için kültürel farklılıkları anlamak ve saygı duymak önemlidir (Bitirim Okmeydan, 2019). Bunun yanında çeşitlilik yönetimi, kurumların farklı kültürel gruplara mensup insanları hoşgörüyü karşılayarak ve katılımlarını sağlayarak topluluk içinde daha geniş bir kabul ve itibar görmelerine katkıda bulunur (Koçak ve Akdağ, 2021). Çeşitlilik yönetimi, kurumsal düzeyde kültürel farklılıkların anlaşılmasını ve saygı gösterilmesini teşvik ederken aynı zamanda kurumun başarısını ve toplumsal etkisini artırabilmektedir.

Halkla ilişkilerin kültürel güvenlik ve çeşitlilik yönetimiyle ilişkisi toplumun genel çıkarları, ortak hassasiyetleri ve ortak müşteri görüşlerine dayalıdır (Uyanık, 2021). Bu açıdan halkla ilişkiler profesyonelleri toplumun farklı kültürel gruplarını temsil etmek ve etkileşimde bulunmak için çeşitlilik yönetimi ve kültürel hassasiyet stratejilerini kullanırlar (Koçak ve Akdağ, 2021). Böylece kurumlar kendi içinde bulunana topluluklarında daha iyi bir itibar inşa etmeye, etkili iletişim kurmaya ve uzun süreli başarıya ulaşmaya yardımcı olur (Bitirim Okmeydan, 2019). Bu nedenle halkla ilişkiler profesyonelleri kültürel farklılıkları anlamak, saygı duymak ve çeşitlilik yönetimi stratejilerini benimsemek için sürekli olarak kendilerini geliştirmelidirler.

2. Halkla İlişkilerde Kültürel Duyarlılık ve Çeşitlilik Yönetimi

Halkla ilişkiler alanında kültürel duyarlılık, bireylerin ve toplulukların kültürel çeşitliliğini anlamayı ve saygı duymayı içerdiği için önemli bir rol oynar ve bu nedenle halkla ilişkilerde kültürel duyarlılığın önemi tanımlanmalı ve kabul edilmelidir (Koçak ve Akdağ, 2021). Halkla ilişkiler uygulayıcılarının farklı hedef kitlelerle iletişim ve etkileşimlerinde kültürel açıdan duyarlı olma ihtiyacı vardır. Fakat halkla ilişkilerde kültürel duyarlılığın teşvik edilmesini engelleyen zorluklar ve engeller de bulunmaktadır. Halkla ilişkilerin yönetim alanına yönelik tanımlarda genellikle kültürel yönü gözden kaçırılmaktadır. Halkla ilişkiler ve kültür ilişkisine yönelik çalışmaların 2000 li yıllardan sonra yoğunluk kazandığı görülmektedir (Özoran, 2020). Halkla ilişkilerde kültürel duyarlılığın teşvik edilmesini engelleyen zorluklar,

dil engelleri, kültürel ön yargılar ve iletişim eksiklikleri şeklinde sıralanabilir. Ayrıca, kültürel farkındalığın yetersiz olması ve kurum içinde çeşitlilik konusunda yeterli desteğin sağlanmaması da bu engellere dahil olabilir. Bu zorlukların üstesinden gelmek için bir zihniyet değişikliğine ve halkla ilişkiler alanında kültürel duyarlılığı teşvik eden stratejilerin uygulanmasına ihtiyaç vardır.

Halkla ilişkilerde kültürel duyarlılığı artırmak için çeşitli stratejiler belirlemek önemlidir. Her şeyden önce halkla ilişkiler alanında kültürel duyarlılığın önemini vurgulayan eğitim ve öğretim faaliyetleri temel bir stratejik yaklaşım olarak görülebilir (Koçak ve Akdağ, 2021). Bu yaklaşım, uygulayıcıların farklı hedef kitlelerle etkili bir şekilde etkileşim kurmak için gerekli beceri ve bilgileri geliştirmelerine yardımcı olabilir. Bunun yanında, kültürel çeşitlilik ve katılımı örgütsel politika ve uygulamalara dahil etmek, farklı kültürlere değer veren ve saygı duyan bir ortam yaratabilir. Çeşitli araştırmalar yapmak, kültürel eğilimler ve sorunlar hakkında güncel verilere sahip olmak, halkla ilişkiler uzmanlarının farklı kitlelerin ihtiyaç ve beklentilerini daha iyi anlamalarına ve bunlara yanıt vermelerine yardımcı olabilir (Özoran, 2020). Bu stratejileri uygulamak suretiyle halkla ilişkiler, çeşitli paydaşlarla olumlu ilişkileri ve etkili iletişimi teşvik ederek kültürel açıdan daha hassas ve kapsayıcı bir alan haline gelebilir. Çeşitlilik yönetimi, farklı kültürel geçmişlere ve değerlere sahip olan insanların bir araya geldiği bir yapıda etkili iletişim kurmayı ve bilgileri yönetmeyi içerir. Bir halkla ilişkiler profesyonelinin, hedef kitleyle etkili bir iletişim kurabilmesi için inançları, değerleri, normları, gelenekleri ve günlük yaşam tarzlarını anlaması önemlidir (Koçak ve Akdağ, 2021). Halkla ilişkilerde çeşitlilik çok yönlü bir kavram olarak karşımıza çıkar. Temel olarak çeşitlilik yönetimi sayesinde bir organizasyon, farklı kültürel gruplara hitap edebilir ve onların isteklerini daha iyi anlayabilir (Kurtuldu ve Poyraz, 2022). Bu sayede daha etkili bir iletişim ve ilişki kurulmasına imkan tanır. Ayrıca çeşitlilik yönetimi, bir organizasyonun itibarını artırır ve toplumda daha geniş bir kitleye ulaşmasını sağlar.

Halkla ilişkilerde çeşitlilik yönetiminin uygulanmasının bazı zorlukları vardır ve bazı stratejiler uygulamayı zorunlu kılar. Genellikle, kültürel farklılıkların farkında olmak ve bunları anlamak önemli olup araştırmalar yapmak, eğitim almak ve kültürel danışmanlarla çalışmak hedefleri gerçekleştirmek için önemlidir. Çeşitlilik yönetimi için etkili stratejiler geliştirme ve uygulama, halkla ilişkilerin kültürel zorlukları başarılı bir şekilde yönetmesini sağlar (Çelebi, 2019).

2.1. Kültürel Duyarlılık ve Çeşitlilik Yönetiminin Halkla İlişkiler Faaliyetlerine Etkisi

Halkla ilişkiler faaliyetleri kültürel çeşitlilik yönetimi ile başarılı bir şekilde yürütülebilir. Özellikle yerel ve uluslararası halkla ilişkiler faaliyetlerini yürütürken hedef kitle

analizi yapmanın temel nedenlerinden biri de kültürel farklılıkları anlayabilmektir (Koçak ve Akdağ, 2021). Kurumlardaki etkili bir halkla ilişkiler yönetimi, genel anlayış ve faydayı teşvik ederek verdiği mesajlarda kurum ve hedef kitle arasındaki ilişkilere odaklanan bir perspektif sunar (Boztepe, 2013). Bu nedenle kültürel duyarlılık ve çeşitlilik yönetimi, halkla ilişkilerin temel bir bileşeni haline gelmiştir.

Başarının elde edilmesinde hedef kitlenin inançları, değerleri, normları, gelenekleri ve günlük yaşam tarzları gibi unsurların dikkate alınması bu başarının önemli bir kısmını oluşturur (Koçak ve Akdağ, 2021). Kültürel duyarlılık ve çeşitlilik yönetimi anlayışına sahip olmak, halkla ilişkiler kampanyalarının hedef kitleye uygun bir şekilde tasarlanması ve iletişiminin sağlanması için gereklidir (Özoran, 2020).

Halkla ilişkilerin temel amacı, kurumlar ve toplum arasında güven inşa etmek ve etkili iletişim kurmaktır. Bu bağlamda hedef kitlenin kültürel inançları, değerleri, normları, gelenekleri ve günlük yaşam tarzları gibi unsurları dikkate almak, halkla ilişkiler kampanyalarının etkisini artırır ve başarı şansını yükseltir. Kültürel duyarlılık ve çeşitlilik yönetimi, halkla ilişkiler faaliyetlerinin çeşitli kültürel gruplarla daha iyi etkileşim kurmasına ve onlarla uyum içinde çalışmasına yardımcı olur. Hedef kitleye uygun mesajlar ve içerikler oluşturmak iletişimin daha anlamlı ve etkili olmasını sağlar. Aynı zamanda halkla ilişkiler uzmanlarının çeşitli kültürel grupların beklenti ve ihtiyaçlarını anlaması, hatalı yargılardan ve kültürel yanlış anlamalardan kaçınmalarına yardımcı olur.

Ayrıca kültürel duyarlılık ve çeşitlilik yönetimi halkla ilişkilerin topluluklarla daha güçlü bağlar kurmasına ve toplumda daha geniş bir kabul ve itibar elde etmesine katkıda bulunur. Bu, kurumlar için sürdürülebilir bir başarı ve uzun vadeli bir etki yaratma açısından önemlidir. Bunun yanında kültürel çeşitlilik ve duyarlılık, küreselleşen dünyada uluslararası halkla ilişkiler faaliyetlerinin başarılı bir şekilde yürütülmesi için de kritik bir rol oynar.

2.2. Halkla İlişkilerde Kültürel Duyarlılık ve Çeşitlilik Yönetiminde Eğitim ve Liderlik

Halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetimi, eğitim ve öğretim faaliyetleri ile birlikte yürütüldüğünde daha etkili olmaktadır. Halkla ilişkilerde eğitim ve öğretim kültürel, siyasi, ekonomik ve diğer yapılar hakkında bilgi sahibi olmayı içerir ve böylece daha geçerli ve etkili iletişim kurmaya katkı sağlar (Şardağı ve Öztürk, 2018). Halkla ilişkiler uygulamaları iç ve dış hedef kitlelerle iletişim kurmak amacıyla iyi niyetle harekete geçirilen faaliyetlerdir (Bitirim Okmeydan, 2019). Günümüzde hem kamu kurumları hem de özel kurumlar, farklı kültürel geçmişlere sahip hedef gruplarla etkili iletişim kurmak için halkla ilişkilerden yararlanmaktadır (Kurtuldu ve Poyraz, 2022). Bu nedenle kültürel duyarlılık ve çeşitlilik

yönetimi konularını içeren eğitim programlarının halkla ilişkiler eğitim programlarına dahil edilmesi önemlidir (Bitirim Okmeydan, 2019). Bu durum stratejik bir anlayışı gerekli kılar.

Halkla ilişkiler eğitim programlarına kültürel duyarlılık ve çeşitlilik yönetimini dahil etmeye yönelik stratejiler, halkla ilişkiler profesyonellerinin kültürel farklılıkları anlamalarını ve yönlendirebilmelerini sağlamayı hedeflemektedir. Bu stratejiler, kültürel çeşitlilik konusunda bilinçlendirme, kültürel duyarlılık eğitimi, kültürel iletişim becerileri geliştirme gibi unsurlardan yararlanır (Bitirim Okmeydan, 2019). Ayrıca, kültürel çeşitliliklerle ilgili pratik deneyimler sunan saha çalışmaları ve staj programları da bu stratejiler arasında yer alabilir. Böylece halkla ilişkiler profesyonelleri, çeşitli kültürel geçmişe sahip kişilerle etkili iletişim kurabilme becerilerini geliştirebilirler.

Kültürel duyarlılık ve çeşitlilik yönetimi konusunda etkili eğitim programlarına sahip örnek olay incelemeleri diğer kuruluşlar için yol gösterici nitelik taşıyabilir. Bu incelemeler, başarılı halkla ilişkiler stratejileri ve uygulamalarıyla ilgili gerçek dünya örneklerini içerir. Halkla ilişkiler profesyonellerine kültürel zeka ve çeşitlilik yönetimi konusunda başarılı olabilmeleri için pratik bilgiler sunabilir. Halkla ilişkiler, eğitim programlarını kültürel duyarlılık ve çeşitlilik yönetimi ile ilgili yapılan araştırma sonuçlarına, örnek olay incelemelerine ve gerçek dünya deneyimlerine dayandırmalı ve uygulamaları pratik öğelerle zenginleştirmelidir.

Etkili bir liderlik, halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetimini geliştirmek için önemlidir. Kültürel farklılıkları anlamak, çeşitli gruplara saygı göstermek ve onları kapsayıcı bir dil kullanmak, halkla ilişkilerin başarılı bir şekilde gerçekleştirilmesinde kritik bir role sahiptir. Bu liderlik yaklaşımı, halkla ilişkilerin topluluklarla güçlü ve olumlu bağlar kurmasına, ihtiyaçları anlayışla karşılmasına ve toplumun çeşitli kesimlerine etkili bir şekilde ulaşmasına yardımcı olur. Ayrıca liderlerin kültürel duyarlılık ve çeşitlilik yönetimi konusunda örnek olmaları, halkla ilişkiler çalışanlarının da aynı değerlere sahip olmalarını teşvik eder ve bu da kurumun itibarını ve toplum nezdindeki algısını olumlu yönde etkiler. Bu nedenle liderlerin kültürel duyarlılık ve çeşitlilik konusunda bilinçli olmaları ve bu değerleri kurum kültürüne yansıtılmaları başarılı halkla ilişkiler stratejilerinin temelini oluşturur.

Halkla ilişkilerde etkili liderlerin belirli niteliklere sahip olması da son derece önemlidir. İyi bir lider, kültürel farklılıkları anlamak ve değer vermek için açık bir zihniyete sahip olmalıdır. Ayrıca iletişim becerileri güçlü olmalı ve çeşitli gruplar arasında etkili iletişim kurabilmelidir. Liderlik takım çalışması ve iş birliği becerilerini gerektirir çünkü kültürel duyarlılık ve çeşitlilik yönetimi, farklı perspektifleri bir araya getirmek ve ortak bir amaca ulaşmak için ortak çabaya dayanır.

Kültürel duyarlılık ve çeşitlilik konusunda güçlü liderliğe sahip olan kuruluşlar başarılı yönetim örnekleri sunmaktadırlar. Araştırmalar kültürlerarası iletişim politikalarına duyarlı bir yönetim profili oluşturmanın etkili ve sürdürülebilir bir halkla ilişkiler stratejisi olduğunu göstermektedir. Farklı kültürler arasında etkili iletişim tekniklerini uygulayan ve çeşitli perspektifleri içeren kuruluşlar daha kapsayıcı ve başarılı halkla ilişkiler faaliyetleri yürütmektedir (Bitirim Okmeydan, 2019). Bunun yanında kültürel duyarlılık ve çeşitlilik yönetiminde liderlerin rolü, kurum içinde kültürel farkındalığı teşvik etmek ve çeşitliliği desteklemektir. Başarılı bir lider, çalışanlara kültürel çeşitliliği kabul eden bir ortam yaratır ve herkesin görüşlerine saygı duymasını sağlar. Aynı zamanda liderler farklı kültürlerden gelen çalışanların becerilerini ve deneyimlerini takdir eder ve onlara eşit fırsatlar sunar. Bu, çalışanların motivasyonunu artırır, işbirliğini teşvik eder ve kurumun çeşitli bakış açılarından faydalanmasını sağlar.

Etkili liderler aynı zamanda kültürel farklılıklara duyarlı bir iletişim ve karar verme süreci oluştururlar. Karar alma süreçlerine farklı kültürlerden gelen çalışanları dahil eder ve onların perspektiflerini dikkate alır. Böylece halkla ilişkiler stratejileri daha kapsayıcı ve topluluklarla uyumlu bir şekilde geliştirilir. Liderler ayrıca, halkla ilişkiler projelerinde kültürel açıdan hassas ve uygun mesajlar kullanmak suretiyle iletişim kurmaya özen gösterirler böylece topluluklarda daha iyi bir anlayış oluşturulur ve güven inşa edilir.

Ayrıca liderlerin kültürel duyarlılık ve çeşitlilik konusunda kendilerini sürekli geliştirmeleri de önemlidir. Eğitim ve bilinçlendirme programlarına katılarak kültürel farkındalıklarını artırabilirler ve çeşitlilik yönetimi becerilerini geliştirebilirler. Bu, liderlerin daha etkili ve başarılı halkla ilişkiler stratejileri geliştirmesine yardımcı olur ve kurumun kültürel açıdan zengin ve çeşitli bir çalışma ortamı oluşturmasına katkı sağlar.

3. Halkla İlişkilerde Kültürel Duyarlılık ve Çeşitlilik Yönetiminde Etik Konular

Halkla ilişkilerde kültürel sorumluluklar etik zorlukları da beraberinde getirmektedir. Kültürel duyarlılık, farklı kültürel değerlere saygı gösterme ve bu değerlere uygun iletişim kurma becerisi gerektirir. Halkla ilişkiler uygulayıcıları farklı kültürel gruplarla etkileşim halindeyken kültürel duyarlılık konusunda dikkatli olmalı ve etik sorunlarla karşılaşmamak için azami özen göstermelidirler (Koçak ve Akdağ, 2021). Kurumların halkla ilişkiler anlayışı içerisindeki halkla bütünleşme misyonu, kültürel farklılıkları anlama ve bu farklılıklara uygun iletişim kurma yolunu geliştirme becerisini içermelidir (Özoran, 2020). Bu sayede kurumun etik sorunlarla başa çıkma yeteneği artacak ve daha etkili bir iletişim kurma imkanı yaratılmış olacaktır (Bitirim Okmeydan, 2019).

Halkla ilişkilerde çeşitlilik yönetimi etik hususları içeren önemli bir konudur. Bu yönetim farklı kültürel, etnik ve sosyal grupların bir arada çalıştığı ve etkileşimde bulunduğu adil ve eşitlikçi bir çalışma ortamı sağlamayı hedefler. Halkla ilişkiler faaliyetleri çeşitlilik yönetimi çerçevesinde herkesin haklarına saygı gösterme, tüketiciyi yanıltmama ve topluma fayda sağlama gibi etik ilkeleri benimsemelidir. Bu şekilde halkla ilişkiler çalışmaları çeşitliliği destekleyen, etik değerlere saygı gösteren ve toplumsal uyumu güçlendiren bir şekilde gerçekleştirilebilir.

Kültürel duyarlılık ve çeşitlilik yönetimindeki etik gereksinimlerin ele alınması için stratejiler geliştirmek önemlidir. Halkla ilişkiler kültürel yapılar ve çeşitlilik konusunda duyarlı bir iletişim stratejisi oluşturmalı ve bu stratejiyi uygulamak için eğitim programlarından yararlanmalıdır. Bu şekilde halkla ilişkiler çalışmaları etik değerlere uygun, kültürel olarak duyarlı ve toplumun çeşitliliğini destekleyen bir şekilde yürütülebilir.

Halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetimi konusunda etik sorunlardan bazıları aşağıdaki şekilde ifade edilebilir.

Stereotip ve Önyargılar: Halkla ilişkiler çalışmalarında farklı kültürel gruplara yönelik stereotip ve önyargılar kullanılması etik bir sorun teşkil eder. Stereotipler, bir kültürü veya grubu yanlış ve genellemeci bir şekilde temsil etmeye yönelik önyargılı inançlardır. Bu tür yaklaşımlar toplumu yanıltabilir ve çeşitliliğe zarar verebilir.

Kültürel Sapmalar: Bir organizasyonun kültürel farkındalığı yeterli düzeyde olmadığından kültürel olarak uygun olmayan mesajlar ve uygulamalar ortaya çıkabilir. Bu durum halkla ilişkiler faaliyetlerinin başarısını olumsuz etkileyebilir ve topluluklarla arasındaki ilişkileri zedeleyebilir.

Dil ve Görsel Hatalar: Çeşitli kültürel gruplara yönelik iletişimde dil ve görsel materyallerin yanlış veya hassas bir içeriğe sahip olması etik problemlere yol açabilir. Bu tür hatalar kurumun itibarını zedeleyebilir ve güvenilirliğini sarsabilir.

Kültürel İhlaller: Halkla ilişkiler faaliyetlerinde, bir kültürün değerlerine veya geleneklerine saygısızlık edecek veya kültürel olarak uygun olmayan mesajlar kullanılması etik bir ihlal olarak değerlendirilir.

Eşitsizlik ve Ayrımcılık: Halkla ilişkiler çalışmalarında, çeşitli gruplar arasında ayrımcılık yapacak veya bir grup lehine diğerini ihmal edecek şekilde eşitsizlik yaratacak uygulamaların yer alması etik bir sorun olabilir.

Kültürel İstismar: Halkla ilişkiler faaliyetlerinde bir kültürü veya kültürel sembolleri maddi kazanç sağlamak veya özendirici amaçlarla istismar etmek, etik açıdan ciddi bir problem oluşturabilir.

Bu nedenle, halkla ilişkiler profesyonelleri kültürel duyarlılık ve çeşitlilik yönetimi konusunda dikkatli olmalı ve etik değerlere uygun iletişim stratejileri geliştirmeye özen göstermelidir. Toplumun çeşitliliğini anlamak, saygı göstermek ve farklı kültürel gruplarla etkileşimde adil ve eşitlikçi bir yaklaşım benimsemek etik ve başarılı bir halkla ilişkiler çalışması için önemlidir.

Sonuç

Bu çalışma, günümüzde küreselleşme, göç ve teknolojik gelişmeler gibi etmenlerin dünyanın dört bir yanındaki toplumları bir araya getirerek etkileşimi artırdığı ve çok kültürlü toplumları giderek daha yaygın hale getirdiği gerçeğine dikkat çekmektedir. Bu süreçler toplumların kozmopolit yapılarını zenginleştirirken, halkla ilişkiler alanında da önemli bir konu olarak karşımıza çıkan kültürel çeşitliliği vurgulamaktadır. Yapılan çalışma halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetiminin öne çıkan bir konu olduğunu açıkça ortaya koymaktadır. Çok kültürlülük, halkla ilişkiler çalışmalarının temelinde yer alan ve üzerinde durulması gereken bir kavramdır. Halkla ilişkiler profesyonelleri, farklı kültürlere mensup bireylerin bir arada yaşadığı toplumlarda kültürel duyarlılık ve çeşitlilik yönetimi perspektifinden çalışmalarını sürdürmelidirler. Çalışma kültürel duyarlılığın ve çeşitliliğin, halkla ilişkiler faaliyetleri üzerinde belirgin bir etkisi olduğunu göstermektedir. Bu etkinin müşteri ilişkilerinden medya iletişimine ve kriz yönetimine kadar halkla ilişkiler süreçlerini kapsadığı anlaşılmaktadır. Kültürel faktörlerin bu süreçlerde başarı üzerindeki olumlu etkisi, halkla ilişkilerin güçlü ve sürdürülebilir ilişkiler inşa etme amacını desteklemektedir.

Aynı şekilde halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetiminin, eğitim ve liderlik ile desteklenmesinin önemi de anlaşılmaktadır. Halkla ilişkiler çalışanlarının kültürel farkındalığını artırmak için eğitime ve liderlik rolünü anlamak başarılı iletişim stratejilerinin geliştirilmesine katkı sağlamaktadır. Eğitim ve liderlik, halkla ilişkiler alanında çalışanların kültürel farkındalığını artırmalarına ve çeşitliliği etkin bir şekilde yönetmelerine yardımcı olmaktadır.

Halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetiminin etik boyutu ise halkla ilişkiler profesyonellerinin karşılaşılabilecekleri çeşitli etik zorluklarla başa çıkarken topluluklar arasında sağlam ve saygın ilişkiler inşa etmeleri açısından büyük önem taşır. Etik değerlere uygun davranışlar sergilemek, profesyonellerin güven ve itibar kazanmalarını ve uzun vadeli başarılı ilişkiler kurmalarını sağlar.

Halkla ilişkiler alanında çalışan profesyoneller, çeşitli kültürel gruplarla etkileşim halinde olabilirler ve bu süreçte etik açıdan hassas durumlarla karşılaşabilirler. Örneğin, farklı kültürlerin değerleri, normları ve iletişim tarzları arasında farklılıklar olabilir ve bu durum yanlış anlamalara ve olumsuz algılara yol açabilir. Bu nedenle halkla ilişkiler profesyonelleri, kültürel farklılıklara duyarlılık göstererek iletişim süreçlerini doğru ve saygın bir şekilde yönetmelidirler.

Ayrıca, halkla ilişkilerde kültürel duyarlılık ve çeşitlilik yönetimi, kamuya hizmet veren kurumlar veya şirketler için toplum nezdinde bir ahlaki sorumluluk taşır. Toplumlardaki kültürel çeşitliliği ve farklılıkları anlamak buna saygı göstermek ve uygun bir şekilde yönetmek, profesyonellerin etik standartlara uygun hareket etmelerini sağlar. Bu durum, kurumların itibarını korumak ve toplumla güvene dayalı ilişkiler inşa etmek için hayati önem taşır.

Abstract

[(TMEDA)Zn(acac)₂], (tetramethylethylenediamine)zincbis(acetylacetonate), has a crystal structure consisting of mixed complexes and contains two types of ligands. In this study, (TMEDA)Zn(acac)₂, vibrational frequency analysis and NMR chemical shifts are studied using DFT method. Studied compound is C₁₆H₃₀N₂O₄Zn chemical formula. The geometry optimization and all calculations is computed with DFT-B3LYP/631G(d,p) basis set. The comparison between computed and experimental data in the crystal structure shows a good agreement.

Keywords: Zinc, NMR, vibration, DFT.

Introduction

The metal complexes involving the pentane-2,4-dionate (or acetylacetonate = acac) ligand has been the subject of numerous studies [1,2,3,4]. Tetramethylethylenediamine (TMEDA) is widely used as a ligand or cosolvent in organic syntheses, particularly when organolithium reagents are involved. It is known from the literature that TMEDA increases product yields.

In this study we analyzed (tetramethylethylenediamine)zincbis(acetylacetonate), [(TMEDA)Zn(acac)₂], compound consisting of mixed complexes and contains two types of ligands [5].

We present DFT calculations on geometry parameters (bond length and bond angle), vibrational frequency analysis and NMR chemical shifts of (TMEDA)Zn(acac)₂ compound.

METHODS

Gaussian 09 software package has been used to perform geometry optimizations and total energy calculations by DFT (B3LYP) method with the 631G(d,p) basis set [6]. Visualization of the structure and the analysis of the outputs have been carried out with Gauss-View software [7]. ¹H and ¹³C NMR chemical shifts are calculated by using GIAO method with CDCl₃ solvent. The calculated harmonic vibrational frequencies were scaled by 0.96 for B3LYP/6-31G(d,p) level [8].

RESULTS AND DISCUSSION

Structural Properties

(TMEDA)Zn(acac)₂, studied compound is C₁₆H₃₀N₂O₄Zn chemical formula. The initial molecular geometry of ligand compound was taken cif [5] and figured by using Gauss-View. We figure out geometry optimizations as seen Fig. 1.

Fig. 1. (a) Molecular structure of complex 2 showing the labeling scheme. Displacement ellipsoids drawn at 50% probability level, H atoms are omitted [5]. b) optimized structure of the C₁₆H₃₀N₂O₄Zn compound is shown.

Optimized energy values of studied compound is found -76667 eV for DFT(B3LYP/631G(d,p) method. The optimized bond length and bond angles were obtained by B3LYP method combining with 6-31G(d,p) basis set for title compound were listed in Table 1. These values were in agreement with the experiment values [5]. As can be seen, most of the bond distances are slightly longer than the experimental distances.

Table 1. Comparative bond lengths and bond angles.

Vibrational Properties

The IR spectra contain some characteristic bands of the stretching vibrations of the C-H, Zn-O, Zn-C, C=O, C=C, C-C, Zn-N and C-N groups. In Table 2, especially experimental C-N and carbonyl group (C=O) values are agree theoretical values.

Table 2. Selected some experimental Ref.[5] and calculated vibrational frequencies (cm⁻¹).

Electronic Properties

The energy gap between HOMO and LUMO is a critical parameter in the determination of molecular electrical transport properties. An electronic system with a larger energy difference between HOMO–LUMO orbital (E_{gap}) should be less reactive than one having a smaller gap [9]. The energy gaps (E_{gap}) is calculated 4.999 eV for DFT method (Fig. 2 (a)).

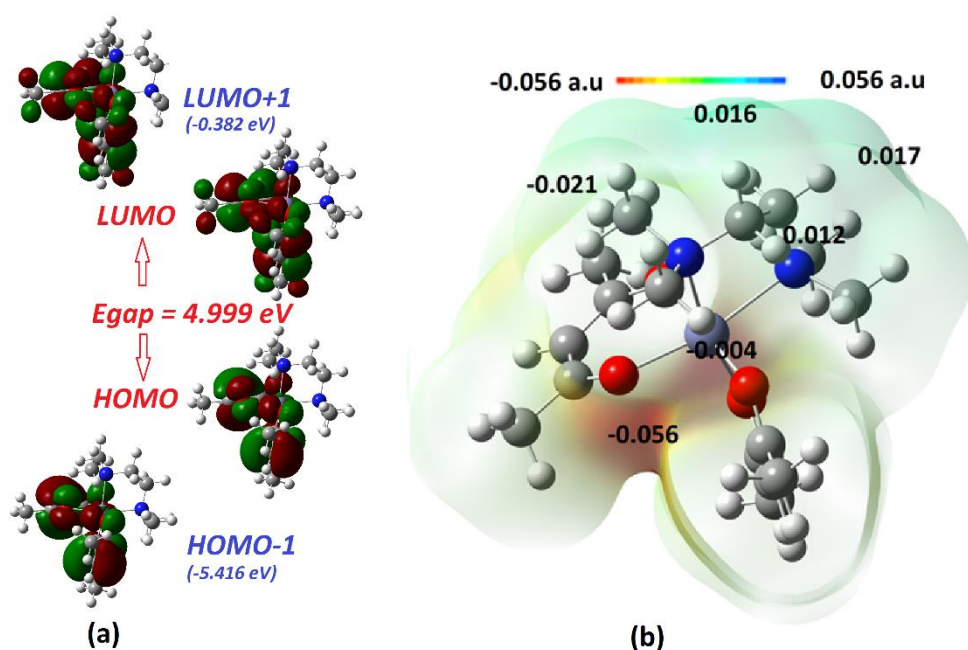

Fig. 2. (a) FMO analysis and (b) total electron density mapped of the compound.

I is the ionization potential, A is the electron affinity, χ is electronegativity. It should be noted that, as the electronic chemical potential (μ) difference increases the global electron density transfer will have a lower polar character. The resistance of a molecule to exchange electron density with the environment is defined as the chemical hardness(η).

Table 3. The measured electronic parameters of molecules.

Parameters (eV)	B3LYP
E_{LUMO}	-0.391
E_{HOMO}	-5.390
$\Delta E = E_{LUMO} - E_{HOMO}$	4.999
$I = -E_{HOMO}$	5.390
$A = -E_{LUMO}$	0.391
$\chi = (I+A)/2$	2.891
$\mu = -\chi$	-2.891
$\eta = (I-A)/2$	2.499
$S = 1/2\eta$	0.200
$w = \mu^2 / 2\eta$	1.672
μ_D (Debye)	2.6359

A large HOMO–LUMO gap (ΔE_{H-L}) indicates a harder molecule and small a ΔE_{H-L} indicates a softer molecule. It is possible to relate the stability of the molecule to η , which indicates that the molecule with least ΔE_{H-L} means it is more reactive and less stable (as seen Table 3).

Molecular electrostatic potential (MEP) surface helps to predict the reactivity of molecules in electrophilic and nucleophilic reactions and hydrogen bonding interactions. It also provides

visual understanding of relative polarity of the molecule. The electrostatic potential increases in the order red < orange < yellow < green < blue [10]. As seen Fig 2. (b), negative region is mainly localized over the oxygen atoms. The maximum positive region is localized on the hydrogen atoms of TMEDA indicating a possible site for nucleophilic attack.

3.4. NMR spectra

Gauge including atomic orbital (GIAO) ^1H and ^{13}C chemical shifts were calculated using the DFT/B3LYP method with 6-31G(d,p) basis set. The chemical shifts were converted into the TMS scale by subtracting the calculated absolute chemical shielding of TMS. The values of ^1H and ^{13}C are 31.76 and 191.81 ppm for B3LYP/6-31G(d,p) respectively [11]. The calculated results were given in Table 4 along with the experimental chemical shift values [5].

^1H chemical shift values are calculated to be 1.16–5.19 ppm at B3LYP/6-31G(d,p) level, while the experimental results are observed to be 1.85–5.15 ppm. The (CH₃)₂N signals were observed to be 2.31 ppm. The methyl with oxygen of the compound (CH₃C(O)) gave a singlet at 1.85 ppm. This was calculated nearly 1.85 ppm at B3LYP level. respectively.

Table 4. ^1H and ^{13}C chemical shift values

^1H	Atom	Exp.	B3LYP	^{13}C	Atom	Exp.	B3LYP
		(Fe)	(scaled 31,76)			(Fe)	(scaled 191,81)
C(O)CHC(O)	H14,H26	5.15	5.21	C(O)CHC(O)	C13, C25	98.4	98.23,98.22
	H9-H11	1.85	1.9,1.43,1.74		C8, C16	28.3	28.3,28.43
CH3C(O)	H17-H19	1.85	1.98,1.71,1.47	CH3C(O)	C20	28.3	28.3
	H21-H23	1.85	1.9,1.74,1.43		C28	28.3	28.43
	H29-H31	1.85	1.98,1.47,1.71	Me2N-CH2	C32, C50	56.5	55.28,47.55
Me2N-CH2	H33,H34	2.49	3.1,1.89	(CH3)2N)	C38, C42	46.6	47.54,43.64
	H36,H37	2.49	3.1,1.89		C46, C50	46.6	43.65,47.55
(CH3)2N)	H39-H41	2.31	3.53,2.76,1.69	C(O)	C12	190.9	183.21
	H43-H45	2.31	1.22,2.22,2.92		C15	190.9	181.31
	H47-H49	2.31	2.92,1.22,2.21		C24	190.9	183.21
	H51-H53	2.31	1.69,3.53,2.76		C27	190.9	181.31

^{13}C NMR spectra of the compound show signal at 190.9 ppm due to the C12, C15, C24 and C27 atoms of the C-O group. This signals were calculated at 183.21, 181.31, 183.21 and 181.31 ppm. As can be seen from Table 4 the theoretical ^1H and ^{13}C chemical shift results for the title compound are generally closer to the experimental data.

4. CONCLUSION

The (TMEDA)Zn(acac)₂ compound investigated. The calculated geometric parameters are good agreement with the experimental data. Detailed vibrational assignments of the title compound are ascribed to their structural vibrations, which show that the theoretical harmonic frequencies are in good agreement with their observed spectral features. The MEP map indicates that hydrogen atoms is positive while the O atom is the negative. These sites give information about the region from where the molecule can have intermolecular interactions and metallic bonding. NMR properties are studied by DFT calculations.

Abstract

(TMEDA)Fe(acac)₂, optimized geometry, electronic and IR properties are studied using quantum mechanical methods. Studied compound is C₁₆H₃₀FeN₂O₄ chemical formula. Optimized energy value (-62638 eV), HOMO (E_{HOMO}= -3.78 eV) and LUMO (E_{LUMO}= -0.25 eV) energies are also performed. The HOMO–LUMO gap (ΔE_{H-L}) is found 3.53 eV. Considering the chemical hardness, small HOMO–LUMO gap means a soft molecule and large ΔE_{H-L} means a hard molecule.

Keywords: Iron, IR, DFT, electronic.

Introduction

Tetramethylethylenediamine (TMEDA) serves as an inexpensive and easily removable ligand in the iron-catalyzed coupling of alkyl Grignard reagents and activated aryl chlorides. The use of TMEDA allows for low ligand and iron catalyst loading as well as an increased reaction concentration and an ambient reaction temperature on a mole scale. There is intense interest in metal complexes containing the pentane-2,4-dionate (or acetylacetonate = acac) ligand. [1,2,3,4]. Pentane-2,4-dionate (acac) and ethylenediamine derivatives are amongst the most widely used chelate ligands in transition metal chemistry. The crystal structures of mixed complexes [(TMEDA)Fe(acac)₂] (tetramethylethylenediamine)ironbis(acetylacetonate) containing both types of ligands has been reported for Fe metal [5]. In this study, the structural properties and vibration values of (TMEDA)Fe(acac)₂ compound, such as bond length and bond angles, were examined by DFT.

METHODS

Gaussian 09 software package has been used to perform geometry optimizations and total energy calculations by DFT (B3LYP) method with the 631G(d,p) basis set [6]. Visualization of the structure and the analysis of the outputs have been carried out with Gauss-View software [7]. The calculated harmonic vibrational frequencies were scaled by 0.96 for B3LYP/6-31G(d,p) level [8].

RESULTS AND DISCUSSION

Structural Properties

Studied compound, (TMEDA)Fe(acac)₂, is C₁₆H₃₀FeN₂O₄ chemical formula. The initial molecular geometry of ligand compound was taken cif [5] and figured by using Gauss-View. We figure out geometry optimizations as seen Fig. 1. Optimized energy values of studied compound is found -62638 eV for DFT(B3LYP/631G(d,p) method.

Fig. 1. (a) Molecular structure of complex 2 showing the labeling scheme. Displacement ellipsoids drawn at 50% probability level, H atoms are omitted [5] and b) optimized structure of the C₁₆H₃₀FeN₂O₄ compound is shown.

The optimized bond length, bond angles and dihedral angles were obtained by same method for title compound were listed in Table 1. These values were in agreement with experimental values [5]. As can be seen, most of the bond distances are slightly longer than the experimental distances. Comparing the experimental and calculated bond lengths for the molecule, the theoretical values bigger than experimental values.

Vibrational Properties

The IR spectra contain some characteristic bands of the stretching vibrations of the C-H, Fe-O, Fe-C, C=O, C=C, C-C, Fe-N and C=N groups. Calculated FT-IR spectra are presented in Fig. 2. For comparison, scaled theoretical and experimental FT-IR wavenumbers are summarized in Table 2 along with detailed vibrational assignments. The calculated IR intensities, the theoretically computed wavenumbers matched well with the experimental ones. In Table 2, especially experimental C-N and carbonyl group (C=O) values are agree theoretical values.

4.1. Electronic Properties

Frontier molecular orbitals (FMO), represented with High Occupation Molecular Orbital (HOMO) and Light Unoccupation Molecular Orbital (LUMO), play an interesting role in describing physical and chemical activities of molecules. HOMO–LUMO analysis helps to elucidate charge transfer occurring in the molecule. Compounds containing small energy gap ($E = E_{\text{HOMO}} - E_{\text{LUMO}}$) present higher chemical reactivity, more polarized and low kinetic stability, and vice versa for compounds possess high energy gap [9,10].

The energy value of the band gap is calculated as $E = E_{\text{HOMO}} - E_{\text{LUMO}} = -3.53 \text{ eV}$, this means that the compound has quite stable feature [11]. As seen Fig. 3, green and red colors distributions signify negative and positive phase in molecular orbital wave function, respectively [12].

Fig. 3. FMO of the compound.

An electronic system with a larger energy difference between HOMO–LUMO orbital (E_{gap}) should be less reactive than one having a smaller gap [10]. Optimized energy value (-62638 eV), HOMO ($E_{\text{H}} = -3,78 \text{ eV}$) and LUMO ($E_{\text{L}} = -0,25 \text{ eV}$) energies are also performed. The HOMO–LUMO gap ($\Delta E_{\text{H-L}}$) is found $3,53 \text{ eV}$ (Fig. 3). Considering the chemical hardness, small HOMO–LUMO gap means a soft molecule and large $\Delta E_{\text{H-L}}$ means a hard molecule.

The ionization potential (I), the electron affinity (A), electronegativity (χ), chemical potential (μ), chemical hardness (η), softnes (s), electrophilicity index (w) and dipol moment (μ_{D}) values is calculated using HOMO and LUMO energies (as seen Table 3). A large HOMO–LUMO gap ($\Delta E_{\text{H-L}}$) indicates a harder molecule and small a $\Delta E_{\text{H-L}}$ indicates a softer molecule.

Table 3. The measured electronic parameters of molecules.

Parameters (eV)	B3LYP	Parameters (eV)	B3LYP
E_{LUMO}, E_{HOMO}	-0.25, -3.78	$\mu = -\chi$	-2.015
$\Delta E = E_{LUMO} - E_{HOMO}$	3.53	$\eta = (I-A)/2$	1.765
$I = -E_{HOMO}$	3.78	$S = 1/2\eta$	0.283
$A = -E_{LUMO}$	0.25	$w = \mu^2/2\eta$	1.150
$\chi = (I+A)/2$	2.015	μ_D (Debye)	2.6359

CONCLUSION

In this study the (TMEDA)Fe(acac)₂ compound characterized theoretically. The calculated geometric parameters are good agreement with the experimental data. Detailed vibrational assignments of the title compound are ascribed to their structural vibrations, A good agreement between experimental and calculated vibrations normal modes has been found.

Özet

Transgenik bitkiler, gen teknolojisi ile bir organizmadan diğer organizmalara istenilen özelliği ifade eden genin aktarılması olarak ifade edilmektedir. Bu yöntemle hastalık ve zararlılara dayanıklı, kaliteli ve verimli bitkiler elde etmek için çalışmalar yapılmaktadır. Bitkiler üzerinde yapılan bu çalışmaları destekleyen, çalışmalara karşı çıkan veya tarafsız kalan farklı görüşler ortaya çıkmıştır. Tartışmaların günümüzde de devam ettiği transgenik bitkiler hızla gelişmeye devam etmektedir. 1996 yılında 1,7 milyon hektar alanla başlayan transgenik bitki tarımı 2017 yılında 190 milyon hektar alana kadar çıkmıştır. Gelecekte daha da artacağı tahmin edilmektedir. Diğer taraftan transgenik bitki ve ürünlerinin avantajları ve risklerinin bütün insanlığı ve çevreyi etkileyeceği düşünüldüğünde risk araştırması yapılarak, kamuoyuna bilimsel araştırmalar sonucu hakkında bilgi verilmesi gereklidir. Bu bildiride transgenik bitkiler geçmişten günümüze değerlendirilerek avantaj ve riskleri hakkında bilgi verilmektedir.

Anahtar Kelimeler: Transgenik bitki, gen teknolojisi, modern ıslah

TRANSGENIC PLANTS

Abstract

Transgenic plants are defined as the transfer of the gene expressing the desired feature from one organism to other organisms through gene technology. With this method, studies are carried out to obtain quality and productive plants that are resistant to diseases and pests. Different opinions have emerged that support, oppose or remain neutral regarding these studies on plants. Transgenic plants, where discussions continue today, continue to develop rapidly. Transgenic plant farming, which started with an area of 1.7 million hectares in 1996, increased to an area of 190 million hectares in 2017. It is estimated that it will increase further in the future. On the other hand, considering that the advantages and risks of transgenic plants and products will affect all humanity and the environment, it is necessary to conduct risk research and inform the public about the results of scientific research. In this paper, transgenic plants are evaluated from past to present and information is given about their advantages and risks.

Keywords: Transgenic plant, gene technology, modern breeding

Giriş

Dünyada gün geçtikçe su kaynakları tükenmekte, tarım alanları azalmaktadır. Nüfusun da artması ile çevre sorunları ve nüfusa yeterli besin sağlama endişesi ortaya çıkmıştır. Nüfusa yeterli besini sağlamak, daha ucuza daha iyi bir yaşam kalitesi sağlamak, gelir düzeyi düşük ülkelere yeterli besini sağlamak ve yabancı otlarla mücadelede kullanılan ilaçların azaltılmasına yönelik çevreye dost yöntemler bulmak amacıyla araştırmacılar birçok çalışma yürütmektedir (Atsan ve Kaya, 2008). Bu çalışmaların çoğunun neticesinde gen teknolojileri kullanılarak transgenik bitkiler geliştirilmiştir (Şen ve Altınkaya, 2014). Transgenik bitkiler, biyoteknolojik yöntemler kullanılarak bitkiye gen aktarılması veya var olan gen bölgesinin çıkarılması sayesinde bitkiye yeni bir özelliğinin kazandırılması veya o özelliğin inhibe edilmesi olarak tanımlanmaktadır. Örneğin, kutuplarda yaşayan bir tür balıktan donmayı engelleyen antifreeze geni alınıp, domates ve çilek gibi bitkilere aktarılarak soğuğa karşı dirençli transgenik bitkiler geliştirilmiştir (Yeşilbağ, 2004). Bitkilere aktarılan gen kendi türünden bir bitkiden alınabildiği gibi bitki ile melezlenemeyen başka bir türden de alınabilmektedir. Ayrıca gen aktarımı için hayvan veya bakteri gibi bitkiler alemi dışındaki organizmalar da kullanılabilir (Hatipoğlu, 2016). Bitkiye aktarılan genin bitkiyle aynı türde olması veya bitkinin yakın akrabasından alınması ile elde edilen bitkiye ‘cisgenik’ denilmektedir (Hatipoğlu, 2016). Cisgenik bitkiye örnek olarak ‘kara leke hastalığına dayanıklı malus floribunda çeşidi elmadan alınan genin farklı bir elma çeşidinde aktarılarak o çeşidinde hastalığa dayanıklı olması’ verilmektedir. Islah yöntemleri kullanılarak 50 yıla kadar süren çalışmanın ‘cisgenik’ yöntem kullanılarak 10 yılda gerçekleştirilebileceği öngörülmektedir. Bitkinin gen bölgesinden Talens ve Crispr gibi genom düzenleme yöntemleri kullanılarak gen çıkartılması ile elde edilen bitkilere ‘subgenik’ bitki adı verilmektedir (Hatipoğlu, 2016). Buğdayın külleme hastalığına karşı geliştirdiği savunma mekanizmasını baskılayan protein kodlayan gen bölgesinin Talens ve Crispr gibi yöntemlerle çıkarılarak hastalığa dayanıklı hale getirilmeye çalışılması Subgenik bitkiye bir örnektir.

Günümüzde yaygınlaşan transgenik bitki üretiminin en iyi örneklerinden birisi altın pirinçtir. Yeterli besin takviyesi alamayan insanlarda yaşanan A vitamini eksikliği görme kaybına sebep olmaktadır. “Altın pirinç”, A vitamini eksikliğinden kaynaklanan sorunlar ile savaşmak için ortaya çıkarılmıştır. Provitamin A (β -karoten) oluşmasını sağlayan enzimleri kodlayan 4 adet genin *Narcissus pseudonarcissus* bitkisi ve *Erwinia uredovora* bakterisinden alınarak pirince aktarılması ile altın pirinç elde edilmektedir (Şen ve Altınkaya, 2014). Transgenik bitkilerin arazide ilaç kullanımını azaltması ve bitkilerde hastalık ve böceklerle karşı

dayanıklı olması gibi avantajları bulunmaktadır. Avantajları olduğu kadar kültür bitkilerinde çeşitliğin azalması, süper otların ortaya çıkması gibi riskleri de bulunmaktadır. Yaşanabilecek risklerden dolayı farklı görüşler ortaya çıkmakta ve bu konuyla ilgili tartışmalar devam etmektedir (Yıldız ve ark., 2005).

2. Transgenik Bitki Tarımının Mevcut durumu

Transgenik bitki alanında yapılan çalışmalar 1980’li yıllardan itibaren hızlanmış, transgenik bitkilerin ilk tarla denemelerine ise 1985 yılında başlanmıştır (Çetiner ve Tuzla, 2005). 1994 yılında “Flavr Savr” adlı tescil edilmiş transgenik domates ile ilk transgenik bitki tarımına başlanılmıştır (Çetiner ve Tuzla, 2005). Ticari anlamda bitkisel üretime ise 1996 yılında başlanmış ve ticarileşmesinden kaynaklı ön plana çıkarak transgenik bitki tarımı yaygınlaşmaya başlamıştır. 1996 yılında 1,7 milyon hektar alana sahip olan transgenik bitki tarımı, 2005 yılında 90 milyon hektarlık bir alana yayılmıştır (Tablo 1). 2017 yılında ise 190 milyon hektara kadar çıkmıştır. Tablo 1’de dünyadaki transgenik bitki ekim alanlarının yıllara göre değişimi verilmiştir.

Tablo 1. Dünyada transgenik bitki ekim alanları (Süllü, 2018)

Yıllar	Ekili Alan (Milyon ha)
1996	1,7
1997	11
1998	27,8
1999	39,9
2000	44,2
2001	52,6
2002	58,7
2003	67,7
2004	81
2005	90
2006	102
2007	114,3
2008	125
2009	134
2010	148
2011	160
2012	170,3
2013	175,2
2014	181,5
2015	179,7
2016	185,1
2017	190

3. Transgenik Bitki Tarımı Yapan Ülkeler

Transgenik bitkilerin 2016 yılında dünyada toplam ekim alanı 185,1 milyon hektardır. 2016 yılında dünyada en fazla transgenik bitki ekim alanına sahip olan ülke 72,9 milyon hektar ile ABD olmuştur (Tablo 2). İlk transgenik bitki tarımını başlatan ülke olan ABD, ticari katma değere önem vererek zamanla çalışmalarını hızlandırmıştır. Transgenik bitki tarımında ABD'yi Brezilya, Arjantin gibi ülkeler takip etmektedir. Tablo 2'de 2016 yılında dünyada transgenik bitki tarımı yapan ülkeler, ekim alanları ve yetiştirdiği bitkiler verilmiştir.

Tablo 2. 2016 yılında dünyada transgenik bitki tarımı yapan ülkeler, ekim alanları ve yetiştirdiği bitkiler (Süllü, 2018)

Ülke	Ekim Alanı (milyon hektar)	Yetiştirildiği Transgenik Bitki
ABD	72,9	Soya, Mısır, Pamuk, Kanola, Papaya, Kabak, Yonca, Şeker Pancarı, Patates
Brezilya	49,1	Soya, Pamuk, Mısır
Arjantin	23,8	Soya, Pamuk, Mısır
Kanada	11,6	Mısır, Soya, Şeker Pancarı, Yonca, Kanola
Hindistan	10,8	Pamuk
Paraguay	3,6	Soya, Pamuk, Mısır
Pakistan	2,9	Pamuk
Çin	2,8	Pamuk, Kavak, Papaya
Güney Afrika	2,7	Soya, Pamuk, Mısır

4. Dünyada Tarımı Yapılan Transgenik Bitkiler

Dünyada halen beş bitkinin transgenik çeşidinin tarımı yapılmaktadır. Bunlardan ilki transgenik çeşitlere ayrılan alanın %50'sini kapsayarak en fazla ekim alanına sahip olan soya fasulyesidir. Daha sonra %33'lük alana sahip olan mısır gelmektedir. Diğer önemli alana sahip olan bitkiler pamuk, kanola ve şeker pancarıdır (Süllü, 2018).

5. Gen Aktarım Yöntemleri

Transgenik bitkilere gen aktarma yöntemleri doğrudan gen aktarım sistemleri ve dolaylı gen aktarım sistemleri olmak üzere ikiye ayrılmaktadır.

5.1. Doğrudan gen aktarım sistemleri

Biyolistik: Balistik ve biyolojik sözcüklerinin kısaltması ile adlandırılan bu yöntem tabancaya benzer bir cihazın kullanılması ile gerçekleştirilmektedir. DNA ile kaplı mikro taşıyıcılar ile hücrelerin aktarımında kullanılan yöntemdir (Korkut ve Soysal, 2013).

Elektroporasyon ve Kimyasal Maddeler Kullanılarak Gen Aktarımı: Yüksek elektrik voltajı ve kimyasal maddeler ile (polietilen glikol (PEG)) hücre zarından gen aktarımını kolaylaştıran bir

yöntemdir. Bu yöntem kullanılarak DNA hücre içerisine daha kolay girebilmektedir (Özgül Arvas, 2019).

Mikroenjeksiyon: Enjektör veya hususi ince kılcal pipetler kullanılarak DNA özel mikroskoplar ile hücrelere aktarılmaktadır. Bu yöntem hayvan hücrelerine gen aktarımında daha fazla kullanılmaktadır. Mikroenjeksiyon yöntemini kullanan kişinin deneyimli olması ve yavaş yapılması bu yöntemin dezavantajlarıdır (Korkut ve Soysal, 2013).

Sonikasyon: Sonik ses dalgaları kullanılarak hücre zarında boşluk açılıp DNA 'nın hücre içerisine girmesini sağlayan bir yöntemdir (Korkut ve Soysal, 2013).

5.2. Dolaylı gen aktarım yöntemleri

Toprakta yaşayan, sporsuz, gram negatif bakterilere *agrobacterium* denilmektedir. *Agrobacterium tumefaciens* ve *Agrobacterium rhizogenes* gen aktarım çalışmalarında kullanılan iki suştur. *Agrobacterium* yöntemleri ile gen aktarım çalışması yapılması nispeten kolaydır. *Agrobacterium tumefaciens* gen aktarım yöntemlerinde en çok kullanılan bakterilerdir. Bitkinin yaralanmış dokusundan organizmaya girerek tümör oluşmasına neden olmaktadır. Araştırmacılar gen aktarım çalışmalarında *agrobacterium tumefaciens* bakterilerinin virülens etki göstererek bitkinin organizmasına girip DNA ile birleşme yeteneğini kullanmaktadırlar (Korkut ve Soysal, 2013). *Agrobacterium rhizogones* ise bitkilerin köklerindeki fenolik bileşiklerin uyarılarak bakterinin DNA'sının bitkiye aktarılmasını yönlendirmektedir. Bitkinin köklerinde saçaklı çok sayıda oluşan bu köklerin normal köklerden çok daha hızlı geliştikleri gözlenmiştir. Bu köklerden sekonder metabolit üretimi ile ilgili çalışmalar yapılmaktadır (Korkut ve Soysal, 2013).

6. Transgenik Bitki Üretiminin Avantajları ve Riskleri

6.1. Transgenik bitkilerin tarımsal avantajları

Yabancı ot ve zararlılara dayanıklı bitkilerin yetiştirilmesi ile verimde yaşanan kayıpların önlenmesi ve verimde artış yaşanması sağlanırken çiftçilerin üretim maliyetlerinin azalması beklenmektedir (Süllü, 2018). Elde edilen ürünlerin raf ömrünün uzatılması ile depolama ortamından kaynaklı yaşanan sorunlar önlenmektedir (Atsan ve Kaya, 2008). Bitkilerin besin kalitesi ve bileşenlerinin geliştirilmesi gibi avantajları bulunmaktadır.

6.2. Transgenik bitkilerin sağlık açısından yararları

Transgenik ürünler kullanılarak daha güvenli ve maliyeti az ilaç ve aşılardan üretilmesi beklenmektedir. Hepatit, kuduz ve veba gibi hastalıklara mısır, kolza, patates gibi bitkiler kullanılarak aşı geliştirilmesi için deneyler başlamıştır. İnsülin alımı için iğne yapılması yerine transgenik ürünlerden gerekli insülinin alınması için çalışmalar yapılmaktadır (Haspolat, 2012).

6.3. Transgenik bitkilerin çevre açısından avantajları

Yabancı ot ve zararlılara karşı dayanıklı çeşit geliştirilmesi ile daha az pestisit kullanılması sonucu çevrede oluşan kirliliğin azalması beklenmektedir (Süllü, 2018). Herbisite dayanıklı çeşitlerin yetiştirilmesi toprak işlemez tarımı mümkün kılarak traktör kullanımının azalması ile yakıt tasarrufu sağlamaktadır. Traktör kullanımının azalması ile yakıtın yanması sonucu oluşan gazların salınımının azalması ile atmosfere karışan gaz miktarı da azalarak çevreye fayda sağlamaktadır (Hatipoğlu, 2016).

6.4. Transgenik bitki yetiştirilmesinin riskleri

6.4.1. Sağlık açısından riskler

Transgenik bitkiyi tüketen kişilerde alerjik ve toksik reaksiyonlara sebep olması: Transgenik bitki yetiştirilmesinin birçok avantajı bulunduğu gibi bitkinin gen diziliminin değiştirilmesinden dolayı farklı risklerde ortaya çıkmaktadır. Ortaya çıkabilecek risklerden birincisi alerjik etki bırakmasıdır. 1996 yılında yapılan bir çalışmada Brezilya kestanesinde "2S" geni izole edilerek soya fasulyesine aktararak transgenik ürün elde edilmiştir. Elde edilen ürün kullanan kişilerde alerjik reaksiyonlara sebep olduğu için marketlerden toplanmıştır (Özgen ve ark., 2015). Ayrıca transgenik bitkiler yeni genlerin aktarılmasından kaynaklı sekonder metabolitleri içerdiği için toksik etkiye sahiptir (Süllü, 2018).

Besin kalitesinin bozulması ile ortaya çıkan riskler: Bitkilere aktarılan yeni genler nedeniyle bitkinin içerdiği besin ve kalite öğelerinde azalma olabileceği belirlenmiştir. Örneğin, kalp hastalıklarına ve kansere karşı önemli bir koruyucu madde olan "phytoestrogen" bileşiklerinin, orijinal bitkiye oranla transgenik bitkilerde daha az olduğu bilinmektedir (Özgen ve ark., 2015).

6.4.2. Ekolojik riskler

Toprak ve su kirliliği: Transgenik bitkiler sonucu oluşan toksik maddelerin suya ve toprağa geçme riski bulunmaktadır. Toprağa ve suya geçen toksik maddelerin diğer canlıların yaşamını da etkilemesi söz konusudur (Özgen ve ark., 2015).

Kültür bitkilerinde çeşitliliğin azalması: Transgenik bitki çeşitlerinin yaygınlaşması ile kültür bitki çeşitliliğinin azalması beklenmektedir.

Süper yabancı otların ortaya çıkışı: Transgenik bitkilerin çevrede floranın bozulmasına neden olacağı düşünülmektedir. Herbisite dayanıklı transgenik bitkilerin genlerinin yabancı akraba olan otlara geçmesi ile oluşan süper otlar tarımda mücadeleyi zorlaştırmaktadır (Süllü, 2018).

6.4.3.Sosyo-ekonomik riskler

Tohumların pahalı olması ve her yıl yenilenme zorunluluğu: Transgenik bitkilerin tohumları orijinal bitkilere göre %25 ile %100 arası oranla daha pahalı olmaktadır. Ayrıca transgenik bitkilerin içerdiği 'terminatör gen' nedeniyle tohumların her yıl yenilenme zorunluluğu olduğundan üreticilerin bu konuda sıkıntı yaşayabileceği belirtilmiştir (Özgen ve ark., 2015).

Tek tip çeşit ve ilaç kullanımı: Tarımsal üretimde transgenik bitkilerin öne çıkması, geleneksel tarımda kullanılan yerel çeşitlerin kullanımında azalmaya sebep olurken, dışa bağımlılık problemi de ortaya çıkacaktır (Süllü, 2018).

Çeşit karışımı: Üreticilerin istedikleri ürün çeşidi elde etmesi zorlaşacaktır. Bunun nedeni aynı alanda yetiştirilen transgenik ve klasik çeşitlerin birbirine karışma riskinden kaynaklanmaktadır (Demir ve ark., 2006).

7.Transgenik Bitkilerin Türkiye'deki Durumu

Transgenik bitki denemeleri 1999 yılında Niğde'de patates üretimi ile başlamıştır. Daha sonra Devlet Planlama Teşkilatı (DPT) tarafından 5 yıllık kalkınma planı amacıyla "Biyoteknoloji ve Biyogüvenlik Komisyonu" adı altında bir komisyon oluşturulmuştur (Güngör ve Demiryürek, 2021). Transgenik ürünler ile ilgili yasaları Tarım ve Orman Bakanlığı yürütmektedir. Türkiye, 2000 yılında Cartagena Protokolünü imzalamış ve 2003 yılında yürürlüğe girmiştir. Cartagena protokolünün amacı biyolojik çeşitliliği zengin olan ülkeleri biyoteknolojik çalışmalardan kaynaklanan zararlara karşı korumaktır (Özgen ve ark., 2015).

Transgenik ürünlerin ithalatı, ihracatı, kontrol ve denetimi ile ilgili usul ve esasları belirlemek amacıyla 2009 yılında "Gıda ve Yem Amaçlı Genetik Yapısı Değiştirilmiş Organizmalar ve Ürünlerinin İthalatı, İşlenmesi, İhracatı, Kontrol ve Denetimine Dair Yönetmelik" yürürlüğe girmiştir. Daha sonra 2010 yılında Biyogüvenlik Kanunu ile genetiği değiştirilmiş hayvan ve bitkilerin üretimi yasaklanmıştır (Kaynar, 2009). Transgenik bitki üretimi çevre sorunları ve insan sağlığı risklerinden dolayı Türkiye'de yasaklanmıştır (Güngör ve Demiryürek, 2021). Fakat Türkiye, transgenik bitki üreten önemli ülkelere soya ve mısır gibi bitkileri ithal ettiği için ülkeye giren bu bitkilerin transgenik bitki olup olmadığı halen tartışılmaktadır (Güngör ve Demiryürek, 2021).

8.Transgenik Bitki Hakkındaki Görüşler ve Gelecekteki Durumu

Transgenik bitkilerin avantajları olduğu kadar risklerinin de bulunması nedeniyle bu konu hakkında farklı görüşler bulunmaktadır. Bu görüşleri üç gruba ayıracak olursak:

Birinci grup, uluslararası şirketlerin bulunduğu ve bu şirketleri destekleyen bilim adamlarının olduğu gruptur. Bu grup “Transgenik bitki üretimi ile ortaya çıkabilecek risklerin klasik ıslah yöntemleriyle üretilen bitkilerden farklı değildir” görüşünü savunmaktadır (Hatipoğlu, 2016). Çevre örgütlerinin oluşturduğu ikinci grup, “Transgenik bitki üretiminin daha ileriye taşınması ve yaygın yapılması sonucunda çevre sorunları ortaya çıkacak ve insan sağlığı olumsuz etkilenecek” görüşünü savunmaktadır (Hatipoğlu, 2016).

Bağımsız bilim insanlarının yer aldığı üçüncü grup ise iki farklı görüşün arasında yer alarak “Transgenik bitki yetiştirilecek alan riskler açısından değerlendirilmeli ve tüketicinin bu konuda söz hakkının olması için etiketleme yapılmalıdır” görüşünü savunmaktadır (Hatipoğlu, 2016).

Nüfusun artması ve tarım alanlarının azalması büyük tehlike arz etmektedir. Bu yüzden alternatif yöntemlerin de değerlendirilmesi gereklidir. Alternatif yöntemlerden transgenik bitkilerin de gelecekte daha fazla üstünde durulması beklenmektedir.

Gelecekte hızlı büyüyen, hastalık ve zararlılara karşı dayanıklı, kaliteli ve verimli bitkilerin olması beklenmektedir (Özgen ve ark., 2015). Gelecekte genetik özellikleri belli bazı hedef bitkiler aşağıda verilmiştir.

- Şekerpancarı, buğday ve yonca gibi bitkilerin pestisitlere karşı dayanıklı olması,
- Domates, soya fasulyesi, kolza gibi bitkilerin zararlılara karşı dayanıklı olması,
- Şeker pancarının düşük kalorili şeker oranına sahip olması,
- Kolzada beta karoten oranının artırılması,
- Kahvede kafein oranının azaltılması,
- Muzun ishal aşısı içermesi ve mısırın kuduz aşısı içermesi,
- Bitkiden çıkarılan gen bölgesine, gen aktarımı yapılarak yeni özellikler eklenmesi,
- Birden fazla dayanıklılığa sahip özellikte bitkilerin olması (Tiryaki ve Zeki 2005).

9.Sonuç ve Öneriler

Nüfus artışı ve tarım alanlarının azalması ile insanların gıda ihtiyacının karşılanmasına yönelik yeni yöntemler araştırılmaktadır. Bu kapsamda geçmişten günümüze kadar tarımsal üretimde bitki, hayvan ve mikroorganizmaların kullanıldığı biyoteknolojik yöntemler ön plana çıkmaktadır. Biyoteknolojik yöntemler kullanılarak transgenik bitki üretimi yapılmaya başlanmıştır. Transgenik bitki üretiminin amacı nüfusa yeterli besini sağlayarak, daha verimli daha kaliteli ve maliyeti az yöntemler kullanılarak çevreyi ve insan sağlığını koruyan ürünler elde etmektir. Transgenik bitki tarımı 1996 yılında 1,7 milyon hektar alan iken 2017 yılında 190 milyon hektara kadar yükselmiştir. Bunun nedeni transgenik bitki tarımının ticarileşerek

daha fazla deęer görmeye başlamasından kaynaklıdır. Zamanla önem kazanan gen teknolojisini reddetmek yerine olumsuzluklarını yok edecek çalışmalar yapılmasına özen gösterilmelidir. Transgenik bitki yetiştirilmesinin insan sağlığına ve çevreye karşı avantajları olduğu kadar riskleri de bulunmaktadır. Yaşanabilecek risklerden dolayı birçok farklı görüş ortaya atılmıştır ve bu konu hakkında tartışmalar sürmektedir. Tartışmaların ön plana çıkan gerekçeleri gelecekte bilinmeyen nedenlerden insan sağlığına zarar vermesi, transgenik bitkinin alerjisi olan insanlarda keşfedilemeyen yeni sorunlar çıkarması, çevreye zarar vermesi, kültür bitki çeşitlerinde azalma yaşanması ve farklı sebeplerle transgenik bitki tüketmek istemeyen insanların söz hakkının elinden alınması şeklindedir. Sonuç olarak gen teknolojisi hızla gelişmektedir. Nüfusun çoğalması ile bu teknolojinin geliştirilmesi ve uygulanması yadsınamaz bir gerçektir. Bu nedenle ülkemizin de gen teknolojisindeki uygulamaların hızına yetişmesi gereklidir. Tamamen yasaklamak yerine ülkemizin kendi koşulları ve transgenik bitkilerin riskleri de dikkate alarak çalışmalar yapılmalıdır. Transgenik bitki üretimi, ithalatı, ihracatı, kontrol ve denetiminde mevcut yasaların uygulanmasındaki aksaklıklar düzeltilmelidir. Transgenik bitki üretiminde etiketleme yapılarak insanların da bu konuda söz sahibi olması sağlanmalıdır.

Özet

Çalışmanın amacı, elit seviyede boks branşı ile ilgilenen aktif sporcuların sporda mükemmel performanslarının farklı değişkenler arasındaki ilişkiyi ortaya çıkarmaktır. Çalışmaya 75' i kadın ve 169' u erkek olmak üzere toplam 244 kişi katılmıştır. Araştırmada veri toplama aracı olarak Kişisel Bilgi Formu ve Sporda Mükemmel Performans Ölçeği" kullanılmıştır. Veriler analizinde tanımlayıcı istatistik, güvenilirlik analizi, ikili değişkenler için bağımsız örneklem t testi, ikiden fazla değişkenler için Anova testi yapılmıştır. Araştırma sonucunda cinsiyet, milli sporcu olma, eğitim düzeyi, yaş, spor yaşı, kaç yıl boks branşını yapma durumuna göre ölçek ortalama puanı açısından istatistiksel olarak anlamlı bir farklılık görülmemektedir.

Anahtar Kelimeler: Boks, spor, mükemmel performans

**EXAMINATION OF ELITE BOXERS' EXCELLENT PERFORMANCE IN SPORT
IN TERMS OF DIFFERENT VARIABLES**

Abstract

The aim of the study is to reveal the relationship between different variables and excellent performance in sport of active athletes who are interested in boxing at elite level. A total of 385 people, 75 women and 169 men, participated in the study. Personal Information Form and Excellent Performance in Sport Scale" were used as data collection tools in the study. Descriptive statistics, reliability analysis, independent sample t test for binary variables and Anova test for more than two variables were used in data analysis. As a result of the research, there is no statistically significant difference in terms of scale mean score according to gender, being a national athlete, education level, age, sport age, and number of years of boxing.

Keywords: Boxing, sport, excellent performance

Giriş

Sağlıklı bir toplum olmakta, evren ile bütünleşmekte, ilerlemekte, toplumsal adaletli, aydınlık çevreli bir toplum olmakta sporun yeri ve önemi yadsınamaz (Yazıcı, 2014). İnsanların fiziksel ve ruhsal gelişimine katkı sağlayan spor sosyal açıdan ele alındığında organizasyonlar dâhilinde kültürlerin kaynaşmasına, sorumluluk alabilen, takım çalışmasına yatkın ve etik değerlere sahip sağlıklı bireylerin yetiştirilmesine katkı sağladığı da görülmektedir (Tiryaki & Yetim, 2017). Sporda rekabet ortamının olması ve kazanmanın her zaman ön planda yer alması sporcuların fiziksel ve psikolojik güçlerinin de geliştirilmesi gerekmektedir (Yazıcı vd., 2018). Spor ve fiziksel aktivite bağlamına uygulanan insan davranışı çalışması olarak spor psikolojisi, (Turkay & Demir, 2021) sporun içerisinde yer alan bireylerin psikolojik özelliklerinin değerlendirilerek gerek takım sporlarında gerekse bireysel sporlarda performanslarının en tepeye nasıl çıkarılabileceği ile ilgilenir (Azboy vd., 2012). Spor psikolojisinin yönelimlerinden biri olan bilişsel-davranışçı yaklaşımı; sporcunun bilişsel ve davranışsal yönüne vurgu yaparak bir sporcunun ne düşündüğüne; kendisini ne kadar güvende, rahat veyahut stresli hissettiğine ve bunların performansını nasıl etkilediğine odaklanır (Biddle & Mutrie, 2006).

Alan yazında performans ile ilgili birçok tanıma rastlanmaktadır (Savaş, 2005). Performansa farklı bir açıdan bakacak olursak çalışan kişi verilen vazifeyi ne oranda yaptığı ve yapılış şekliyle hedeflere ulaşma noktasında ortaya çıkan orandır (Doğan, 2004). Bu tanımlamadan hareketle, değerlendirme için performansın bileşenlerini, belirleyen ve etkileyen tüm faktörleri göz önünde bulundurmaya gereğini de beraberinde getirmektedir.

Sportif performansın karmaşık yapısının sebebi, sonucu etkileyen faktörlerin sayısının çokluğu ve çeşitliliğidir. Bu faktörler, performansı olumlu ve olumsuz etkileyebilirler ve oluşum kaynaklarına göre içsel ve dışsal faktörler olarak ikiye ayrılırlar. İçsel faktörler; genel anlamda insanda mevcut olan, kısmen kalıtsal gelen, zaman içinde küçük değişikliklerle farklılaşabilen ve dışarıdan üzerine etki imkânı çok sınırlı olan veya hiç etki yapılamayan etkenlerdir. Yaş, cinsiyet, anatomik yapı, genetik, zekâ, lokomotor sistemin durumu, psikolojik denge, otonom sinir sistemi, salgı bezlerinin fonksiyonları, metabolizma, enerji kullanım mekanizmaları, organ sistemlerinin durumu, allerji, nöromüsküler ileti hızı, kardiyovasküler yapı özellikle içsel faktörlerin en başlıcalarıdır. Bu listeyi uzatmak ve detaylandırmak çok mümkündür.

İçsel faktörleri objektifleştirmek oldukça zor olduğundan performans üzerine etkilerini hesaplayabilmek ve yapılabilecek değişiklikleri tümüyle öngörebilmek neredeyse imkansızdır.

Dışsal faktörler; ise adından da anlaşılacağı gibi insanın vücudundan ve yapısından kaynaklanmayan dışarıdan gelen ve bu nedenle de dolaylı yolla sportif performansı fiziksel veya psişik bileşen üzerinden etkileyen faktörlerdir. Dışsal faktörler üzerine olan etkimiz, içsel olanlara göre çok daha fazladır. Birçoğunu uygun şartlar ve müdahaleler ile değiştirmek ve geliştirmek mümkündür (Bayraktar & Kurtoğlu, 2004).

Fiziksel aktivitenin dayanıklılığı artırma da sporcunun performansı açısından çok önemlidir. Bunun yanında zihinsel olarak da eğitilmeli ve dayanıklılık performansına katkı sağlamalıdır. Özellikle sporcular spor performanslarını fizyolojik, biyomekanik ve psikolojik verimliliği artırılması yönünde yapılacak aktivitelerin sıralanması tanımlanmış olması gerekmektedir. Optimum ve üstün bir sonuca ulaşmak için performans her ikisinin de gelişimine bağlıdır. Sporcunun psikolojik ve fizyolojik yetenekleri ve amaca göre belli bir seviyeye yükseltilmesi gerekmektedir (Konter, 2003).

Yarayan ve İlhan'a (2018) günümüz sporunda kazanmakla kaybetmek arasındaki çizgiyi inceleyerek performans yoğunluğunu artırarak sporcular üzerinde büyük bir baskı oluşturduğunu dile getirmişlerdir. Hazırlıksız yakalanan sporcu ve antrenörler ise birçok baskıya maruz kalıp bu durumla başa çıkmak için arayış içine girmişlerdir. Bu nedenle kişilerin psikolojik farkındalıkları arttıkça son yıllarda yapılan psikolojik çalışmalara verilen önemde artmıştır. Bu hem bireysel hem de takım sporları için geçerlidir. Sporcuların hazırlık süreçlerinde zihinsel eğitim kavramlarının verilmesi ve öğretilmesi, zihinsel dayanıklılığın bireylerin içsel ve dışsal, zihinsel ve fiziksel davranışlar ve deneyimler edinmektedir (Unestahl, 1982).

Bireysel dövüş sporlarından biri olan boks, yüksek düzeyde fiziksel ve zihinsel yetenek gerektiren, mevcut yapısı ve uygulaması gereği performansı, vücut temasının ve dövüşün en çok yaşandığı yer yoğun bir şekilde yapılmaktadır (Quinna, 1994). Boks sporu savunma ve hücum yapma, tempoyu artırma gibi maç sırasında temponun düşürülmesi gerekli stratejiler içermektedir. Bu nedenle zihinsel antrenman uygulamaları beden eğitiminin yanı sıra spor da yapılması gereken maçlara hazırlanmalıdırlar (Luthans, 2002).

Boks sporu bireyin kendisini savunma ve atak gibi yeteneklerini ön planda olduğu, galip gelebilmek için vurulan yumruğun alınan net puandan daha fazlası olmasını gerektiren, teknik ve taktik özelliklerin müsabaka sonucunu etkilediği olimpik bir spor branşıdır. Boks sporu karakteristik özelliklerinin yanı sıra temasa dayalı, güç, hız, çeviklik ve spora özgü becerilerin

bir kombinasyonunu gerektirdiği bir spor dalı olarak görülmektedir (Ağgön vd., 2020). Her branşta olduğu gibi öncelikli olarak yapılan branşa özgü yetenek ön plana çıkmakla birlikte bu yeteneğin kuvvet, zekâ ve beceri ile bütünleştirilmesi boksta elde edilecek yüksek performansın öncelikli etkenidir. Bununla birlikte, yaratıcılık, kurallarına uygun beslenme, bilimsel çalışma, anında karar verme, inanç, kötü alışkanlıklardan uzak durma, kurallara uyma, yenme hırsı, mücadele, dayanıklılık, kuvvette devamlılık, hızlilik, kendine güven, düzenli yaşam, ruhsal üstünlük, deneyim kazanma, esneklik, belirli bir hedefe yönelme gibi özellikler boksta başarıyı pekiştirecek önemli faktörler olarak karşımıza çıkmaktadır (Zorba vd., 1999).

Herkes için spor anlayışının temelinde de yatan spor yapan bireylerin mükemmelliğe ulaşma çabası içerisinde ulaşılabilen hedefin kendilerinin en iyi yapabildiğine ulaşmasıdır. Bu bağlamda mükemmeliyetçilik, kişinin davranışını aşırı derecede değerlendirilmesine yönelik eğilimlerinin yanı sıra kusursuz bir performans sergilemek için yüksek standartlar belirlemek ve çabalamak ile karakterize edilen kişilik özelliği olarak görülürken (Flett & Hewitt, 2002), Burns ise mükemmeliyetçiliği; kişinin kendisine koyduğu standartların ulaşılabilir olanın ve mantığın ötesinde olması, zorla ve aralıksız olarak imkânsız hedefler için çabalaması ve kişinin kendi değerlerini belirlerken bunu yalnızca verimli ve başarılı olma üzerinden yapması olarak tanımlamaktadır (Burns, 1980). Mükemmeliyetçilik sosyal psikoloji ve klinik dallarında sıklıkla yapılan bir başlık olarak araştırmacıların 1970'den beri ilgisini çekmiştir. Mükemmeliyetçilik geleneksel olarak, normalin dışında standartlar koymak ve buna ulaşmak için aşırı derece de çaba göstermektir (Slade vd.,1998).

Sporadaki mükemmeliyetçilik ise 1990 yılından beri çalışılmaya başlanılmıştır. Çoğu spor psikoloğu mükemmeliyetçiliğin büyük yarışlarda olumlu bir rol oynadığını kabul etmiştir. Hardy ve ark kendi alanlarında en iyi olan sporcuların mükemmeliyetçi olduğunu ve bu özelliklerin kendilerini geliştirme noktasında olumlu yönde olduğunu ve bu özelliklerinin performanslarını artırdığını söylemişlerdir (Hardy, 1996).

Yöntem

Bu araştırma genel tarama modeli kullanılarak tasarlanmış ve planlanmıştır. Tarama modelleri geçmişte ya da halen var olan bir durumu var olduğu şekli ile betimlemeyi amaç edinen araştırmalar için uygun bir modeldir. Betimsel tarama modelleri kendi içinde iki bölüme ayrılmaktadır. Bu bölümler; genel tarama ve örnek olay taramalarıdır. İlişkisel tarama modeli genel tarama yöntemi içine giren bir yöntemdir.

Genel tarama modelleri; çok sayıda elemandan oluşan bir evrende, evren hakkındaki genel yargıya varmak amacı ile evrenin tümü ya da ondan alınacak bir grup örnek ya da örneklem üzerinde yapılan tarama düzenlemeleridir (Karasar, 2006).

Araştırma 17.01.2022 tarihinde Ardahan Üniversitesi E-67796128-000-2200017488 sayılı, Etik Kurulu Kararında gerekli izinler alınarak yapılmıştır.

Evren/Örneklem

Araştırmanın örneklem seçiminde gelişigüzel örnekleme yöntemi kullanılmıştır. Araştırmacının saptanan örneklem büyüklüğüne göre herhangi bir şekilde evrenin bir parçasını seçmesidir. Herhangi bir okula gidip saptanacak sayıda (100 öğrenci gibi) rastlanan öğrenciyi olasılıklı olmadan örnekleme alma gelişigüzel örneklemedir (Dawson & Trapp, 2001).

Çalışmanın evrenini 2022-2023 yılında boks branşında yarışlara katılan sporcular oluşturmaktadır. Araştırmanın örneklemi ise; gelişigüzel 75 kadın, 169 erkek olmak üzere toplam 244 sporcu oluşturmaktadır. Çalışmaya gönüllü katılan her bir sporcuya demografik bilgi toplama formu verilerek, sporcular çalışma içeriği hakkında bilgilendirilmiştir.

Veri Toplama Araçları

Bu araştırmada kişisel bilgi formu ve “Sporda Mükemmel Performans Ölçeği (PPS-S)” uygulanmıştır. Araştırma kullanılan kişisel bilgi formu ve ölçeklere ilişkin bilgiler aşağıda açıklanmıştır.

Kişisel bilgi formu

Kişisel bilgi formu 6 maddeden oluşmaktadır ve katılımcıların cinsiyet, yaş, eğitim durumu, spor yaşı, milli sporcu ve kaç yıldır boks branşı ile uğraşıyorsunuz değişkenleri gibi bilgileri toplamak amacıyla hazırlanmıştır.

Sporda Mükemmel Performans Ölçeği (PPS-S)

Çalışmada Hewitt ve Flett'in (1991) mükemmeliyetçiliğin boyutları ile ilgili ortaya konulan modelden esinlenerek Hill, Appleton ve Mallinson (2016) tarafından geliştirilen bir ölçektir. Çocuk ve yetişkin sporcular için geçerlik ve güvenilirliğinin incelenmesi ise Esentaş vd., 2020 yılında yapılmıştır. Ölçek kendine yönelik performans mükemmeliyetçiliği (SOPP), sosyal olarak belirlenmiş performans mükemmeliyetçiliği (SPPP) ve diğerlerine yönelik performans mükemmeliyetçiliği (OOPP) olmak üzere 3 alt boyuttan oluşmaktadır. Ölçeğin

derecelendirilmesinde (1) kesinlikle katılmıyorum (2) katılmıyorum, (3) kısmen katılmıyorum, (4) kararsızım, (5) kısmen katılıyorum, (6) katılıyorum, (7) kesinlikle katılıyorum olmak üzere 7’li Likert tipi bir derecelendirme sistemi kullanılmıştır.

Verilerin Analizi

Araştırmada elde edilen verilerin analizi SPSS 21 paket programında yapılmıştır. Veriler analiz edilirken tanımlayıcı istatistik, güvenilirlik analizi, ikili değişkenler için bağımsız örneklem t testi, ikiden fazla değişkenler için Anova testi yapılmıştır. Tüm istatistiksel işlemler için güven aralığı 0.05 kabul edilmiştir.

Bulgular

Tablo 1. Örneklem grubuna ilişkin demografik dağılımı

Değişkenler	n	min.	mak.	x	s.s.
Lise	244	1,00	4,00	2,59	,93
Yaş	244	15,00	18,00	16,47	1,02

Sonuç ve Tartışma

Araştırmamızda elit boksörlerin sporda mükemmel performanslarının farklı değişkenler açısından incelenmesi amacıyla yapılmıştır.

Araştırmada katılımcıların sporda mükemmel performans düzeyleri ile cinsiyetleri arasındaki farklılık değerlendirildiğinde kadın ve erkek boksörler arasında istatistiksel olarak anlamlı farklılık olmadığı belirlenmiştir. Alan yazın incelendiğinde araştırmamızla aynı doğrultuda olmayan çalışmalara rastlanılmıştır. Abdioğlu vd., (2022) ve erkek tenisçilerin performans mükemmeliyetçiliğinin, kız tenisçilerin performans mükemmeliyetçiliğinden daha yüksek olduğu belirlenmiştir. Yine Gönülateş ve İmamoğlu (2019) araştırmasında erkeklerin kadınlardan daha yüksek mükemmeliyetçilik puanlarına sahip olduğu bildirilmiştir. Bu bulgular araştırmamızla paralellik göstermemektedir. Bu durum profesyonel sporcular için genellikle kendilerini mükemmeliyetçi olarak tanımlamalarından (Hill vd., 2016) kaynaklandığı düşünülmektedir. Yine Kangotan (2020) de yapmış olduğu çalışmada sporcuların cinsiyetlerine göre spora ait mükemmeliyetçilikleri arasında istatistiksel olarak anlamlı farklılık olmadığını ortaya çıkarmıştır. Bu bulgu araştırmamız ile aynı doğrultudadır.

Araştırmada sporda mükemmel performans düzeyleri ile spor yaşı arasındaki farklılık değerlendirildiğinde ölçek ortalama puanı açısından istatistiksel olarak anlamlı farklılık olmadığı belirlenmiştir. Özen (2019) yılında yapmış olduğu araştırmada Taekwondocuların spor yaşlarına göre anlamlı fark bulmuştur. Bu çalışma araştırmamızla paralellik göstermemektedir. İlgili literatür incelendiğinde sporda mükemmel performans üzerine çalışmalar yetersiz olduğu görülmüştür. Sonuç olarak araştırmada cinsiyet, milli sporcu olma,

eđitim dzeyi, yař, spor yařı, ka yıl boks branřını yapma durumuna gre lek ortalama puanı aısından istatistiksel olarak anlamlı bir farklılık grlmemektedir.

neriler

1. Arařtırmanın rnekleme grubunu sadece Boks branřındaki elit dzeydeki sporcuların oluřturması bir sınırlılık meydana getirdiđi iin diđer branřlarla ilgilenen elit sporcular zerinde de uygulanabilir.
2. alıřma bařka leklerle kullanılarak geniřletilebilir. (rn. stres, kaygı dzeyi, atılganlık vb.... gibi)
3. Arařtırma sonularımız benzer bilimsel alıřmaların yrtlmesinde kullanılabilir.
4. Elit dzeyde sporda konusunda literatrde ok fazla arařtırma bulunmamaktadır. Bu kavramın farklı deđiřkenlerle iliřkisi zerine arařtırmalar yapılabilir.

Abstract

Soil tillage is closely linked to the concept of sustainability due to its effective role in environmental and agricultural practices. The significance of sustainable agriculture, prioritising unit area yield and food security, has become a necessity amid climate and food crises of the future. This study aims to investigate the practical implementation of correct and conscious tillage methods to reduce soil degradation, enhance soil health and organic matter, promote long-term soil sustainability, and increase crop productivity while reducing environmental impacts. Tillage has recently become increasingly important in the context of land management, resulting in ongoing research in this field. Tillage and land management are integral components in determining the physical, chemical, and biological properties of soil that affect crop yields. It is essential to note that the effects of tillage and land management can be short, medium, or long-term in sustainable agricultural practices. Therefore, it is critical to employ correct management principles to optimize agricultural practices. Proper management of these components can lead to improved soil quality and productivity in agriculture, while simultaneously reducing environmental impacts. In addition to these, appropriate and conscious tillage systems offer socio-economic benefits, including decreased costs associated with machinery, equipment, labour, fuel and fertiliser inputs. The tillage approach selected should depend on factors such as the soil and crop variety characteristics, adaptation to the growing location, and similar considerations. Improper tillage practices may result in soil deterioration, erosion, nutrient loss, escalated carbon emission, depletion of soil microbial activity and biodiversity, as well as water pollution and augmented input costs. It is widely believed that using appropriate and conscientious tillage techniques is crucial for promoting sustainable agricultural productivity and mitigating environmental degradation. This is because these methods have positive impacts on soil quality parameters.

Keywords: Tillage, sustainable agriculture, soil quality, organic matter, soil microbial activity.

Introduction

The rise in environmental issues has led to an increase in concerns and expectations regarding the sustainable management of natural resources, particularly soil (Lal, 2020). Agricultural production has become increasingly important due to population growth and changes in geographical boundaries (Roy et al., 2022). The pressures on natural resources are caused by incorrect and unconscious practices. Intensive agricultural practices, such as unconscious tillage and irrigation, excessive fertilisation, and loss of organic matter, can lead to physical and chemical deterioration of the soil, a decrease in biological activity, and a subsequent decrease in crop production (Karlen et al., 2008). Tillage is one of the factors that directly affects soil quality and management, and it can have both positive and negative effects. Further information on this subject will be presented in the following sections (Ozlu et al., 2022).

Tillage has a significant impact on sustainability due to its effects on the environment. These effects include soil degradation, water quality, and greenhouse gas emissions from soil-related processes (Hassan et al., 2022). Sustainable agriculture is especially crucial in soils that experience frequent climatic changes and are under intense pressure.

Tillage can impact agricultural sustainability by affecting soil processes, properties, and crop growth. Tillage methods should aim to conserve soil and water, improve root system development, maintain soil organic matter content, and reverse degradation of soil life support processes (Francaviglia et al., 2023). Additionally, optimum and correct tillage can contribute to food security by increasing crop yields per unit area.

Recent studies have identified several important components of effective conservation tillage systems, including mulch cultivation, reduced tillage systems, the use of cover crops and cultivated fallows, agroforestry, raised beds or ridge tillage, and soil reversal or deep ploughing (Cárceles Rodríguez et al., 2022). The applicability of these components varies greatly due to ecological limits.

In order to ensure agricultural sustainability in the short, medium, and long term, it is necessary to disseminate practices that take into account basin and field-based components in a process where agriculture will be a strategic power (Tambe et al., 2023).

This study aims to determine the impact of correct tillage techniques and practices on sustainable agricultural productivity. It also explores potential measures to reduce environmental degradation through ideal practices.

2. Contributions of Correct Tillage to Soil

Research conducted in various climatic conditions, soil types, and crop rotation systems has demonstrated that soils subjected to reduced tillage and no-tillage practices contain significantly higher amounts of soil organic matter compared to conventionally tilled soils (Alvarez, 2005). Therefore, soil organic matter levels are one of the most important factors that directly affect soil fertility. Crop residues and additives, such as manure and compost, are sources of soil organic matter. They facilitate soil integration with tillage, thus increasing soil fertility and organic matter levels, which improves soil health and fertility (Rahman et al., 2020). Additionally, environmentally and agriculturally friendly applications, such as vermicompost and mycorrhiza (Figure 1), can increase microbial activity in the soil. Mineralisation can be achieved through correct and conscious ploughing techniques (Maji et al., 2017).

Figure 1. Geleneksel ve koruyucu toprak işlemenin toprak mikroorganizmaları üzerine etkisi (Wander, 2009)

Seed bed preparation is a crucial stage in agricultural production. Tillage plays a significant role in improving seed bed preparation and creating optimal conditions for plant growth and germination. This process can enhance the germination ability of important industrial crops such as maize and soya (Singh et al., 2013).

Post-harvest crop residues and certain additives can aid in weed control, reducing competition for resources between crops and weeds and ultimately leading to increased yields. However, tillage can have negative effects.

In agricultural production, weed control is crucial for both cost and nutrient contribution to the crop. Tillage can support weed management by burying weed seeds and disturbing root systems (Mia et al., 2023) (Figure 2). Incorporating organic matter into the soil is also crucial for sustainable agriculture as it enhances disease and pest control. Conservation tillage practices can reduce the spread of soil-dwelling pathogens and pests by burying them, thereby protecting crops from damage. Reducing reliance on pesticides and promoting sustainable disease and pest management techniques can be achieved through this approach.

Additionally, weed control can be improved by minimising the use of herbicides, promoting more sustainable weed management practices. This not only contributes to lower pesticide and input costs but also plays a crucial role in environmental protection (Bajwa, 2014). Tillage can improve soil structure by breaking up compacted soil, which increases aeration and water infiltration. This promotes root development and nutrient uptake, resulting in healthier crops and higher yields (Schlüter et al., 2018).

Figure 2. A simplified life cycle of *Sinapis arvensis* L. (wild mustard) as a weed is presented with its corresponding life stages (represented by white text boxes) and the processes involved during the transitions from one stage to another (indicated through text in italics). The impacts of soil amelioration, as they affect each stage, are represented in grey text boxes (Mia et al., 2023).

Planned and conscious tillage can positively contribute to soil structure. Limiting tillage intensity can prevent soil degradation, maintain its structure, and minimise erosion (Mattila et al., 2022). This is commonly referred to as conservation tillage, which advocates reducing tillage frequency as much as possible (Cordeau et al., 2020). Another alternative that has emerged in sustainable agriculture research is no-till farming. According to Somasundaram et al. (2020), the use of herbicides to control weeds and leaving crop residues on the soil surface is reported to be effective in preventing soil degradation, while also promoting soil conservation and carbon sequestration.

3. The Importance of Correct Tillage for Soil Health

Unconscious and improper tillage in agricultural practices can cause soil degradation, including soil compaction, increased water erosion and salinisation, decreased soil organic matter, nutrient content and soil biodiversity. These factors can negatively impact soil fertility and long-term sustainability (Lal et al., 2021; Cárceles Rodríguez et al., 2022).

A healthy soil is a dynamic living system that provides various ecosystem services, including maintaining water quality and plant productivity, controlling nutrient recycling in the soil, and removing greenhouse gases from the atmosphere (Tahat et al., 2020). Soil microbiological activity is affected by tillage intensity in many ways, mainly due to changes in soil organic C (SOC) content. However, changes in soil type and texture, as well as experimental and agronomic factors such as cropping patterns and crop residue management, can significantly impact the magnitude and direction of these changes (Nunes et al., 2020). Tillage intensity has a significant impact on SOC and biological soil health indicators. The application of complementary conservation practices as an integrated system, along with appropriate tillage methods and soil conservation measures, can help reduce the negative impact of tillage on soil health indicators (Veum et al., 2015). The microbiological activity of soil can directly impact the level of organic matter present. Therefore, it is important to ensure that the soil's activities are in harmony with ecosystem services to maintain its positive effects. This paper aims to list the contributions of proper tillage to sustainable agricultural activities and soil health.

- Saving labour and fuel,
- Increase in the level of earnings due to increased yields,
- Reduced fertiliser expenditure,
- Ensuring weed control,
- Lower irrigation needs,

- Control of diseases and pests at a lower level,
- Lower level of CO₂ emissions,
- Reduction of erosion and runoff,
- It increases the mineralisation process of wastes on the soil surface,
- Protection and improvement of soil properties, increase of biological activity in soil,
- It makes significant contributions to microbial activity and increase in organic matter level and similar issues.

Figure 3. Management principles and benefits of soil health (Cárceles Rodríguez et al., 2022).

4. Conclusion and Suggestions

The protection and improvement of soil quality require consideration of short, medium, and long-term productivity levels, as well as sustainability. Use clear, concise, and objective language to explain the necessary actions to be taken to benefit the soil and ecosystem services. Effective soil management practices not only enhance soil health but also promote the

sustainability and multifunctionality of agro-ecosystems, thereby reducing the negative socio-economic and environmental impacts associated with soil degradation.

The world is currently researching, discussing, and adopting vital issues such as food safety and environmental protection. Traditional or unconscious agricultural activities have disadvantages such as inefficient use of natural assets, environmental impacts, and high production costs. In contrast, protected agriculture or conscious soil cultivation and conservation offer advantages such as input savings and increased competitiveness. It is important to consider these factors when making decisions about agricultural activities.

Consequently, the adoption of the right tillage methods, especially soil conservation tillage systems, plays a critical function in sustainable agriculture.

Özet

Musgrave tarafından ortaya konan bir ifade olan “Erdemli Mallar” kavramı devletin vatandaşlarına bir takım hizmetler sunması neticesinde her geçen gün, hem önemini hem de beraberinde getirdiği tartışmaları arttırmaktadır. Erdemli malların sosyal devlet kapsamında tüketicilere sunulması, beraberinde ciddi bir maliyeti de getirmektedir. Bu maliyetlere vergi gibi yükümlülükler ile katlanmak zorunda bırakılan bireyler, erdemli malların niteliğini sorgulama eğilimine gitmektedirler. Sosyal devlet gereği vatandaşlarının refahını arttırmayı amaçlayan devletler; uyguladıkları bazı yöntemler ile olumlu sonuçlar almayı amaçlarken, direnç ile karşılaşmakta ve bu durumun negatif dışsallıkları da beraberinde getirdiği durumlar ile karşılaşmaktadır. Eğitim ve sağlık temelli uygulamalar, bireyler tarafından sorgulanmakta ve devletin amaçladığı duruma karşı bazen tepkileri de beraberinde getirmektedir. Zorunlu aşı uygulaması, okullarda çocuklara sunulan bazı hizmetlerin veliler tarafından olumlu karşılanmaması bilgi düzeyinin ve eğitim düzeyinin eksik kalması ile açıklanamamaktadır. Kamu gelirlerine katkı sunan bireylerin erdemli mallara karşı, gerektiğinde soru işaretleri ile yaklaşmaları olağan bir durum olarak görülmelidir. Tüketicilerin, zorunlu kılınan durumlar söz konusu olduğunda bu malları istememeleri seçeneği göz ardı edilmemeli ve bu konuda çalışmalar yapılmalıdır.

Anahtar Sözcükler: Musgrave, Erdemli Mallar, Sosyal Devlet

MERIT GOODS WITHIN THE SCOPE OF THE STATE

Abstract

The concept of "Merit Goods", an expression put forward by Musgrave, increases both its importance and the discussions it brings with each passing day, as a result of the state providing a number of services to its citizens. Providing merit goods to consumers within the scope of the social state also brings with it a serious cost. Individuals who are forced to bear these costs through obligations such as taxes tend to question the nature of merit goods. States that aim to increase the welfare of their citizens as a requirement of the social state; While they aim to get positive results with some of the methods they apply, they encounter resistance and situations where this situation brings with it negative externalities. Education and health-based practices are questioned by individuals and sometimes lead to reactions against the situation intended by the state. Compulsory vaccination and the fact that some services offered to children in schools are not welcomed by parents cannot be explained by the lack of knowledge and education level. It should be considered normal for individuals who contribute to public revenues to approach merit goods with question marks when necessary. The option that consumers may not want these goods when there are mandatory situations should not be ignored and studies should be carried out on this issue.

Keywords: Musgrave, Merit Goods, Social State

Giriş

Devletler kendi vatandaşlarının daha iyi şartlarda yaşamaları için çaba sarf ederler. Bu doğrultuda atılan adımlar kimi zaman vatandaşlar tarafından olumlu karşılanırken kimi zaman da belirli ölçüde dirençler meydana gelmektedir. Erdemli mallar devletler tarafından bir nevi sosyal eşitliğin sağlanması için kullanılmaktadır. Yaşlılara, çocuklara, ekonomik olarak daha alt gelir gruplarında bulunan bireylere, kimi zamanlar ise toplumun neredeyse tümüne sağlanan bu hizmetler ile birlikte toplumsal refaha katkı sunulması amaçlanmaktadır. Musgrave tarafından ortaya atılan erdemli mallara karşı eleştiriler de bulunmaktadır. Kamusal harcamaların yapılabilmesine doğrudan veya dolaylı bir biçimde katkıda bulunan bireyler bir takım erdemli malları reddetme sürecine gidebilmektedirler. Bu doğrultuda tepkisel süreçler meydana gelmekte ve bu durum sadece Musgrave'in ortaya attığı gibi bilgi ve eğitim düzeyi seviyesinin düşük olması ile açıklanamamaktadır.

1. Erdemli Mal Kavramı

Erdemli mallar kamu maliyesi içinde önemli bir yere sahiptir. 1950'li yıllarda Richard Musgrave tarafından ortaya konulmuş olup tüketici tercihleriyle birlikte mal ve hizmetlerin kimler tarafından nasıl ortaya konacağı konularının tartışılmasına neden olmuştur. Erdemli mallar, özel ve kamusal mallar ile birlikte üçüncü bir mal grubu olarak ortaya çıkmıştır. Erdemli mallar için örnek olarak okullarda öğrenciler için dağıtılan bedava sütler, emniyet kemeri, sanatsal faaliyetlerin finansmanının sağlanması, zorunlu olarak yapılan aşular, huzurevleri gibi bir takım faaliyetler sayılmaktadır (Yıldırım, Akyol, 2022). Erdemli mallar açıklanırken ortaya çıkan iki husus bulunmaktadır. Bunlardan biri sosyal devlet iken bir diğeri paternalizmdir. Devlet, sosyal devlet olması halinde geliri diğer gruplara göre daha düşük olan bireyler ile bakıma ihtiyaç duyan kişilere sunulan mal ve hizmetler erdemli mal ve hizmetler çerçevesinde düşünülmektedir. Erdemli malların yüksek sosyal faydalarının bulunmasından kaynaklı olarak özel sektörün bu mal ve hizmetleri yeteri kadar sunamayacağı kabul edilmektedir. Bu noktada devlerin “baba” olma özelliği ön plana çıkmaktadır (Zülfüoğlu, Soydan, 2019). Erdemli malların bir diğer önemli özelliği kişisel mal niteliğine sahip olmaları ve tüketimleri engellenebilir mallar olmalarıdır. Özel sektörün erdemli malları üretmelerine olanak sağlandığı takdirde bu malların yeteri kadar tüketilememesi ve negatif dışsallığa sebep olma olasılıkları bulunmaktadır. Bundan kaynaklı olarak erdemli mallar kamu bütçesi tarafından finanse edilen mallar arasında yer almaktadır (Aydın, Çalışkan, 2019). Erdemli mallar ile ilgili bir diğer önemli husus tercih çarpıklığı kavramıdır. Tercih çarpıklığının en önemli sebebi kişilerinin

bilgilerinin eksik olması, gelirlerinin az olması, fayda-maliyet analizi yapma konusundaki eksikleri ve rasyonelliğe aykırı davranışlarının bulunmasıdır. Gelir adaletsizliğinin belirgin bir biçimde görüldüğü ülkelerde devletlerin erdemli mallar konusundaki rolü büyük önem arz etmektedir. Erdemli mallara olan talebi arttırmanın zorlayıcılık, vatandaşlara riskleri göstererek bilgi edinme olanaklarının arttırılması ile sübvansiyon yapmak olmak üzere üç yolu bulunmaktadır (Kirmanoğlu, 2017). Erdemli mallar az üretilen ve yetersiz tüketilen mallar oldukları için devlet müdahalesi gerektirmektedir. Bireylerin uzun vadeli yararlar yerine kısa vadeli yararlarını düşünmeleri yetersiz tüketimlere sebep olmaktadır (Musgrave, 1956, 1987).

2. Sosyal Devlet Kavramı

Sosyal devlet ya da bir diğer ismiyle refah devleti çok eski yıllara ait bir kavram olmakla birlikte yirminci yüzyılda batı demokrasilerinde önemli bir şekilde vurgulanmış ve 1940'lı yıllardan itibaren Avrupa kıtasında yaygınlaşmıştır. 1970'li yıllara gelindiğinde sosyal devlet eleştirileri başlamış olmakla beraber 80'li yıllarda farklı şekilde ele alınmıştır. Bu zaman diliminden itibaren sosyal devlet kavramına yeni anlamlar eklenmiştir (Türkoğlu, 2013).

Genel olarak ifade etmek gerekirse; devlet tarafından, toplumun sosyal refahını arttırmak için müdahalelerde bulunulmasını ifade eden ve bu doğrultuda çalışan devlet modeline sosyal devlet denmektedir (Yay, 2014). Sosyal devlet uygulamalarında tarihsel süreç içerisinde farklı durumlar yaşanmasına rağmen devletlerin değişen yöntemlerle pek çok dönemde sosyal refah uygulamalarına başvurdukları bilinmektedir. Devletler vatandaşları arasında sosyal adaleti tesis etme gayesiyle hareket etme çabaları bu anlayışın temelini meydana getirmektedir (Karaca, Çam, 2019).

3. Sosyal Devletin Erdemli Mallar ile İlişkisi

Toplum içerisinde yaşayan grupların ya da bazı bireylerin ekonomik ve sosyal yaşantılarını daha iyi bir hale getirebilmek için bazı mallar ya bireylere bedelsiz sunulma ve finansmanı vergilerle sağlanmaktadır ya da piyasada var olan fiyatların çok daha altında satılmaktadır. Bu mal ve hizmetler sosyal anlamda gelir dağılımında devlet müdahalesini olanaklı hale getirmektedir (Egeli, Karakoyun, 2019).

Sosyal devlet ilkesi gereği erdemli mal olarak toplumun hizmetine sunulan mallar arasında dinlenme yerleri ve parklar, öğrenci yurtları, toplu konutlar, öğrenciler için okullarda dağıtılan

ücretsiz kitaplar, sosyal tesisler, aşı, vatandaşların yararına sunulan kültür ve sanat hizmetleri sunulmaktadır (Özel, 2014).

3.1 Erdemli Mallara Karşı Oluşan Tepkiler

Tüketicilerin tercihlerinin çarpıklaşması veya bozulması erdemli malların tüketilmesi konusunda sorunları beraberinde getirmektedir. Böyle bir durumda toplum tarafından tüketilmesi arzulanan malların tüketimi sekteye uğramaktadır. Vatandaşların hiç tercih etmedikleri veya çok az tercih ettikleri fakat toplum tarafından tüketilmesi sonucunda büyük fayda getireceği düşünülen mal ve hizmetlerin tüketimi için kamusal müdahalelerin olduğu görülmektedir (Yıldırım, Akyol, 2022).

Kamusal müdahaleler kimi zaman aşılarda olduğu gibi bireylerin hareket kabiliyetinin kısıtlanmasına neden olurken kimi zamanda emniyet kemeri uygulamalarındaki gibi cezai yaptırımlar ile sonuç odaklı uygulanmaktadır.

3.1.1 Sağlık temelli uygulamalar

Erdemli mallar çevresinde oluşan tartışmaların merkezinde tüketicilerin tercihlerinin eksik ve çarpık olması yer almaktadır. Bu problemler Covid-19 aşısı ile birlikte tekrar gündeme gelmektedir. Tüketicilerin tercihlerinin bozulması halinde tüketicilerin toplum için önemli görülen ürünleri tüketmediği haller ile karşılaşılmaktadır (Yıldırım, Akyol, 2022).

Aşı karışıklığı hususu dünyanın pek çok ülkesinde karşılaşılan bir durumdur. Bazı salgınlardan dolayı bağışıklığı olmayan çocukların pek çoğunun ebeveynlerinin aşılarla karşı ön yargılı olmalarından kaynaklı aşı olmadıkları görülmüştür. Yine tüketici tercihlerinin eksik olması hususu ile ilgili bu bireylerde aşının erdemli mal olarak görülmesi ve toplum üzerinde çoğu zaman dayatılması beraberinde bazı sorunları da getirmektedir.

3.1.2 Eğitim temelli uygulamalar

Herhangi bir hizmetin erdemli mal olarak değerlendirilip değerlendirilemeyeceği konusunu Musgrave bazı kriterler belirlemiştir. Bu kriterler; halkın sağlığı için gerekli görülen ama bilgi düzeyinin ve eğitim düzeyinin yeterli olmaması durumunda talebin eksik olması hali olarak ifade edilmiştir. Bilgide eksiklikler ve düşük gelir söz konusu olduğunda istenilen ölçüde talep oluşmamaktadır (Zülfüoğlu, Soydan, 2019).

Türkiye’de okullarda öğrenciler için dağıtılan süt, kuru üzüm veya son dönemde anasınıfı öğrencileri için okullarda dağıtılan kahvaltılık ve öğlen yemeği uygulamaları buna örnek olarak gösterilebilir. Çocukların gelişimi için önemli görülen beslenme biçimlerine bir takım velilerin tepki oluşturduğu örnekler ile karşılaşmaktadır. Dağıtılan sütlerin ve kuru üzümün ne derece sağlıklı olduğu, markaları, son tüketim tarihleri tartışılan hususlardan olmaktadır. Yine özellikle anaokullarında dağıtılan yemeklerin çocuklarının damak tatlarına hitap etmediği, çocuklarının sevmediği yemekler neticesinde aç kaldıkları ve alternatif geliştirilmesi yönünde fikirler beyan edilmektedir.

SONUÇ

Erdemli mallar sosyal devlet anlayışı gereği kamu maliyesinde oldukça önemli bir yer tutmaktadır. Bu doğrultuda devletler toplumsal eşitliğe katkı sunmak adına pek çok mal ve hizmeti daha çok alt gelir gruplarına ulaştırmayı amaçlarlar. Bu doğrultuda yapılan faaliyetler vatandaşların bir kısmı tarafından tepkisel karşılanabilmektedir. Tüm dünyayı etkisine altına alan ve bireylerin hayat tarzları üzerinde değişikliklere sebebiyet veren Covid-19 pandemisi sürecinde getirilen aşı zorunluluğu bu hususta önemli bir örnek olarak karşımıza çıkmaktadır. Aşı konusunda kafasında bazı soru işaretleri bulunan tüketicilerin aşı olmak istememeleri ve bu doğrultuda takındıkları tavır kamu tarafından negatif dışsallık kapsamında algılanmakta iken, bu bireyler tarafından ise kamu gelirlerine sunmuş oldukları katkının sorgulanması anlamına gelmektedir. Buna benzer durumlar, huzurevi, toplu konut ve eğitim kapsamlı erdemli mallar içinde geçerlidir. Sadece alt gelir grubunda bulunan veya eğitim seviyesi düşük olan bireylerin tepkisel davranmadıkları, toplumun pek çok kesiminde farklı hassasiyetlerin olduğu görülmektedir. Bu doğrultuda erdemli mallar olarak görülen mallara olan yaklaşımın yeniden değerlendirilmesi ve tüketicilerin ortaya koydukları irade karşısında alternatiflerin geliştirilmesi gerekmektedir.

Abstract

The increasing demand for energy and the need to reduce greenhouse gas (GHG) emissions, has led to a growing interest in exploring alternative energy sources. Point focus solar collector (PFSC) systems, have emerged as a promising technology for harnessing solar energy and converting it into electricity or heat. This survey was conducted on the energy potentials of PFSCs including their efficiency, cost-effectiveness, environmental impact, and potentials for integration into the existing energy infrastructure. Findings revealed that PFSC systems involves zero GHG emissions, making them a clean and sustainable energy option that contributes to the reduction of GHG emissions. It was observed that the Levelized cost of electricity (LCOE) from PFSC systems has become competitive with conventional energy sources, such as coal and natural gas. This cost-effectiveness, combined with the potential for long-term savings on fuel costs, makes PFSC systems an attractive option for energy mix augmentation. Considering their power potentials, PFSC systems can be integrated into the grid to provide electricity during peak demand periods or to supplement the energy supply during periods of low solar radiation. Also, they can be combined with thermal energy storage technologies to provide a continuous and reliable energy supply. Conventional studies indicated that the efficiency of PFSC systems depends on various factors, including the type of collector, the concentration ratio, and the tracking mechanism. The high efficiency, cost-effectiveness, and minimal environmental impact make PFSC systems a viable option for large-scale energy production. Thus, with PFSC systems, the energy mix can be augmented to reduce the reliance on conventional energy sources while contributing to a more sustainable and secured energy future.

Keywords: Energy potential, Solar collectors, Energy mix, GHG emissions, sustainability.

Overview of Point Focus Solar Collector

Solar energy has gained significant attention as a renewable and sustainable source of power. Among the various solar technologies, point focus solar collectors have emerged as a promising solution for harnessing solar energy efficiently. The concept of point focus solar collectors can be traced back to ancient civilizations. The ancient Greeks and Romans used concave mirrors to concentrate sunlight for various purposes, including heating water and starting fires (Michael et al., 2016; Szabó, 2017). However, it was not until the 19th century that significant advancements were made in this field. Augustin Mouchot, a French inventor, is credited with developing the first practical point focus solar collector in the 1860s. Mouchot's solar-powered steam engine utilized a parabolic reflector to concentrate sunlight onto a boiler, generating steam for mechanical work. This invention marked a significant milestone in the development of point focus solar collectors (Shreve, 2013; Fernandez, 2019)

Over the years, technological approaches have greatly improved the efficiency and practicality of point focus solar collectors. One notable approach is the use of advanced materials for reflectors and absorbers (Salvi et al., 2018; Lakshmipathy et al., 2020). Initially, mirrors made of polished metal were used, but they were heavy and prone to corrosion. Modern point focus solar collectors employ highly reflective materials such as silvered glass or aluminium-coated polymer films, which are lightweight and durable. Another significant approach is the integration of tracking systems. Point focus solar collectors require precise alignment with the sun to maximize energy capture (Lee et al., 2009; Ahmad et al., 2024). Early designs relied on manual adjustment, but the introduction of automatic tracking systems greatly improved their efficiency. These systems use sensors and motors to continuously orient the collector towards the sun, ensuring optimal sunlight concentration throughout the day.

Furthermore, the development of receiver technologies has enhanced the conversion of concentrated sunlight into usable energy. Initially, point focus solar collectors were primarily used for thermal applications, such as water heating and steam generation. However, advancements in receiver technologies have enabled the conversion of concentrated sunlight into electricity through the use of photovoltaic cells. This integration of solar thermal and photovoltaic technologies has expanded the range of applications for point focus solar collectors (Desideri et al., 2013; Ali and Alabid, 2022).

Point focus solar collectors play a crucial role in the renewable energy sector due to their high efficiency and versatility (Sankar and Muniraja, 2020; Tabassum et al., 2021). Their ability to concentrate sunlight allows for the collection of a large amount of energy in a relatively small

area. This makes them particularly suitable for applications requiring high-temperature heat, such as industrial processes and power generation. Moreover, point focus solar collectors have the potential to contribute significantly to the reduction of greenhouse gas emissions. By replacing fossil fuel-based energy sources, they can help mitigate climate change and promote sustainable development. Additionally, their modular design allows for scalability, making them adaptable to various energy demands.

The historical development and technological advancements of point focus solar collectors have transformed them into a viable and efficient solution for harnessing solar energy. From ancient civilizations to modern times, these collectors have evolved significantly, incorporating advanced materials, tracking systems, and receiver technologies. Their high efficiency and versatility make them a valuable asset in the renewable energy sector, contributing to a sustainable future. As the world continues to prioritize clean energy sources, further research and development in point focus solar collectors will undoubtedly lead to even more efficient and cost-effective solutions (Kalogirou, 2004; Nikolaidis, 2023; Hasan et al., 2023).

2. Theories Governing Point Focus Solar Collector

The Point Focus Solar Collector (PFSC) is a significant technology in the field of solar energy conversion. A comprehensive theories governing the principles of PFSC are presented as follows:

Concentrated Solar Power (CSP) Principle: The PFSC operates on the principle of Concentrated Solar Power (CSP), which involves focusing sunlight onto a small area to generate heat or electricity (Soomro et al., 2019). CSP systems utilize mirrors or lenses to concentrate sunlight onto a receiver, which then converts the solar energy into usable forms. This theory forms the basis for the PFSC's functionality and distinguishes it from other solar energy technologies.

Optical Concentration: Optical concentration is a key theory governing the PFSC. By employing mirrors or lenses, the PFSC concentrates sunlight onto a small focal point, thereby increasing the intensity of solar radiation. Therefore, optical concentration enhances the efficiency of solar energy conversion, making the PFSC a viable option for large-scale power generation (Zhe et al., 2021; Soomar et al., 2022).

Thermal Energy Conversion: The PFSC utilizes thermal energy conversion theory to convert concentrated solar radiation into usable heat or electricity. The concentrated sunlight heats a working fluid, such as water or oil, which then transfers the heat to a power cycle or storage system. This theory highlights the PFSC's potential for various applications, including

electricity generation, desalination, and industrial processes (Obalalu et al., 2023; Dada et al., 2023).

Tracking Systems: Tracking systems theory plays a crucial role in optimizing the PFSC's performance. The PFSC requires precise tracking mechanisms to ensure continuous alignment with the sun's position throughout the day. This theory emphasizes the importance of accurate tracking systems in maximizing solar energy collection and improving overall system efficiency (Chong et al., 2009; Xiao et al., 2017).

The theories governing the Point Focus Solar Collector provide a solid foundation for understanding its functionality and potential applications. The Concentrated Solar Power principle, optical concentration, thermal energy conversion, and tracking systems theory collectively contribute to the PFSC's efficiency and effectiveness. Research and technological advancements are necessary to address these limitations and enhance the overall performance of the PFSC.

3. Operating parameters influencing the Performance of PFSCs

Point focus solar collectors, also known as concentrator solar collectors, are designed to concentrate sunlight onto a small area using mirrors or lenses. This concentration of sunlight increases the intensity of the solar radiation incident on the receiver, which in turn enhances the energy conversion efficiency. However, the performance of point focus solar collectors can be influenced by several factors, which need to be carefully considered during the design and operation of these systems. Operating parameters play a crucial role in determining the performance of point focus solar collector systems (Foulaadvand et al., 2021; Iqbal et al., 2023). These parameters include the solar irradiance, collector temperature, concentration ratio, and tracking accuracy.

Solar irradiance: Solar irradiance is a key factor that affects the performance of point focus solar collector systems. It refers to the amount of solar energy received per unit area. Higher solar irradiance levels result in increased energy collection and conversion. A higher solar irradiance level leads to a higher temperature rise in the collector, resulting in improved system efficiency (Gorjian et al., 2015; Vidyanandan, 2017). Therefore, it is essential to consider the solar irradiance levels when designing and operating point focus solar collector systems. The intensity of solar radiation incident on the collector surface determines the amount of energy that can be converted into usable heat or electricity. Variations in solar irradiance due to factors such as cloud cover, atmospheric conditions, and seasonal changes can significantly impact the

performance of point focus solar collectors. Therefore, accurate measurement and prediction of solar irradiance are essential for optimizing the performance of these collectors (Park et al., 2021; Tscholl et al., 2022; Kosmopoulos et al., 2024).

Collector temperature: Collector temperature is another critical operating parameter that significantly impacts the performance of point focus solar collector systems. The temperature of the collector affects the efficiency of energy conversion. As the collector temperature increases, the efficiency of the system decreases due to increased thermal losses. Maintaining a lower collector temperature can enhance the overall performance of point focus solar collector systems. Therefore, it is crucial to control the collector temperature within an optimal range to maximize system efficiency (Sardeshpande et al., 2021; Wang et al., 2021; Wang et al., 2023).

Concentration ratio: Concentration ratio is a parameter that determines the concentration of solar energy onto the receiver. It is defined as the ratio of the area of the reflector to the area of the receiver. A higher concentration ratio leads to increased energy collection and conversion. A higher concentration ratio improves the system's ability to concentrate solar energy onto the receiver, resulting in enhanced performance. Therefore, it is important to optimize the concentration ratio to achieve higher system efficiency (Supa et al., 2015; Osorio et al., 2019; Ardila et al., 2021).

Tracking accuracy: Tracking accuracy is an operating parameter that influences the performance of point focus solar collector systems. Tracking accuracy refers to the ability of the system to accurately track the movement of the sun. A higher tracking accuracy ensures that the collector is always aligned with the sun, maximizing energy collection. A higher tracking accuracy improves the system's performance by increasing the solar energy incident on the receiver. Therefore, it is crucial to maintain a high tracking accuracy to achieve optimal system efficiency. Point focus solar collectors require precise tracking systems to ensure that the concentrated sunlight remains focused on the receiver throughout the day. Any deviations or errors in tracking can result in reduced performance and efficiency of the collector. Factors such as mechanical wear, control system accuracy, and environmental conditions can affect the tracking accuracy of point focus solar collectors. Therefore, it is crucial to maintain and calibrate the tracking system regularly to ensure optimal performance (Hughes, 1980; Sardeshpande et al., 2011; Ullah and Kang, 2019; Sauerborn, 2021; Liu, B., Zong and Huang, 2023).

Receiver Design: The design of the receiver plays a vital role in the performance of point focus solar collectors. The receiver is responsible for absorbing the concentrated solar radiation and

converting it into usable heat or electricity. Factors such as receiver material, geometry, and thermal properties can significantly impact the efficiency and performance of the collector. The selection of appropriate receiver materials with high thermal conductivity and low emissivity is crucial to minimize heat losses and maximize energy conversion efficiency. Tagle-Salazar et al., 2020; Malwad and Tungikar, 2020a; Malwad and Tungikar, 2020b; Kumar and Gupta, 2022).

Environmental Conditions: Environmental conditions, such as ambient temperature, wind speed, and humidity, can affect the performance of point focus solar collectors. High ambient temperatures can lead to increased thermal losses, while strong winds can cause misalignment of the mirrors or lenses, resulting in reduced concentration and efficiency. Humidity can also affect the optical properties of the collector components, leading to decreased performance. Therefore, it is essential to consider the local environmental conditions during the design and operation of point focus solar collectors (Mustafa et al., 2020; Hasan et al., 2022; Gholami et al., 2022; Lin et al., 2023).

Operating parameters such as solar irradiance, collector temperature, concentration ratio, and tracking accuracy significantly influence the performance of point focus solar collector systems. Higher solar irradiance levels, lower collector temperatures, higher concentration ratios, and higher tracking accuracy lead to improved system efficiency. Therefore, it is essential to consider and optimize these operating parameters to maximize the performance of point focus solar collector systems.

4. Energy Storage for Point Focus Solar Collectors

Point focus solar collectors (PFSCs) have gained significant attention as a promising technology for harnessing solar energy. These collectors concentrate sunlight onto a small area, resulting in higher temperatures and increased energy conversion efficiency. However, the intermittent nature of solar radiation necessitates the integration of energy storage systems to ensure a continuous and reliable power supply (Suman et al., 2015; Hussain and Lee, 2016; Arnaoutakis and Katsaprakakis, 2021). Energy storage for point focus solar collectors are classified as follows:

a. Thermal Energy Storage

Sensible Heat Storage: Thermal energy storage (TES) systems, such as sensible heat storage, utilize the heat capacity of a material to store excess energy generated by PFSCs. Sensible heat storage materials, such as molten salts or rocks, absorb and release heat as their temperature

changes. This method offers high energy density and long-term storage capabilities, making it suitable for PFSCs (Bauer et al., 2012; Alva et al., 2017; Rigui et al., 2022).

Latent Heat Storage: Latent heat storage involves the phase change of a material, such as the melting and solidification of a substance, to store and release energy (Rathod, 2022; Teamah, 2022). Phase change materials (PCMs) exhibit high energy storage density and can store energy for extended periods. However, the limited range of operating temperatures and the need for encapsulation pose challenges for their implementation in PFSCs.

b. Electrochemical Energy Storage

Batteries: Batteries, such as lithium-ion batteries, offer a viable option for energy storage in PFSCs. They provide high energy density, fast response times, and can be easily integrated into existing systems. However, their limited lifespan, high cost, and environmental concerns associated with their production and disposal hinder their widespread adoption.

Supercapacitors: Supercapacitors, also known as ultra capacitors, store energy through the separation of charges at the electrode-electrolyte interface. They offer high power density, rapid charge/discharge rates, and long cycle life. However, their relatively low energy density and high self-discharge rates limit their application in long-term energy storage for PFSCs (Bharti et al., 2021; Ahmed et al., 2022).

c. Chemical Energy Storage

Hydrogen Production: Hydrogen production through water electrolysis offers a promising avenue for energy storage in PFSCs. This method involves using excess electricity generated by PFSCs to split water into hydrogen and oxygen. Hydrogen can be stored and later used in fuel cells or combustion engines to generate electricity. However, challenges related to hydrogen storage, transportation, and safety need to be addressed for widespread implementation. Wang et al., 2021; Tashie-Lewis and Nnabuife, 2021; Nasser et al., 2022).

5. Advancements in Point Focus Solar Collectors

Solar energy has emerged as a promising alternative to conventional energy sources due to its abundance and environmental benefits. Point focus solar collectors, also known as concentrated solar power (CSP) systems, have witnessed significant advancements in recent years. These are enumerated as follows:

High-Efficiency Solar Cells: One of the major advancements in point focus solar collectors is the development of high-efficiency solar cells. Traditional solar cells have limited efficiency in converting sunlight into electricity. However, recent breakthroughs in materials science and engineering have led to the creation of more efficient solar cells, such as multi-junction cells and perovskite cells. These advancements have significantly increased the overall efficiency of point focus solar collectors, making them more economically viable (Hoffschmidt et al., 2012; Tabarhoseini et al., 2022; Parthiban and Ponnambalam, 2022).

Concentrated Solar Power Systems: Point focus solar collectors utilize mirrors or lenses to concentrate sunlight onto a small area, thereby generating high temperatures (John, 2015; Zaboli et al., 2023). The advancements in concentrating technologies have led to the development of more efficient and cost-effective systems. For instance, parabolic trough collectors, heliostat mirrors, and dish-Stirling systems have become more sophisticated, allowing for higher concentration ratios and improved energy conversion.

Thermal Energy Storage: One of the key challenges of solar energy is its intermittent nature. However, advancements in thermal energy storage systems have addressed this issue. Point focus solar collectors can now store excess thermal energy in molten salts or other heat transfer fluids, which can be used to generate electricity during periods of low sunlight. This breakthrough has significantly increased the reliability and dispatchability of point focus solar collectors, making them a more attractive option for large-scale energy production (Salloom et al., 2018; Wang et al., 2020; Modi, 2023; Barrasso et al., 2023).

Hybridization with Other Energy Sources: To further enhance the reliability and efficiency of point focus solar collectors, hybridization with other energy sources has gained attention. By integrating CSP systems with fossil fuel power plants or biomass facilities, the overall energy output can be increased while ensuring a continuous power supply. This hybrid approach allows for the utilization of existing infrastructure and provides a smoother transition towards a renewable energy future (Yousef et al., 2021; Alami et al., 2023; Gutiérrez-Alvarez et al., 2023; Chen et al., 2023).

6. Characteristics of Point Focus Solar Collectors

Point focus solar collectors are a crucial component of solar energy systems due to their unique characteristics enumerated as follows:

Concentration Ratio: One of the primary characteristics of point focus solar collectors is their ability to achieve high concentration ratios. Concentration ratio refers to the ratio of the area of

the collector aperture to the area of the receiver (Kulkarni et al., 2023; Kulkarni, et al., 2020). Higher concentration ratios enable increased energy conversion efficiency by focusing a larger amount of sunlight onto a smaller receiver area. This characteristic makes point focus solar collectors suitable for applications requiring high-temperature heat or electricity generation.

Tracking Mechanism: Point focus solar collectors often incorporate tracking mechanisms to ensure optimal alignment with the sun's position throughout the day (Lee et al., 2009; Racharla and Rajan, 2017; Aghamohammadi and Foulaadvand, (2023). This characteristic allows for maximum utilization of solar energy by continuously adjusting the collector's orientation. Tracking mechanisms can be either single-axis or dual-axis, with the latter providing higher accuracy but at a higher cost. The ability to track the sun's movement enhances the overall performance of point focus solar collectors, especially in regions with varying solar angles.

Thermal Storage: Point focus solar collectors can be integrated with thermal storage systems, enabling the storage of excess thermal energy for later use (Tian and Zhao, 2023; Elkhatat and Al-Muhtaseb, 2023). This characteristic is particularly advantageous for applications requiring continuous energy supply, even during periods of low solar radiation. Thermal storage systems can utilize various materials, such as molten salts or phase change materials, to store and release thermal energy efficiently. The incorporation of thermal storage enhances the flexibility and reliability of point focus solar collectors, making them suitable for both residential and industrial applications.

Optical Efficiency: The optical efficiency of point focus solar collectors plays a crucial role in determining their overall performance. This characteristic refers to the ability of the collector to capture and concentrate sunlight effectively. Factors such as reflector design, receiver material, and tracking accuracy influence the optical efficiency of these collectors. Higher optical efficiency ensures maximum utilization of available solar energy, resulting in improved energy conversion efficiency (Danielli et al., 2011; Belghachi, 2015)

Hybridization with Fossil Fuels: Another advancement is the hybridization of point focus solar collectors with fossil fuel power plants. This integration allows for the utilization of solar energy during peak sunlight hours, reducing the reliance on fossil fuels and decreasing GHG emissions. Hybrid systems can enhance the overall efficiency and reliability of power generation (Hassan et al., 2023; Al-Rawashdeh et al., 2023; León Gómez et al., 2023)

High-Temperature Applications: Point focus solar collectors have also made advancements in high-temperature applications. By using advanced materials and innovative designs, these systems can achieve higher temperatures, enabling the production of hydrogen, synthesis of

fuels, and other industrial processes that require extreme heat (Wang et al., 2019; Arnaoutakis and Katsaprakakis, 2021; Aquilanti et al., 2023)

7. Applications of Point Focus Solar Collectors

Point focus solar collectors are a type of solar energy technology that concentrates sunlight onto a small area, maximizing the amount of energy that can be harvested. These collectors have gained significant attention due to their potential to generate clean and sustainable energy.

Power Generation: One of the primary applications of point focus solar collectors is in power generation. Concentrated solar power (CSP) plants utilize these collectors to focus sunlight onto a receiver, which then converts the solar energy into heat. This heat is used to generate steam, which drives a turbine to produce electricity. CSP plants have the advantage of being able to store excess heat, allowing for continuous power generation even during periods of low sunlight. This makes them a reliable and efficient source of renewable energy (Kurup and Turchi, 2016; Ayaz et al., 2020; Ghodbane et al., 2020).

Industrial Processes: Point focus solar collectors can also be employed in various industrial processes that require high-temperature heat. For instance, in the manufacturing sector, these collectors can be used to provide heat for processes such as metal smelting, drying, and chemical reactions. By utilizing solar energy instead of fossil fuels, industries can significantly reduce their carbon footprint and operating costs (Fortuin and Stryi-Hipp, 2012; Kumar et al., 2022; Tasmin et al., 2022).

Desalination: Another promising application of point focus solar collectors is in desalination. Solar desalination systems utilize the concentrated solar energy to evaporate seawater, leaving behind the salt and other impurities. The vapour is then condensed to produce fresh water. This technology offers a sustainable solution to address the global water scarcity issue, particularly in arid regions where access to freshwater is limited (Xu et al., 2017; Hoque, et al., 2019; Aende et al., 2020; Choong et al., 2020).

Heating and Cooling: Point focus solar collectors can also be used for residential and commercial heating and cooling purposes. Solar thermal systems can provide hot water for domestic use, space heating during colder months, and even cooling through absorption chillers (Helm et al., 2014; Filipowicz et al., 2019). By harnessing solar energy for these applications, buildings can reduce their reliance on conventional energy sources, leading to lower energy bills and reduced greenhouse gas emissions.

8. Advantages of Point Focus Solar Collectors

Solar energy is a renewable and sustainable source of power that has gained significant attention in recent years. Point focus solar collectors, also known as concentrated solar power (CSP) systems, are a type of solar technology that uses mirrors or lenses to concentrate sunlight onto a small area. The various advantages of point focus solar collectors are as follows:

High Efficiency: Point focus solar collectors have the advantage of achieving high levels of efficiency in converting sunlight into usable energy (Sun et al., 2023; Obalalu et al., 2023). By concentrating sunlight onto a small area, these systems can generate higher temperatures, which in turn increases the efficiency of energy conversion. This high efficiency makes point focus solar collectors suitable for large-scale power generation, particularly in regions with abundant sunlight.

Energy Storage: Another advantage of point focus solar collectors is their ability to incorporate energy storage systems. By utilizing thermal energy storage, excess heat generated during peak sunlight hours can be stored and used later when sunlight is not available (Sarbu and Sebarchievici, 2018; Agbo et al., 2021). This feature allows for continuous power generation, even during cloudy periods or at night. Energy storage also enhances the reliability and stability of the power supply, making point focus solar collectors a viable option for meeting energy demands.

Scalability: Point focus solar collectors offer scalability, allowing for the construction of both small and large-scale power plants (Omeiza et al., 2023; Ahmad et al., 2024). These systems can be easily expanded by adding more mirrors or lenses, enabling the generation of higher power outputs as needed. This flexibility makes point focus solar collectors suitable for various applications, ranging from residential and commercial use to utility-scale power generation.

Energy Viability: The energy viability of point focus solar collector systems has improved over the years due to technological advancements and economies of scale. The cost of solar photovoltaic (PV) modules, which are used in many solar energy systems, has significantly decreased, making solar energy more competitive with conventional energy sources (Diemuodeke et al., 2021; Dada and Popoola, 2023). Furthermore, the operational and maintenance costs of point focus solar collector systems are relatively low compared to other renewable energy technologies. These factors make point focus solar collector systems an attractive option for energy mix augmentation.

Environmental Benefits: The use of point focus solar collectors contributes to significant environmental benefits. Firstly, solar energy is a clean and renewable source, resulting in

minimal greenhouse gas emissions compared to fossil fuel-based power generation (Owusu et al., 2016; Agbo et al., 2021; Hussain et al., 2022). Secondly, point focus solar collectors have a smaller land footprint compared to other renewable energy technologies, such as wind or biomass. This makes them suitable for areas with limited available land. Additionally, the use of point focus solar collectors reduces water consumption, as they do not require large amounts of water for cooling, unlike conventional power plants.

Economic Opportunities: The deployment of point focus solar collectors presents various economic opportunities. The construction and operation of solar power plants create jobs, stimulating local economies. Moreover, the use of solar energy reduces dependence on imported fossil fuels, leading to energy independence and improved energy security. Additionally, as the technology advances and becomes more widespread, the cost of point focus solar collectors is expected to decrease, making them more economically competitive with conventional power generation methods (Oyedepo, 2012; Obaideen et al., 2021; Bhuiyan et al., 2022).

Point focus solar collectors offer numerous advantages, including high efficiency, energy storage capabilities, scalability, environmental benefits, and economic opportunities. These advantages make them a promising solution for addressing energy needs while mitigating environmental concerns. As the world continues to transition towards a sustainable energy future, point focus solar collectors have the potential to play a significant role in meeting global energy demands.

9. Disadvantages of Point Focus Solar Collectors

Point focus solar collectors have gained significant attention in recent years due to their ability to concentrate sunlight onto a small area, thereby increasing the efficiency of solar energy conversion. However, despite their advantages, these collectors also possess several disadvantages that need to be considered.

High Cost: One of the primary disadvantages of point focus solar collectors is their high cost. The complex design and advanced technology required for these systems contribute to their expensive nature (Omeiza et al., 2023; Salvi et al., 2018). The manufacturing, installation, and maintenance costs associated with point focus solar collectors can be prohibitive, making them less accessible for widespread adoption, particularly in developing countries or regions with limited financial resources. However, the levelized cost of electricity (LCOE) from PFSC systems is gradually becoming very competitive with conventional energy sources in recent times.

Limited Efficiency: While point focus solar collectors offer higher efficiency compared to other solar technologies, they are still subject to certain limitations. These collectors heavily rely on direct sunlight, making them less effective in cloudy or overcast conditions (Abdul-Rahman and Wang, 2010; Toledo et al., 2016). Additionally, their efficiency is significantly reduced during periods of low solar radiation, such as early mornings, late evenings, or winter months. This limitation restricts their overall energy output and may require additional energy storage systems to compensate for the intermittent nature of solar energy.

Environmental Concerns: Point focus solar collectors often employ reflective surfaces and mirrors to concentrate sunlight onto a small area. The manufacturing and disposal of these materials can have adverse environmental impacts. The production of reflective surfaces may involve the use of toxic chemicals, while their disposal can contribute to landfill waste. Additionally, the large-scale deployment of point focus solar collectors may disrupt local ecosystems and habitats, particularly if not properly planned and managed (Hernandez et al., 2015; Roddis et al, 2020).

Safety Risks: The concentrated solar energy produced by point focus solar collectors can pose safety risks if not handled properly. The intense heat generated by these systems can cause burns or fires if the collectors are not adequately insulated or protected. Moreover, the concentrated sunlight can be harmful to human eyes and may require additional safety measures during installation, maintenance, or repair. (Arnaoutakis and Katsaparakakis, 2021; Hagumimana et al., 2021).

Land and Space Requirements: Point focus solar collectors typically require a significant amount of land or space for installation. This can be a challenge in densely populated areas or regions with limited available land. Moreover, the concentration of solar energy in a small area may lead to localized temperature increases, potentially affecting nearby vegetation or wildlife.

Weather Conditions: Another significant disadvantage is their sensitivity to weather conditions, particularly cloudy or overcast skies. Cloud cover reduces the amount of sunlight reaching the collector, thereby decreasing its energy output (Kejna et al., 2021; Tian et al., 2023). Additionally, the initial cost of installing point focus solar collectors, especially those with advanced tracking mechanisms, can be relatively high. These limitations should be considered when evaluating the suitability of point focus solar collectors for specific applications

While point focus solar collectors offer higher efficiency and concentrated solar energy, they also possess several disadvantages that need to be carefully considered. The high cost, limited efficiency under certain conditions, environmental concerns, safety risks, and land requirements

associated with these collectors highlight the need for a comprehensive evaluation before their widespread adoption. Future research and technological advancements may help address these drawbacks, making point focus solar collectors a more viable and sustainable option for harnessing solar energy.

10. Types of Point Focus Solar Collectors

Solar energy has emerged as a promising alternative to conventional energy sources due to its abundance and environmental benefits. Point focus solar collectors play a crucial role in harnessing solar energy efficiently.

Parabolic Trough Collectors: Parabolic trough collectors (PTCs) are one of the most widely used point focus solar collectors. As shown in Figure 1, these collectors consist of parabolic-shaped mirrors that concentrate sunlight onto a receiver tube located at the focal point (Çağlar, 2016; Ahmad et al., 2024). PTCs offer several advantages, including high efficiency, low maintenance requirements, and the ability to generate high-temperature heat. PTCs can achieve thermal efficiencies of up to 80%, making them suitable for various applications such as electricity generation and industrial processes. However, PTCs also have certain limitations. Parabolic troughs use curved mirrors to focus sunlight onto a receiver tube (Babuje et al., 2020; Lüpfer, 2022). Firstly, their design requires precise alignment with the sun's position, necessitating complex tracking systems (Ramde et al., 2020; Felsberger et al., 2022). Secondly, the receiver tube's high temperatures can lead to thermal losses and material degradation over time. Despite these limitations, PTCs remain a popular choice due to their proven track record and reliability. These collectors can be categorized into two main types: parabolic troughs and solar power towers.

Figure 1: Parabolic trough systems

Dish Stirling Systems: Dish Stirling systems are another type of point focus solar collector that utilizes a parabolic dish to concentrate sunlight onto a receiver at the focal point (Gholamalizadeh and Chung, 2017; Arnaoutakis and Katsaprakakis, 2021) as shown in Figure 2. These systems employ a Stirling engine to convert the concentrated solar energy into electricity. Dish Stirling systems offer several advantages, including high efficiency, modularity, and the ability to generate both electricity and heat simultaneously. Dish Stirling systems can achieve solar-to-electric conversion efficiencies of up to 30%, making them one of the most efficient solar technologies available. Additionally, their modular design allows for easy scalability, making them suitable for both small-scale and large-scale applications. However, the high cost of dish Stirling systems and their complex maintenance requirements pose significant challenges to their widespread adoption (Mancini et al., 2003; Monné, 2014; Singh and Kumar, 2018; Alhawsawi et al., 2023).

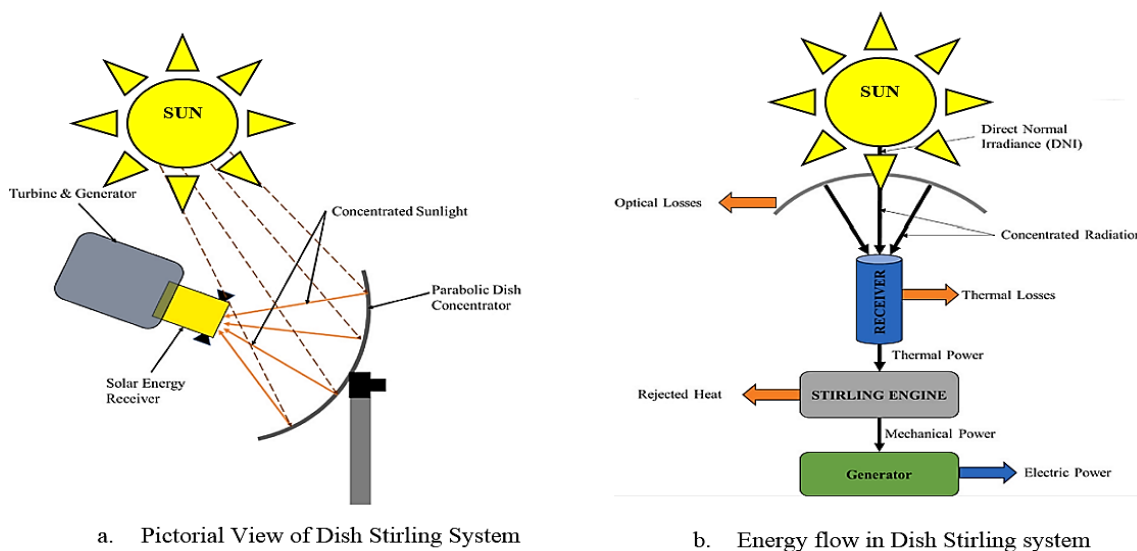

Figure 2: Dish Stirling systems

Fresnel Reflectors: Fresnel reflectors are a type of point focus solar collector that utilizes a series of flat mirrors to concentrate sunlight onto a linear receiver (Breeze, 2016; Breeze, 2019). These collectors consist of a fixed solar collector and a high inverted linear fixed receiver. Direct solar radiation is reflected on several rows of single-axis tracking mirrors. The radiation is reflected and focused on a fixed linear receiver mounted above the mirror, which may or may not be combined with auxiliary concentrators as shown in Figure 3a. This receiver consists of a secondary reflector and a highly efficient selectively coated vacuum tube. The heat is then collected in this absorption tube. The heat is then transferred to industrial processes via a heat carrier as shown in Figure 3b. The secondary reflector increases the optical efficiency of the

collector while also protecting the muffler (Kalogirou, 2014; Murty, 2017). The Fresnel collector is incorporated with high quality solar components such as safety glass mirrors and thermally efficient vacuum tubes.

Fresnel reflectors offer advantages such as low cost, ease of installation, and the ability to generate high-temperature heat. Fresnel reflectors can achieve optical efficiencies of up to 70%, making them a cost-effective option for various applications. However, Fresnel reflectors also have limitations. The linear receiver design can lead to thermal losses and non-uniform heat distribution along the receiver tube. Additionally, the complex mirror arrangement requires precise alignment and tracking systems, increasing the overall system complexity and cost (Bhatia, 2014; Karathanasis, 2019; Singh et al., 2021).

Figure 3: Fresnel reflector systems

Solar Power Towers: Solar power towers use an array of flat sun-tracking mirrors, known as heliostats, to reflect sunlight onto a central receiver located at the top of a tower as shown in Figure 4 (Alrwashdeh, 2018; Behar et al., 2020; Hamanah et al., 2023). The receiver absorbs the concentrated solar energy and transfers it to a heat transfer fluid, which is then used to generate electricity through a conventional steam turbine system. Solar power towers use an array of mirrors to direct sunlight towards a central receiver located on a tower (Khosravi, et al., 2021; Telsnig and Ferrán, 2016; Silva-Pérez, 2017).

Figure 4: Solar power tower system

Point focus solar collectors, including parabolic trough collectors, dish Stirling systems, and Fresnel reflectors, offer unique advantages and limitations. PTCs provide high efficiency and reliability, while dish Stirling systems offer modularity and dual heat-electricity generation capabilities. Fresnel reflectors, on the other hand, provide a cost-effective solution for high-temperature heat generation. The choice of the collector type depends on the specific application requirements, cost considerations, and available resources. Further research and development are necessary to overcome the limitations and enhance the performance of these point focus solar collectors, ultimately contributing to the widespread adoption of solar energy as a sustainable energy source.

11. Augmentation of Point Focus Solar Collectors

Solar energy has emerged as a sustainable and abundant source of renewable energy. PFSCs are a key technology used to harness solar energy efficiently. This technology offers benefits such as high energy concentration, reduced material usage, and improved efficiency compared to other solar collector types. However, to further enhance their performance and address certain limitations, it is essential to explore some augmentation techniques which are enumerated as follows:

Optical Augmentation: Optical augmentation techniques aim to improve the concentration ratio and overall efficiency of PFSCs. Examples include the use of secondary reflectors, refractive or diffractive optical elements, and spectral filters. These techniques enhance the collection of solar radiation and minimize energy losses (Kincaid et al., 2018; Manikandan et al., 2019; Subramaniyan et al., 2021)

Thermal Augmentation: Thermal augmentation techniques focus on reducing heat losses and improving the thermal performance of PFSCs. Strategies such as selective coatings, advanced

heat transfer fluids, and innovative receiver designs help increase the overall efficiency and temperature output of the system. Shamsul Azha et al., 2020; Kumar and Varghese, 2022; Kalair et al., 2022).

Tracking Augmentation: Tracking augmentation techniques aim to enhance the accuracy and reliability of solar tracking systems used in PFSCs. Advanced tracking algorithms, improved sensors, and innovative control mechanisms can optimize the tracking accuracy, leading to increased energy collection (Nguyen, 2016; Awasthi et al., 2020; Seme et al., 2020).

Augmentation techniques offer several advantages, including increased energy collection, improved system efficiency, and enhanced economic viability. These benefits contribute to the overall competitiveness of PFSCs in the renewable energy market. Augmentation techniques also present challenges such as increased complexity, higher costs, and potential reliability issues (Lee et al., 2009; Kumar et al., 2021). The integration of new components and materials requires careful consideration to ensure long-term performance and economic feasibility. The augmentation of PFSCs holds great promise for enhancing solar energy harvesting. Optical, thermal, and tracking augmentation techniques offer significant benefits in terms of increased energy collection, improved efficiency, and economic viability. However, careful consideration of the associated challenges is crucial to ensure the long-term performance and reliability of augmented PFSC systems. Further research and development efforts are needed to optimize these techniques and facilitate the widespread adoption of augmented PFSCs in the renewable energy sector.

12. Thermodynamic Equations for PFSCs

Thermodynamic equations employed in computing the PFSC parameters are as follows:

a. Declination angle

To effectively estimate the solar radiation of a tilted surface, there is need to know the angular position of the sun at solar noon, hence the determination of the declination angle considering the number of days. Declination angle varies and is calculated using the following relation in Equation 1.

$$\delta = 23.45 \sin \left(360 \frac{284+n}{365} \right)$$

where n is the no of days. For n , the mean day in each month was used.

b. Zenith Angles of the sun

The Zenith angle was estimated considering the angle between the vertical and the line to the sun, that is, the angle of incidence of beam radiation on a horizontal surface has to be known in order to effectively estimate the amount of solar radiation on a solar collector. The zenith angle is given by Equation 2:

$$\cos \theta_z = \cos \phi \cos \delta \cos \omega + \sin \phi \sin \delta$$

where ϕ = latitude of the location, δ = declination angle, ω = Hour angle

c. Solar Azimuth Angle (γ_s)

The solar azimuth angle is estimated using the following relations in Equation 3:

$$\gamma_s = \sin(\omega) \left| \cos^{-1} \left(\frac{\cos \theta_z \sin \phi - \sin \delta}{\sin \theta_z \cos \phi} \right) \right|$$

where, Sign function is used to determine ω , θ_z = Zenith angle, ϕ = latitude of site and δ = Declination angle.

d. Incidence angle

The angle of incidence on the inclined surface is given by Equation 4 (Duffie and Beckman, 2013):

$$\cos \theta = \cos \theta_z \cos \beta + \sin \theta_z \sin \beta \cos (\gamma_s - \gamma)$$

Where θ = incidence angle, β = tilted angle, $\gamma = 0$, because it is facing south, θ_z = Zenith angle and γ_s = Solar azimuth angle.

e. Radiation on tilted surface

The geometric factor R_b , is the ratio of beam radiation on the tilted surface, and this can be estimated using the following relations in Equation 5.

$$R_b = \frac{\cos \theta}{\cos \theta_z} = \frac{G_{b,t}}{G_h}$$

where θ = angle of incidence, θ_z = zenith angle respectively, $G_{b,t}$ = radiation on tilted surface and G_h = radiation on horizontal surface.

To determine the available energy in the solar collector, it is important to consider the equation for energy gained by the solar collector. This is given by Equation 6 (Al-Sulaiman, 2014):

$$Q_{use} = m_a C_p \Delta T$$

Equation for heat losses from the collector is expressed in Equation 7 (Islam et al., 2015):

$$Q_{use} = A_{abs} Q_r [S_i - U_1 (\Delta T)]$$

The energy leaked from the solar collector is given by Equation 8 [29]: (Calise et al., 2016):

$$E_1 = \left\{ U_1 A_{abs} (T_{abs} - T_a) \left(1 - \frac{T_a}{T_{abs}} \right) \right\}$$

where S_i is the optical absorbed solar flux and U_i is the heat loss by emittance, reflection and optical efficiency of glazing given by Equation 9 (Jafarkazemi and Ahmadifard, 2013):

$$Q_R = \frac{m a C_P}{U_1 A_{abs}} \left[1 - \exp \left\{ \frac{-F \phi U_1 A_{abs}}{m a C_P} \right\} \right]$$

The energy destroyed by the solar collector is given by Equation 10 (Farahat et al., 2009):

$$E_d = -m C_P T_a \frac{T_{out}}{T_{in}} E_d = -m C_P T_a \left\{ 1n \left(\frac{T_{out}}{T_{in}} \right) - \left(\frac{T_{out} - T_{in}}{T_{abs}} \right) \right\}$$

(10)

where E_d is the heat loss due to absorber plate temperature. It is the latent heat absorbed by the solar collector in phase change. The exergy of the solar collector is given by Equation 11 (Islam et al., 2015):

$$E_{out} = \left[\left\{ \left(m_a C_P \left(T_{out} - T_a \right) l_n \frac{T_{out}}{T_a} \right) - \frac{m \Delta P_{out}}{\rho} \right\} + m w C_P (T_w - T_a) \right]$$

In this case, the angle of incidence is given by Equation 12 (Kalogirou et al., 2016):

$$\cos \theta = \sin \phi (\sin \delta \cos \beta + \cos \delta \cos \gamma \cos \omega \sin \beta) + \cos \phi (\cos \delta \cos \omega \cos \beta - \sin \delta \cos \gamma \sin \beta) + \cos \delta \sin \gamma \sin \omega \sin \beta$$

where δ is the Declination angle, n is no of day in the yea, β is the slope angle, ϕ is the latitude of the location, γ is the surface azimuth angle and ω is the hour angle. Tilt factor for sun light radiation is given by Equation 13.

$$r r_b = \frac{\cos \theta}{\cos \theta_z}$$

$$\cos \theta_z = (\sin \phi * \sin \delta) + (\cos \phi * \cos \delta * \cos \omega)$$

Radiation shape factor for the diffused radiation is given by Equation 15 while the tilt factor for reflected radiation is given by Equation 16.

$$R_d = \frac{(1 + \cos \beta)}{2}$$

$$r_r = \frac{\rho (1 - \cos \beta)}{2}$$

Instantaneous efficiency is given by Equation 17 while exergy (e) is given by Equation 18

$$\eta_i = \frac{\dot{m} C_P (T_2 - T_1)}{I_t * A_p}$$

$$e = (h - h_o) - T_o (S - S_o) + \frac{V^2}{2} + g z \quad kJ/kg$$

The top loss coefficient is given by Equation 19.

$$U_T = \left(\frac{N}{\frac{c}{T_{pm}} \left[\frac{(T_{pm} - T_a)}{(N+f)} \right]^e + \frac{1}{h_w}} \right)^{-1} + \frac{\sigma(T_{pm} + T_a)(T_{pm}^2 + T_a^2)}{\frac{1}{\varepsilon_p + 0.00591Nh_w} + \frac{2N+f-1+0.133\varepsilon_p}{\varepsilon_g} - N}$$

Where f = focal distance, h_w = wind heat transfer, ε_p = emittance of plate, N = number of glass covers, c = collector factor, e = emissive power, ε_g = emittance of glass (0.88), T_a = ambient temperature and T_{pm} = mean plate temperature. The bottom loss coefficient is given by the relation in Equation 20:

$$U_B = \frac{k}{L}$$

Where k is thermal Conductivity (Urethane) = 0.028 and L = thickness of urethane layer = 30mm = 0.03. Edge loss coefficient can be estimated using Equation 21:

$$U_e = \frac{\frac{k}{L_e} \times P \times C_t}{C_A}$$

Where k = thermal conductivity of insulation (polyurethane), L_e = Thickness of edge insulation, P = Perimeter of collector, C_t = Thickness of Collector, C_A = Collector Area. The useful energy is given by Equation 22.

$$Q_u = A_c(S - U_L(T_{pm} - T_A))$$

The bond conductance C_b is given by Equation 23.

$$C_b = \frac{K_b b}{\gamma}$$

Where K_b is the bond conductivity, b = bond Width and γ = Bond Thickness. The radiation tilted surface derived from the angle of incidence on the inclined surface is given by Equation 24.

$$R_b = \frac{\cos \theta}{\cos \theta_z}$$

The amount of solar energy received by the collector can also be obtained by the product of the rate of transmission of the glass cover and the absorption rate of the absorber and this is substituted in Equation 25.

$$Q_{rec} = I_n A(\tau\varepsilon)$$

where Q_{rec} is the solar energy received, τ is the transmissivity and ε is the absorption rate. As the collector absorbs heat its temperature gets higher than that of the surrounding and heat is lost to the atmosphere by convection and radiation. The rate of heat loss depends on the collector overall heat transfer coefficient, collector temperature and ambient temperature respectively. This is represented mathematically by Equation 26.

$$Q_{loss} = U_T A (T_p - T_a)$$

where Q_{loss} is the heat loss, U_T is the overall heat transfer coefficient, T_p is initial temperature of the absorber plate and T_a is the ambient temperature respectively. Thus the rate of useful energy extracted by the collector is the rate of extraction under steady state conditions and it is proportional to the useful energy absorbed by the collector. This is given by Equation 27.

$$Q_{usfl} = Q_{recv} - Q_{loss} = I_n A (\tau \varepsilon) - h A (T_p - T_a)$$

where Q_{usfl} is heat energy gained by the solar collector. The heat removal factor F_R is given by Equation 28.

$$F_R = \frac{m C_p (T_{out} - T_{in})}{A ((\tau \varepsilon) - h (T_p - T_a))}$$

$$Q_{usfl} = A F_R [I_n (\tau \alpha)_{av} - U_L (T_p - T_a)]$$

$$\frac{Q_{usfl}}{A} = q = I_n (\tau \varepsilon) - h (T_p - T_a)$$

13. Conclusion

Point focus solar collectors are widely used in solar energy systems to concentrate sunlight onto a small area, thereby increasing the efficiency of energy conversion. However, the performance of these collectors can be influenced by various factors. Solar irradiance, tracking accuracy, receiver design, and environmental conditions are key factors that need to be carefully considered during the design and operation of these systems. By understanding and optimizing these factors, researchers and engineers can enhance the performance and overall efficiency of point focus solar collectors, thereby contributing to the advancement of solar energy technologies. Energy storage is a critical component for the successful integration of PFSCs into the energy grid. While various storage options exist, each has its own advantages and limitations. Thermal energy storage systems, such as sensible and latent heat storage, offer high energy density and long-term storage capabilities. Electrochemical energy storage, including batteries and supercapacitors, provide high power density and fast response times. Chemical energy storage, particularly hydrogen production, shows promise but requires further research and development. A combination of these storage technologies, tailored to specific applications, may be the key to unlocking the full potential of PFSCs in the future. Advancements in point focus solar collectors have revolutionized the renewable energy sector by increasing their efficiency, reliability, and overall performance. The development of high-efficiency solar cells, improved concentrating technologies, thermal energy storage systems, and hybridization with other energy sources have significantly enhanced the viability of point focus solar collectors.

These advancements pave the way for a sustainable and cleaner energy future, reducing our dependence on fossil fuels and mitigating the impacts of climate change.

Point focus solar collectors possess several key characteristics that make them a viable option for harnessing solar energy. Their high concentration ratios, tracking mechanisms, thermal storage capabilities, and optical efficiency contribute to their overall performance. However, it is essential to acknowledge their limitations, such as weather sensitivity and initial cost. By understanding these characteristics, policymakers, researchers, and industry professionals can make informed decisions regarding the implementation and optimization of point focus solar collectors. Point focus solar collectors have a wide range of applications, from power generation to industrial processes, desalination, and heating/cooling systems. These collectors offer a sustainable and efficient way to harness solar energy, contributing to the global transition towards clean and renewable sources of power. As technology continues to advance, the potential for point focus solar collectors to revolutionize various sectors and mitigate climate change becomes increasingly evident.

Abbreviations

GHG	Greenhouse gas
PFSC	Point focus solar collector
CSP	Concentrated Solar Power
LCOE	Levelized cost of electricity
TES	Thermal energy storage
PCMs	Phase change materials
PTCs	Parabolic trough collectors
PV	photovoltaic
n	Number of days
δ	Declination angle
ω	Hour angle
γ_s	Solar Azimuth Angle
θ_z	Zenith angle
ϕ	latitude of site
θ	Incidence angle
β	Tilted angle
R_d	Radiation shape factor for the diffused radiation
$G_{b,t}$	Radiation on tilted surface

G_h	Radiation on horizontal surface
S_i	Optical absorbed solar flux
U_l	Heat loss by emittance, reflection and optical efficiency of glazing.
E_d	Heat loss due to absorber plate temperature difference with fluid
η_i	Instantaneous efficiency
e	Exergy, Emissive power
f	Focal distance
h_w	Wind heat transfer
ε_p	Plate emittance
N	Number of glass covers
c	Collector factor
ε_g	Glass emittance
T_a	Ambient temperature
T_{pm}	Mean plate temperature
k	Thermal conductivity
L	Thickness of urethane layer
L_e	Thickness of edge insulation
P	Perimeter of collector
C_t	Thickness of collector
C_A	Collector area
K_b	Bond conductivity
b	Bond width
γ	Bond thickness
Q_{rec}	Solar energy received
τ	Transmissivity
ε	Absorption rate
Q_{loss}	Heat loss
U_T	Overall heat transfer coefficient, top loss coefficient
T_p	Initial temperature of absorber plate
T_a	Ambient temperature
Q_{usfl}	Heat energy gained by the fluid
U_B	Bottom loss coefficient

F_R	Heat removal factor
Q_u	Useful energy
U_e	Edge loss coefficient
U_T	Top loss coefficient
R_b	Geometric factor, radiation tilted surface
Q_{use}	Available energy in the solar collector
γ	Surface azimuth angle
rr_b	Tilt factor for sun light radiation
r_r	Tilt factor for reflected radiation
C_b	Bond conductance

Abstract

The current study aimed to analyze the relationship between parenting styles and emotional intelligence in adolescents. The main objective of this paper is to examine the correlation between leadership styles and emotional intelligence in adolescents. To achieve this goal, we surveyed 100 parents and 100 adolescents from different regions in Kosovo. In this study, we used quantitative methodology, and through the measurement instrument for parenting styles and the measurement instrument for emotional intelligence, we collected data to test our hypotheses. The results of the data analysis showed that the relationship between emotional intelligence and parenting styles is assessed through Spearman's rho correlation. The results indicate a small negative correlation (-0.181) between emotional intelligence and the authoritarian parenting style, but this correlation is not statistically significant (p-value: 0.072). For other parenting styles (permissive, authoritative, neglectful), the results show a weak and statistically insignificant correlation with emotional intelligence. The findings of this study can be used to develop appropriate strategies to assist parents and health professionals in dealing with the challenges of the relationship between parenting styles and emotional intelligence in adolescents.

Keywords: adolescent, parents, parenting styles, emotional intelligence, relationship.

Introduction

Studies of parent-adolescent relationships have grown tremendously recently with implications for emotional intelligence. This study examines the relationship between parenting styles and emotional intelligence in adolescents. Adolescence is a critical developmental period that requires parents and youth to renegotiate their relationship (Reis & Youniss, 2004).

The term emotional intelligence was coined by two researchers, Peter Salavoy and John Mayer in their article "Emotional Intelligence" in the journal *Imagination, Cognition and Personality* in 1990. It was later popularized by Goleman in his 1995 book "Emotional Intelligence".

Goleman defined Emotional Intelligence as a set of skills and characteristics that drive leadership performance. Emotional intelligence is most commonly defined as the ability to perceive, use, understand, manage and handle emotions (Goleman, 1995). Emotional intelligence is the ability to perceive, interpret, demonstrate, control, evaluate and use emotions to communicate and relate to others effectively and constructively (Bar-On, 2000).

Intelligence also refers to the ability to recognize one's own and others' feelings, to motivate oneself, and to manage emotions well in oneself and in our relationships. Unlike intelligence quotient (IQ) which changes little after the teenage years, emotional intelligence (EI) is largely learned, not genetically fixed or developed in early childhood, but continues to develop and is largely determined by the environment (Goleman, 1998).

The way parents discipline their children leads to deep and lasting consequences for the child's emotional life. The literature on how parents treat their children shows that some parents are indifferent to their children while some show warmth (Goleman, 1998).

Benson & Harris, (2002) asserted that parenting styles have a strong effect on children's emotions. Parenting styles have been found to influence children's self-control, sociability and social competence (Benson & Harris, 2002).

Parenting style is defined as a constellation of attitudes and behaviors of parents towards children and an emotional climate in which parental behaviors are expressed ((Walker, 2008). In the field of parenting, the typological approach of Pepe & McCann, (2003) for the concept of parenting has had a tremendous impact. They classified parenting into four types based on responsiveness and demand (Pepe & McCann, 2003).

The democratic parenting style is characterized as highly responsive and demanding. Democratic parents provide not only support and warmth, but also clearly defined rules and consistent discipline (Pepe & McCann, 2003).

The authoritarian parenting style is characterized as low in responsiveness, but high in demand. Parents of this style tend to use hostile control or harsh punishment in an arbitrary manner to achieve compliance, but they rarely provide explanations or allow verbal give-and-take (Pepe & McCann, 2003).

Permissive parenting style is characterized as low in demanding but high in responsiveness. Permissive parents are responsive to their children and satisfy their children's needs, but they fail to impose appropriate discipline, display behavioral control, or make demands for mature behavior (Pepe & McCann, 2003).

Finally, the neglectful parenting style is characterized as low in responsiveness and demanding. Neglectful parents are parent-centered and rarely involved in child-rearing practices. They neither provide warmth nor set rules for their children (Pepe & McCann, 2003).

Variations in parenting styles and qualities of parent-adolescent relationships are longstanding research topics in developmental and family psychology. Previous research has shown that parenting styles are critical family context factors that are closely related to parent-adolescent relationships (Herman, 2007). Despite the large number of studies on the links between parenting styles and emotional intelligence, existing research has mainly focused on the direct effects of parenting styles on parent-adolescent relationships, while the underlying mechanisms through which parenting styles relate to parent-adolescent (Assor, Roth, & Deci, 2004). Previous research has shown that parenting styles are critical family context factors that are closely related to adolescent emotional intelligence. A study of emotional intelligence and perceived parenting styles among adolescents in a rural area in Karnataka concluded that those who reported poor parenting also appeared to report low emotional intelligence in self-awareness, motivation, and social skills (Bar-On, 2000; Braberry & Greaves, 2009). Schaster & Singer, (1962) focused on "parenting styles and traits of emotional intelligence in adolescence". The sample included 127 adolescents from Greek schools, 15–19 years old. They used perceived parenting (Authority Questionnaire – PAQ) and trait IE (Trait Emotional Intelligence Questionnaire – Adolescent Short Form – TIEQue–ASF) The results of the study showed that parenting styles and IE trait were statistically significant for authoritarianism ($b = 0.27, z = 3.92, p < 0.001$) and marginally significant for authoritarianism ($b = -0.10, z = -1.77, p = 0.08$) (Yoder, 2005).

LITERATURE REVIEW

1.1. The influence of parenting styles on emotional intelligence in adolescents

Parenting styles play an important role in the development of emotional intelligence in adolescents. How parents handle and respond to their children's emotions can influence how they develop and express their emotions in the future. A supportive and understanding parenting style, where parents help teenagers understand and manage their emotions, can help develop emotional intelligence. Parents who show care and attention to their children's emotions help them learn how to recognize and understand their emotions, as well as better manage emotional reactions in their relationships with others (Roco, 2004).

On the other hand, interruptive or overbearing parenting styles, where parents have little time or attention to express concern for their adolescent's emotions, can have a negative impact on emotional intelligence. When adolescents do not have the opportunity to learn how to recognize and manage their emotions effectively, they may encounter challenges in their interpersonal relationships and in resolving emotional conflicts (Bar-On, 2000).

Studies have shown that parents who encourage free expression of emotions, awareness and understanding of them, and provide children with the tools to manage their emotions in a healthy way, are more likely to produce teenagers with higher emotional intelligence (Pepe & McCann, 2003).

To increase emotional intelligence in teenagers, it is important for parents to be positive role models in managing emotions and promote an environment where teens feel safe to express and express their emotions. This includes listening carefully, supporting positive emotions, and responding comprehensibly to the adolescent's difficult emotions. An authoritarian parenting style, where parents set strict rules and control teenagers' emotions, can hinder the development of emotional intelligence. In this case, adolescents may feel limited in expressing their emotions and do not learn how to manage them in a healthy and constructive way (Schute, Malouff, & Hall, 1998).

An overly permissive or unconcerned parenting style, where parents do not provide help and guidance in managing emotions, can also have a negative impact on adolescent emotional intelligence. Without parental support, they may encounter challenges in knowing and managing their emotions and may have difficulties with social connections and behaviors (Landa, Lopez, & Martinez, 2006).

Parents who combine wise and supportive ways of interacting are more likely to positively influence the development of adolescent emotional intelligence. This involves a combination of clear limits and clear rules with support and understanding of teenagers' emotions. Parents who provide guidance and assistance in managing emotions and encourage their recognition and understanding help adolescents develop healthy emotional intelligence (Walker, 2008).

1.2. Emotional variability during interactions in the parent-adolescent relationship

Some conflicts with parents can be considered a normal part of family relationships during adolescence and these conflicts are thought to influence the development of autonomy and individualization of adolescents (Caraso & Salovey, 2004). However, too much conflict is dangerous for adolescents' psychosocial adjustment and well-being. Adolescents who have more conflicts with their parents have more externalizing and internalizing problems; lower levels of self-esteem, well-being and adjustment to school; and more frequent substance use. This may reflect two-way processes: Adolescent conflicts with parents may lead to lower psychosocial adjustment, and their adjustment problems may cause more conflict with parents. The conditions under which parent-adolescent conflicts are positively related to parent-adolescent relationship development are less clear. Therefore, to understand more about the role that conflicts play in reshaping parent-adolescent relationships toward more equality, we need to understand what parents and adolescents do during conflict interactions, that is, rather than exploring the number of conflicts that parents and teenagers have, we must consider what they do during their conflicts (Dihoru, 2009).

An important aspect of conflict interactions is the extent to which parents and adolescents display different emotions and flexibly switch between these emotions during conflicts. This flexibility to express different emotions, or emotional variability, enables parent-adolescent dyads to explore new patterns of interaction. When parents and children can express negative and positive emotions during conflicts, they are more likely to find alternative patterns of interaction and renegotiate their relationship. For example, when parents and children can express their anger and frustration at each other during a disagreement, but also show love to each other, express interest in each other's thoughts, and laugh about the conflict, conflicts can help them find new ways to connect with each other. Parents and children who get stuck in anger or other negative emotions, or who only express positive emotions to each other and are afraid to express anger, may have more trouble renegotiating their relationship. Thus, greater emotional variability during parent-adolescent interactions involving conflict reflects

behavioral flexibility, or the ability to effectively adapt and reorganize behavior in response to the various interpersonal and contextual demands associated with adolescence (Roco, 2004). .

Focusing on emotional variability addresses the structure of parent-adolescent relationships and interactions rather than the content. Aspects of relationships are usually evaluated as relatively static characteristics and changes are examined over a long period. Short-term fluctuations in behavior during interactions are often ignored or attributed to lower reliability and measurement error. However, since moment-to-moment interactions are the proximal engines of development, these fluctuations may be a key feature of relationships and relationship development. Thus, investigating variability during parent-adolescent conflict interactions can expose underlying relational processes (Wood & Tolley, 2003).

A dynamic systems approach considers relationships as self-organizing developmental systems that organize behavior around coherent and stable patterns of interaction or attractors. The system is multistable, with multiple attractors or preferred interaction patterns coexisting. Systems tend to stabilize and settle into interaction patterns or attractive states that occur regularly, but at the same time, the system is also characterized by some variability. A dynamic systems approach suggests that this variability reflects internal processes in which relationship characteristics oscillate around an equilibrium from which the relationship withdraws (Petrides, 2004). Adaptive relationships can be flexibly rearranged when changes occur 27. In these relationships, dyad members can adapt easily and fluidly to environmental changes. For example, a mother and daughter may express negative emotions when they disagree about the daughter's curfew, but express mutual support and trust when talking about fun activities. Lack of flexibility (also called rigidity) can be conceptualized as a limited capacity to switch between behaviors in response to changes in the environment or developmental changes, for example, when mother and child cannot exit a negative state when they switch from their conflict about curfews to talk about fun activities, or when they have conflicts in different domains (Mayer & Salovey, 1993).

METHODOLOGY

The methodology of this study will be quantitative. The data collection is primary in nature because the data collection is done with a structured questionnaire prepared for this purpose which will be completely anonymous.

During the work and elaboration of this topic, we have used some of the tools, methods, and techniques most suitable for the study and research of this thesis. The study data were processed with the statistical computer package through the SPSS program.

The main purpose of this paper was to analyze the relationship between leadership styles and emotional intelligence in adolescents. This study also aimed to identify which styles were used more by parents as well as the differences in the use of parenting styles in the context of gender, education level and parents' place of residence. The samples of this research were parents and teenagers. 100 parents and 100 teenagers from different countries in the Kosovo Region participated in this study. The study questionnaire was applied online through the google forms application. In this research, two measuring instruments will be applied: The instrument for parenting styles is standardized Robinson et al, (2020) and the Instrument for measuring emotional intelligence is a standardized questionnaire by Schutte, (1990) analyzing each question in detail so that the questions trigger the variable, and are appropriate to the topic. The survey of respondents started on April 10, 2023 and ended on May 30, 2023. Before starting the survey, we informed the respondents about the purpose of our research and the security of the anonymity of their data.

The hypotheses of this study are:

H1 There is a positive correlation between parenting styles and emotional intelligence in adolescents

H2 Gender, age and place of residence do not have a significant impact on the emotional intelligence of teenagers

RESULTS

In this part of the paper, we have presented the results achieved during this research. For the most comprehensible and logical presentation of the results from the statistical analyses, we have presented the data in the form of tables.

Table 1.
Gender of parents

		N	Percent
Valid	Female	54	54.0%
	Male	46	46.0%
	Total	100	100.0%

Table 1 presents the parents' gender and the frequencies for each gender. From the table, it can be seen that 54% of parents are women, while 46% are men. This shows a balanced representation of the parents' gender in this study group. It is noted that the number of female parents is greater than the number of male parents, but the difference is not very large.

Table 2.
Age of parents

	N	Minimum	Maximumi	Mean	Deviation Std
Age of parents	100	36.00	65.00	51.6100	7.01642

Table 2 presents the data related to the age of the parents and some important statistics of their analysis. The table shows that there are 100 parents included in the study, the minimum value of the parents' age is 36 years, while the maximum value is 65 years. The mean age of the parents is 51.61 years and the standard deviation is 7.01, indicating that the ages of the parents have a certain distribution from the mean.

Table 3
Adolescent gender

		N	Percent
Valid	Female	60	60.0%
	Male	40	40.0%
	Total	100	100.0%

Table 4 presents the gender of the adolescents in the study. The table shows that of the total of 100 teenagers included in the study, 60% of them are female while 40% are male. Based on the data in the table, we can conclude that there is a greater representation of women than men in the group of teenagers included in the study.

Table 4
Adolescent age

	N	Minimum	Maximum	Mean	Deviation Std
Adolescent age	100	16.00	21.00	18.1200	1.51277

Table 5 shows the data related to the age of the adolescents in the study. The table shows that in the group of 100 teenagers included in the study, their average age is 18.12 years. The minimum age of the adolescents in the study is 16 years, while the maximum age is 21 years. The standard deviation of the teenagers' age is 1.5. Based on the data in the table, we can observe that the teenagers in the study have an average age of about 18 years, with a considerable difference between their minimum and maximum ages.

H1. There is a positive correlation between parenting styles and emotional intelligence in adolescents

Table 5.
Correlation between emotional intelligence and parenting styles

			Emotional intelligence	Authoritative style	Permissive style	Collaborative style	Neglecting style
Spearman's rho	Emotional intelligence	Correlation coefficient	1.000	-.181	.033	-.016	.049
		Sig.	.	.072	.742	.877	.627
		N	100	100	100	100	100

Based on table 8, where the correlation between emotional intelligence and parenting styles is presented, we can evaluate hypothesis H1.

In this case, the relationship between emotional intelligence and parenting styles was assessed through Spearman's rho correlation. The results show a small negative correlation (-0.181) between emotional intelligence and authoritarian parenting style, but this correlation is not statistically significant (p-value: 0.072). For other parenting styles (permissive, cooperative, neglectful), the results show a weak and statistically non-significant correlation with emotional intelligence.

Based on these results, we cannot accept hypothesis H1 that there is a positive correlation between parenting styles and emotional intelligence in teenagers. There is insufficient evidence to support such an association in this study.

H2. Gender, age and place of residence do not have a significant impact on the emotional intelligence of adolescents.

Table 6.

The influence of gender, age and place of residence on the emotional intelligence of adolescents

Model	R	"R squared	Adjusted R Square	Std. Error of the Estimate
	.189 ^a	.036	.006	.17004

Table 9 shows the results of the regression model regarding the influence of gender, age and place of residence on emotional intelligence. The correlation value (R) is very small (0.189), it shows that the influence of these factors is limited. The value of "R factor" is 0.036, which indicates a very small and not statistically significant effect. Accordingly, there is no consistent or strong interaction between emotional intelligence and these variables. The value of the estimate of the standard error (Std. Error) is also small (0.17), indicating that the estimate of the model is insignificant.

Table 7.

ANOVA analysis for the influence of gender, age and place of residence on the emotional intelligence of adolescents

Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	.103	3	.034	1.185	.320 ^b
	Residual	2.776	96	.029		
	Total	2.879	99			

Table 10 presents the ANOVA analysis to assess the influence of gender, age and place of residence on emotional intelligence. The result of the ANOVA analysis shows that there is no statistically significant impact, since the F-test value is small (1.18) and the p-value is above the significance level (0.32).

Tabela 8.

Coefficients for the influence of gender, age and place of residence on the emotional intelligence of adolescents

Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	4.542	.252		18.024	.000
	Adolescent gender	-.059	.036	-.170	-1.631	.106
	Adolescent age	-.008	.012	-.072	-.683	.496
	Residence of teenagers	-.051	.045	-.115	-1.123	.264

Table 11 presents the coefficients for the influence of gender, age and place of residence on emotional intelligence. The standardized coefficients (Beta) for all variables (adolescent gender, adolescent age, adolescent residence) are small and not statistically significant (t-values are small and p-values are above the level of significance).

Based on these results, we can conclude that gender, age and place of residence do not have a significant impact on the emotional intelligence of teenagers and thus the hypothesis H2 is accepted.

CONCLUSIONS AND RECOMMENDATIONS

From the results we conclude that there is no significant correlation between emotional intelligence and authoritarian parenting style. This result shows that teenagers with a high level of emotional intelligence are not particularly influenced by the authoritarian parenting style. Likewise, we did not find significant correlations between emotional intelligence and other parenting styles such as abusive, cooperative and neglectful. This suggests that parenting styles do not have a significant impact on the development of emotional intelligence in adolescents. If we look from a demographic perspective, the results show that there is no significant influence of gender, age and place of residence on the level of emotional intelligence of teenagers. This means that emotional intelligence does not vary significantly by these demographic variables. Also, we found no statistically significant differences in parenting styles based on parents' gender and place of residence.

These results indicate that there is a need for more studies and research to better understand emotional intelligence and parenting styles in teenagers. It may be interesting to include different methods of measuring emotional intelligence and to analyze more contextual factors to find other potential associations. Longitudinal studies can also provide a broader picture and help identify changes over time in emotional intelligence and parenting styles.

Moreover, by paying attention to the cultural context, a fuller and broader understanding of emotional intelligence and parenting style in the global context can be created. By developing these recommendations and continuing research in this area, we can improve our understanding of emotional intelligence and parenting styles in adolescents, influencing education and child rearing policies and practices in a positive way..

RECOMMENDATIONS

- We recommend that parents be aware of their parenting style. Understand how your parenting affects your teen's emotions and behavior. Once you understand your style, you can make improvements and adapt your parenting style to improve your relationship with your teen.
- We recommend promoting open and sensitive communication with your teenager. Try to create an environment where the teenager feels heard and understood. Listen carefully, respond sensitively, and express your emotions with him constructively.
- We recommend teaching and promoting emotional intelligence in the adolescent. Help them understand, express and manage their emotions in a healthy way. You can use techniques such as developing emotional awareness, identifying different emotions, and practicing stress management strategies.
- We recommend creating a strong emotional connection with your teenager. Creating an atmosphere of warmth, love and trust helps create emotional connection. You can invest time in joint activities, express your love and support, and create special moments for both parties.
- We recommend considering the cultural and social context. Learn about the influence that culture and society have on parenting and emotional intelligence. If you have a particular cultural context, adapt to match your teen's needs and promote positive values that help emotional connection.

Özet

Bu araştırmada bezelye bitkisinin derin öğrenme yöntemi ile yapılan eğitim uygulaması üzerinde çalışılmıştır. Makinalı hasatta bezelye bitkisinde bakla rengi bitkinin rengi ile aynı olduğu için ayırt edilmesi zordur. Bundan dolayı özellikle robotik seçici hasat uygulamalarında zorluk yaşanmaktadır. Yaptığımız çalışmada yetiştirildiği tarım alanında renginden dolayı bitki üzerinde seçilmesi ve toplanması vakit alan bezelyenin, robotik hasat uygulamalarında kullanılmak üzere derin öğrenme ile bitki üzerinde tanımlanması ve yapraktan ayrılması amaçlanmıştır. Derin öğrenme metodu için YOLOv5 ailesinin nano-small-medium ve large modelleri kullanılmıştır. Oluşturulan modellere göre ağımız eğitilmiştir. Eğitilen modeller test setiyle kontrol edilmiştir. Test sonucunda elde edilmiş olan tüm metrik değerleri incelenmiştir. En başarılı model YOLOv5l algoritmasıyla, 640x640 boyutundaki görsellerin 20 Batch, 95 Epoch ile eğitilmiş model olduğu görülmüştür. Model değerleri sonuçları “metrics/precision”, “metrics/recall”, “metrics/mAP_0.5” ve “metrics/mAP_0.5:0.95” olarak incelenmiştir. “YOLOv5 large” modelinin metrik verilerinin diğer modellerle kıyaslandığında daha yüksek olduğu tespit edilmiştir. Ölçülen değer Model 4: Size: 640x640, Batch: 20, Epoch: 95, Algorithm: YOLOv5l ‘dur. Modelin başarı oranı 95 epoch için F1 score %90,10, precision %92,59, recall %83,27, mAP %64,20’dir. Buradan “Model 4”in robotik bezelye hasadında bezelyenin bitki üzerinde ayırt edilmesinde kullanılacak en iyi tespit modeli olduğu anlaşılmıştır.

Anahtar Kelimeler: Bezelye, YOLOv5, tanımlama, hasat

YOLOV5 DETECTION OF PEA(*pisum sativum*) ON THE PLANT BY IMAGE PROCESSING METHOD

Abstract

In this research, the training application of pea plant with deep learning method was studied. In machine harvesting, it is difficult to distinguish the pod colour of the pea plant because it is the same with the colour of the plant. Therefore, it causes difficulties especially in robotic selective harvesting applications. In our study, pea, which take time to be selected and collected on the plant due to their colour in the agricultural field where they are grown, were identified on the plant and separated from the leaves with deep learning to be used in robotic harvesting applications. For the deep learning method, nano-small-medium and large models of the YOLOv5 family were used. Our network was trained according to the models created. The trained models were checked with the test set. All metric values obtained as a result of the test were analysed. It was seen that the most successful model was the model trained with the YOLOv5l algorithm with 20 Batch, 95 Epoch for 640x640 images. The results of the model values were analysed as "metrics/precision", "metrics/recall", "metrics/mAP_0.5" and "metrics/mAP_0.5:0.95". It was determined that the metric data of the "YOLOv5 large" model was higher compared to the other models. The measured value is Model 4= Size: 640x640, Batch: 20, Epoch: 95, Algorithm: YOLOv5l. The success rate of the model is F1 score 90.10%, prediction 92.59%, recall 83.27%, mAP 64.20% for 95 periods. It is concluded that "Model 4" is the best detection model to be used in robotic pea harvesting to distinguish peas on the plant.

Keywords:Pea, YOLOv5, identification, harvesting

Giriş

Derin öğrenme, yapay sinir ağları ve öğrenme algoritmalarının çok katmanlı yapılarını kullanarak karmaşık ilişkileri modellemesidir. Büyük veri kümelerinde yüksek düzeyde öznitelik çıkarma ve desen tanıma yeteneğine sahiptir. Derin öğrenme, bilgisayarlara verileri insan beyninden esinlenerek işlemeyi öğreten bir yapay zeka (AI) yöntemidir. Derin öğrenme modelleri, doğru öngörü ve tahminler üretmek için resimler, metinler, sesler ve diğer verilerdeki karmaşık modelleri tanıyabilir. Görüntüleri tasvir etmek veya bir ses dosyasını metne dönüştürmek gibi tipik olarak insan zekası gerektiren görevleri otomatikleştirmek için derin öğrenme yöntemlerini kullanabiliriz (Anonim 1). Derin öğrenme, genelleştirme yeteneğine sahip yüksek boyutlu modeller kullanarak yüksek doğruluk için oldukça fazla etiketli veriye ihtiyaç duymaktadır (Saralioglu ve ark., 2022). Bu özelliği, derin öğrenmeyi eski ve sığ öğrenme yaklaşımlarından ayıran en önemli avantajlardan biri olup, derin öğrenme yöntemini küçük veri problemlerinde etkin kılmaktadır (Elmas, 2021). Derin öğrenmenin bir başka avantajı, geleneksel yöntemlere göre daha az mühendislik gerektirmesi ve mevcut hesaplama ve veri miktarındaki artışlardan kolayca faydalanabilmesidir (LeCun ve ark., 2015). Derin öğrenmenin birçok kullanım alanı bulunmaktadır. Bunlara görüntü ve ses tanıma, doğal dil işleme, oyunlar ve eğlence, sağlık alanı, otomotiv sektörü, finansal hizmetler, üretim ve zincir yönetimi, enerji sektörü, robotik ve otomasyonu örnek olarak verilebilir. Teknolojinin hızla gelişmesiyle kendine yeni uygulama alanları bulmaktadır. Derin öğrenme, karmaşık veri setlerindeki önemli ilişkileri keşfetme, geleneksel yöntemlere göre avantajlar sağlama ve çeşitli uygulama alanlarında etkili bir şekilde kullanılabilme gibi özellikleriyle dikkat çeken bir makine öğrenmesi alanıdır. Derin öğrenme tarım alanında birçok uygulama da kullanılmaya başlamıştır. Liakos ve ark. (2018) yılında yaptıkları bir araştırmada tarımsal üretim sistemlerinde makine öğrenmesinin kullanıldığı çeşitli alanları incelemiştir. Yapılan çalışma tarımsal verim tahmini, hastalık tespiti, yabancı ot tespiti, bitki kalitesi ve tür tanıma konularını kapsamaktadır. Haque ve ark. (2022) yılında oluşturdukları patlıcan için hastalık tespiti sistemi çalışmalarında 6 derin öğrenme modelini karşılaştırmışlardır. Her bir model inceleme sonucunda %99 bir başarı elde etmişlerdir. Zang ve ark. (2018) derin öğrenme tabanlı domates hasat robotu çalışmalarındaki deneysel sonuçları, 0,01 saniyeden daha kısa bir tahmin süresiyle ortalama %91,9 doğruluk oranıdır. Hidayah ve ark. (2022) yılında 4 grup ürün üzerinde derin öğrenme ile hastalık tespiti üzerine çalışmalarında YOLOv5 modeli ile ortalama hassasiyet değerini %94,2 olarak bulmuşlardır. (Fu ve ark., 2022) yılında yaptıkları hedef odaklı lahana

ilaçlama sistemi çalışmalarında YOLOv5 derin öğrenme modelinin kullanmışlardır. (Wang ve ark., 2022) yılında hıyar ıslahını desteklemek amacıyla modifiye edilmiş YOLOv5s derin modeline dayalı bir salatalık kök-ur nematodu tespit modeli çalışmalarında iyi bir performans elde ettiklerini vurgulamışlardır. Bu çalışmada YOLOv5 modelinin farklı uygulamalarının ana bitki ile neredeyse aynı renkte olan bezelye baklalarının hasat dönemleri ve bakla büyüklüklerinin tespit edilmesi amaçlanmıştır.

2. Materyal ve Yöntemler

2.1. Materyal

Bezelye Leguminosae familyasına ait bir sebzedir. Kültürü yapılan bezelyenin *Pisum arvense* ve *Pisum sativum* olmak üzere iki formu vardır (Özdemir, 2002). Bezelye, dünyanın pek çok ülkesinde yıl boyunca en fazla tüketilen baklagillerden birisidir. Genelde taze baklaları veya kuru taneleri için yetiştirilen bezelyenin ekiliş ve üretiminde, son yıllarda konserve ve dondurulmuş gıda sanayinin hızla gelişmesi önemli artışlar sağlamıştır (Öz ve Karasu, 2010). Protein kaynağı olarak kullanılan besin maddelerinin insan beslenmesindeki öneminin ne derece büyük olduğu artık yadsınamaz bir gerçektir. Bezelye bir baklagil bitkisi olarak havanın serbest azotunu bitkilerin alabileceği forma dönüştürmesi yanında, tanelerinin %20-30 gibi yüksek oranda protein içermesi, karbonhidratlarca yeterli; kalsiyum, demir ve özellikle fosforca zengin olması ayrıca çeşitli vitaminlere de sahip bulunması bakımından iyi bir bitkisel protein kaynağıdır (Akçin, 1988). Bezelye meyveleri bakla şeklindedir. Döllenmeden sonra taç yapraklarının dökülmesi ile meyve üzerinde sadece çanak yaprak kalır. Meyve birkaç gün içinde hızla gelişir. Bakla iki parçalı simetriktir. Tohum taslakları baklanın karın kısmında bulunan plesanta üzerinde sıralanmış durumda bulunur. Bezelye meyveleri çeşitlere bağlı olarak değişik uzunluklarda, değişik genişliklerde, düz veya kıvrık, küt uçlu veya sivri uçlu olabilirler. Meyvelerin boyu 3-15 cm eni 0,5-2,5 cm arasında değişir. Baklalar taze iken renkleri açık yeşilden koyu yeşile doğru değişkendir. Olgunlaşan baklalarda renk açık sarıdan kahverengiye kadar değişir. Bezelyede hasat olgunluğuna gelmiş baklalar en geç iki-üç gün içinde hasat edilmez. Hasat zamanında yapılmaz geç kalınırsa daneler unlu bir durum alır ve konservelik kalitesi düşer. Özellikle konservelik bezelyeler geniş alanlarda yetiştirilir ve hasadı makinalar ile yapılır. Küçük alanlarda ise hasat el ile kademeli olarak yapılmaktadır (Vural ve ark.2000).

2.2.Yöntem

Çalışma kapsamında nesne tespiti ve analizi hedeflenen bezelye sebzesinin veri setini hazırlarken, sera ve tarlada çekilmiş bitki fotoğrafları kullanılmıştır. Hasat esnasında ve yetiştirme sırasında Tekirdağ Naip Köyünde üretici tarlasından çekilmiş pek çok bezelye görseli toplanmıştır. Elde edilen görseller arasında, yapmış olduğumuz proje kapsamında değerlendiremeyeceğimiz görseller elenmiştir. Yapacağımız nesne tespit çalışması için sağlıklı olacak 45 adet görsel belirlenmiştir. Ayrıca her bir görselde birden fazla bezelye bulunabilmektedir. Şekil 1’de alınan görüntülerden örnekler gösterilmiştir.

Şekil 1. Üretici tarlasından alınan görüntü örnek resimleri

Çalışma kapsamında nesne tespiti ve analizi hedeflenen bezelye için veri setini hazırlarken tarlada çekilmiş bitki fotoğrafları kullanılmıştır. Bezelye bitkisi hasat olgunluk seviyesi durumundayken toplam 45 bitki fotoğrafı çekilmiştir. Her bir görselde birden fazla bezelye bulunmaktadır. 45 bitki görselin her birinde bezelye görüntüsünü içeren kısımların sınırlayıcı kutu alanı ile işaretlenmesi ve ait olduğu nesne sınıfı olan “bezelye” sınıfına atanması yapılmıştır. Etiketleme görüntüler üzerinde alan seçimleri, işaretlemeleri ve sınıf etiketlemeleri yapılmasını sağlayan popüler web sitesi olan Roboflow ile yapıldı. Şekil 2’de Etiket ekranı gösterilmiştir. Şekil 3’de modellerin eğitilmesi sırasında kullanılan eğitim seti verilmiştir.

Şekil 2. Etiketleme Ekranı

Şekil 3. Modellerin eğitilmesi sırasında kullanılan eğitim setinden görüntüler

Yapmış olduğumuz çalışmada, CNN yöntemiyle geliştirilmiş YOLO model ailesinin açık kaynak olarak geliştirilen YOLO (You Only Look Once) modeli seçilmiştir. YOLO bilgisayarla görme ve derin öğrenme alanında büyük ilgi gören son teknoloji nesne algılama sistemidir. YOLO, görüntülerdeki nesnelere gerçek zamanlı olarak yüksek doğruluk ve verimlilikle tespit etme ve konumlandırma yapmaktadır. Nesnelere tespit etmek için bölge önerme algoritmaları ve çoklu aşamalar kullanan geleneksel nesne tespit yöntemlerini kullanmamaktadır. Bu yöntemin yerine YOLO, nesne tespitini uzamsal olarak ayrılmış sınırlayıcı kutulara ve ilişkili sınıf olasılıklarına bir regresyon problemi olarak çerçeveleyerek farklı bir yaklaşım benimsemektedir. YOLO modelinin en önemli avantajlarından biri hızı ve verimliliğidir. YOLO görüntüleri gerçek zamanlı olarak işleyerek otonom araçlar, gözetleme sistemleri ve robotik gibi hızlı nesne tespiti gerektiren uygulamalar için uygun hale getirir. YOLO'nun tek aşamalı algılama yaklaşımı, sinir ağından tek bir geçişle tahminler yapmasına olanak tanıyarak birden fazla hesaplama ihtiyacını ortadan kaldırır ve işlem süresini önemli ölçüde azaltır. Hızına ve doğruluğuna ek olarak, araştırmacılar belirli uygulamalar için özelleştirmelerine olanak tanıyan açık kaynaklı uygulaması ve önceden eğitilmiş modellerin kullanılabilirliği nedeniyle yaygın olarak kullanılmaktadır. YOLO modeli gerçek zamanlı işleme yetenekleri, yüksek doğruluğu ve verimliliği ile nesne tespitinde devrim yaratmıştır. Tek aşamalı algılama yaklaşımı, hızı ve çok yönlülüğü, onu bilgisayarla görme ve ötesinde çok çeşitli uygulamalar için popüler bir seçim haline getirmiştir. Bu nedenlerle YOLO modeli seçilmiştir. YOLO modelinin birçok versiyonları vardır. Çalışmamızda bu versiyonlardan YOLOv5 modeli

kullanılmıştır. Ayrıca YOLOv5 'in alt modelleri olan n/s/m ve l (nano-small-medium ve large) modelleriyle derin öğrenme eğitimi için yapılmıştır.

Bezelye tespiti yapacak olan modelin eğitiminin başlatılması için, YOLOv5 modelinin bilgisayardaki konumuna gidildi ve burada bir Python çalıştırıcı editör açıldı. Ana dizinde bulunan ve YOLOv5 eğitimini sağlayan train.py programı, çalıştırılmak üzere kontrol edildi. Bu Python programının çalıştırılması, çeşitli parametreler ile özelleştirilebilmektedir.

Proje dahilinde, bezelye sebzesi için aşağıda yazılı olan kodlar içerisindeki parametreler ve düzenlemeler tercih edildi.

```
python train.py --img 640 --batch 20 --epochs 95 --data dataset.yaml --weights yolov5n.pt
python train.py --img 640 --batch 20 --epochs 95 --data dataset.yaml --weights yolov5s.pt
python train.py --img 640 --batch 20 --epochs 95 --data dataset.yaml --weights yolov5m.pt
python train.py --img 640 --batch 20 --epochs 95 --data dataset.yaml --weights yolov5l.pt
```

--img: Eğitimi yapılacak görsellerin YOLOv5 modeli tarafından düşürüleceği piksel boyutu. Varsayılan değeri 640x640 olarak belirlenmektedir ve burada da bu şekilde seçilmiştir.

--batch: Modeli eğitirken, ekran kartı tarafından bir seferde kullanılacak veri noktası paketi sayısıdır.

--epochs: Modelin eğitimi yapılırken, tüm eğitim verilerinin eğitilen ağa gösterilme, ağırlıkların güncellenmesi sayısıdır.

--data: Veri setini içeren dosyanın genel yol ve sınıf bilgisini içeren yaml dosyasının yoludur.

--weights: Modelin eğitiminde kullanılacak eğitim katsayılarını içeren ağırlık dosyasının konumudur.

Bu kod satırlarının doğru şekilde çalıştırılması sonucunda, modellerin eğitim işlemi başlamıştır. Program, öncelikle YOLOv5 dosyalarını kontrol edip, herhangi bir güncelleme durumunu kontrol etmektedir. Ardından, belirlenen döngü sayısı (epoch) boyunca eğitim işlemi yapılmaktadır.

Değerlendirme Göstergeleri;

Gerçek Pozitif (TP), doğru şekilde pozitif olarak kategorize edilen pozitif görüntülerin sayısını tanımlar.

Gerçek Negatif (TN), modelin Negatif bir örneği gerçekten Negatif olarak doğru şekilde tanımladığı belirli bir örnek sayısını gösterir.

Yanlış Pozitif (FP), negatif bir örneğin algoritma tarafından kaç örnekte yanlışlıkla pozitif bir örnek olarak tanımlandığını detaylandırır.

Yanlış Negatif (FN), algoritmanın pozitif bir numuneyi yanlışlıkla negatif olarak kategorize ettiği örnek sayısını gösterir.

Doğruluk (Accuracy): İncelenen sınıflandırma problemi dengeli sınıf dağılımına sahipse kullanılan metriktir. Sınıf dağılımının dengesiz olması durumunda, sınıf sayısı düşük olan sınıfı yakalama problemi yaşanabilmektedir.

$$\text{Accuracy} = \frac{\text{TN} + \text{TP}}{(\text{TP} + \text{FP} + \text{TN} + \text{FN})}$$

Hata Oranı (Error Rate): Probleme yanlış yapılan sınıflandırmaların/tahminlerin sıklığının oranını verir.

$$\text{Error Rate} = \frac{\text{FN} + \text{FP}}{(\text{TP} + \text{FP} + \text{TN} + \text{FN})} \text{ or } (1 - \text{Accuracy})$$

Precision (Kesinlik): Pozitif sınıf (1) tahminlerinin başarı oranıdır. Tahmin edilen pozitif sınıfların (1 olarak tahmin edilen sınıfların) gerçekte ne kadarının pozitif olduğunu gösteren metrik değeridir.

$$\text{Precision} = \frac{\text{TP}}{(\text{FP} + \text{TP})}$$

Recall (Duyarlılık): Pozitif sınıfın (1) doğru tahmin edilme oranıdır. Tahmin edilen pozitif sınıfların ne kadarının doğru tahmin edildiğini gösteren metrik değeridir.

$$\text{Recall} = \frac{\text{TP}}{(\text{TP} + \text{FN})}$$

F1-Score: Precision ve recall değerlerinin harmonik ortalamasıdır.

$$\text{F1 Score} = \frac{2 * \text{Precision}}{(\text{Precision} + \text{Recall})}$$

Mean Average Precision (Ortalama Kesinlik Ölçütü): Bu metrik, algılanan sınırlayıcı kutuların hassas ve geri çağırma değeridir. mAP değer skalası 0 ile 1 arasındadır. Elde edilen değerler ne kadar yüksek olursa kesinlik ölçütü o kadar iyi olacaktır. mAP, her sınıf için ayrı ayrı ortalama kesinlik (AP) ve ardından sınıf üzerindeki ortalama hesaplanarak bulunur. Hesaplanan mAP değeri 0.5'in üzerindeyse doğru pozitif olarak kabul edilir.

$$\text{mAP} = \frac{1}{C} + \sum_{k=1}^T P(k)\Delta R(k)$$

3.Araştırma Bulguları

YOLOv5 algoritmalarının sonuçlarının hata matrisi metriklerine göre sonucu F1 Score,Precision ,Recall ve Precision-Recall değer grafikleri incelenmiştir.Değer sonuçları Tablo 1’de verilmiştir.

Tablo 1.Değer Sonuçları

Model	Epoch	*F1 Score	Precision	Recall	Map@0.5:0.95	**F1 Score / Precision Recall
Yolov5n	95	72,05%	79,46%	63,33%	30,44%	0,70%
Yolov5s	95	88,12%	77,03%	83,33%	46,31%	0,80%
Yolov5m	95	87,82%	88,53%	77,18%	55,04%	0,82%
Yolov5l	95	90,10%	92,59%	83,27%	64,20%	0,87%

*NOT: Tablodaki F1 Score Değeri son Epoch değerlerine göre hesaplanmıştır.

**NOT: Tablodaki F1 Score Değeri (aynı zamanda Precision Recall) Hata Matrisindeki formüle göre hesaplanmıştır.

F1 Score / Precision Recall

Model 4: F1 skoru, bir sınıflandırma modelinin kesinlik (precision) ve duyarlılık (recall) metriklerinin harmonik ortalamasını temsil eden bir performans ölçüsüdür. F1 skoru, özellikle dengesiz sınıflandırma durumlarında, sınıflar arasındaki dengeyi değerlendirmek için kullanışlıdır. Bir modelin F1 skoru, kesinlik ve duyarlılığı bir arada değerlendirerek, bu iki metrik arasında bir denge sağlayıp sağlamadığını gösterir. Özellikle F1 skoru %0.87 olarak değerlendirildiğinde modelin orta seviyede bir denge sağladığını gösterir. Hem kesinlik hem de duyarlılık makul düzeydedir, ancak her iki metrik de mükemmel değildir. Bu durumda, modelin sınıflar arasındaki dengeyi korumaya çalıştığı ve hem yanlış pozitiflerin hem de yanlış negatiflerin dikkate alındığı bir strateji izlediği söylenebilir.

Precision:

Model 4: Precision (kesinlik), bir sınıflandırma modelinin pozitif olarak tahmin ettiği örneklerin gerçekten pozitif olan örnekler arasındaki oranıdır ve eğitimde Precision değeri %92,59 olarak belirlenmiştir. Bu değer, modelin pozitif olarak tahmin ettiği örneklerin yaklaşık olarak %92,59'unun gerçekten pozitif olduğunu gösterir. Yüksek bir kesinlik değeri, modelin pozitif tahminlerinin çoğunlukla doğru olduğunu gösterir.

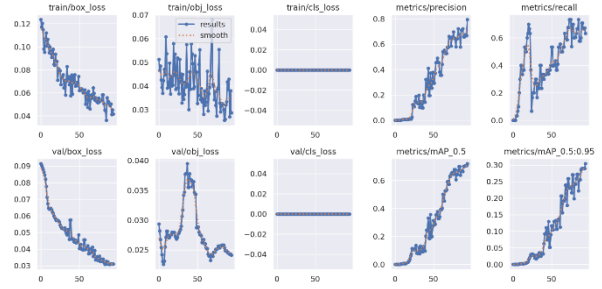

Recall:

Model 4: Recall değeri %83,27olarak belirlenmiştir. Bu değer, modelin gerçek pozitif örneklerin yaklaşık olarak %83,27'ini doğru bir şekilde tespit ettiğini gösterir. Recall, genellikle özellikle yanlış negatiflerin kritik olduğu durumlarda dikkate alınır. Yüksek bir recall değeri, modelin pozitif sınıfı kaçırmama eğiliminde olduğunu gösterir. Ancak, bu durumda, precision (kesinlik) değeri de göz önünde bulundurulmalıdır. Çünkü yüksek recall değerleri genellikle daha düşük precision değerleri ile birlikte gelir.

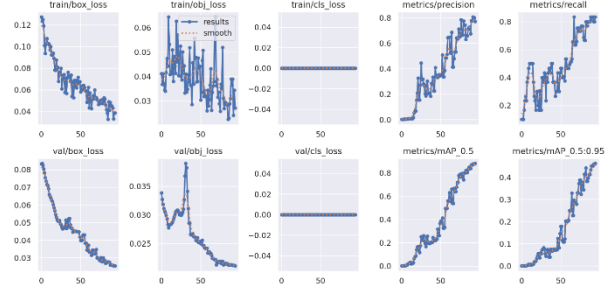

Loss Function:

Tablo 2. Loss Function sonuç grafiği

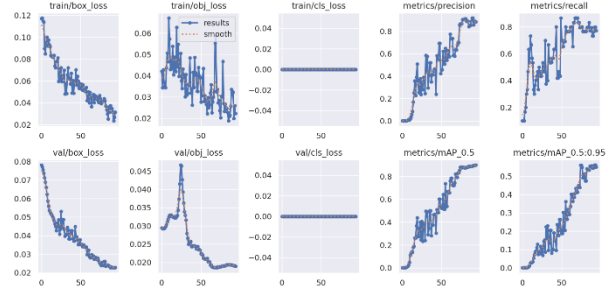

Görsel 1:Size: 640x640, Batch: 20, Epoch: 95, Algorithm: YOLOv5n

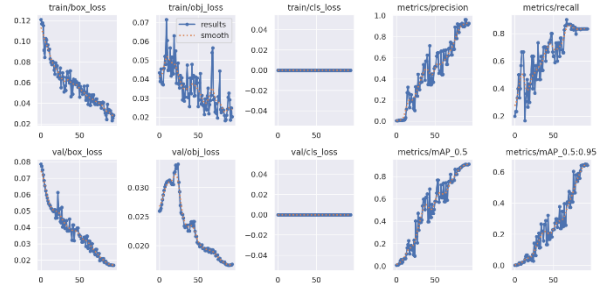

Görsel 2:Size: 640x640, Batch: 20, Epoch: 95, Algorithm: YOLOv5s

Görsel 3:Size: 640x640, Batch: 20, Epoch: 95, Algorithm: YOLOv5m

Görsel 4:Size: 640x640, Batch: 20, Epoch: 95, Algorithm: YOLOv5l

Model 4: Tablo 2'deki grafikler incelendiğinde Model 4'nin hatalarının zaman içinde genel olarak azaldığını görülmektedir. Bu durum, modelin eğitim süreci boyunca genellikle daha iyi hale geldiği ve tahminlerinin gerçek değerlere daha yakın olduğu anlamına gelmektedir.

Modellerin başarılarını ölçmek için modellerin nesne tespitlerindeki doğru tahmin başarıları ve ortalamaları önemli rol oynasa da, tek başına yeterli değildir. Modellerin, hem eğitim hem de doğrulama veri kümelerindeki kayıp değerleri de model başarısının incelenmesinde rol oynayan önemli parametrelerdir. Eğitim ve doğrulama verilerindeki sınıflandırma kayıplarını ifade eden train/cls_loss ve val/cls_loss parametreleri çok sayıda nesne sınıfının tespitini gerektiren modellerde önemli bir rol oynar. Modellerin kayıp değerlerini gösteren tablodaki dört parametre sütunu (train/box_loss, train/obj_loss, val/box_loss, val/obj_loss) değerleri incelendiğinde, eğitim setinde en az kayıp değerlerine sahip modelin, "Model 4" olduğu görülmektedir. Modellerin optimizasyon parametreleri (x/lr0-1-2) incelenmiştir. Tüm modellerin bu parametrelerdeki değerleri eşittir. Bu değerler tablo 3'de verilmiştir.

Tablo 3. Optimazasyon parametreleri

Model	x/lr0-1-2	Fark(Model 1'e)
Model4	0,00030842	
Model1	0,00030842	0
Model2	0,00030842	0
Model3	0,00030842	0

Son olarak, modellerin optimizasyon parametreleri (x/lr0-1-2) incelenmiştir. Tüm modellerin bu parametrelerdeki değerleri eşittir.

senaryolarda insan iş gücüne bağlı giderlerin azaltılabileceğini vurgulamıştır. Mohamed,R.(2023) derin öğrenme ile biberin dal üzerinde belirlenmesi ve sınıflandırması çalışmasında %93 'lük başarı elde etmiştir.Gai ve ark.(2021) Yolov4 derin öğrenme algoritması ile kiraz meyvesinin dal üzerinde tespitini yapmışlardır.Ma ve ark(2022) derin öğrenmeye dayalı kivi hasat robotu için algılama çalışmalarında %88.7 'lik bir hasat başarı oranı elde etmişlerdir.Li ve ark.(2022) dal üzerinde kiraz tespiti çalışmalarında derin öğrenme metodu kullanmışlardır. Wei ve ark.(2023) asma üzerinde derin öğrenme metodu ile üzüm salkımının tespitini yapmışlardır. Chen ve ark.(2021) F-YOLO modeli kullanılarak çay krizanteminin erken çiçeklenme aşamasının tespitini yapmışlardır. Zhang ve ark.(2021) robotik elma hasadı için elmanın yerinin tespitini de YOLOv4 derin öğrenme modelini kullanmışlardır. Çalışmanın robotik hasat tespit başarı oranını % 92.9 olarak tespit etmişlerdir.Guo ve ark.(2023) YOLOv4 derin öğrenme modeli kullanarak üzüm salkımlarının asma üzerinde tespitini yapmışlardır.Hou ve ark.(2023) robotik domates hasatında kullanılmak üzere YOLOv7 modellemesi ile domates tespit sistemi geliştirmişlerdir. *Tarım alanında verimlilik artışı, kaynakların daha etkin kullanımı ve sürdürülebilir tarım uygulamaları için derin öğrenme yöntemleri tarım alanında birçok farklı uygulama alanında etkili bir şekilde kullanılmaktadır.YOLO modeli birçok çalışmada başarılı bir şekilde kullanılmıştır. Yapılan çalışmalar incelendiğinde elde edilen sonuçlar ile yaptığımız çalışmada elde ettiğimiz sonuçlar paralellik göstermektedir. Bezelye hasadında kullanılmak için tasarlanacak robotik sistemlerin tanımlama performansını arttırmak için YOLOv5 'in bütün metrik değerleri incelenmiştir. Değerlerin incelenmesi sonucunda hangi modelin robotik hasat sistemlerinin geliştirilmesi ve optimizinde kullanılacağı tespit edilmiştir. Yapılan çalışma, robotik bezelye hasadı için derin öğrenme ile bitki üzerinde bezelyenin tespiti yapılmıştır. Eğitim seti 45 bezelye bitkisi görüntüsünden oluşan bir veri kümesi olarak hazırlanmıştır. Her bir görüntüde birden fazla bezelye bulunmaktadır. Hazırlanan veri seti ile eğitilen ağ tarlada alınmış video görüntüleri ve tarlada çekilmiş görüntülerle test edilmiştir. YOLOv5 modelinin alt varyatları ile test edilen ağda en başarılı sonucu Model 4(YOLOv5l) vermiştir .Başarı oranı 95 epoch için F1 score %90,10,presicion %92,59,recall %83,27, mAP %64,20'dir. Çalışma robotik bezelye hasadında kullanılmak üzere bezelye tanımlamadaki YOLOv5 modelinin potansiyelini göstermektedir.*

Abstract

Due to teacher burnout, thousands of educators worldwide quit their jobs in the classroom each year. Excessive job stress can lead to physical and emotional tiredness, which is known as teacher burnout syndrome. Excessive workloads, toxic settings, student conduct, a lack of autonomy, or being closely monitored by the administration are the main causes of burnout. Teachers who are under stress begin to feel unappreciated and alone. Teachers who experience burnout may have anxiety, sadness, cardiovascular illness, or even pass away. This study examines the body of research on teacher burnout and successful stress-reduction initiatives. Staff members are healthier, burnout is decreased, and teacher retention is raised when efficient methods to treat stress in educators are put into place.

Keywords: Teacher burnout, English language teaching, coping

Introduction

Teachers serve a crucial role in facilitating learning and caring for students, who will become future leaders. Teaching, although recognized as a crucial profession for a nation, is also known to be one of the most demanding careers in terms of stress levels, as stated by Adams (2001). Therefore, it is crucial to prioritize the well-being of teachers. This is because teachers are responsible for more than just imparting knowledge; they are also the ones who motivate and inspire students. Additionally, teachers are expected to stay current with the latest information, be accountable for their actions, possess assessment skills, and maintain positive interactions with everyone in the educational environment. All of these responsibilities are aimed at facilitating the learning process.

Numerous aspects of a teacher's life provide challenges. The ability to effectively manage obstacles may greatly enhance one's life, as it provides stimulation. At the end of a day's work, certain educators have a sense of being depleted, both emotionally and physically, feeling unwell, exhausted, overwhelmed by their workload, and inadequately compensated. Furthermore, some individuals may have a sense of isolation or detachment from their educational institution, their colleagues, or the administrative staff (Abaci, 1995).

Excessive stress among teachers can result in adverse physical, mental, and emotional well-being, which may subsequently impact teacher performance, teacher-student relationships, and ultimately, student achievement. Consequently, measuring the stress levels is crucial as it is necessary to implement essential modifications to the environment or personal circumstances, with the aim of enhancing difficult conditions.

Impact of Burnout on Teachers

Human service professions, especially the teachers, experience stress and burnout very often. Burnout is the term used to describe the adverse effects that arise from prolonged stress in the workplace. It encompasses emotional elements such as fatigue, detachment from oneself, and a diminished feeling of personal achievement (Huebner, Gilligan & Cobb, 2002). Collected data indicates that teaching is often seen as a vocation with significant levels of stress. According to Kyriacou (2001), around 25% of schoolteachers perceive teaching as extremely stressful. The repercussions of stress and burnout have detrimental effects on teachers, students, and the education sector as a whole. Throughout the academic year, elevated levels of stress can contribute to an increased rate of absenteeism (Griffith, Steptoe & Cropley, 1999).

Additionally, burnout among teachers may result in premature retirement, thereby diminishing the pool of skilled educators and limiting their ability to instruct and support children.

Annually, a significant proportion of educators and school administrators experience an inability to sustain their employment in educational institutions due to feelings of depletion and fatigue (Gray & Taie, 2015; Herman & Marlowe, 2005; Moran, 2018). Multiple research have documented that teachers frequently encounter fatigue in their professions (Antoniou et al., 2013; Clipa, 2017), resulting in detrimental personal outcomes (Mark & Smith, 2012). This is a concerning and enduring issue that has lasted for several decades. According to Truch (1980), a significant majority of teachers, over 90%, have encountered some degree of burnout. Additionally, more than a quarter of teachers, specifically over 25%, have suffered severe levels of burnout as a result of their employment (Bas, 2011).

Role of a Teacher as a Whole

Presently, schools are undergoing rapid transformation, leading to a shift in the responsibilities and scope of instructors. According to Bas (2011), teachers have other responsibilities beyond instructing learners. These include devising curricula, creating assignments, directing students, building communication with families, and participating in community services and departmental chores. The nature of the teaching profession has led to its classification as the most demanding occupations globally (Diehl & Carlotto, 2014; Shernoff et al., 2011). Teachers not only transmit knowledge, but also have a crucial role in facilitating the overall development of students.

Everyday Sources of Teacher Burnout

Teacher burnout can be attributed to a multitude of internal and environmental variables. For instance, both school systems and society frequently expose instructors to the potential of burnout, resulting in a subsequent decline in their passion for doing their jobs. The absence of teacher passion and ardor for teaching leads to the teachers to loose their passion in teaching as well as the low performance level of the students (Fernet et al., 2014; Skinner & Jeffry, 2016). Furthermore, the work experiences of teachers, along with the norms of the school and the policy contexts such as budget cuts, heightened expectations for student accomplishment, and the low level of support from administrators and parents, have been found to contribute to

greater burden on teachers (Richards, 2012). Additionally, inadequate infrastructure, insufficient teaching materials, and subpar classroom resources are recognized as potential sources of stress (Fernet et al., 2012). Furthermore, factors such as insufficient teacher training and a absence of other forms of encouragement can also cause stress and burnout (Ingersoll & Strong, 2011; Kim et al., 2017).

Kyriacou (2001) identified ten primary factors that contribute to teacher stress:

- *Instructing unmotivated students;*
- *Enforcing discipline;*
- *Time constraints and heavy workload;*
- *Adapting to changes;*
- *Being assessed by others;*
- *Interactions with colleagues;*
- *Self-esteem and professional standing;*
- *Administrative and managerial tasks;*
- *Conflicting roles and ambiguity;*
- *Substandard working conditions.*

Without a doubt, the factors causing stress among various teachers will differ and depend on both the unique characteristics of the teacher and the situations in their professional and personal domains. However, the above-indicated categories suggest potential sources of stress for instructors that need to be addressed.

Coping Strategies

Kyriacou (2001) categorizes coping tactics into two distinct types: *direct action and palliative techniques*:

Direct action encompasses the various ways that teachers might employ to effectively reduce the underlying causes of stress. For example, if the presence of time constraints and strict deadlines is causing stress, a proactive approach to alleviate the issue would involve requesting a time extension or requesting a modification to the deadline.

Palliative approaches aim to alleviate the symptoms of stress rather than addressing the root cause, by specifically targeting the reduction of stress-related emotions. Certain solutions may involve physical methods, such as relaxation training designed to alleviate sensations of tension and anxiety. Others may pertain to cognitive processes and include the instructor altering their evaluation of stressful events.

- *Endeavor to maintain a sense of proportion when faced with difficulties;*
- *Avoid engaging in conflicts; • Make an effort to unwind after work;*
- *Take proactive measures to address issues;*
- *Maintain emotional composure;*
- *Allocate more time to specific tasks;*
- *Engage in open discussions about problems and emotions with others;*
- *Cultivate a balanced and fulfilling personal life;*
- *Anticipate and prioritize tasks in advance;*
- *Acknowledge and accept personal limitations.*

These strategies encompass both *proactive measures and palliative approaches*. Implementing direct action may seem like the most effective approach to mitigate job-related stress. Nevertheless, there are instances where these tactics may be impracticable to execute. Under those circumstances, the implementation of beneficial, soothing methods is crucial.

Methods for Cognitive Reorganization

Utilizing cognitive therapy techniques can serve as a palliative measure to assist instructors in mitigating job-related stress. Howard and Johnson (2004) illustrate that instructors who engage with challenging children often employ strategies to alleviate their own stress by modifying their perception of stressful conditions in the school environment. In addition, teachers who depart from a school or the teaching profession following their experience with challenging students exhibit specific traits.

Scenario: The class is not listening. The teacher had to reiterate his/her message multiple times in order to get the learners' attention.

Feeling(s): Anguish

Reflections: Teaching this class is an overwhelming task.

In this example, a teacher had a sense of frustration when faced with the challenge of capturing the attention of his students. S/he recalls believing that instructing this specific group of students was an overwhelming task. Undoubtedly, anyone would experience annoyance in such a position. However, perceiving it as an overwhelming situation undoubtedly intensified his/her emotional reaction, leading to more stress and anger. By reassessing the scenario, s/he may have discerned that just a subset of learners were genuinely inattentive, hence it would be erroneous to claim that the entire class was disengaged. Moreover, it is probable that even pupils learners who perceive themselves as "impossible" to teach have acquired a multitude of knowledge throughout the year.

To lessen undesirable emotions such as frustration caused by stress, instructors can benefit from altering their cognitive perspective on stress-inducing circumstances. An effective approach is to develop alternative conceptualizations of these events that contradict or are inconsistent with existing beliefs. In the prior example, the teacher cannot believe that the entire class is uneasy to educate, but rather that only a small amount of learners motivate to instruct. Both propositions cannot be simultaneously accurate. The difficulty in managing a mere subset of learners contradicts the notion that the entire class is at fault. Recognizing that these challenging children have acquired knowledge during the year contradicts the notion that it is unfeasible to educate them. One can determine the true incompatibility of these new concepts with the old ones by observing their ability to reduce feelings of tension and dissatisfaction. It appears that this teacher has the belief that students either acquire knowledge effortlessly or are incapable of being instructed. Hence, the teacher is disregarding any ambiguous aspects between these two polarities.

Keep in mind that this technique requires regular practice and constant application in order to become effective. It would be advantageous to start utilizing it after the school day, when there is an opportunity to allocate a few minutes for reflecting on the day's occurrences. To maximize effectiveness, it is advisable to start employing these approaches during stressful conditions, rather than solely after they have diminished.

Özet

Türkiye dünyanın önemli biber üreticisi ülkelerinden biridir. Biber üretim alanı ve üretim miktarı bakımından dünya genelinde 3.sırada yer almaktadır. 2019 yılı FAO verilerine göre ülke dünya genelinde biber üretim alanında %4.69, üretim miktarında da %7.19'luk paya sahiptir. Bu çalışmada önemli biber üretim merkezlerinden biri olan Çanakkale ilinde kopya biber üretiminde kullanılan faktörlerin kaynak kullanım etkinliğinin belirlenmesi amaçlanmıştır. Araştırmada kullanılan veriler "Tabakalı Örneklem Yöntemi" ile tespit edilen 76 tarım işletmesinden yüzyüze yapılan anketler yoluyla derlenmiştir. Cobb-Douglas tipi fonksiyon yardımıyla oluşturulan kopya biber üretimine ait tahmin denklemin belirlilik katsayısı (R^2) 0.79 olup, F değeri (8.94) %1 düzeyinde anlamlı bulunmuştur. Tahmin denkleminde yer alan üretim faktörlerinin elastikiyet katsayıları toplamı ($\sum \beta_i$) 0.562 olarak tespit edilmiştir. Hesaplanan değer kopya biber üretiminde ölçüğe azalan getirinin olduğunu göstermektedir. Denklemle ilişkin DW İstatistiği 1.639 olup, değişkenler arasında otokorelasyona rastlanılmamıştır. Denkleminde yer alan bağımsız değişkenlere ait üretim elastikiyeti katsayıları incelendiğinde; fide sayısı, tarımsal mücadele ilacı miktarı ve mazot kullanım miktarı değişkenlerinin elastikiyet katsayıları negatif olduğu anlaşılmaktadır. Tahmin denkleminde yer alan gübre faktörü ve işgücü faktörünün elastikiyet katsayıları %5 düzeyinde önemli bulunmuştur. Denklemindeki faktörlerin marjinal etkinlik katsayıları dikkate alındığında biber üretiminde; fide sayısı, tarımsal mücadele ilacı kullanım miktarı ve mazot kullanım miktarına ilişkin değişkenlerin aşırı kullanıldığı ve azaltılması gerektiği söylenebilir. Bununla birlikte biber üretim faaliyetinde işgücü (19.47) ve saf gübre kullanım miktarı (13.64) değişkenleri optimum düzeyin altında kullanılmakta olup, birim alana kullanım miktarlarının artırılması gerekmektedir. Yürütülen araştırmada işgücü ile saf gübre kullanımına ilişkin faktör bileşenlerinin marjinal etkinlik katsayısı 1.43 olarak elde edilmiştir. Bu değer gübre faktörünün tohum faktörüne nispetle fazla kullanıldığını ve azaltılması gerektiğini göstermiştir. Yapılan çalışma biber üretiminde üretim faktörlerinin etkin kullanılmadığını, bu durumun da üretici geliri düşürdüğünü göstermiştir. Zira araştırma sonuçları, tahmin denkleminde yer alan değişkenlerin elastikiyet katsayıları toplamı dikkate alındığında, araştırma alanında kopya biber üretiminin karlı bir faaliyet dalı olmadığını ortaya koymuştur. Araştırma kapsamındaki işletmelerde karlı bir biber üretim faaliyetinin yapılabilmesi için; üretimde kullanılan girdilerin marjinal düzeyde yapılan masraflara göre girdinin sağlamış olduğu ürün artışına karşılık gelen değerlerin ya eşit ya da daha yüksek olması gerekmektedir. Diğer bir ifade ile üretimde karlılık üretim faktörlerinin rasyonel kullanılmasına bağlıdır.

Anahtar Kelimeler: Biber üretimi, Etkinlik, Elastikiyet, Marjinal Verim, Marjinal Gelir, Marjinal Etkinlik.

DETERMINATION OF RESOURCE UTILIZATION EFFICIENCY IN CAPIA PEPPER (*Capsicum annuum L.*) PRODUCTION: THE CASE OF ÇANAKKALE PROVINCE

Abstract

Turkey is one of the most important pepper producer countries in the world, and it ranks 3rd in the world in terms of pepper production area and production amount. According to FAO data of 2019, Turkey had a share of 4.69% in pepper production area and 7.19% in production amount in the world. In this study, it was aimed to determine the resource utilization efficiency of the factors used in capia pepper production in Çanakkale province, which is one of the important pepper production centers in Turkey. The data used in the research were gathered through face-to-face surveys from 76 agricultural enterprises which were determined by the "stratified sampling method". The coefficient of determination (R^2) of the estimation equation of capia pepper production created by means of the Cobb-Douglas type function was 0.79, and the F value (8.94) was significant at the level of 1%. The sum of the elasticity coefficients of the production factors in the estimation equation ($\sum\beta_i$) was determined as 0.562. The calculated value shows that there was a decreasing return to scale in capia pepper production. The DW statistic for the equation was 1.639, and no autocorrelation was found between the variables. When the production elasticity coefficients of the independent variables in the equation were examined; it was understood that the elasticity coefficients of the number of seedlings, the amount of pesticides and the amount of diesel fuel use were negative. The elasticity coefficients of the fertilizer factor and labor factor in the estimation equation were found to be significant at the 5% level. Considering the marginal efficiency coefficients of the factors in the equation, in pepper production; it could be said that the variables related to the number of seedlings, the amount of pesticide use and the amount of diesel fuel use were overused and should be reduced. However, the variables of labor (19.47) and the amount of pure fertilizer use (13.64) in pepper production were used below the optimum level, and the amount of use per unit area needs to be increased. In the research, the marginal efficiency coefficient of the factor components related to the use of labor and pure fertilizer was calculated as 1.43. This value showed that the fertilizer factor was used more than the seed factor and it should be reduced. The study showed that production factors are not used effectively in pepper production, and this situation reduces producer income. Considering the sum of the elasticity coefficients of the variables in the estimation equation, it was revealed that capia pepper production is not a profitable activity in the research area, In order to carry out a profitable pepper production; according to the marginal costs of the inputs used in production, the value corresponding to the product increase provided by the input should be either equal or higher. In other words, profitability in production depends on the rational use of production factors.

Key words: Pepper Production, Efficiency, Elasticity, Marginal Yield, Marginal Revenue, Marginal Efficiency.

Giriş

Biber (*Capsicum spp.*), hem dünyada hem de Türkiye’de sevilerek tüketilen, içerdiği mineral maddelerin yanı sıra vitamin yönünden oldukça zengin ve insan beslenmesine olumlu katkısı olan bir sebze türüdür. Kapyta biberi [*Capsicum annuum L. var. conoides (Mill.) Irish*], uzun konik şekilli ve kırmızı rengini aldığında tüketilen bir biber tipi olup “salçalık” veya “yağlık” biber olarak da adlandırılmaktadır. Taze olarak tüketilebilmesinin yanı sıra farklı kullanım alanlarında; dondurulmuş, kurutulmuş, közlenmiş olarak ya da salça, sos, baharat ve konserve olarak da tüketilebilmektedir (Karaağaç ve Balkaya 2010).

Birleşmiş Milletler Gıda ve Tarım Örgütü’nün verilerine göre, 2019 yılında dünya toplam biber üretim alanı 1963089 ha, üretim miktarı ise 36026386 ton olarak gerçekleşmiştir. Dünya biber üretim alanlarının %4.69’u, üretim miktarının da %7.19’u Türkiye’ye aittir (FAO, 2020). Türkiye, 2019 yılında dünyada en fazla biber üreten üçüncü ülke konumundadır.

Türkiye toplam biber üretim alanının %47.57’sinde (37003 ha) kapyta biber ekimi yapılmakta olup, Türkiye toplam biber üretim miktarının %48.96’sını kapyta biber üretimi oluşturmaktadır (TÜİK, 2021a).

Türkiye İstatistik Kurumu verilerine göre Çanakkale ilinde kapyta biber üretim verileri incelendiğinde; 7176 ha alan üzerinde, 266679 ton ürün elde edildiği anlaşılmaktadır. Çanakkale ili kapyta biber üretim alanlarında 4486 ha ve %62.52’lik pay ile Yenice ilçesi en büyük paya sahiptir. Yenice ilçesini %13.38 pay ile Biga ilçesi, %8.50 pay ile Bayramiç ilçesi takip etmektedir. Çanakkale’de en yüksek kapyta biber üretimi ise 153232 ton ve toplamdaki %57.46’lık pay ile Yenice ilçesinde gerçekleşmiştir. Bu ilçeyi %14.76 oran ile Biga ilçesi, %9.15 pay ile Bayramiç ilçesi izlemektedir (TÜİK, 2021b).

Konu ile ilgili olarak yapılan literatür incelemesinde biber üretiminde kaynakların etkin kullanımından daha fazla sayıda biber üretim maliyetine yönelik çalışmalar olduğu tespit edilmiştir (Peševski ve Stojkov, 2014; Ayodele ve ark., 2016; Channa ve ark., 2020; López-Marín ve ark., 2022). Ancak biber üretiminde kaynakların etkin kullanımına ilişkin tatmin edici düzeyde çalışma olmadığı anlaşılmaktadır.

Tarımsal üretimde kaynakların etkin kullanımı ve verimlilik ülke ekonomisi ve üretici refahı açısından büyük öneme sahiptir. Zira, üretim faktörlerinin optimal düzeyde kullanımı üretim maliyetlerini de önemli düzeyde azaltabilmektedir (Semerci, 2022a). Tarımsal üretimde kaynakların etkin bir şekilde kullanılması aynı zamanda verimliliğin de artmasına neden olmaktadır (Semerci, 2022b). Kapyta biber üretimi konusunda yürütülen araştırmalara ait bilgiler alta verilmiştir.

Aytaç (1990) çalışmada 122 tarım işletmesinden elde edilen veriler yardımıyla cam seralarda biber üretiminin girdi ihtiyaçları tespit edilmiş ve üretimde kullanılan girdilerle biber üretimi arasındaki ilişki Cobb-Douglas üretim fonksiyonu yardımıyla analiz edilmiştir.

Çakan (1996) 72 tarım işletmesinden elde edilen veriler yardımıyla biber üretimi incelenmiş ve üretim girdilerinin ekonometrik analizi yapılmıştır. Araştırmada; alüviyal topraklarda, kireçsiz kahverengi topraklarda ve kırmızı kahverengi topraklarda olmak üzere 3 farklı toprak tipinde yapılan biber üretimi ekonomik yönden analiz edilmiştir. Çalışmada tahmin denkleminde üretim miktarı bağımlı değişken; üretim alanı, çapalama sayısı, saf azot, saf fosfor, işgücü, tohum miktarı ve ilaçlama masrafları bağımsız değişkenler olarak yer almıştır.

Yayar ve Karkacier (1997) çalışmada 25 işletmeden elde edilen bilgiler yardımıyla biber üretiminin ekonometrik analizi yapılmıştır. Tahmin denkleminde bağımlı değişken biber üretim miktarı bağımsız değişken olarak da; çapalama işgücü (EİG), biber üretim alanı, ilaç masrafları, saf azot miktarı, saf fosfor miktarı, sulama sayısı, hasat sayısı, tohum masrafı ve traktör çekigücü dikkate alınmıştır.

Radam ve Ismail (1999) Malezya'da 159 işletmede çalışmada biber üretiminde bağımlı değişken biber üretim miktarı, açıklayıcı değişkenler olarak da; gübre miktarı (β_i 0.3116), herbisit miktarı (β_i 0.0881), diğer tarımsal mücadele ilacı miktarı (β_i 0.2232), işgücü (β_i 0.2494) ve fide sayısı (β_i 0.2518) değişkenleri ele alınmıştır.

Yılmaz ve ark. (2000) araştırmada 71 işletmeden elde edilen veriler yardımıyla biber üretiminde tarımsal mücadele ilacı ve gübre girdilerinin ne ölçüde kullanıldıkları Cobb-Douglas tipi üretim fonksiyonu yardımıyla incelenmiştir.

Dipeolu ve Akinbode (2008) Güneybatı Nijerya'da 284 işletmede gerçekleştirilen çalışmadan elde edilen veriler yardımıyla biber üretiminin fonksiyonel analizi yapılmıştır. Araştırma üretim miktarı bağımlı değişken olup; üretim alanı (β_i 0.052), aile işgücü (β_i -0.024), kiralık işgücü (β_i 0.057), fide sayısı (β_i 0.257), gübre miktarı (β_i 0.375) ve tarımsal mücadele ilacı miktarı (β_i 0.221) değişkenleri de bağımsız değişken olarak dikkate alınmıştır.

Ambili ve Joseph (2013) çalışmada Hindistan'da biber üretiminin ekonometrik analizi yapılmıştır. Yürütülen çalışma ülke biber üretiminin %96'sının gerçekleştirildiği Kerala Eyaletinde son 40 yıllık dönemde biber üretim alanlarında azalma görüldüğünü ortaya koymuştur.

Jayalath ve Rathnayake (2015) Sri Lanka'da 100 tarım işletmesi üzerinden yürütülen araştırmada biber üretiminin teknik etkinlik analizi yapılmıştır. Tahmin denkleminde biber

verim miktarı bağımlı deęişken olup, bağımsız deęişkenler; biber üretim alanı (β_i 0.826) , aile işgücü (β_i -0.127), kiralık işgücü (β_i 0.067), kimyevi gübre kullanım miktarı (β_i 0.0370), dolomit uygulaması (β_i 0.08.19), tarımsal mücadele ilacı masrafı (β_i -0.159), elle ot alma sayısı (β_i -0.580) olarak belirlenmiştir.

Mohammed (2015) Nijerya’da 200 tarım işletmesinde yürütölen arařtırmada bağımlı deęişken biber üretim miktarı, bağımsız deęişkenler olarak da; üretim alanı (β_i 0.213), tohum miktarı (β_i 0.636), gübre miktarı (β_i 0.053), işgücü (β_i -0.085) ve tarımsal mücadele ilacı (β_i -0.069) yer almıştır.

Mustapha ve ark. (2015) Nijerya’da 76 tarım işletmesinde çalışmada oluşturulan tahmin denkleminde biber üretim miktarı bağımlı deęişken ise; üretim alanı, gübre miktarı, çiftlik gübresi miktarı, tohum miktarı, tarımsal mücadele ilacı miktarı olarak sıralanmıştır.

Ali ve ark. (2016) arařtırmada biber üretim miktarı bağımlı deęişken olup, bağımsız deęişkenler; üreticilerin eğitim süresi (β_i 0.214), üreticilerin deneyim süresi (β_i 0.185), yayım hizmeti veren kuruluşlarla iletişim (β_i 0.248), polythene kullanım miktarı (β_i 0.118), traktör çekigücü (β_i -0.146), tohum miktarı (β_i -0.018), gübre miktarı (β_i -0.071), tarımsal mücadele ilacı kullanım miktarı (β_i -0.015), sulama süresi (β_i 0.088), işgücü miktarı (β_i 0.118) deęişkenleri dikkate alınmıştır.

Asravor ve ark. (2016) Gana’da 200 üretici ile yapılan arařtırmada çalışmada bağımlı deęişken biber üretim miktarı, bağımsız deęişkenler olarak da; üretim alanı (β_i 0.3437), kiralık işgücü (β_i 0.2845), aile işgücü (β_i -0.2880), gübre maliyeti (β_i 0.2065), tohum miktarı (β_i 0.0938) ve dięer masraf unsurları (β_i 0.1795) belirlenmiştir.

Abate ve ark. (2019) Etiyopya’da 385 üreticiyle yürütölen arařtırmada biber üretiminin fonksiyonel analizi yapılmıştır. Tahmin denkleminde üretim miktarı bağımlı deęişken, üretim alanı (0.630), tohum miktarı (β_i 0.297), gübre miktarı (β_i 0.033), tarımsal mücadele ilacı (β_i 0.021), hayvan işgücü (β_i 0.100) ve işgücü (β_i 0.072) ise bağımsız deęişkenler olarak yer almıştır.

Lagiso ve ark. (2020) Güney Etiyopya’da 170 işletmede yürütölen arařtırmada hazırlanan tahmin denkleminde; biber üretiminde üretim miktarı bağımlı deęişken, üretim alanı (β_i -0.173),

hayvan işgücü (β_i 0.31), tohum miktarı (β_i 0.087), işgücü (β_i 0.47) ve gübre miktarı (β_i 0.38) açıklayıcı değişken olarak yer almıştır.

Nursalam (2020) Endonezya'da 60 tarım işletmesinden elde edilen veriler yardımıyla biber üretiminde teknik etkinlik analizi yapılmıştır. Tahmin denkleminde üretim miktarı bağımlı değişken, arazi büyüklüğü (β_i 1.135), işgücü (β_i 0.270), kimyevi gübre miktarı (β_i 0.145) ve tarımsal mücadele ilacı miktarı (β_i 0.075) da açıklayıcı değişken olarak yer almıştır.

Bayramoğlu ve ark. (2021) çalışmada 232 işletmeden derlenen veriler yardımıyla bir çok ürünler birlikte biber üretiminin maliyet analizi yanında fonksiyonel analizini yapmıştır. Araştırmada biber üretimine ilişkin fonksiyonda bağımlı değişken üretim maliyeti bağımsız değişkenler olarak da; fide maliyeti, gübre maliyeti, ilaç maliyeti, materyal masrafı, işgücü masrafı, sera büyüklüğü ve fide unsurları yer almıştır.

Kumari ve ark. (2021) Hindistan'da 99 tarım işletmesinden elde edilen verilerle biber üretiminin ekonometrik analizi yapılmıştır. Tahmin fonksiyonunda biber üretiminden elde edilen kar bağımlı değişken olarak yer almıştır. Denkleminde yer alan bağımsız değişkenler ise; Tohum fiyatı, çiftlik gübresi ve kimyevi gübre fiyatı, tarımsal mücadele ilacı fiyatı, işgücü fiyatı, hayvan çekigücü ve makine çekigücü fiyatı, sabit masraflar ve biber fiyatı şeklinde sıralanmıştır.

Essa ve Essa (2022) Güney Etiyopya'da 320 tarım işletmesinden elde edilen veriler yardımıyla kırmızı biber üretiminde teknik etkinlik analizi yürütülmüştür. Çalışmada biber üretim miktarı bağımlı değişken, açıklayıcı değişkenler olarak da tohum miktarı (β_i 0.114), işgücü (β_i 0.210), tarımsal mücadele ilacı miktarı (β_i 0.286) ve kimyasal gübre miktarı (β_i 0.443) dikkate alınmıştır.

Yapılan araştırmada kapyta biber üretiminde ülkenin ilk sırasında yer alan Çanakkale ilinde il toplam üretim miktarının %81.37'sini oluşturan Bayramiç, Biga ve Yenice ilçelerinde bu üretim faaliyetinde kullanılan girdiler ile üretim miktarı arasındaki ilişki Cobb-Douglas tipi fonksiyon yardımıyla analiz edilmiştir. Araştırmada kapyta biber üretiminde kullanılan girdilerin üretim elastikiyeti katsayıları, marjinal verim değerleri, marjinal gelirleri, marjinal etkinlik katsayılarıyla birlikte, üretim girdilerinin kombinasyonu göz önünde bulundurularak girdiler arasında marjinal teknik ikame oranı ve faktör bileşimlerinin etkinlik katsayıları da

hesaplanmıştır. Araştırma sonucunda elde edilen bulgular konu ile ilgili yapılan diğer araştırma bulgularıyla karşılaştırılarak analiz edilmiştir.

2. MATERYAL VE YÖNTEM

2.1. Materyal

Araştırmanın birincil verilerini araştırma alanı olarak belirlenen ve Türkiye'nin Marmara Bölgesi'nde yer alan Çanakkale iline bağlı Biga, Bayramiç ve Yenice ilçelerinde kapa biber üreten ve "Tabakalı Örneklem Yöntemi" kullanılarak belirlenen 76 adet tarım işletmesinden anket uygulamasıyla elde edilen veriler oluşturmaktadır. Çalışmanın ikincil verilerini ise; başta Birleşmiş Milletler Gıda ve Tarım Örgütü (FAO) ve Türkiye İstatistik Kurumu (TÜİK) ve Çanakkale İl Tarım ve Orman Müdürlüğü'nden elde edilen veriler oluşturmaktadır. Çalışmada yağlık ayçiçeği ile ilgili ulusal ve uluslararası düzeyde çeşitli kurum ve kuruluşların yayınlarından, tezlerden ve komisyon raporlarından yararlanılmıştır.

2.2. Yöntem

2.2.1. Örneklemde Kullanılan Yöntem

Araştırmada örneklem çerçevesinin oluşturulmasında Çanakkale İl Tarım ve Orman Müdürlüğü Çiftçi Kayıt Sistemi verilerinden yararlanılmıştır (TOB, 2020). Bir bölgedeki tarım işletmelerinin sosyo-ekonomik yapısını incelemeye yönelik olarak yapılan araştırmalarda tarım işletmeleri büyüklüklerine ya da gelir durumlarına göre tabakalara ayrılmaktadır. Bunun temel nedeni işletmelerin genel olarak ele alınması halinde araştırma alanında bulunan işletmelerin farklı büyüklüklerde olması nedeniyle heterojen bir yapıyla karşılaşılmasıdır. Tabakalandırma işlemiyle popülasyona ait tahminlerin doğruluk derecesi artırıldığı gibi popülasyondaki farklı bölümlerin (işletme büyüklük gruplarının) yeterince temsil edilmesi sağlanmış olmaktadır (Oğuz ve Karakayacı, 2017).

Araştırmada örneklem çerçevesi ve örnek sayısının belirlenmesinde (işletmelerin arasında homojenliğin sağlanması amacıyla) Tabakalı Örneklem Yöntemlerinden Neyman tarafından önerilen istatistikî formül kullanılmıştır (Yamane, 1967).

$$n = \frac{[\sum(N_h * S_h)]^2}{N^2 * D^2 + [\sum(N_h * S_h)]^2} \quad D^2 = \left(\frac{d}{t}\right)^2$$

(1)

Denklem 1'de gösterimi verilen; n= örnek hacmini, N_h= h'inci tabakaya ait örneklem çerçevesindeki işletme sayısını, S_h= h'inci tabakadaki verilerin standart sapmasını, S_h²= h'inci tabakadaki verilerin varyansını, t= belli bir güven aralığı için t tablo değerini, N= Örneklem çerçevesine toplam işletme sayısını, d= ortalamadan belli bir % sapmayı göstermektedir.

Örnek hacmi oluşturan işletmeler, standart sapma ve varyasyon katsayıları (C.V.) dikkate alınarak tabakalara ayrılmıştır. Varyasyon katsayısı, standart sapmanın ortalamaya göre yüzde kaçlık bir değişim gösterdiğini ifade etmektedir. Varyasyon katsayısının düşük olması, birim değerlerin ortalamadan sapmalarının daha az olduğu anlamına gelir. Başka bir ifade ile incelenen birimlerin, özellik bakımından daha homojen olduğunu göstermektedir. Varyasyon katsayısı %33'ün üzerinde olan bir örnek normal bir populasyonu ifade etmez ve veriler arasında büyük farklılıkları işaret eder. Varyasyon katsayısı Denklem 2'deki gibi hesaplanmaktadır (Oğuz ve Karakayacı, 2017).

$$C.V. = \frac{s}{\bar{x}}$$

(2)

Denklem 2'de; C.V., varyasyon katsayısını, S, standart sapmayı ve \bar{X} ise ortalamayı ifade etmektedir. Örnek hacmin tabakalara dağıtılmasında Denklem 3 kullanılmış olup, tabakalar belirlenirken C.V. katsayıları da göz önüne alınmıştır.

$$n = \frac{(N_h * S_h) * n}{\sum (N_h * S_h)}$$

(3)

Denklem 3 yardımıyla işletmeler; 2.00-4.99 dekar, 5.00-9.99 dekar, 10 dekar ve üzeri olmak üzere 3 gruba ayrılmıştır. Tabakaların homojen dağılımı tespit edildikten sonra her bir gruba giren örnek sayıları (n_h), Denklem 4 yardımıyla bulunmaktadır.

$$n_h = \frac{N_h}{N} * \left(\frac{n}{\sum N_h * S_h} \right)$$

(4)

Eşitlikten yararlanılarak yapılan hesaplamada; birinci grupta 21, ikinci grupta 20, üçüncü grupta 35 işletme olmak üzere araştırma kapsamında 76 tarım işletmesinde kapyra biber üretimiyle ilgili anket çalışması yürütülmüştür.

2.2.2. Analizlerde Kullanılan Yöntem

Fonksiyonel analiz için çalışmada Cobb-Douglas üretim fonksiyonu kullanılmıştır (Kip ve İşyar, 1976; Doll ve Orazem 1984; Beattie ve ark., 2009). Çeşitli araştırmacılar da Cobb-Douglas tipi üretim fonksiyon denklemlerinin tarımsal faaliyetlerin fonksiyonel analizi için uygun olduğunu belirtmişlerdir (Heady ve Dillon, 1961; Zoral, 1973,1984; Özçelik, 1989). Ayrıca Cobb-Douglas tipi üretim fonksiyonu; hesaplama kolaylığı sağlaması, üretim esnekliğinin istatistiksel testlerinin yapılması, yetersiz veri ile bile yeterli serbestlik derecelerinin sağlanması vb. birçok yönden tercih edilmektedir (Heady ve Dillon, 1966).

Fonksiyona ait denklem altta verilmiştir (Dawson ve Lingard, 1982; Doll ve Orazem, 2005; Gujarati ve Porter, 2014)

$$Y = \alpha X_1^{b_1} X_2^{b_2} X_3^{b_3} \dots X_n^{b_n}$$

(5)

Denklemin her iki tarafının logaritması alındığında Denklem 6 şekline dönüşmektedir.

$$\log Y = \log \alpha + \beta_1 \log x_1 + \beta_2 \log x_2 + \dots + \beta_k \log x_k + e^u \quad (6)$$

Denklemdaki β_i sembolleri ile gösterilenler, üretim elastikiyetlerini ifade etmektedir ($\beta_i=1,2,\dots,n$). β_i katsayılarının testi,

$$t \beta_i = \beta_i / se(\beta_i)$$

(7)

Denklem 7. formülüyle yapılmakta ve hesaplanın $t\beta_i$ değeri, “t-tablosu”nda (n-k-1) serbestlik derecesini gösteren satır ile istenen önem seviyesine ait sütunun kesiştiği yerdeki değeri ile karşılaştırılmaktadır.

Elde edilen regresyon denklemine ilişkin; çoklu regresyon (R) ve determinasyon katsayısı (R^2), bağımsız değişkenlere ait elastikiyet katsayıları (β_i), standart hataları ($se \beta_i$) ve önem seviyeleri ($t\beta_i$), değişkenlerin geometrik ortalamaları (X_iG , YG), basit korelasyon katsayıları (r_{ij}) ile denklemin standart sapması (S) ve önem seviyesi (F değeri) uygun bir istatistik paket programı yardımıyla yapılan regresyon analizleri sonucunda elde edilmiştir. Bununla birlikte araştırmada tahmin denkleminde ilgili olarak aşağıda belirtilen hesaplamalar ve bağıntı araştırmaları yapılmıştır: Determinasyon Katsayısı (R^2), Kısmi Korelasyon Katsayılarının (bi) Önem Testi, İçsel Bağıntı (autocorrelation), Çoklu Bağıntı Varlığı (multicollinearity) (Ertek, 1996; Gürler, 1996).

Kapya biber üretiminde kullanılan herhangi bir X_i girdisinin marjinal fiziksel veriminin (Marginal Physical Productivity-MPP-) hesaplanmasında altta verilen formül kullanılmıştır (Singh ve ark., 2004; Mobtaker ve ark., 2010; Rafiee ve ark., 2010).

$$MPP_{Xij} = \beta_{ij} * GM(Y) / GM(X_i)$$

(8)

Denklemden; MPP_{Xj} girdinin marjinal fiziksel verimini, α_j girdinin regresyon katsayısını, $GM(Y)$ bağımlı değişken olan ürünün geometrik ortalama değerini, ve $GM(X_j)$ girdilerin geometrik ortalama değerlerini göstermektedir.

Anket uygulanan işletmelerde çeltik üretiminde kullanılan üretim faktörlerinin Marjinal Gelirinin (MG) hesaplanmasında kullanılan formül aşağıda gösterilmiştir.

$$MjRxj = \beta_j * \frac{GM(Y)}{GM(Xij)} * Fy$$

(9)

formülü kullanılarak tespit edilmiştir (Singh ve ark., 2004; Mobtaker ve ark., 2010; Rafiee ve ark., 2010). Marjinal verimin ürün fiyatı ile çarpımı Marjinal Gelir'i vermektedir. Bu durumda, j'inci üretim faktörü kârı maksimum yapacak şekilde veya en ekonomik biçimde olarak kullanılıyor demektir.

Marjinal gelirlerin faktör fiyatlarına bölünmesi ile bulunan Marjinal Etkinlik Katsayıları (Marginal Efficiency Coefficients –MEC-) ekonomik yönden hangi faktörün etkin hangi faktörün de az veya fazla kullanıldığını ifade etmektedir. Marjinal etkinlik katsayısının hesaplanmasında kullanılan eşitlik altta gösterilmiştir (Dilmen, 1985; Singh ve ark., 2004; Mobtaker ve ark., 2010; Rafiee ve ark., 2010).

$$MEC = \frac{\text{Marginal Factor Revenue}}{\text{Marginal Factor Cost (Factor Price or Opportunity Cost)}}$$

(10)

Üretim faktörlerine ilişkin hesaplanan marjinal etkinlik katsayılarının yorumlanmasında aşağıda belirtilen kurallar dikkate alınmıştır (Akçay ve Uzunöz, 1999):

EK = 1 ise faktör etkin kullanılmaktadır (MR=MC).

EK > 1 ise faktör az kullanılmaktadır ve artırılmalıdır (MR>MC),

EK < 1 ise faktör aşırı kullanılmaktadır ve azaltılmalıdır (MR<MC)

Üretimde kullanılan faktörler arasındaki teknik ikame haddi (marjinal teknik ikame oranı), diğer bir ifadeyle Y seviyesinde bir üretim miktarını elde etmek için X₁ faktörü miktarına karşılık, X₂ faktörünün ne miktarda kullanılması gerektiği;

$$MTIO_{x2/x1} = \frac{X1G \text{ Marjinal Verim}}{X2G \text{ Marjinal Verim}}$$

(11)

veya;

$$MTIO_{x2/x1} = \frac{b1.X2G}{b2.X1G}$$

(12)

formülleri kullanılarak hesaplanmıştır.

Çalışmada faktör bileşenlerinin marjinal etkinlik katsayıları hesaplanırken altta verilen eşitlikten yararlanılmıştır (Karagölge, 1973).

$$FBMEK = \left(\frac{bj * xjgo}{bi * xjgo} \right) / \left(\frac{Fxi}{Fxi} \right)$$

(13)

Formülde marjinal teknik ikame oranlarının hesaplanmasında değişkenlerin geometrik ortalaması kullanılmıştır (Gündoğmuş, 1998; Karkacıer, 2001).

3. ARAŞTIRMA VE BULGULAR

Araştırma kapsamında Çanakkale ilinde 76 tarım işletmesinden elde edilen veriler yardımıyla kapyra biber üretim miktarı ile; fide sayısı, saf gübre kullanım miktarı, tarımsal mücadele ilacı kullanım miktarı, üretimin tamamı için kullanılan mazot ve işgücü kullanım miktarları arasındaki ilişkiler Cobb-Douglas üretim fonksiyonu yardımıyla analiz edilmiştir (Neill, 2002). Çalışmada kapyra üretim fonksiyonunda yer alan değişkenler aşağıda gösterilmiştir.

Y = Kapyra biber üretim miktarı (kg/da)

Fonksiyonda yer alan bağımsız değişkenler ise aşağıda verilmiştir.

X₁ = Fide sayısı (adet/da)

X₂ = Saf gübre miktarı (kg/da),

X₃ = Tarımsal mücadele ilacı kullanım miktarı (cc/da)

X₄ = Mazot miktarı (lt/da),

X₅ = İşgücü (saat/da).

Yapılan araştırmada üretimde yer alan değişkenler arasındaki fonksiyonel bağıntı;

$$Y = 1.415 * X_1^{-0.107} * X_2^{0.188} * X_3^{-0.092} * X_4^{-0.030} * X_5^{0.603}$$

(S=0.085; R= 0.624; R² = 0.79; F=8.94) şeklinde belirlenmiştir.

Tahmin denkleminin ilişkin çoklu korelasyon ve determinasyon katsayıları (F_{hesap}>F_{tablo}) %1 olasılık seviyesinde anlamlı bulunmuştur. Araştırmada oluşturulan denklemde otokorelasyon varlığı “Durbin Watson (DW) Testi” kullanılarak test edilmiştir (Tablo 1).

Tablo 1. Kapyta biber üretimi tahmin denkleminde ait temel istatistikler

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate	Change Statistics				Sig. F Change	Durbin-Watson
					R Square Change	F Change	df1	df2		
1	0.624 ^a	0.390	0.346	0.0847	0.390	8.940	6	70	0.000	1.639

a. Predictors: (Constant), işgücü, saf gübre, tarımsal mücadele ilacı, mazot, fide sayısı.

b. b. Dependent Variable: üretim miktarı

Tahmin denkleminde ait $DW_{H(\text{hesap})}$ istatistiği (0.05; n=76; k'=5) değeri tablo üst değerinden yüksek olması nedeniyle ($DW_H 1.639 > DW_{U(0.05)} 1.624$) fonksiyona yönelik otokorelasyon probleminin olmadığı anlaşılmıştır (Tablo 1,2).

Tablo 2. Kapyta biber üretim fonksiyonu varyans analizi tablosu

	Serbestlik Derecesi	Kareler Toplamı	Kareler Ortalaması	F değeri	P değeri
Regresyon	5	0.320	0.064	8.940	0.000
Kalan	70	0.502	0.007		
Toplam	75	0.822			

Bağımsız değişkenlere ait üretim elastikiyetleri incelendiğinde; fide sayısı, tarımsal mücadele ilacı ve kullanılan mazot faktörlerinin üretim elastikiyeti katsayıları negatif, saf gübre miktarı ve işgücü değişkenlerine ilişkin üretim elastikiyeti katsayılarının pozitif karakterli olduğu tespit edilmiştir (Tablo 3).

Tablo 3. Kapyta biberde üretim faktörlerine ait üretim elastikiyeti katsayıları

	X ₁ (fide sayısı)	X ₂ (saf gübre miktarı)	X ₃ (tarımsal mücadele ilacı miktarı)	X ₄ (mazot miktarı)	X ₅ (işgücü kullanım miktarı)	($\sum\beta_i$)
Üretim elastikiyetleri (β_i)	-0.107	0.188	-0.092	-0.030	0.603	0.562
Standart hata (se β_i)	0.246	0.171	0.126	0.041	0.230	-
t β_i	-1.023	1.918*	-0.938	-0.310	6.113*	-

(*) : %5 ihtimal düzeyinde önemli.

Fonksiyonda yer alan faktörlerin üretim elastikiyetleri toplamı ($\sum\beta_i$) 0.562'dir. Bu durum kapyta biber üretiminde ölçeğe göre azalan getiriyi ifade etmektedir. Kısacası, kapyta biber üretiminde yer alan değişkenler %1 artırıldığında, üretim miktarında %0.56 oranında bir artış olması beklenebilir.

Oluşturulan denkleminde saf gübre (X₁) ve işgücü (X₅) girdilerinin üretim elastikiyeti katsayıları %5 ihtimal düzeyinde önemli bulunmuştur. Teorik açıdan konuya yaklaşıldığında

kapya biber üretiminde kullanılan saf gübre girdisindeki %1'lik artışın üretimi %0.188, işgücü girdisindeki %1'lik artışın ise kapya biber üretiminde %0.603 oranında artıracığı söylenebilir. Pratik açıdan ise kapya biber üretiminde nitelikli girdi kullanımının üretim düzeyinde belirli bir aşamaya kadar artış sağlayabileceği şeklinde yorumlanması daha uygundur.

Fonksiyonda yer alan üretim faktörlerinin elastikiyet katsayıları toplamı ($\sum\beta_i$) 0.562 olarak hesaplanmıştır. Bu değer ölçeğe azalan getiriyi göstermektedir. Araştırmada kapya biber üretim miktarında etkili olan üretim faktörlerine ait marjinal ürün değerleri ve marjinal etkinlik katsayıları Tablo 4'te verilmiştir.

Tablo 4. Kapya biber üretim modelinde yer alan faktörlerin marjinal kıymetleri ve etkinlik katsayıları

	X ₁ (fide sayısı)	X ₂ (saf gübre)	X ₃ (tarımsal mücadele ilaç)	X ₄ (mazot)	X ₅ (işgücü)	Y
Geometrik Ortalama	4451.23	44.39	483.20	17.60	99.76	3220.83
Marjinal Ürün Kıymeti (TL)	-0.03	77.62	-130.01	-37.61	1557.47	-
Faktör Fiyatları (TL)	0.44	5.69	212.00	6.85	80	-
Marjinal Etkinlik Katsayısı	-0.07	13.64	-0.61	-5.49	19.47	-

Tablo 4'ün incelenmesinde de anlaşılacağı üzere kapya biber üretiminde kullanılan girdiler içinde sadece saf gübre ve işgücü değişkenleri pozitif niteliktedir. Bu nedenle tüm faktörler için hesaplama yapılmakla birlikte sadece bu iki değişken hakkında ekonomik ve teknik yorumda bulunulmuştur. En yüksek marjinal etkinlik katsayısı işgücü değişkenine (X₅) aittir. Bu değişkeni saf gübre değişkeni (X₂) izlemektedir. Marjinal ürün değerlerinin belirlenmesinde faktör fiyatları olarak kullanılan girdilerin birim fiyatları dikkate alınmıştır. Marjinal etkinlik katsayılarına göre işgücü ve saf gübre girdileri ekonomik optimum düzeyinin altında kullanılmaktadır. Bu nedenle marjinal etkinlik katsayısı yüksek olan işgücü ve saf gübre faktörlerinin kullanımının artırılması tavsiye edilebilir. Diğer bir ifade ile bu faktörler; toprak analizi yapıldıktan sonra tavsiye edilen miktarlara göre kullanımı teşvik edilmeli, daha nitelikli işgücü kullanımına özen gösterilmelidir.

Marjinal Teknik İkame Oranı

Marjinal Teknik İkame Oranının belirlenmesinde iki girdiden birisi negatif, diğeri pozitif üretim elastikiyetine sahip olduğu durumda, bunlar arasında ikame ilişkisi söz konusu olmamaktadır (Özçelik, 1989). Çalışmada tarımsal mücadele ilacına ait etkinlik katsayısının negatif işaretli olması nedeniyle çalışmada bu değişkenlerle diğer değişkenler arasında ikame oranı hesaplanmamıştır. Denklemdeki iki faktör arasındaki marjinal teknik ikame oranı, bu

faktörlerin geometrik ortalamalarına göre bulunan marjinal verimlerinin oranından ibarettir (Heady ve Dillon, 1966; Zoral, 1984).

$MT\ddot{O}>1$ olması faktör bileşiminin paydadadaki değişken lehine, $MT\ddot{O}<1$ olması da faktör bileşiminin paydaki değişken lehine değiştirilmesini gerektirmektedir. Yapılan çalışmada $MT\ddot{O}_{\text{gübre/işgücü}}$ 1.43 olarak bulunmuştur.

Buna göre üretim fonksiyonuna dahil edilen bütün faktörler geometrik ortalamalarındaki seviyelerinde kullanılırken, işgücü (X_3) miktarında yapılacak bir birimlik ilaveye karşılık, aynı üretim seviyesinde kalmak şartıyla, gübre kullanımında 1.43 kg azaltmaya gidilmeli ve diğer girdilerin kullanım miktarları geometrik ortalaması seviyesinde sabit tutulmalıdır.

Faktör Bileşenlerinin Marjinal Etkinlik Katsayısı

Faktör bileşenlerinin marjinal etkinlik katsayısı faktörler arasındaki marjinal teknik ikame oranının ($MT\ddot{O}$) fiyat oranına (FO) bölünmesi ile elde edilmektedir. Optimum kullanım düzeyinde belirtilen iki oranın birbirinden bölünmesinden elde edilen değer 1'e eşit olması gerekir.

Yapılan çalışmada $MT\ddot{O} [(b_j \cdot x_i) / (b_i \cdot x_j)]$ 'nın Fiyat Oranına $[F_{x_j} / f_{x_i}]$ bölünmesinden elde edilen değer 20.07 olarak elde edilmiştir. Bu değer gübre faktörüne göre işgücü kullanımının aşırı olduğu ve azaltılması gerektiğini ortaya koymaktadır. Yapılan hesaplamalarda faktörlerin geometrik ortalama değerleri dikkate alınmıştır.

Dünya genelinde biber üretimiyle ilgili olarak yapılan fonksiyonel analiz çalışmalarından elde edilen bulgular bu bölümde ayrıntılı olarak incelenmiştir. Yapılan araştırma sonucunda elde edilen bulgular ve karşılaştırmalı analizi altta verilmiştir.

Yürütülen bir araştırmada 122 tarım işletmesinden elde edilen veriler yardımıyla cam seralarda biber üretiminin girdi ihtiyaçları tespit edilmiş ve üretimde kullanılan girdilerle biber üretimi arasındaki ilişki Cobb Douglas üretim fonksiyonu yardımıyla analiz edilmiştir. Yapılan fonksiyonel analiz sonucunda biber üretim faaliyetinde girdilerin ekonomik optimuma uygun olarak kullanılmadığı, girdi kullanım düzeylerinin bir kısım girdiler için gerekenden az, diğer bir kısım girdiler için ise fazla olduğu saptanmıştır. Cam seralardaki biber üretim faaliyetlerinde en önemli girdinin arazi olduğu belirlenmiştir (Aytaç, 1990).

Türkiye'nin Kahramanmaraş ili Narlı bölgesinde alüviyal topraklar üzerinde kırmızı biber yetiştirilen işletmelere (I. Bölge) ait verilerin kullanılması ile elde edilen fonksiyon %1 düzeyde önemli olup, fonksiyona ilişkin determinasyon katsayısı (R^2) 0.942 olarak hesaplanmıştır. Tahmin denkleminde bağımsız değişkenlere ait üretim elastikiyetleri katsayıları toplamı ($\sum \beta_i$)

1.73 olup, hesaplanan değer ölçeğe artan getiri durumu söz konusudur. Çalışma değişkenlerden saf azot, tohum miktarı ve ilaçlama masraflarına ait üretim elastikiyetlerinin negatif olduğunu göstermiştir. Yapılan marjinal analizler sonucu saf azot, tohum miktarı ve ilaçlama masrafları hariç, diğer değişkenlerin geometrik ortalamalarındaki kullanım seviyelerinin az olduğu saptanmıştır. Ayrıca, girdilerin birbirleri ile etkin kullanılmadıkları belirlenmiştir (Çakan, 1996).

Aynı araştırmacının kireçsiz kahverengi topraklar üzerinde kırmızı biber yetiştiren işletmelere ait verilerin kullanılması ile elde edilen fonksiyon %40 düzeyde önemli bulunmuş olup, R^2 değeri ise 0.510 olarak hesaplanmıştır. Denklemden yer alan değişkenlerden işgücü ve tohum miktarı hariç diğer bağımsız değişkenlerin üretim elastikiyetleri negatif değerlidir. Denklemden bağımsız değişkenlere ait üretim elastikiyetleri katsayıları toplamı ($\sum\beta_i$) -1.2005 olup, hesaplanan değer ölçeğe azalan getiriyi ifade etmektedir. Yapılan çalışma; üretimde kullanılan işgücü ve tohum miktarının artırılması halinde biber üretiminde ve ürünün gayrisafi üretim değerinde artışa neden olacağını ortaya koymuştur. Yapılan araştırma; diğer değişkenlerin geometrik ortalamalarındaki kullanım seviyelerinin fazla olduğu ve girdilerin birbirleri ile etkin kullanılmadıkları göstermiştir (Çakan, 1996).

Yine aynı araştırmacı tarafından kırmızı kahverengi Akdeniz toprakları üzerinde kırmızı biber yetiştiren işletmelere ait verilerin kullanılması ile elde edilen fonksiyon %1 düzeyinde önemli olup, fonksiyona ait R^2 değeri 0.927 olarak hesaplanmıştır. Tahmin denkleminde yer alan değişkenlerden çapalama sayısı, saf fosfor ve ilaçlama masrafları değişkenlerinin üretim elastikiyetleri negatif değerlidir. Değişkenlerden sulama sayısı faktörü %4 ve ekim alanı faktörü ise %11 düzeyinde önemli bulunmuştur. Bağımsız değişkenlere ait üretim elastikiyetleri toplamı 1.4086 olup, ölçeğe artan getiri vardır. Yapılan çalışma; çapalama sayısı, kullanılan saf fosfor miktarı ve ilaçlama masrafları hariç diğer bağımsız değişkenlerin artırılmasının üretim miktarı ve ürünün gayrisafi üretim değeri üzerinde olumlu etkiye neden olacağını ortaya koymuştur. Araştırmada, biber üretiminde tahmin fonksiyonunda yer alan değişkenler arasında etkin kullanım durumunun bulunmadığı tespit edilmiştir (Çakan, 1996).

Yürütülen bir araştırmada biber üretimi tahmin denkleminde yer alan değişkenlerden; çapalama işgücü %20, biber üretim alanı ve saf azot miktarı %1, sulama sayısı %5, hasat sayısı %10 düzeyinde anlamlı bulunmuştur. Fonksiyonda yer alan değişkenlerden saf azot miktarı, saf fosfor miktarı ve sulama sayısı değişkenlerine ait elastikiyet katsayıları negatif işaretli bulunmuştur. Denklemin R^2 değeri 0.731 olup %1 düzeyinde önemli bulunmuştur. Fonksiyonda yer alan ve istatistiki yönden önemli bulunan değişkenlerin etkinlik katsayıları

şöyle yorumlanmıştır: çapalama işgücü (2.99), biber üretim alanı (12.17) ve hasat sayısı (3.86) az kullanılmaktadır ve artırılmalıdır. Çalışmada saf azot miktarı ve sulama sayısı değişkenlerinin negatif marjinal gelire sahip olmaları nedeniyle aşırı kullanıldıkları ve azaltılmaları gerektiği sonucuna varılmıştır (Yayar ve Karkacı, 1997).

Yapılan bir çalışmada biber üretimine ilişkin tahmin fonksiyonunun R^2 değeri 0.5375 olarak hesaplanmıştır. Tahmin denkleminde yer alan değişkenlerden gübre miktarı, herbisit miktarı ve fide sayısı değişkenleri %1, işgücü değişkeni ise %10 düzeyinde önemli bulunmuştur (Radam ve Ismail, 1999).

Biber üretimiyle ilgili oluşturulan bir üretim fonksiyonunda bağımlı değişken olarak gayri safi üretim değeri, açıklayıcı değişkenler olarak; gübre masrafı (β_i 0.2156), ilaç masrafı (β_i -0.2645), emek (β_i 0.2921), tohum (β_i -0.0015), sera tipi (β_i 0.0817) kullanılmıştır. Fonksiyonun DW İstatistiği 1.0182, belirlilik katsayısı (R^2) 0.24 olarak belirlenmiş olup denkleme ilişkin F İstatistiği 2.294 %6 önem düzeyinde anlamlı bulunmuştur. Biber üretim fonksiyonunda emek % 3 önem seviyesinde anlamlı bulunurken, gübre % 9 ve ilaç % 13 önem seviyelerinde anlamlı, tohum ve sera tipi ise anlamsız bulunmuşlardır. Yapılan araştırma; tahmin edilen biber üretim fonksiyonunda ilaç değişkeninin katsayısının negatif olması bu girdinin aşırı yönde kullanıldığını, gübre girdisinde ise hesaplanan marjinal gelir değerinin biber üretiminde ekonomik optimum noktadan daha düşük seviyelerde gübre kullanıldığını ortaya koymuştur. Çalışma sonucunda; biber üretiminde ilaç kullanımında entegre mücadelenin yaygınlaştırılması, gübre kullanımında ise toprak ve bitki analizlerine dayalı gübreleme yapılması önerilmiştir (Yılmaz ve ark., 2000).

Konu ile ilgili olarak oluşturulan biber üretimi tahmin denkleminde yer alan değişkenlerden gübre miktarı %1, üretim alanı %5, fide sayısı ve tarımsal mücadele ilacı değişkenleri de %10 düzeyinde önemli bulunmuştur (Dipeolu ve Akinbode, 2008).

Biber üretiminin ekonometrik analiziyle ilgili bir çalışmada elde edilen fonksiyonda yer alan üretim alanı ve tarımsal mücadele ilacı masrafı değişkenleri %1, aile işgücü elle ot alma %5, kiralık işgücü ve dolomite application değişkenleri de %10 düzeyinde önemli bulunmuştur (Jayalath ve Rathnayake, 2015).

Benzer bir çalışmada oluşturulan tahmin denkleminde yer alan değişkenlerden tohum miktarı ve gübre miktarı değişkenleri %1, üretim alanı ise %10 düzeyinde önemli bulunmuştur. Bununla birlikte çalışmada bağımlı değişken biber miktarı, bağımsız değişkenler olarak da; üretim alanı maliyeti (β_i -0.0795), tohum maliyeti (β_i 0.1596), gübre maliyeti (β_i 0.0579), işgücü maliyeti (β_i 0.3517), tarımsal mücadele ilacı maliyeti (β_i -0.0426) ve ürün maliyeti (β_i 0.2672)

değişkenleri yer almıştır. Değişkenlerden tohum maliyeti, gübre maliyeti, işgücü maliyeti ve üretim maliyeti ise %1 düzeyinde önemli bulunmuştur (Mohammed, 2015) .

Nijerya'da biber üretiminde girdi-çıkıtı analizi konusunda hazırlanan tahmin denkleminin R^2 değeri 0.726, F istatistiği ise 3.541 bulunmuştur. Denklemden yer alan değişkenlerden üretim alanı ve işgücü kullanımı %5, gübre miktarı %10 düzeyinde önemli bulunmuştur. Bununla birlikte çiftlik gübresi ve tohum miktarı değişkenlerinin elastikiyet katsayıları negatif bulunmuştur. Değişkenlerden üretim alanı (0.047) ve tarımsal mücadele ilacının (0.108) marjinal etkinlik katsayıları 1'in altında, gübre (373.943) ve işgücü (45.02) değişkeninin de 1'in üzerinde olduğu hesaplanmıştır (Mustapha ve ark., 2015).

Diğer bir araştırmada hazırlanan tahmin denkleminde yer alan değişkenlerden; üreticilerin eğitim süresi, üreticilerin deneyim süresi, yayım hizmeti veren kuruluşlarla iletişim, polietilen kullanım miktarı %1, işgücü miktarı %5 ve sulama süresi değişkeni de %10 düzeyinde önemli bulunmuştur. Denkleme ilişkin R^2 değeri 0.824, F istatistiği ise 27.602 olarak hesaplanmıştır. Yapılan çalışmada girdilerin marjinal etkinlik katsayıları da hesaplanarak yorumlanmıştır. Araştırma sonucunda; polietilen kullanım miktarı (4.14), sulama (8.84) ve işgücü faktörlerinin (2.01) marjinal etkinlik katsayıları 1'in üzerinde bulunmuştur. Bu faktörlerin üretimde kullanım miktarı az olup, artırılmaları önerilmiştir. Biber üretiminde kullanılan traktör çekigücü, tohum miktarı, gübre miktarı ve tarımsal mücadele ilacı kullanım miktarına ilişkin marjinal etkinlik katsayılarının negatif işaretli olması bu girdilerin aşırı kullanıldığını ve azaltılması gerektiğini göstermiştir (Ali ve ark., 2016).

Gana'da yürütülen bir çalışmada biber üretimi tahmin denklemindeki değişkenlerden üretim alanı, kiralık işgücü, aile işgücü ve gübre maliyeti değişkenleri %1, diğer masraf unsurları değişkeni de %10 düzeyinde önemli bulunmuştur. Bununla birlikte çalışmada bağımlı değişken biber üretim masrafı, bağımsız değişkenler olarak da; üretim alanı kira değeri (β_i 0.0398), kiralık işgücü (β_i 0.3999), aile işgücü (β_i 0.4087), diğer masraf unsurları (β_i 0.0599), gübre maliyeti (β_i 0.0791), tohum maliyeti (β_i 0.0370), üretim miktarı (β_i 0.0047) değişkenleri yer almıştır. Değişkenlerden üretim miktarı hariç, diğer faktörlerin tamamı %1 düzeyinde önemli bulunmuştur (Asravor ve ark., 2016).

Etiyopya'da yapılan bir araştırmada tahmin denkleminde yer alan değişkenlerden üretim alanı ve tohum miktarı faktörleri %1, gübre miktarı, hayvan işgücü ve işgücü faktörleri de %5 düzeyinde önemli bulunmuştur (Abate ve ark., 2019). Yine Güney Etiyopya'da yapılan bir çalışmada biber üretimi tahmin denkleminde yer alan değişkenlerden hayvan işgücü, işgücü ve

gübre miktarı değişkenleri %1, tohum miktarı değişkeni de %5 düzeyinde önemli bulunmuştur (Lagiso ve ark., 2020).

Endonezya'da konu ile ilgili olarak yapılan bir çalışmada elde edilen tahmin denkleminin R^2 değeri 0.799, F İstatistiği 5.477 olarak hesaplanmıştır. Denkleminde yer alan değişkenlerden üretim alanı %1, işgücü ve kimyevi gübre miktarı değişkenleri de %10 düzeyinde önemli bulunmuştur. Tahmin denkleminde yer alan faktörlerin üretim elastikiyeti katsayıları toplamı 1.625 olup, ölçeğe artan getiri bulunmaktadır. Yürütülen çalışmada değişkenlerin marjinal etkinlik katsayıları şöyle bulunmuştur: arazi büyüklüğü (1.21), işgücü (4.16), kimyevi gübre miktarı (2.19) ve tarımsal mücadele ilacı miktarı (1.11). Bu değerler denkleminde yer alan değişkenlerin tamamının etkinlik katsayılarının 1'den büyük olduğunu ve marjinal gelir = marjinal maliyet prensibi gereği bu girdilerin kullanımının artırılmaları gerektiğini ortaya koymaktadır (Nursalam, 2020).

Bayramoğlu ve ark. (2021) tarafından yapılan araştırma kapsamında oluşturulan fonksiyonun R^2 değeri 0.884, F istatistiği 187.818 ve DW İstatistiği 2.062 olarak hesaplanmıştır. Tahmin denkleminde; fide maliyeti %1, gübre maliyeti, ilaç maliyeti ve materyal masrafı %5 düzeyinde istatistikî açıdan önemli bulunmuştur. Yapılan araştırma fide maliyetindeki 1 TL'lik artışın ürün maliyetini 2.25 TL, gübre maliyetindeki 1 TL'lik artışın üretim maliyetinde 2.914 TL, ilaç maliyetindeki 1 TL'lik artışın da üretim maliyetini 1.12 TL artıracığını ortaya koymuştur. Yapılan analiz sonucuna göre her bir ürün için kurulan modelde materyal masrafları ile biber üretim maliyeti arasındaki ilişki beklendiği gibi negatif yönlü bulunmuştur. Biber üretiminde materyal masraflarında meydana gelen 1 TL'lik artışın üretim maliyetlerini 4.19 TL azaltacağı tahmin edilmiştir. Yapılan analizde mevsimlik işgücü maliyetinde 1 TL'lik artışın biber üretiminde 3.04 TL azalmasına yol açacağı tespit edilmiştir. Çünkü işletme ölçeği arttıkça kullanılan sabit sermayenin etkinliği artmakta ve kaynaklar rasyonel kullanılmaktadır (Altıntaş ve Akçay, 2007; Bayramoğlu ve ark., 2010; Çıtak, 2011; Bayramoğlu ve Bozdemir, 2017; Erdoğan ve Bayramoğlu, 2017; Oğuz ve ark., 2017; Bal, 2018; Topcu, 2018).

Hindistan'da yapılan bir çalışmada biber üretimi tahmin denkleminde yer alan değişkenlerden tohum fiyatı, çiftlik gübresi ve kimyevi gübre fiyatı, hayvan çekigücü ve makine çekigücü fiyatı, biber fiyatına ilişkin elastikiyet katsayıları %1 düzeyinde, tarımsal mücadele ilacı fiyatına ait katsayı da %5 düzeyinde önemli bulunmuştur. Denklemin ilişkin R^2 değeri 0.960, F İstatistiği de 313.006 olarak hesaplanmıştır (Kumari ve ark., 2021).

Güney Etiyopya'da yürütülen bir çalışmada biber üretimi tahmin denkleminde yer alan değişkenlerin elastikiyet katsayıları toplamı 1.051 olup, ölçeğe artan getiri söz konusudur.

Tahmin denkleminde yer alan deęişkenlerin tamamı %1 seviyesinde önemli bulunmuştur (Essa ve Essa, 2022).

Dünya genelinde biber üretiminde yapılan araştırmalardan elde edilen verilerle bu çalışmada elde edilen veriler üç temel noktada karşılaştırılabilir. Bunlardan birincisi elde edilen tahmin denkleminin ilişkin determinasyon katsayısının açıklayıcılık özelliğidir. Diğer bir ifade ile tahmin denkleminde yer alan bağımsız deęişkenler (biber üretiminde kullanılan ve fonksiyonda yer alan deęişkenler) bağımlı deęişkeni (biber üretim miktarını) hangi ölçüde açıklayabilmektedir (Özçelik, 1994).

Diğer bir konu ise biber üretiminde kullanılan girdilerin elastikiyet katsayılarının toplamının ölçüğe getirisinin ne olduğudur. Son görülen önemli bir nokta da bu araştırmada elde edilen verilere göre biber üretiminde etkili olan faktörlerin istatistiki yönden önem düzeyinin ve marjinal etkinlik katsayılarının diğer araştırma bulgularıyla karşılaştırılarak analiz edilmesidir. Tarımsal üretimde üretim miktarı ile üretim faaliyetinde kullanılan deęişkenler arasındaki ilişki farklı tipteki fonksiyonlar yardımıyla analiz edilmektedir. Fonksiyona ilişkin determinasyon katsayısı (R^2) denkleminde yer alan deęişkenlerin hangi düzeyde bağımlı deęişkeni açıklayabildiğini göstermektedir. Bu bakımdan tahmin denkleminin R^2 değeri ve önem düzeyi ile denklemin F İstatistik değeri ve önem düzeyi elde edilen fonksiyonun gerçeklik kazanmasında büyük bir öneme sahiptir. Yapılan araştırmada hazırlanan denklemin determinasyon katsayısı (0.79) ve F İstatistik değeri (8.940) istatistiki açıdan %1 düzeyinde önemli bulunmuştur. Bu çalışmada oluşturulan denkleme ilişkin determinasyon katsayısı; Nursalam (2020) ile bulunan değerle aynı, Çakan (1996)'ın alüviyal topraklar ve kırmızı kahverengi akdeniz toprakları için hesapladığı değerler ile, Ali ve ark. (2016), Bayramođlu ve ark. (2021) ve Kumari ve ark. (2021) tarafından hesaplanan değerlerden küçük olduğu anlaşılmaktadır.

Bununla birlikte araştırmada hesaplanan determinasyon katsayısı; Çakan (1996)'ın kireçsiz kahverengi topraklar için bulduğu değer ile, Yarar ve Karkacier (1997), Radam ve Ismail (1999), Yılmaz ve ark. (2000) ve Mustapha ve ark. (2015) tarafından hesaplanan değerlerden ise büyük olduğu tespit edilmiştir.

Yapılan araştırmada kopya biber üretiminde kullanılan girdilerin üretim elastikiyetleri katsayıları toplamı ($\sum\beta_i$) 0.562 olarak hesaplanmıştır. Bu değer Çakan (1996), Yarar ve Karkacier (1997), Radam ve Ismail (1999), Yılmaz ve ark. (2000), Dipeolu ve Akinbode (2008), Jayalath ve Rathnayake (2015), Mohammed (2015), Ali ve ark. (2016), Asravor ve ark.

(2016), Abate ve ark. (2019), Lagiso ve ark. (2020) Nursalam (2020) ve Essa ve Essa (2022) tarafından hesaplanan değerlerden düşük düzeyde bulunmuştur.

Yürütülen araştırma tahmin denkleminde yer alan işgücü ve saf gübre kullanım miktarına ilişkin değişkenlerin elastikiyet katsayılarının pozitif, %5 düzeyinde önemli olduğu ve marjinal etkinlik katsayılarının da 1'in üzerinde olduğunu göstermiştir.

Benzer şekilde biber üretiminde işgücü değişkeni; Yarar ve Karkacier (1997), Radam ve Ismail (1999), Jayalath ve Rathnayake (2015), Asravor ve ark. (2016), Abate ve ark. (2019), Bayramoğlu ve ark. (2021) ve Kumari ve ark. (2021) tarafından yapılan çalışmada istatistiki yönden önemli bulunmuştur. Aynı şekilde işgücü değişkeninin marjinal etkinlik katsayısı; Mustapha ve ark. (2015), Ali ve ark. (2016), Nursalam (2020) ve Essa ve Essa (2022) tarafından yapılan çalışmalarda da 1'in üzerinde olduğu tespit edilmiştir.

Biber üretiminde saf gübre kullanımı istatistiki yönden önemli bulunmuştur. Benzer şekilde gübre faktörü; Yılmaz ve ark. (2000), Dipeolu ve Akinbode (2008), Radam ve Ismail (1999), Mohammed (2015), Asravor ve ark. (2016), Abate ve ark. (2019), Bayramoğlu ve ark. (2021), Kumari ve ark. (2021) ile Essa ve Essa (2022) tarafından yapılan araştırmalarda da istatistiki yönden önemli bulunmuştur. Aynı şekilde gübre faktörünün marjinal etkinlik katsayısı; Yılmaz ve ark. (2000), Mustapha ve ark. (2015) ve Nursalam (2020) tarafından yapılan çalışmalarda 1'in üzerinde bulunmuştur.

Bu araştırmada elde edilen temel bulgulardan yola çıkarak yapılan karşılaştırmalara göre biber üretiminde kullanılan faktörlerin ülkeden ülkeye ve bölgeden bölgeye değişiklik gösterdiği söylenebilir. Yapılan araştırmada özellikle biber üretiminde kullanılan girdilerden işgücü ve gübre kullanım miktarına ilişkin faktörlerin, bu araştırmada olduğu gibi, diğer araştırmalarda da istatistiki yönden önemli çıktığı ve belirtilen girdilerin marjinal etkinlik katsayısının da 1'den olduğu tespit edilmiştir. Bu nedenle bu araştırmadaki bulguların diğer araştırma sonuçlarıyla paralellik gösterdiği söylenebilir.

4.SONUÇ

Türkiye dünyanın önde gelen biber üreticisi ülkelerinden biridir. Ekim alanı ve üretim miktarı bakımından ilk 3 ülke arasında yer alan Türkiye'de biber üretimi birçok üreticinin geçim kaynağıdır.

Türkiye'de salçalık kopya üretim alanı, 2020 yılı verilerine göre toplam biber üretim alanının %47.57'sini, üretim miktarının da %48.96'sını oluşturmaktadır. Araştırma alanı olarak belirlenen Çanakkale ili ülke kopya biber üretiminde ilk sırada yer almakta olup, üretimin %20.60'ını karşılamaktadır.

Kapya biber üretimi Çanakkale ili için yüksek öneme sahiptir. Çanakkale ilinin toplam bitkisel üretim değeri içinde biberin payı %5.08'dir. İl toplam sebze üretim değeri içerisinde ise biberin payı %25.33'dür.

Bu çalışmada kapya biber üretiminde elde edilen üretim miktarı ile üretim faaliyetinde kullanılan girdiler arasındaki ilişkiler fonksiyonel olarak analiz edilmiştir. Yapılan araştırmada kapya biber üretim miktarı ile fide sayısı, saf gübre kullanım miktarı, tarımsal mücadele ilacı, mazot ve işgücü kullanım miktarları arasındaki ilişkiler Cobb-Douglas tipi fonksiyon kullanılarak incelenmiştir.

Çalışmada kapya biber üretimine ilişkin oluşturulan fonksiyonda; saf gübre (X_2) ve işgücü (X_5) girdilerinin üretim elastikiyetleri %5 ihtimal düzeyinde önemli bulunmuş, üretim miktarı üzerinde etkili olan faktörlerin üretim elastikiyetleri katsayıları toplamının ise ($\sum\beta_i$: 0.56) ölçeğe azalan getiriye ifade ettiği sonucuna varılmıştır.

Tahmin denkleminde yer alan değişkenlerden işgücü değişkenine ait (X_5) marjinal etkinlik katsayısı 19.47, saf gübre değişkeni ilişkin değer ise 13.64 olarak hesaplanmıştır. Marjinal etkinlik katsayılarına göre biber üretiminde işgücü faktörünün ekonomik optimum düzeyinin altında kullanıldığı belirlenmiştir. Bu nedenle marjinal etkinlik katsayısı yüksek olan işgücü ve saf gübre faktörlerinin birim alanda kullanımının artırılması tavsiye edilebilir. Diğer bir ifade ile biber üretiminde nitelikli ve kaliteli işgücü kullanımına özen gösterilmelidir. Bununla birlikte biber üretiminde toprak analizine dayalı olarak gübreleme yapılmalıdır. Yapılan araştırma birim alanda kullanılan gübre miktarının az olduğunu ve artırılması gerektiğini kanıtlamıştır. Bu amaca yönelik olarak biber üretim alanlarında mutlaka toprak analizi yapılmalıdır. Toprak analizine dayalı olarak tavsiye edilecek miktarlarda gübre kullanımı hem birim alandan elde edilen verimi artıracak hem de gelir değerini yükseltecektir.

Özet

Tekstilden havacılığa, lifler birçok sektör için vazgeçilmezdir ve bu alandaki gelişmeler lifleri kullanma ve görme şeklimizi tamamen değiştirme potansiyeline sahiptir. Akıllı lifler, çeşitli sektörlerde yeni bir inovasyon ve olanaklar çağını başlatan gelişmiş malzemeler ve en son teknolojinin dikkate değer bir birleşimini temsil etmektedir. Dış uyaranlara dinamik olarak tepki verebilen malzemelere olan talep, akıllı liflerin gelişimini de etkilemektedir. Bu lifler verileri algılamak, uyarlamak ve iletmek amacıyla üretildiği için, tekstil, çevresel izleme ve sağlık hizmetleri de dahil olmak üzere çeşitli sektörlerde ilgi çekici yeni olanaklar sunmaktadır. Akıllı liflerin giyilebilir teknolojide kullanımı, en ilginç yeni keşiflerin arasında yer almaktadır. Bu liflerin giysi ve aksesuarlara entegre edilmesi, vücut sıcaklığı, kalp atış hızı, duruş ve fiziksel aktivite gibi çeşitli sağlık parametrelerinin gerçek zamanlı olarak izlenmesine olanak tanımaktadır. Ayrıca, akıllı lifler gerilim, deformasyon ve sıcaklık değişikliklerini gerçek zamanlı olarak tespit edebildiği için inşaat mühendisliğinde yapıların güvenliğinin görüntülenmesinde kullanılabilir. Akıllı lifler nem, kirlilik seviyeleri ve diğer çevresel faktörler hakkında veri toplanmasına yardımcı olarak sürdürülebilirlikle ilgili karar alma süreçlerini iyileştirmektedir. Bütün bunlara ek olarak, bazı akıllı lifler dış uyaranlara tepki olarak renk, doku veya şekil değiştirme yeteneğine sahiptir, bu da onları hem tekstil endüstrisi için hem de kamuflaj gibi askeri uygulamalarda kullanılacak malzemeler üretmek için kullanışlı hale getirmiştir. Bu çalışma, akıllı lif teknolojisindeki en son gelişmelerin kapsamlı bir özetini sunmakta, muhtemel uygulamalarını vurgulamaktadır.

Anahtar Kelimeler: Akıllı lifler, sağlık görüntüleme, sensörler, renk değiştiren lifler

RECENT DEVELOPMENTS IN SMART FIBERS

Abstract

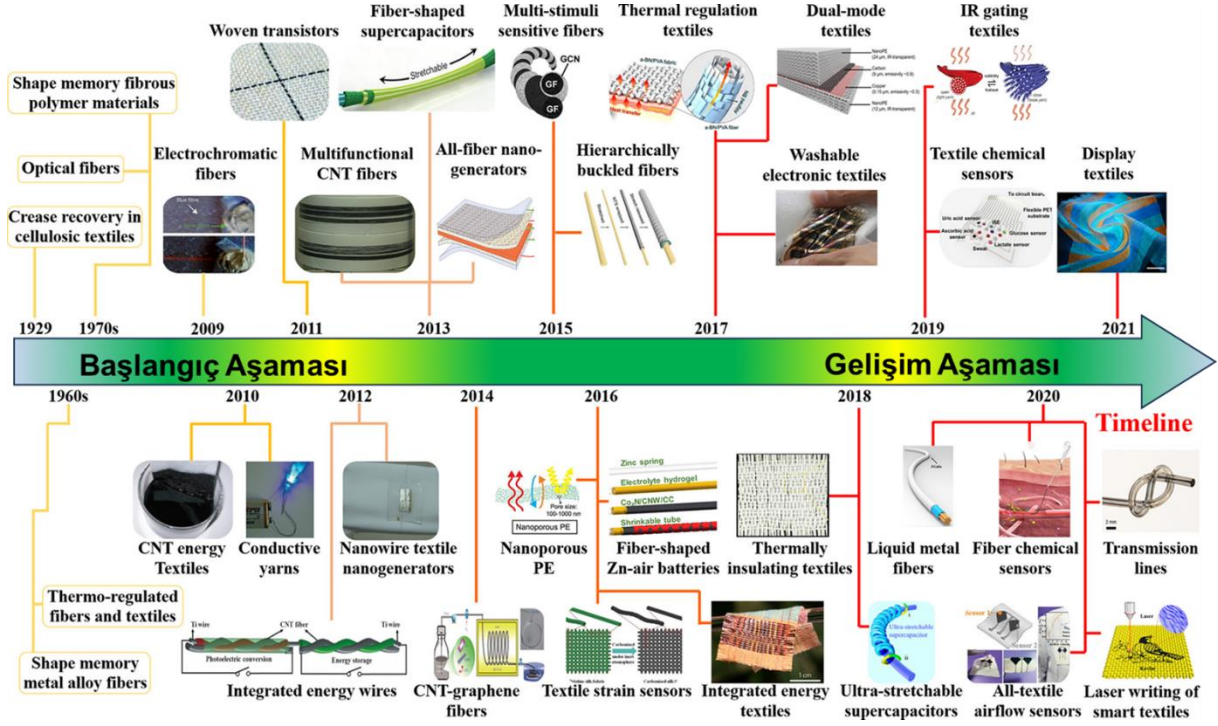

From textiles to aerospace, fibers are essential to many industries, and new developments in this field have the potential to completely change how we use and see fibers. Smart fibers represent a remarkable convergence of advanced materials and cutting-edge technology, ushering in a new era of innovation and possibilities across various industries. The demand for materials that can react dynamically to outside stimuli has fueled the development of smart fibers. Because these fibers are made to sense, adapt, and transmit data, they present intriguing new possibilities in a variety of industries, including textiles, environmental monitoring, and healthcare. Smart fibers' use in wearable technology is among their most interesting new discoveries. The integration of these fibers into apparel and accessories allows for the real-time monitoring of several health indices, such as body temperature, heart rate, posture, and physical activity. Furthermore, smart fibers can be used in structural health monitoring in aerospace and civil engineering, where they can detect stress, strain, and temperature changes in real-time. Additionally, these fibers help collect data on humidity, pollution levels, and other environmental factors, which improves sustainability decision-making. Also, certain fibers have the ability to change color, texture, or shape in reaction to outside stimuli, which makes them useful for both fashion and design as well as for generating materials that can be used in military applications such as camouflage. This study provides a thorough summary of the most recent developments in smart fiber technology, and highlights its prospective applications.

Keywords: Smart fibers, health monitoring, sensors, color-changing fibers

Giriş

Akıllı lifler, akıllı malzemelerden alınan verilerin işlenmesi yoluyla dış çevreyi ve iç durumu algılama, yanıt verme ve yeni işlevleri keşfetme yeteneğine sahip olan lifler olarak tanımlanmaktadır. Akıllı lifler, algılama, geri bildirim, bilgi tanıma ve depolama, yanıt verme, kendi kendine teşhis koyma, kendi kendini onarma gibi akıllı işlevlere sahiptir (Dang and Zhao 2021). Algılama işlevi, akıllı liflerin dış ve iç ortamı algılayabileceği ve ışık, ısı, stres, radyasyon veya manyetik yoğunluktaki değişiklikler gibi dış uyaranları algılayıp tanıyabileceği anlamına gelmektedir. 1970li yıllarda şekil hafızalı polimerlerin keşfi ile birlikte başlayan şekil hafızalı akıllı liflerin üretim süreci 2000li yıllarda bilgi teknolojilerini oluşturan transistör, sensör, kapasitör, pil gibi elektronik devre elemanlarının üretimi ile gelişimini sürdürmüş ve günümüzde ısı konfor sağlayan akıllı liflerden, tekstil malzemelerinden üretilmiş ekranlara kadar pek çok alanda araştırma ve geliştirme süreçleri devam etmektedir. Şekil 1'de akıllı liflerin tarihsel gelişimi kronolojik olarak verilmiştir. (H. Wang et al. 2021).

Geleneksel liflerin tekstil pazarındaki pazar payı, lif tipine ve spesifik uygulamaya bağlı olarak değişmektedir. Örneğin, Uluslararası Pamuk Danışma Komitesi'nin (ICAC) verilerine göre, pamuk hala küresel tekstil pazarında en yaygın kullanılan doğal elyaftır ve toplam elyaf tüketiminin yaklaşık %27'sini oluşturmaktadır. Aynı verilere göre polyester, naylon ve akrilik gibi sentetik elyaflar da tekstil endüstrisinde yaygın olarak kullanılmakta ve toplam elyaf tüketiminin yaklaşık %70'ini oluşturmaktadır. Bununla birlikte, çevre dostu ve yüksek performanslı tekstillere yönelik tüketici tercihlerinden kaynaklanan, tekstil pazarında sürdürülebilir ve gelişmiş elyaflara yönelik artan bir talep bulunmaktadır.

Şekil 1. Kronolojik olarak akıllı liflerin tarihi gelişimi (H. Wang et al. 2021)

Akıllı lifler, geleneksel liflere kıyasla daha küçük bir Pazarda kendisine yer bulmasına rağmen, askeri, endüstriyel, uzay ve havacılık, sağlık, eğlence ve spor gibi uygulamalarda hızla büyüyen bir ekonomik potansiyele sahiptir.

Şekil 2. Akıllı liflerin Pazar analizi

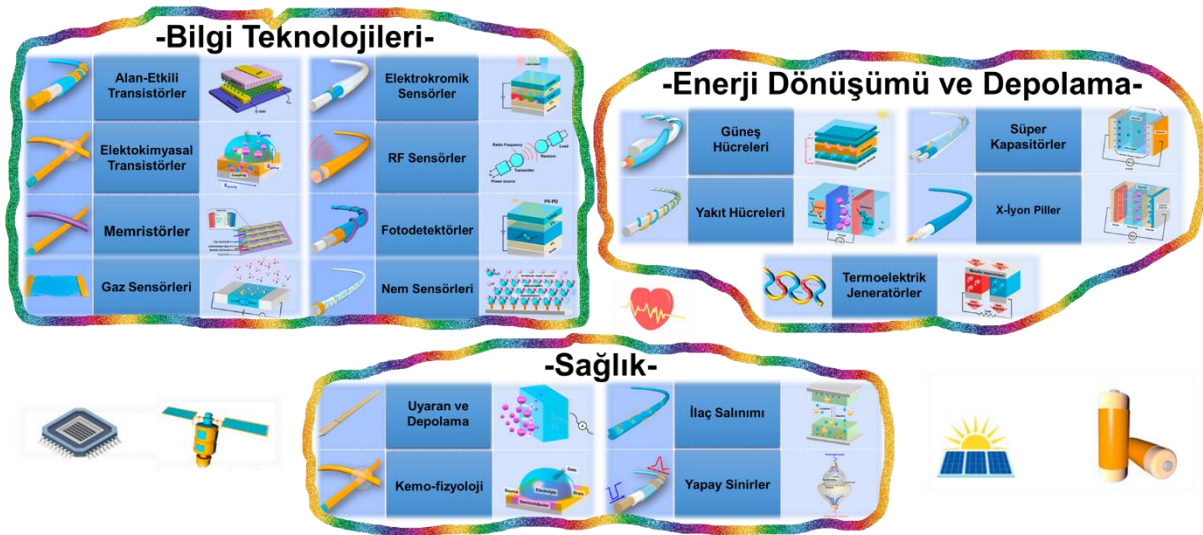

Mordor Intelligence'ın raporuna göre geleneksel liflerin Pazar büyüklüğü 2021 yılı itibariyle 193.1 milyar USD seviyesinde iken, 2028 yılına kadar %6.5'lik CAGR ile 282.2 milyar USD'ye ulaşacağı tahminlenmiştir. Şekil 2'de de gösterilen farklı şirketlerin raporları incelendiğinde, 2020-2030 yılları arasında özellikle akıllı kumaş pazarının çok daha yüksek bir CAGR ile (%20-%28) büyüyeceği öngörülmektedir (WEB1 2023; WEB2 2023; WEB3 2023).

1. Akıllı Liflerin Uygulama Alanları

Sun vd. tarafından yapılan çalışmalarda akıllı liflerin uygulama alanları, bilgi teknolojileri, sağlık ve enerji dönüşümü/depolama olarak 3 temel gruba ayrılmıştır. Şekil 3'de çeşitli uygulama alanlarında kullanılan akıllı lifler ve çalışma mekanizmaları gösterilmiştir (Sun et al. 2023).

- Bilgi Teknolojileri:

Bilgi teknolojileri içerisinde lif formunda üretilmiş olan alan-etkili transistörler (H. M. Kim et al. 2016), elektrokimyasal transistörler (Qing et al. 2019), memristörler (Xu et al. 2020), elektrokromik sensörler (Zhou et al. 2018), RF sensörleri (Liu et al. 2021), fotodetektörler (Dong et al. 2016; Du et al. 2022), nem (J. Zhang et al. 2019) ve gaz sensörleri (Nie et al. 2018) örnek olarak verilebilir.

Şekil 3. Akıllı liflerin temel uygulama alanları (Sun et al. 2023)

- *Sağlık:*

Sağlık alanında yapılan çalışmalar incelendiğinde, akıllı lif formundaki yapıların uyarandepolama (Tsukada, Nakashima, and Torimitsu 2012), kemo-fizyoloji (Y. Wang et al. 2017), elektrik kontrollü ilaç salınımı (Esrafilzadeh et al. 2013), ve yapay sinir üretimi (Ham et al. 2023) gibi uygulamalarının mevcut olduğu bilinmektedir.

- *Enerji Dönüşümü ve Depolama:*

Enerji dönüşümü alanında akıllı lifler kullanılarak yapılan çalışmalar incelendiğinde en temel uygulamaların güneş hücreleri (Song et al. 2016), yakıt hücreleri (Kwon et al. 2014), ve termoelektrik jeneratörler (Y. Kim et al. 2020) olduğu görülmektedir. Enerji depolama alanında ise süperkapasitörler (Tian et al. 2021), ve Li-iyon (Karahan Toprakci and TOPRAKCI 2021), Zn-iyon (Yi et al. 2019) ve Na-iyon (Borman 2017) piller ile ilgili çalışmalar ön plana çıkmaktadır.

2. Akıllı Liflerin Sınıflandırılması

Akıllı lifler, kullanılan malzemeye göre polimer kompozitleri, polimer karışımları, inorganik lifler ve hibrit lifler olarak sınıflandırılabilir. Ayrıca, liflerin mimarisine göre çekirdek-kabuk morfolojisinde, paralel yerleşim, çapraz yerleşim veya bükülmüş olarak akıllı kumaşların içerisinde yer alabilir. Ayrıca boyutlarına göre 1 boyutlu, 2 boyutlu, veya 3 boyutlu olarak akıllı kumaşlar oluşturulabilmektedir (Chen et al. 2023; Sun et al. 2023).

Şekil 4. Akıllı liflerin boyutlarına veya mimarisine göre sınıflandırılmasının şematik görünümü (Chen et al. 2023)

Bu çalışmada akıllı liflerin aşağıda detaylı incelemesi de verilmiş olan çalışma mekanizmalarına göre sınıflandırılması sunulmuştur.

- *Şekil hafızalı lifler:*

Şekil hafızalı lifler ilk olarak ortaya çıkan akıllı liflerdir. Deforme olmuş liflere basınç ve sıcaklık gibi belirli dış uyaran koşulları verildiğinde, şekil hafızalı lifler orijinal şekline geri dönebilmektedir. Choe vd. yaptıkları çalışmada insan cildinde IR ve su iletiminin ayarlanabilir düzenlenmesi için şekil hafızalı polimerik liflere dayalı akıllı bir tekstil geliştirmiştir. Bu çalışmada kullanılan lifler ısı yalıtım performansını artırmak için hiyerarşik mikro/nanogözenekli yapılarla üretilmiştir ve asimetric IR yansıtıcılığı ve hidrofilitiklik sağlamak için bir tarafa gümüş nanoteller kaplanmıştır. Şekil hafızalı polimerik lif tabanlı dokuma kumaş, uyarılara yanıt olarak şekil ve yapının deformasyonu ve geri kazanımı ile ısı yalıtımı ve asimetric ıslanabilirliğin büyük ölçüde ayarlanabilirliğini göstermektedir (Choe et al. 2022).

- *Optik lifler:*

Optik lifler, ışık enerjisini lifin içine hapsedebilen ve bir dalga kılavuzu modunda iletebilen bir tür optik kompozit lif türüdür. Optik lif, çekirdek ve kaplama olmak üzere iki parçadan oluşmaktadır. Elektromanyetik radyasyonun iletiminde, basamak tipi veya gradyan tipi lif yapısına sahip dalga kılavuzu kullanılmaktadır. Optik lifler, bilgi algılama ve bilgi iletimi gibi ikili işlevlere sahip olduğundan, yaygın olarak bir algılama malzemesi olarak kullanılmaktadırlar. Rahman vd. yaptıkları çalışmada çok modlu optik lifleri yapay sinir ağları yardımı ile görüntü transferinde kullanmışlardır. %98'den yüksek oranda görüntü transferi gerçekleştirebilmişlerdir (Rahmani et al. 2018).

- *Fotokromik lifler:*

Işığa duyarlı renk değiştiren maddeler, ışığın etkisi altında tersine çevrilebilir konfigürasyon değişikliklerine uğrayabilen ve böylece renk gelişimi veya solmasının tersine çevrilebilirliğini sergileyen izomerler içeren organik bileşiklerdir. Renk değiştirme mekanizması, belirli bileşiklerin ultraviyole ışığın veya görünür ışığın ışınlaması altında, farklı absorpsiyon spektrumlarına sahip yeni bileşikler oluşturmak için moleküler yapıda veya elektronik enerji seviyelerinde değişikliklere uğraması ve başka bir ışık koşulu altında, bu bileşiğin orijinal durumuna geri dönmesi prensibine dayanmaktadır. Bu sayede tersine çevrilebilir değişiklikler sürekli bir döngüde meydana gelebilmektedir. Zheng vd. yaptıkları çalışmada fotokromik boyalarla katkılanmış elektroöğrülmiş polikaprolakton liflerini şablonlayarak veya fotokromik

öz-kılıf ipliklerinin ticari kumaşlara işleyerek, akıllı giyilebilir göstergeler geliştirmiştir (Zheng et al. 2020).

- *Sıcaklığa duyarlı lifler:*

Sıcaklığa duyarlı lifler, özellikleri sıcaklıkla tersine çevrilebilir şekilde değişebilen lifleri ifade etmektedir. Isı koruması ve nemlendirme etkisi ve sıcaklığa duyarlı olarak renk değişikliği gösterebilen lifler en yaygın uygulama alanlarıdır. Mitsubishi Rayon Fiber Corporation tarafından geliştirilen "Ventcool" lifi, nem oranı yüksek olduğunda anında esneyebilen ve kurduğunda hızla kıvrılabilen, çevreye ve dinamik değişikliklere karşılık gelen dinamik lifler olarak adlandırılır. Li vd. sıcaklık değişimine bağlı olarak elektriksel direnci değişebilen PEDOT kaplı termoplastik poliüretan lifleri üretmişler ve bu lifleri esnek sıcaklık sensörü olarak kullanmışlardır (Li et al. 2022). Bir diğer çalışmada Duan vd. tarafından kendiliğinden kristallenme faz değişimi ile düzenlenen elektro-termokromik floresan lifler üretilmiştir. Yapılan çalışmada lüminesans özelliklerinin, faz değişimli malzemelerin kristalleşme/erime süreçleri sırasında florofor moleküllerinin dağılım durumunun ve floresan emisyonunun tersine çevrilebilir dönüşümü sayesinde ayarlanabildiğini göstermişlerdir (Duan et al. 2021).

- *İletken lifler:*

İletken lifler, standart koşullar altında (20 °C, bağıl nem% 65) $1 * 10^7 \Omega\text{-cm}$ 'den daha düşük özgül dirence sahip olan lifleri ifade etmektedir. Antistatik elektriksel özellik sağlamak, elektromanyetik dalgaların absorpsiyonu ve elektrik sinyallerini tespiti ve iletimi için kullanılmaktadır. İletken lifler elektron iletken lifler, iyon iletken lifler ve endüktif lifler olarak ayrılabilir. Choi vd. yaptıkları çalışmada giyilebilir tekstil elektroniğindeki gelişmiş ara bağlantı bileşenleri için yüksek elektrik iletkenliğine (0.11 S/cm), su geçirmezliğe ve mekanik stabiliteye sahip bir lif geliştirmiştir. Ticari bir Kevlar lifi önce Ag nanopartikül-poli(stiren-bütadien-stiren) polimer kompozitleri ile kaplanmış ve sonrasında da su geçirmezlik ve kendi kendini temizleme özellikleri kazandıran kendinden montajlı tek katman oluşturuca reaktiflerle kaplanmıştır (Choi et al. 2018).

- *pH'a duyarlı lifler:*

pH'a duyarlı lifler, pH'daki değişikliklerle hacim veya şekil değiştiren lifleri ifade etmektedir. Bu değişim, moleküler düzeyde, makromoleküler düzeyde ve moleküller arası düzeyde uyarın duyarlılığına dayanmaktadır. Zhang vd. elektroçirime yöntemi ile farklı derecelerde deasetilasyona sahip anyonik poli(akrilik asit) (PAA) ve katyonik kitosandan (Cs) oluşan pH'a duyarlı nanolifler üretmiştir (R.-Y. Zhang et al. 2018). Bir diğer çalışmada da pH 5.0 ile pH 7.0 arasında kesin bir pH eşliğinde duyarlı özellikler gösteren dekstranın koesterifikasyonu yoluyla

dekstran esterleri sentezlenmiştir. Çok katmanlı elektro eğrilmiş nanolifler sayesinde, üç farklı ilaç yükü, pH değerinin kademeli olarak artırılmasıyla sıralı ve bağımsız olarak ilaç salınımı gerçekleştirilmiştir (Theerasilp and Crespy 2019).

- *Antibakteriyel lifler:*

Antibakteriyel veya deodorant lifler gibi insan sağlığını korumak veya yaşam konforunu arttırmak amacıyla akıllı liflerin üretimi sürekli olarak geliştirilmektedir. Bunlar arasında, seçici antibakteriyel lifler en yaygın kullanılan akıllı lif grubudur. Seçici antibakteriyel lifler, belirli bir antibakteriyel madde eklenerek yüzey bakterilerini inhibe etme veya öldürme yeteneğine sahip akıllı bir lifi ifade etmektedir. Aytac vd. ambalaj malzemeleri için fonksiyonel bir katman olarak biriktirilebilen, ortalama 225 ± 50 nm çapında enzim ve bağıl neme (RH) duyarlı antimikrobiyal liflerin geliştirmişlerdir. Selüloz nanokristaller, zein (protein) ve nişasta, kekik yağı, sitrik asit ve nisin gibi doğadan elde edilen serbest antimikrobiyallerden ve kekik yağı, sorbik asit ve nisin siklodekstrin-içerme komplekslerinden oluşan bir kokteyl içeren çoklu uyarana-duyarlı nanoliflerden oluşturulan lifler, %95 bağıl nemde %50 bağıl neme kıyasla daha fazla aktif antibakteriyel madde salmış ve bu da %95 bağıl nemde E. coli popülasyonunda daha yüksek bir azalma meydana getirmiştir (Aytac et al. 2021). Bir diğer çalışmada, plazma bombardımanı tekniği ile geliştirilmiş kuaterner amonyum tuzunun kimyasal aşılması ile etkili bir antibakteriyel performansa sahip yeni bir cam lifi geliştirilmiştir (Guo et al. 2019). Cai vd. entegre bir radyatif soğutma etkisi ve fotokatalitik antibakteriyel özelliğe sahip hiyerarşik bir poliüretan/metal-organik çerçeve (MOF) kompozit nanolif membran üretmiştir. Elektro eğirme yöntemiyle üretilen hiyerarşik nanolif membran, ZIF-8 nanopartiküllerindeki bol kimyasal bağlara atfedilen %97'lik yüksek güneş yansıtma özelliği ve %93'lük gelişmiş termal emisyon özelliği göstererek doğrudan güneş ışığı altında $\sim 7,2$ °C ve geceleri $\sim 5,5$ °C'lik bir sıcaklık düşüşü sağlamıştır. Ayrıca, ZIF-8'in fotokatalitik aktivitesi sayesinde, %96'lık bir bakteriyel ölüm oranı elde edilmiştir (Cai et al. 2023).

3. Sonuçlar ve Tartışma

Son yıllarda akıllı lifler hem akademik hem de endüstriyel alanda önemli bir ilgi kaynağı olmuştur. Akıllı lifler, akıllı giyilebilir cihazların en temel bileşenidir. Bu nedenle özellikle kişisel sağlık yönetiminde, giyilebilir elektroniklerde ve giyilebilir enerji dönüşümü/enerji depolama uygulamalarında önemli ilerleme yaratmaları beklenmektedir. Lif ve tekstil tabanlı elektroniklerin malzeme ve yapısal tasarımlarındaki ilerlemeler, insan hareketlerinin, fizyolojik sinyallerin ve biyokimyasal sinyallerin gerçek zamanlı olarak izlenmesine olanak sağlamıştır.

Termal yönetim açısından, aynı tekstilde etkili soğutma, ısıtma veya her iki fonksiyona sahip akıllı tekstiller geliştirilmiştir. Buna ek olarak, esnek elektroniklerin sürdürülebilir çalışmasını sağlamak için enerji dönüşümünü, depolanmasını ve toplanmasını desteklemek üzere yüksek performanslı akıllı enerji lifleri ve tekstilleri geliştirilmiştir.

Bununla birlikte, akıllı liflerin veya tekstillerin pratikteki uygulamalarını gerçekleştirebilmek için üstesinden gelinmesi gereken önemli sorunlar bulunmaktadır. Bu çalışmada sunulan akıllı lif veya tekstillerin çoğu laboratuvar ölçeğinde üretilmektedir ve endüstriyel ölçekte üretime geçişte birçok zorluk bulunmaktadır. Diğer bir dezavantaj ise, geleneksel cihazlara kıyasla, lif veya tekstil tabanlı elektroniklerin genellikle daha düşük performans göstermesidir. Ayrıca, lifler ve tekstiller için yıkanabilirlik pratik uygulamalar için büyük önem taşımaktadır ve bildirilen bazı akıllı lifler ve tekstiller bu süreçte zarar görmektedir. Ayrıca, geniş bir uygulama yelpazesine ulaşmak için çok işlevli akıllı liflerin ve tekstillerin geliştirilmesi gerekmektedir. Örneğin, kendi kendine güç sağlayan, kablosuz akıllı giysiler için algılama, enerji depolama ve bilgi aktarım işlevlerinin entegrasyonu ve veri güvenliği gereklidir. Birçok zorluk devam etse de, akıllı liflerin ve tekstillerin parlak bir geleceğe sahip olduğu düşünülmektedir.

Özet

Giyilebilir cihazlar olarak da bilinen giyilebilir elektronikler, vücuda aksesuar veya implant olarak giyilebilen elektronik cihazları ifade etmektedir. Bu cihazlar fonksiyonuna göre giyilebilir elektronikler ve giyilebilir akıllı elektronikler olarak sınıflandırılmaktadır. Sadece zaman ve tarihi gösteren bir saat giyilebilir elektronik iken, kalp atış hızı, kan basıncı, vücut ısısı, lokasyon ve fiziksel aktivite gibi çeşitli parametreler hakkında gerçek zamanlı geri bildirim sağlayarak kullanıcılarının rahatını, güvenliğini ve esenliğini artıran saatler de akıllı giyilebilir elektronikler olarak adlandırılmaktadır. Bu cihazı giyen/taşıyan kişinin sağlığını ve faaliyetlerini çeşitli verilerle takip etmek için geliştirilen bu elektronik sistemler genellikle sensörler, mikroişlemciler ve kablosuz iletişim sistemleri gibi alt bileşenlerden oluşmaktadır. Bu elektronikler metal, plastik veya kompozit yapılardan üretilebildiği gibi tekstil yapılarından da üretilebilmektedir. Tekstil ürünlerinin vücuda kolaylıkla sarması, gün boyunca elektroniğin sabit bir şekilde taşınabilmesi gibi avantajları sayesinde son zamanlarda elektronik tekstil (e-tekstil) olarak tanımlanan giyilebilir elektroniklere olan ilgi her geçen gün artmaktadır. Bu çalışmada giyilebilir elektroniklerdeki son trendler ele alınmıştır.

Anahtar Kelimeler: Giyilebilir elektronikler, elektronik tekstiller, tekstil sensörleri, tekstil aktüatörleri

RECENT TRENDS IN WEARABLE ELECTRONICS

Abstract

Wearable electronics, also known as wearable devices, refer to electronic devices that can be worn on the body as accessories or implants. These devices are classified as wearable electronics and wearable smart electronics according to their function. While a watch that only displays the time and date is a wearable electronic, watches that improve the comfort, safety and well-being of their users by providing real-time feedback on various parameters such as heart rate, blood pressure, body temperature, location and physical activity are called smart wearable electronics. These electronic systems, which are developed to monitor the health and activities of the person wearing/carrying this device usually consist of subcomponents such as sensors, microprocessors and wireless communication systems. These electronics can be produced from metal, plastic or composite structures and textile structures. Thanks to the advantages of textile products such as high coverability of textiles and the ability to carry electronics stably throughout the day, the interest in wearable electronics, recently defined as electronic textiles (e-textiles), is increasing day by day. In this study, the latest trends in wearable electronics are discussed.

Keywords: Wearable electronics, electronic textiles, textile sensors, textile actuators

Giriş

Giyilebilir elektronikler, vücuda aksesuar veya implant olarak takılabilen elektronik cihazları ifade etmek için kullanılan bir terimdir. Bu cihazlar tipik olarak bir kişinin sağlığının ve faaliyetlerinin çeşitli yönlerini izlemek için gelişmiş sensörler, mikroişlemciler ve kablosuz iletişim teknolojisi gibi farklı bileşenlerin bir veya birkaçından oluşmaktadır. Bu ürünlere ait Pazar payı her geçen gün artmakta ve yaklaşık 70 milyar \$ bir paya sahiptir. Bu payın içinde spor, kişisel takip, kontrol sistemleri, iletişim, ev tekstili, etkileşimli tekstiller, medikal, askeriye, otomotiv, çevre kontrolü gibi birçok alanda farklı form ve büyüklükteki ürün yer almaktadır (Khan et al., 2019; Pang et al., 2020; Zhang et al., 2021).

1. Giyilebilir Elektronikler

Giyilebilir bir elektroniğin en önemli fonksiyonu vücuda kolaylıkla uyum sağlaması, vücudu sarması, takılabilmesi, giyilebilmesi, taşınabilmesidir. Bunlara ilave olarak konforlu olması, bakımı ve onarımının kolay olması da önemlidir. Giyilebilir elektroniklerin temel bileşenleri ve bu bileşenlerin önemli fonksiyonları aşağıdaki şekildedir (Ismar et al., 2020; Kan & Lam, 2021; Koncar, 2016):

- **Sensörler:** Kişide veya kişinin çevresinde meydana gelen değişimleri algılama ve bu değişimleri anlamlı elektriksel sinyallere dönüştürme,
- **Aktüatörler:** Elektrik, hidrolik, pnömatik veya mekanik enerjiyi harekete veya kuvvete dönüştürme,
- **Birleştirme elemanları:** Giyilebilir elektroniğin farklı kısımlarını birleştirme,
- **Kullanıcı arayüzleri:** Kullanıcıların giyilebilir elektronik veya yazılım uygulaması ile etkileşime girmesi ve elektroniğin kontrolü,
- **Güç kaynağı:** Sistemin çalışması için enerji sağlamak,
- **Jeneratör:** Enerji hasadı yapmak,
- **Devreler:** Elektronik fonksiyonun gerçekleşmesi,
- **Mikrokontrolör/İşlemci:** Sistemin kontrolü,
- **İletişim sistemleri/Wireless sistemler:** Uzaktan sistem takip ve kontrolü.

2. Giyilebilir Elektroniklerin Kullanım Alanları Ve Bunlardaki Son Trendler

Giyilebilir elektronikler yıllardır kullanılan cihazlar olmasına rağmen son zamanlarda hem elektronik ve esnek malzeme teknolojilerindeki gelişmeler hem de yazılım-yapay zekâ teknolojilerindeki gelişmeler sayesinde farklı bir boyuta taşınmıştır. Giyilebilir elektroniklerdeki en önemli gelişmeler sağlık ve fitness takibinde, akıllı tekstillerde, tıbbi ekipmanlarda, enerji hasadında ve giyilebilir elektroniklerin sürdürülebilirliği alanında gerçekleşmektedir. Bu başlıklarda meydana gelen önemli trenler aşağıda ele alınmıştır.

3.1 Sağlık ve Fitness Takibi ve Tıbbi Cihazlar

Sağlık ve fitness takibi cihazları yıllardır kullanılmaktadır. Bu sistemler akıllı saatler ve akıllı tekstiller gibi ürünler ile yapılmakta ve genellikle adım sayısı, yürüme koşma hızı, nabız, kalp atışı, vücut sıcaklığı, uyku analizi, stres seviyesi gibi analizler yapılmaktadır. Bu alanda ar-ge kapsamında yapılan çalışmaların çoğu daha esnek ve vücudu saran fonksiyonel polimer kompozitler kullanımı ile kablosuz çalışabilen sistemler üzerine yoğunlaşmıştır. Bu sistemlerin daha gelişmiş versiyonlarında ise hidrasyon takibi, kandaki oksijen ve glikoz seviyesinin ölçülmesi gibi fonksiyonlarda bulunmakta ve gerekli durumlarda uyarı yapıp kullanıcının yapması gerekenleri bildirmektedir. Sağlık ve spor sırasında kullanılan bir diğer sistem de giyilebilir elektrokardiyogram (EKG) ve kan basıncını izlemeyi sağlayan cihazlardır. Kişilerin yaşamlarını sağlıklı bir şekilde sürdürebilmeleri için uyku oldukça önemlidir. Uyku takibi de son zamanlarda takip edilen kriterlerdendir. Özel polimerle hazırlanan yapay derilerle uyku takibi yapılabilen yüzeyler hakkında çalışmalar yoğunlaşmaktadır. Bu sistemler sayesinde uyku kalitesi hakkında önemli bilgiler elde edilebilmektedir. Yine son zamanlarda yapılan çalışmalarda kullanıcıların stres seviyesi, kaygı ve ruh halinin takibi hakkında da çalışmalar yapılmaktadır. Bu tür bilgiler kişinin kalp atışlarından, nabzından, terleme derecesinden yola çıkarak yapılmaktadır. Ayrıca solunum takibi yapan hem tekstil hem de bandaj formunda geliştirilmiş sistemler de bulunmaktadır. Bu sistemler yaşlı ve bebeklerin sağlık takibinde oldukça avantajlıdır. Son yıllarda nöroloji alanında yapılan çalışmalar sayesinde giyilebilir özel elektrotlar ile kişilerin nörolojik fonksiyonları takip edilebilmektedir. Bu tür cihazlar epilepsi ve benzeri hastalıkların takip ve tedavisi için önemlidir. Bu sistemlerin yönetimi de oldukça önemlidir. Bu yüzden giyilebilir cihazlara güvenli bir şekilde kullanıcıya erişim için parmak izi veya göz tanıma, doğrulama gibi sistemler adapte edilmektedir. Uzaktan hasta izleme sistemleri

ise bu alandaki önemli gelişmelerdendir. Özellikle evden takip edilebilecek hafif veya kronik hastaların takibinde hem maliyet hem de ileri yaştaki insanların daha konforlu hissetmesi açısından önemlidir. Bu sistemler. Giyilebilir elektroniklerin sağlık ekosistemleri ile entegre edilmesi son zamanda çalışılan önemli konulardandır. Giyilebilir sistemler sayesinde elde edilen veriler kişilere ait sağlık kayıtlarını oluşturmakta ve bu veri tabanı uygun ekosistemler sayesinde sağlık uzmanlarına ulaştırılmaktadır. Bu aşamada gerekli durumlarda elde edilen veriler yapay zeka ve farklı algoritmalarla analiz edilmekte, yorumlanabilmekte ve hasta veya hastalar için gerekli önlemler önceden alınabilmektedir. Bu alandaki çalışmalar oldukça yeni olup, binlerce dataya ihtiyaç duyulmaktadır (Hickey et al., 2021; Khan et al., 2019; Kubicek et al., 2022; Mirjalali et al., 2022; Panch et al., 2018; Pang et al., 2020; Passos et al., 2021; Soh et al., 2015; Yue et al., 2022) .

3.2 Akıllı Giysiler

Akıllı giysiler, giyilebilir elektroniklerin bir başka formudur. Bu yapılar, vücudu kolayca sarabilmesi ve birçok elektroniği kolayca taşıyabilme gibi avantajları sayesinde son zamanlarda oldukça popülerdir. Akıllı giysilerdeki en önemli gelişmeler tekstil üretim teknolojilerindeki ve malzeme, elektronik alanlarındaki gelişmelerle yakından ilişkilidir. Akıllı giysilerde sensörler, aktüatörler, enerji hasat etme sistemleri, kablosuz iletişim sistemleri, antenler, devreler gibi bileşenlerden oluşmaktadır. Bu yapılar dokuma, örme, baskı, kaplama, üç boyutlu baskı, elektro eğirme gibi tekniklerden birisi veya birkaçının kombinasyonu ile üretilebilmektedir. Akıllı giysilerdeki son zamanlardaki en önemli gelişmeler esneme ve uzatılabilme yeteneği olan, kendi kendini iyileştirebilen, tamir edebilen polimerik yapıların geliştirilmesidir. Akıllı giysiler sağlık izleme sistemlerinde, bir önceki kısımda anlatılan aktivitelerin gerçekleştirilmesini sağlayabilmektedir. Buna ilave olarak vücut ısısının dengelenmesi için, ısıtma veya soğutma elemanları ile donatılmış akıllı tekstiller de son zamanlarda geliştirilen giyilebilir elektroniklerdendir. Yine benzer şekilde tekstil yapılarına aydınlatma sağlayan elemanlar uyarlanarak gerek karanlıkta kullanılabilen güvenlik amaçlı gerekse moda amaçlı yapılar geliştirilebilmektedir. Son zamanlarda popüler olan bir diğer konu da akıllı tekstillerden enerji hasadı yapmaktır. Bu yapılarda güneş enerjisinden, hareket enerjisinden, sürtünmeden, ısı farkından dolayı enerji elde edilebilmektedir. Bu sistemler kendi enerjini sağlayabilen sistemler olarak adlandırılmaktadır. Giyilebilir elektroniklere geleneksel tekstillerde olduğu gibi farklı antimikrobiyal vb. bitim işlemleri de yapılabilmektedir. Elektronik tekstiller son zamanlarda

akıllı polimerlerle üretilip, bu yapıların sıcaklık, nem, elektriksel alan vb. dış uyaranlara bağlı olarak özelliklerini değiştirebilmektedirler. Bu ürünlerin hem elektronik hem de tekstil ürünü olarak kullanılabilmesi, bakım-yıkama gibi etkenlere dayanıklı olmalıdır. Bu alanda yapılan çalışmalarla özel enkapsülasyon yapıları geliştirilmektedir. Diğer giyilebilir elektroniklerde olduğu gibi, kablosuz iletişim sistemleri ile entegre edilebilmektedir (Bairagi et al., 2023; Cochrane et al., 2007; H. Lee & Roh, 2019; T. Lee et al., 2016; Zheng et al., 2022).

3.3 Enerji Hasadı

Giyilebilir cihazların enerji gereksinimi her geçen gün önem kazanmaktadır. Şarj edilebilen pillerin maliyetlerinin her geçen gün artması elektroniğin maliyetini de artırmaktadır. Bu yüzden kendi enerjisini üretebilen elektronikler günümüzde en çok konsantre olunan konular başında gelmektedir. Bu sistemlerde, güç üretmek için güneş enerjisi, vücut ısısını veya vücut hareketi gibi farklı formdaki enerjiler kullanılabilir. Bu amaçla kullanılan malzemelerden birisi piezoelektrik özellik gösteren malzemelerdir. Bu malzemeler, mekanik titreşimlerden veya basınçtan enerji elde etmek için yaygın olarak kullanılmaktadır. Bu alanda özellikle giyilebilir elektronikler için bu özellikteki polimerler veya polimer kompozitler kullanılmaktadır. Son gelişmeler, giysi ve ayakkabı gibi giyilebilir cihazlara entegre edilen piezoelektrik jeneratörlerin verimliliğini ve esnekliğini artırmaya odaklanmaktadır. Enerji hasadında meydana gelen gelişmelerden birisi de triboelektrik jeneratörlerin giyilebilir formda üretilmesidir. Bu yapılar farklı yüzeylerin sürtünmesi sonucu ortaya çıkan enerjinin hasat edilmesini sağlamaktadır. Bu alandaki gelişmeler de malzeme bilimi ve mikro elektroniklerin gelişmesine paralel olarak ilerlemektedir. Giyilebilir enerji üretebilen sistemlerdeki önemli bir diğer gelişme de esneyebilen, bükülebilen ve performansında önemli değişiklikler olmayan yapıların geliştirilmesidir. Bu yapılar bir önceki kısımda verildiği gibi, tekstil ürünlerine adapte edilebilmekte veya tekstil ürününden üretilmektedir. Benzer şekilde güneş enerjisi üreten mini panellerin giyilebilir forma getirilmesi ile de bu enerji değerlendirilebilmektedir. Bu alandaki gelişmeler ince film ve organik fotovoltaik teknolojilerine paralel bir şekilde ilerlemektedir. Bir diğer sistem de sıcaklık farkı ile enerji üretimini sağlayan termoelektrik jeneratörlerdir. Giyilebilir cihazlar genellikle vücut ve çevre arasındaki sıcaklık değişiminden yararlanmaktadır. Bu sistemlerde enerjinin depolanabilmesi için geliştirilen esnek piller veya süper kapasitörler de bu alandaki önemli gelişmelerdendir. Bu sayede, giyilebilir cihaz için sürekli ve stabil bir güç kaynağı elde edilmiştir. Bu alandaki çalışmalardaki gelişmeler esnek

termoelektrik malzemelerin geliştirilmesi ve boyutlarının küçültülmesi ile gerçekleşmektedir. Bu sistemlerin her birinin avantajlarından faydalanmak için kombine edilebilmekte ve hibrit sistemler üretilebilmektedir (Enescu, 2019; Khaligh & Onar, 2017; Li et al., 2019; Rodrigues-Marinho et al., 2023; Ryu et al., 2019; Snyder, 2009; Thainiramit et al., 2020; Vallem et al., 2021; Xiahou et al., 2023; Zou et al., 2019) .

3.4 Sürdürülebilirlik

Giyilebilir elektroniklerin tüketiminin artması dolayısıyla son zamanlarda çevresel etkileri konusunda giderek artan bir farkındalık söz konusudur. Bu amaçla sürdürülebilir, geri dönüştürülebilir malzeme kullanılabilir. Bunun yanında biyolojik olarak parçalanabilen ve biyo-bazlı malzemelerin kullanımı üzerine çalışmalar yapılmaktadır. Bu sayede çevresel ayak izinin azaltılmasına yardımcı olmaktadır. Giyilebilir cihazların uzun ömürlü, tamir edilebilir, enerji tasarruflu, sürdürülebilir ambalajların kullanılması, üretim sırasında minimum enerji ve malzeme kullanılması, zararlı bileşenlerin minimize edilmesi ve geri dönüştürülebilir bileşenlerden oluşması da bir diğer katkıdır (Han & Yoon, 2021; Manjunatheshwara & Vinodh, 2021).

Sonuçlar ve Tartışma

Giyilebilir elektronikler sağlık takibinden, spora, güvenlik sistemlerinden, enerji üretimine kadar birçok alanda kullanılmaktadır. Pazar payı her yıl yaklaşık %7-8 oranında artış gösteren giyilebilir elektronikler, malzeme, mikroelektronik teknolojilerindeki gelişmelere paralel olarak her geçen gün

Abstract

Intrusion Detection Systems (IDS) play a critical role in safeguarding networks and systems from security threats. This report provides an overview of IDS, discussing their types, advantages, limitations, and components. Additionally, it explores the evaluation metrics used to assess IDS performance. The report highlights the challenges faced by IDS, such as evolving threats, false positives and negatives, encrypted traffic, scalability, insider threats, and zero-day attacks. Emerging trends in IDS, including machine learning, deep learning, big data analytics, cloud-based architectures, threat intelligence integration, behavior-based analysis, and integration with Security Orchestration, Automation, and Response (SOAR), are also discussed. Furthermore, the report emphasizes the importance of IDS in early threat detection, enhanced incident response, compliance, network visibility, defense-in-depth strategy, continuous monitoring, and threat intelligence. It concludes by underscoring the significance of IDS in maintaining a strong security posture and reducing the risk of cyber-attacks. The insights provided in this report will assist researchers, practitioners, and organizations in understanding the evolving landscape of IDS and making informed decisions to enhance their cybersecurity defenses.

Keywords: Intrusion Detection Systems, Cyber Security, Architecture

INTRODUCTION

Intrusion Detection Systems (IDS) are security mechanisms designed to monitor and detect unauthorized or malicious activities within computer networks or systems such as unauthorized access attempts, malware infections, or abnormal behaviors. These systems analyze network traffic, system logs, and other relevant data sources in real-time to identify potential intrusions or security breaches (Sharafaldin, 2018). The primary goal of an IDS is to provide timely and accurate detection of security incidents, allowing for prompt response and mitigation measures. By analyzing network packets, system logs, or user behaviors, IDS can identify patterns and signatures associated with known attacks or detect anomalies that deviate from normal system behavior (Akinyele, 2020). These functional attributes signify IDS as essential components of cybersecurity that help organizations detect and respond to potential unauthorized activities or intrusions within their computer networks or systems and therefore, mitigate possible damages caused by cyber threats. Early threat detection provided by Intrusion Detection Systems present before the world, proactive security measures which address vulnerability stances in modern-day security systems.

It is worth noting that IDS can be standalone systems or integrated into other security solutions, such as Intrusion Prevention Systems (IPS) or Security Information and Event Management (SIEM) systems. Standalone IDS focuses on detection and alerting, while integrated systems often incorporate prevention or response capabilities alongside detection (Akinyele, 2020). In practice, organizations often deploy a combination of these IDS types to achieve a more comprehensive and layered approach to intrusion detection. Network-based IDS provides visibility into network traffic, host-based IDS focus on individual systems, anomaly-based IDS detects deviations from normal behavior, and signature-based IDS identifies known attacks. This combination helps organizations detect a wider range of threats and enhances overall intrusion detection capabilities (Kim, 2015).

The components of typical IDS were evaluated and the role of integration and systemic architecture in successful intrusion detections were studied. This followed the determination of evaluation metrics in intrusion detection techniques implemented on a vast scale. This paper aims to delve into the types and mechanics of Intrusion Detection Systems, the techniques associated with intrusion detection, and their significance followed by the current challenges and prospects towards achieving optimum security.

TYPES OF INTRUSION DETECTION SYSTEMS

Intrusion Detection Systems can be classified into several main types (Alazab, 2012):

Network-Based IDS (NIDS):

Network-Based IDS monitors network traffic at strategic points within a network infrastructure. They analyze network packets, looking for patterns, anomalies, or known attack signatures. NIDS can be deployed at network boundaries, such as routers or firewalls, or within internal network segments. They inspect network traffic in real-time and generate alerts when suspicious or malicious activities are detected. NIDS are effective in detecting network-level attacks, such as port scans, denial-of-service (DoS) attacks, or unauthorized access attempts.

Advantages:

- NIDS can monitor network traffic at strategic points, providing broad visibility into network activities and potential threats.
- NIDS are effective in detecting network-level attacks, such as port scans, DoS attacks, or unauthorized access attempts.
- NIDS can monitor large-scale networks and handle high volumes of network traffic.
- NIDS operate independently of individual host systems, making them suitable for detecting attacks targeting multiple hosts simultaneously.

Figure 1. Network-Based Intrusion Detection System NIDS architecture

Limitations:

- NIDS have limited visibility into host-level activities and may not detect attacks that bypass network-level defenses and occur at the host level.
- NIDS faces challenges in analyzing encrypted network traffic as it may be difficult to inspect the content of encrypted packets.

- NIDS may generate false positive alerts, especially when detecting anomalies in network traffic, leading to unnecessary investigations and resource consumption.

Host-Based IDS (HIDS):

Host-Based IDS are installed on individual host systems and monitor activities occurring on those systems. They analyze system logs, file integrity, user activities, and other host-specific data to detect signs of unauthorized access or malicious behavior. HIDS provides visibility into the activities happening at the host level, enabling the detection of attacks that may bypass network-level defenses. They are effective in detecting host-level attacks, such as privilege escalation, file tampering, or malware infections (Kim, 2015).

Advantages:

- HIDS provides detailed visibility into activities occurring at the host level, detecting attacks that bypass network-level defenses.
- HIDS can analyze system logs, file integrity, and user activities, allowing for a deeper understanding of the context and potential impact of detected events.
- HIDS are effective in detecting attacks targeting specific host systems, such as privilege escalation, file tampering, or malware infections.
- HIDS generate fewer false positive alerts compared to network-based IDS since they analyze activities occurring directly on the host system.

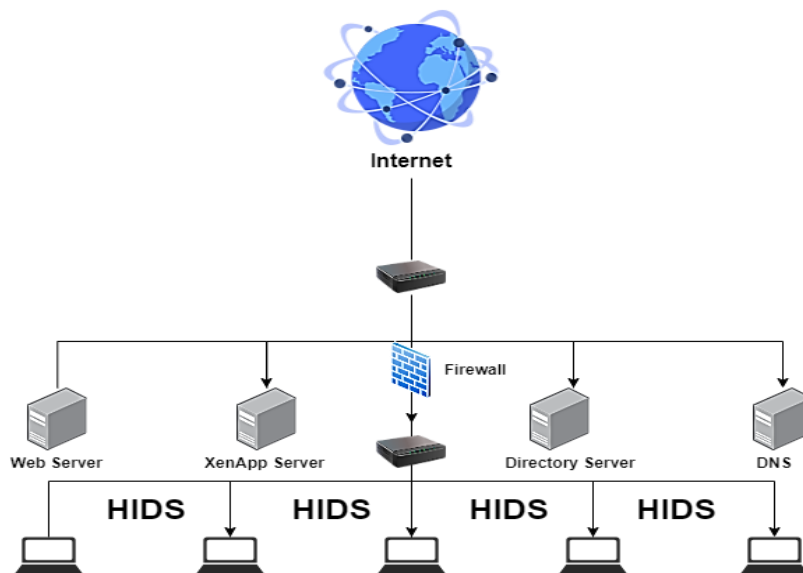

Figure 2. Host-Based Intrusion Detection System Work Station

Limitations:

- HIDS focuses on individual host systems and may not capture network-level attacks or threats targeting other hosts.
- HIDS can consume system resources, impacting host performance, particularly when monitoring and analyzing large amounts of data.
- HIDS's effectiveness can be influenced by the host's configuration, and attackers who gain administrative access to the host may manipulate or disable the HIDS.

Anomaly-Based IDS:

Anomaly-Based IDS detects intrusions by comparing observed behavior against a baseline of normal behavior. They establish a profile or model of what is considered normal system or network behavior. Any deviations from this baseline are flagged as potential intrusions. Anomaly-based IDS are effective in detecting previously unknown or zero-day attacks because they don't rely on known attack signatures. However, they require a period of training and learning to establish the baseline behavior accurately.

Advantages:

- Anomaly-based IDS can detect previously unknown or zero-day attacks by identifying deviations from established baselines or normal behavior.
- Anomaly-based IDS can adapt to changes in the network or system behavior and adjust the baseline accordingly.
- Anomaly-based IDS do not rely on frequent signature updates, making them useful in detecting new or evolving attack techniques.

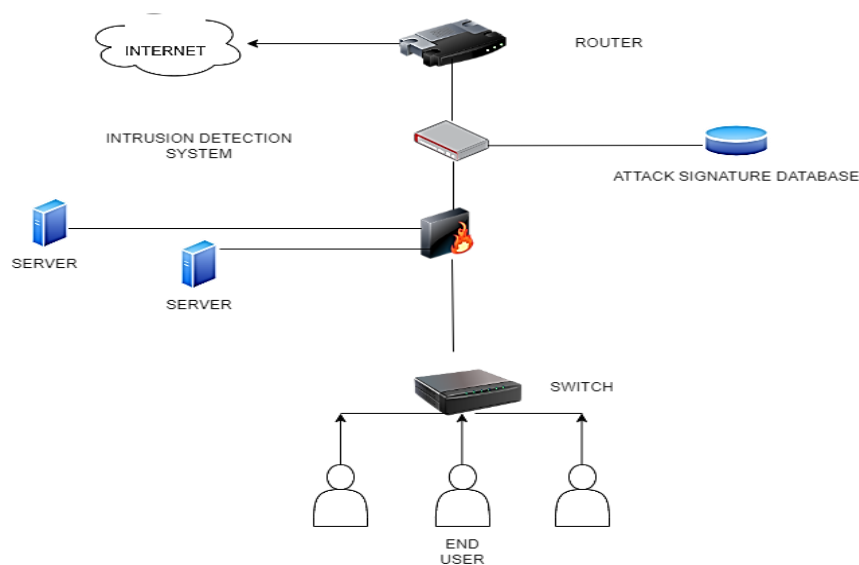

Figure 3. Anomaly-based Intrusion Detection System

Limitations:

- Anomaly-based IDS requires a period of training and learning to establish accurate baselines, which may result in a higher rate of false positives during the initial stages.
- Anomaly-based IDS can generate false positive alerts, especially in dynamic network environments or when legitimate activities deviate from the baseline.
- Configuring and fine-tuning anomaly-based IDS can be complex due to the need to balance sensitivity to detect intrusions and minimize false positives.

Signature-Based IDS:

Signature-Based IDS uses a database of known attack signatures or patterns to detect potential intrusions. They match observed network packets, system logs, or other data against the signatures in their database. If a match is found, it indicates the presence of a known attack or malicious activity. Signature-based IDS are effective in detecting known attacks and are relatively quick to implement. However, they may struggle with detecting new or evolving attack techniques that do not match any existing signatures (Alazab, 2012).

Advantages:

- Signature-based IDS can quickly and effectively detect known attacks or threats for which signatures are available.
- Signature-based IDS tend to have a lower false positive rate since they focus on known attack signatures.
- Minimal Resource Consumption: Signature-based IDS are relatively lightweight and consume fewer system resources compared to other types of IDS.

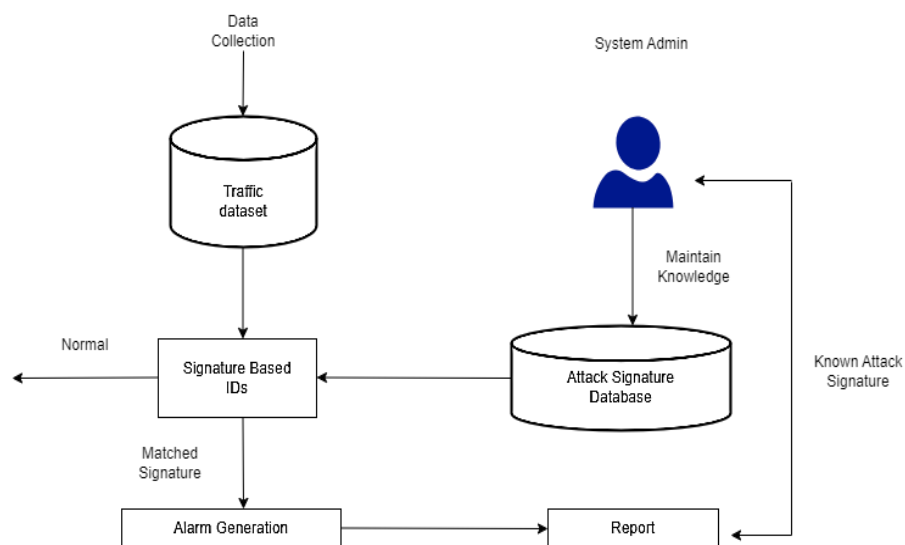

Figure 4. Signature-Based Intrusion Detection System

Limitations:

- Signature-based IDS heavily depend on up-to-date signature databases. They may miss newly emerging or evolving attacks until the signatures are updated.
- Signature-based IDS may fail to detect attacks that do not match any known signatures, making them less effective against zero-day or novel attack techniques.
- Signature-based IDS may generate a large number of alerts due to the sheer volume of signatures, making it challenging to prioritize and manage the alerts effectively.

1. ARCHITECTURE AND TECHNIQUES OF IDS

IDS consists of several components and follows a specific architecture to ensure methodical monitoring and control and can vary depending on specific implementation, deployment, environment, and organizational requirements (Sharafaldin, 2018).

Sensors or Data Sources:

IDS relies on various sensors or data sources to collect relevant information for analysis. These can include network sensors that capture network traffic, system logs from individual hosts, security event logs, application logs, or other sources of data that provide insights into the system and network activities.

Collection and Preprocessing:

The collected data from sensors undergo a collection and preprocessing phase. This involves aggregating and normalizing the data to ensure consistency and compatibility for subsequent analysis. During this phase, data may be filtered, compressed, or transformed to reduce redundancy and optimize storage and processing efficiency.

Analysis Engine:

The analysis engine is the core component of an IDS responsible for detecting potential intrusions. It applies detection algorithms, rules, or models to the preprocessed data to identify signs of suspicious or malicious activities. The analysis engine can employ various techniques such as signature matching, anomaly detection, or heuristics-based analysis to detect intrusions.

Signature Database or Models:

Signature-based IDS rely on a database of known attack signatures or models. This database contains predefined patterns, behaviors, or characteristics associated with known attacks. The analysis engine compares the observed data against this database to identify matches and raise alerts when a signature or model is detected.

Anomaly Detection Models:

Anomaly-based IDS uses statistical models, machine learning algorithms, or behavioral profiles to establish baselines of normal system or network behavior. These models identify deviations or anomalies that deviate from the established baseline, indicating potential intrusions or abnormal activities.

Alert Generation:

When the analysis engine detects a potential intrusion or security incident, it generates alerts or notifications. Alerts typically contain information about the event, its severity, and relevant details to facilitate incident response. Alerts can be sent to security personnel, and administrators, or integrated with a Security Information and Event Management (SIEM) system for centralized monitoring and management.

Response and Notification:

Upon receiving alerts, security personnel or administrators can initiate appropriate response actions. This may involve further investigation, mitigation measures, blocking suspicious traffic, isolating compromised hosts, or engaging incident response procedures. IDS can also trigger notifications to stakeholders or response teams, ensuring timely incident awareness and coordinated actions.

Reporting and Logging:

IDS generates reports and logs to provide documentation and evidence of security events, alerts, and responses. These logs are valuable for post-incident analysis, compliance reporting, forensic investigations, or audit purposes. They help in understanding attack patterns, identifying vulnerabilities, and enhancing the overall security posture of the organization.

Integration with Other Security Systems:

IDS can integrate with other security systems, such as firewalls, Intrusion Prevention Systems (IPS), SIEM platforms, or threat intelligence feeds. The integration enables collaboration between different security components, enhances threat visibility, and allows for coordinated responses to detected intrusions.

2. EVALUATION METRICS FOR IDS

When evaluating the effectiveness and performance of an Intrusion Detection System (IDS), several metrics are commonly used (Alazab, 2012).

True Positive (TP): The number of correctly identified intrusions or attacks by the IDS. It represents the instances where the IDS correctly detects and alerts about a genuine security threat.

False Positive (FP): The number of alerts generated by the IDS for events that are not actual intrusions. False positives occur when the IDS incorrectly identifies normal or benign activities as malicious or suspicious.

True Negative (TN): The number of correctly identified non-intrusive events or legitimate activities by the IDS. It represents the instances where the IDS accurately recognizes and ignores normal network or system behavior.

False Negative (FN): The number of undetected or missed intrusions by the IDS. False negatives occur when the IDS fails to detect a genuine security threat, allowing it to go unnoticed.

Detection Rate or True Positive Rate (TPR): The percentage of actual intrusions correctly identified by the IDS. It is calculated as $TP / (TP + FN)$ and represents the IDS's ability to detect true positives.

False Alarm Rate (FAR): The percentage of false positives generated by the IDS compared to the total number of non-intrusive events. It is calculated as $FP / (FP + TN)$ and indicates the rate of false alerts raised by the IDS.

Accuracy: The overall correctness or accuracy of the IDS's detection. It is calculated as $(TP + TN) / (TP + FP + TN + FN)$ and represents the proportion of correctly classified events (both intrusions and non-intrusive events) by the IDS.

Precision: The proportion of correctly identified intrusions among all the events classified as intrusions by the IDS. It is calculated as $TP / (TP + FP)$ and represents the accuracy of the positive predictions made by the IDS.

Recall or Sensitivity: The proportion of correctly identified intrusions out of all the actual intrusions. It is calculated as $TP / (TP + FN)$ and indicates the IDS's ability to detect all the positive instances (intrusions) present in the dataset.

F1 Score: A combined metric that balances precision and recall. It is the harmonic mean of precision and recall and provides an overall measure of the IDS's performance. F1 Score is calculated as $2 * (Precision * Recall) / (Precision + Recall)$.

3. RESULTS AND DISCUSSIONS

5.1 Significance of IDS

Early Threat Detection: IDS serves as a proactive defense mechanism by detecting and alerting potential security threats at an early stage. By monitoring network and system activities

in real time, IDS can identify suspicious behaviors, anomalies, or known attack signatures, allowing organizations to respond promptly and mitigate risks.

Enhanced Incident Response: IDS provides valuable insights and alerts that facilitate incident response efforts. By promptly notifying security teams about potential intrusions, IDS enables rapid investigation, containment, and mitigation of security incidents. This helps minimize the impact of attacks and reduces the time to detect and respond to security breaches.

Defense against Unknown Threats: IDS equipped with anomaly-based detection techniques and machine learning capabilities can detect unknown or zero-day attacks. These attacks may not have known signatures but can be identified by analyzing deviations from normal behavior. IDS plays a crucial role in identifying novel attack patterns and enhancing the security posture of organizations.

Compliance and Regulatory Requirements: IDS assists organizations in meeting compliance and regulatory requirements, such as the Payment Card Industry Data Security Standard (PCI DSS) or General Data Protection Regulation (GDPR). By monitoring and analyzing network and system activities, IDS helps organizations demonstrate due diligence in protecting sensitive data and maintaining compliance with industry-specific regulations.

Network and System Visibility: IDS provide valuable visibility into network and system activities, offering organizations a comprehensive understanding of their infrastructure's security posture. This visibility helps identify vulnerabilities, suspicious activities, or misconfigurations that could potentially be exploited by attackers. With this knowledge, organizations can take proactive measures to strengthen their security defenses.

Defense-in-Depth Strategy: IDS is an integral component of a defense-in-depth strategy, which involves layering multiple security controls to provide comprehensive protection. By complementing other security measures such as firewalls, Intrusion Prevention Systems (IPS), and endpoint security solutions, IDS add an extra layer of defense, increasing the likelihood of detecting and preventing security threats.

Continuous Monitoring and Threat Intelligence: IDS enable continuous monitoring of network and system activities, ensuring a proactive security posture. They can integrate with threat intelligence feeds, providing organizations with real-time information on emerging threats, attack vectors, and indicators of compromise. This integration enhances the IDS's ability to detect and respond to evolving threats effectively.

3.2 Challenges, Future, and Emerging Trends in IDS

Challenges and emerging trends in IDS are continually evolving due to the dynamic nature of cybersecurity threats and advancements in technology (Akinyele, 2020).

- Attackers are constantly developing sophisticated and stealthy techniques to bypass traditional IDS defenses. IDS must keep up with the ever-evolving threat landscape and adapt to detect new attack vectors effectively.
- IDS often generate false positive alerts, leading to alert fatigue and reduced trust in the system. False negatives, where genuine intrusions go undetected, pose significant risks. Balancing the detection accuracy while minimizing false alerts is a constant challenge.
- The increasing use of encryption, especially Transport Layer Security (TLS), makes it challenging for IDS to inspect the content of network traffic. IDS needs to develop mechanisms to effectively analyze encrypted traffic without compromising privacy.
- IDS must handle high-volume network traffic, making scalability and performance critical. Processing and analyzing vast amounts of data in real time without impacting network performance can be challenging.
- IDS face difficulties in detecting insider threats, as malicious activities from trusted users may not exhibit typical attack signatures. Behavioral analysis and anomaly detection techniques are required to identify abnormal behaviors of authorized users.
- IDS heavily rely on known attack signatures, making them vulnerable to zero-day attacks, which exploit vulnerabilities unknown to the security community. IDS should incorporate anomaly-based detection techniques and threat intelligence to detect unknown attacks.

Future Prospects

- Machine learning and artificial intelligence techniques are being integrated into IDS to enhance detection capabilities. These technologies enable IDS to learn from patterns, behaviors, and anomalies, improving accuracy and adaptability to new and evolving threats.
- Deep learning techniques, such as convolutional neural networks (CNNs) and recurrent neural networks (RNNs), are being explored to improve the accuracy and efficacy of IDS. These models can learn complex patterns and behaviors, enabling more advanced threat detection.

- IDS is leveraging big data analytics to process and analyze large volumes of network and system data. By applying data mining and analytics techniques, IDS can identify hidden patterns, correlations, and anomalies that may indicate malicious activities.
- With the increasing adoption of cloud computing, IDS is moving towards cloud-based architecture. Cloud-based IDS can scale dynamically, leverage cloud resources for analysis, and provide centralized management and monitoring of distributed environments.
- IDS is incorporating threat intelligence feeds and sharing platforms to enhance detection capabilities. By integrating real-time threat intelligence, IDS can proactively detect and respond to emerging threats and indicators of compromise.
- IDS are increasingly focusing on behavior-based analysis, looking for deviations from normal activities and user behavior. By establishing baselines and monitoring for anomalies, IDS can detect zero-day attacks, insider threats, and other advanced attacks.
- IDS are being integrated with SOAR (Security Orchestration, Automation, and Response) platforms to enable automated response and remediation actions. This integration streamlines incident response processes and facilitates coordinated actions between different security systems.
- User and Entity Behavior Analytics (UEBA) techniques are being incorporated into IDS to analyze user behaviors, detect anomalies, and identify potential insider threats or compromised accounts.

4. CONCLUSION

In today's rapidly evolving threat landscape, where new attack techniques are constantly emerging, organizations need robust and effective intrusion detection capabilities. IDS provide organizations with the visibility, early warning, and incident response capabilities necessary to protect their critical assets and maintain a strong security posture. By investing in IDS and staying abreast of emerging trends and technologies, organizations can significantly enhance their cybersecurity defenses and reduce the risk of successful cyber-attacks.

IDS are not only essential for detecting and responding to cyber-attacks but also for preventing them from happening in the first place. By analyzing network traffic and system activities, IDS can identify and block malicious or anomalous behavior before it causes any damage. IDS can also help organizations comply with regulatory and industry standards, such as PCI DSS, HIPAA, and NIST, by providing evidence of security controls and incident management.

Furthermore, IDS can enable organizations to improve their security posture by providing insights into their vulnerabilities, threats, and risks, and by facilitating continuous monitoring and improvement of their security policies and practices.

However, IDS also faces some challenges and limitations that need to be addressed. One of the main challenges is the trade-off between accuracy and performance. IDS needs to balance the detection rate (the percentage of attacks that are detected) and the false positive rate (the percentage of benign activities that are misclassified as attacks). A high detection rate is desirable, but it may also result in a high false positive rate, which can cause unnecessary alerts, waste resources, and reduce user trust. A low false positive rate is desirable, but it may also result in a low detection rate, which can leave some attacks undetected and cause serious damage. Therefore, IDS need to optimize their accuracy and performance by using appropriate algorithms, techniques, and parameters.

Another challenge is the scalability and adaptability of IDS. As the network size, complexity, and diversity increase, IDS needs to cope with the increasing volume, variety, and velocity of data. IDS need to process large amounts of data in real time, without compromising their detection capabilities or causing network congestion. Moreover, IDS needs to adapt to the changing network environment and user behavior, as well as the evolving threat landscape and attack techniques. IDS need to learn from new data and feedback, update their models and rules, and incorporate new features and methods.

Özet

Bu çalışmada, hammadde kaynaklarımızın rantabl değerlendirilmesi çerçevesinde, mümkün mertebede alternatif kaynaklardan yararlanmak amacıyla, geri dönüşümle tekrar yeni bir ürüne dönüştürülmesi hedeflenmiştir. Bu amaçla belli oranlarda atık ofis kırpıntı kağıtlar kullanılarak üretilen kompozit malzemenin bazı teknolojik (fiziksel ve mekanik) özellikleri incelenmiştir. Kompozit levha üretiminde tutkal olarak üre formaldehit, sertleştirici olarak amonyum klorür, hidrofobik madde olarak da parafin kullanılmıştır. Levha üretimi % 0, % 10, % 20, %30, %40, %50 oranlarında atık kağıtlardan oluşmuş olup fabrikadan temin edilen normal odun yongaları ile karıştırılarak gerçekleştirilmiştir. Kompozit levhalar, ilgili TS-EN standartlarına göre fiziksel ve mekanik özellikleri araştırılmıştır. Elde edilen sonuçlara göre, kırpılmış ofis kağıt parçacıklarının levha üretiminde % 20 oranına kadar değerlendirilmesi mümkün olduğu görülmüştür. Kaynakların geri dönüşümle tekrar ürüne dönüştürülmesi, levha sektöründe üretim maliyetlerini kısmen azaltabileceği için çevresel ve ekososyal açıdan katkılar sağlayabilir.

Anahtar Kelimeler: Kompozit levha, atık kağıt, fiziksel ve mekanik özellikler

PARTICLEBOARD PRODUCTION FROM WASTE SCRAP PAPER

Abstract

In this study, we aim to recycle our raw material resources into a new product to benefit from alternative resources as much as possible within the framework of profitable evaluation. For this purpose, composite panels were produced using waste office scrap papers and their technological properties were examined. In the production of composite panels, urea formaldehyde was used as glue, ammonium chloride was used as a hardener, and paraffin was used as a hydrophobic substance. Board production consists of waste paper at rates of 0%, 10%, 20%, 30%, 40%, and 50%, mixed with industrial wood particles supplied from the factory. The physical and mechanical properties of composite panels were investigated according to relevant TS-EN standards. Based on the obtained results, it has been observed that it is possible to use office paper particles up to 20% in board production. Converting resources back into products by recycling can provide environmental and eco-social contributions as it can partially reduce production costs in the board industry.

Keywords: Composite board, waste paper, physical and mechanical properties

Giriş

Geri dönüşüm, atık çöp miktarını azaltmakta, kaynakların tükenmesini önlemekte ve kaynakların lüzumsuz kullanımının önüne geçmektir. Ayrıca katı atıkların taşınması ya da depolanması gibi sorunlarına da büyük ölçüde çözüm sağlamaktadır. Kaynakların rantabl kullanılması çevreye ve ekonomiye önemli katkılar sağlar. Hammaddesi yine orman emvali olan atık kağıtları yonga levha teknolojisiyle geri kazandırmanın, orman ürünleri endüstrisinde kıymetli bir adım olacağı düşünülebilir.

Ağaç, ilk çağlardan günümüze kadar geçen süreç içerisinde barınma amacından, mobilya olarak kullanımına kadar çeşitli şekillerde kullanılagelen bir malzeme olmuştur. 1900'li yılların başlarına kadar mobilya üretiminde her türlü ihtiyaç masif ağaçla karşılanmıştır (Yaman, 2002).

Masif ağaç ile yapılan ürünlerde maliyetin ve zayıtın fazlalığı, minimum malzeme ile maksimum fayda sağlamayı engellemektedir. Buna binaen; Dünya nüfusundaki artış ve orman kaynaklarındaki azalma da dikkate alındığında, mobilya üretiminde en büyük hammadde kaynağı olan ağaçtan optimum faydalanma ihtiyacı ister istemez kaçınılmaz hale gelmektedir. Bu nedenle, mobilya üretiminde masif ağaç malzeme yerine odun, vb. malzemelerin artıklarından elde edilen kompozit malzemeler daha fazla kullanılır hale gelmiştir. Yonga levhalar da bu kompozit malzemelerden olup, ağaç levha endüstrisinde en büyük üretim payına sahip malzemedir (Nemli ve Kalaycıoğlu, 2000).

Atık kağıtlar, hammaddeler arasında önemli bir yere sahiptir. 1970'lerin ortalarından itibaren bu kaynak sürekli büyümeye başlamıştır. Hammadde ve enerjinin tüketimini sınırlandırmak, yüksek fiyatlar, odun hammaddesi kıtlığı gibi olumsuz şartlar diğer yandan teknolojik gelişmeyi de modife etmiştir. Lif fiyatlarının yüksek olması odun arzının kıtlığı gibi konular teknik gelişmeyi harekete geçirerek kaynakların kullanım alanları ve yeniden kazanım ve tekrar kullanım oranlarında dünya genelinde artışa yol açmıştır.

1990'lı yıllarda Avrupa da lif ve liflevha tüketiminin %37'si tekrar kullanılmak üzere geri kazanılmıştır. Kağıt ve karton üretiminde kullanılan lifin üçte birinden fazlası atık kağıttan sağlanmıştır. Sağlam bir atık sektörü oluşabilmesi için pek çok şartın yerine getirilmesi gerekir. Düzgün bir kent oluşumu ve nüfus potansiyeli önemlidir. Dağınık ve kırsal kesimlerde atık kağıt toplanması pahalı bir işlemdir. Toplamayı düzenlemek için iyi bir organizasyon alt yapısı ile "ekolojik-toplumsal" bilinç gerekmektedir.

Son dönemlerde artan çevre bilincine paralel olarak gerek kirlilik kaygılarının artması gerekse kağıt endüstrisi için işletme ve yatırım maliyetlerinin yüksek olması, atık kağıtların hammadde olarak tekrar kullanılmasını zorlaştırmaktadır. Özellikle kağıt hamuru üretimi için gerekli üretim girdilerinin pahalı olduğu ülkelerde atık kağıtların geri kazanımı önemli bir yer tutmaktadır. Çevre kirlenmesi problemlerinin gittikçe artan baskısı sonucu atık kağıt kullanımının önemi giderek daha çok önem kazanmaktadır.

Atık kağıt kullanım oranlarının artırılmasıyla hammadde kullanımında genel olarak oduna bağımlı olan kağıt endüstrisi, hammadde temini yönünden bir ölçüde rahatlamakta olduğu söylenebilir (Güler, 2005). Böylece ülke ormanlarımız üzerindeki baskı da azaltılabilecektir. Atık kağıt kullanımı, çevresel etki ve enerji tasarrufu yönlerinden odundan kağıt hamuru üretimine göre daha avantajlıdır. Kullanım yerlerine uygun olarak üretilen atık kağıt hamurunun daha ucuza imal edilerek çok sayıda kağıt karton türünün yapımına uygun bir kaynak olabileceği anlaşılmıştır. Atık kağıtların değerlendirilmesiyle bu endüstri dalındaki hammadde açığına büyük oranda katkı sağlanacak ikinci defa kullanıldığı halde her kalitede (yazı tabı, gazete, oluklu mukavva, ambalaj, temizlik ürünleri vb.) kağıdın üretimi mümkün olacaktır (Akgül, Güler 2002).

Çizelge 1. 2022 Yılı Türkiye İthal ve Yerli Kağıt Toplam Miktarı (ton) (Anon., 2023)

İTHAL					YERLİ					GENEL TOPLAM
Oluklu ve Kraft Torba	Gazete	1.Hamur	Karışık	İthal Toplam	Oluklu ve Kraft Torba	Gazete	1.Hamur	Karışık	Yerli Toplam	
699.447	53.001	2.516	590.080	1.345.044	2.161.372	12.663	344.932	1.094.131	3.613.098	4.958.142

Yonga levha bitkisel veya odunsu yongaların tutkal ilavesi ile belirli özelliklerde oluşturulan levha taslağının preslenmesi sonucu elde edilen bir üründür. Yonga levhaların özgül ağırlıkları 0.50-0.80 g/cm³ arasında değişir.

Yonga levhalar, özgül kütleye göre üç grupta toplanmaktadır (Bozkurt ve Göker, 1990);

a- Düşük özgül kütledeki yonga levhalar: özgül kütlesi 0.59 g/cm³'ten daha az olan levhalardır.

b- Orta özgül kütledeki yonga levhalar: özgül kütlesi 0.59-0.80 g/cm³ arasında olan levhalardır.

c- Yüksek özgül kütledeki yonga levhalar: özgül kütlesi 0.80 g/cm³'ten daha yukarı olan levhalardır.

Yonga levha üretiminde hammadde olarak levha ağırlığının yaklaşık % 90'ından fazlasını odun oluşturmakta, yapıştırıcı olarak sentetik reçineler kullanılmaktadır. Yonga levha üretiminde kullanılan hammaddeler arasında başta iğne yapraklı ağaçlar olmak üzere geniş yapraklı ağaçlar ve bunların endüstriyel atıkları ve çeşitli yıllık bitkilerin odunsu kısımları yonga levha endüstrisinde değerlendirilmektedir.

Ülkemizdeki hammadde kaynaklarının daha rasyonel olarak kullanılması gerekmektedir. Orman ürünleri endüstrisinin temel girdilerinden biri durumundaki yongalevhanın belli oranda kırılmış kağıt atıklarının değerlendirilmesine yönelik çalışmalar hem bu ürünün hammadde kaynaklarını genişletecek hem de teknolojik özelliklerine yeni nitelikler kazandıracaktır.

Bu çalışmada atık kırıntı kağıtlardan belirli oranlarda karıştırılarak levha üretilmiştir. Böylece her yıl yakılarak yada değişik amaçlarla kullanılagelen kırıntı atık kağıtların orman ürünleri endüstrisinde hammadde kaynağına destek olarak değerlendirilmesi hedeflenmiştir.

MATERYAL VE METOT

Kağıt atıkları Düzce Üniversitesi Orman Fakültesinden, endüstriyel odun yongaları ise Yıldız Entegre AŞ. Mudurnu tesislerinden temin edilmiştir. Denemelerde kullanılacak kompozit malzemenin üretiminde kırıntı atık kağıtlar ve yongalar belirli oranlarda karıştırılarak uygulanmıştır. Taslakların hazırlanmasında özel bir yöntem uygulanarak kapalı ortamda tutkal pülverize yöntemi ile karıştırma işlem yapılmıştır. Karışım oranları % 10, 20, 30, 40 ve 50 olarak belirlenmiştir. Üretilen kompozit malzeme kalınlığı 18 mm, 150 °C ısıda 7 dk süre ile preslenmiştir. Üretimde % 55 lik üre formaldehit, ve % 33 lük Amonyum klorür sertleştirici olarak kullanılmıştır. Her gruptan ikişer levha üretimi gerçekleştirilmiştir. Levhaların üretim planı Çizelge 2'de gösterilmiştir.

Çizelge 2. Levha Üretim Planı

Araştırma aşamasında, birim hacim ağırlık tespiti ve suya daldırma işleminden sonra kalınlığına şişme tayini testleri için, ilk ağırlık ve hacimleri tespit edilen numuneler sırasıyla 2 saat ve 24 saat olmak üzere tamamen su altında bırakılmış; her aşamadan sonra tekrar kumpas ve hassas terazi yardımıyla ağırlıkları ve hacimleri tespit edilmiştir (Resim 11).

Resim 11. Ağırlık ve Hacim Ölçüm Aletleri

Araştırmada numune alma, kesme ve muayene, deney Numunelerinin Seçimi, kesimi ve deney sonuçlarının Gösterilmesi (TS EN 326-1, 1999), fiziksel özelliklerden birim hacim ağırlık, (TS EN 323/1999), Su içerisine daldırma işleminden sonra kalınlığına şişme tayini (TS EN 317/1999), mekanik özelliklerden Eğilme Dayanımı ve Eğilme Elastikiyet Modülünün Tayini (TS EN 310/1999)'e göre yapılmış olup, standartlarda uygunluğu yönünden yonga levhaların özellikleri (TS EN 312/2012) ye göre değerlendirmeler yapılmıştır.

BULGULAR VE TARTIŞMA

Farklı gruplara ait yoğunluk, kalınlık artımı ve standart sapma değerleri Çizelge 5'te gösterilmiştir.

Çizelge 5. Levhaların fiziksel özellikleri (ortalama \pm standart sapma).

Levha	Yoğunluk (g cm ³)	Kalınlık Artımı (%)	
		2 Saat	24 Saat
A	0.700 (0.01)	21,12 (2.28)	27,06 (2.54)
B	0.718 (0.02)	25.44 (3.29)	32.43 (5.06)
C	0.718 (0.024)	29.24 (5.04)	38.01 (2.43)
D	0.710 (0.04)	24.50 (2.68)	30.31(2.81)
E	0.713 (0.018)	27.23 (2.17)	32.44 (2.24)
H	0.725 (0.033)	22.08 (1.60)	25.49 (1.30)
I	0.733 (0.02)	19.23 (1.31)	29.32 (1.90)

*Parantez içerisinde standart sapmalar gösterilmiştir.

Levhaların yoğunluğu 0.70-0.73 g/cm³ arasında değişmektedir (Şekil, 1). Yoğunluk levhanın direnç özelliklerini önemli ölçüde etkilemektedir. TS-EN 312 (2012)'ye göre levhadaki ortalama yoğunluğa dair tolerans \pm %10 olabilir denilmektedir. Ancak levha içerisinde ortalama yoğunluk dağılımı homojen olup standartlara uygundur.

Kalınlık artımı 2 saat suda bekletme sonucunda en düşük A grubu levhalarda %21.12, en yüksek C grubu levhalarda %29.24 olarak tespit edilmiştir. 24 saat için ise, en düşük H grubu levhalarda % 25.49, en yüksek C grubu levhalarda % 38.01 olarak tespit edilmiştir (Şekil 2). TS 312 (2012)'e göre nemli şartlarda kullanılan yük taşıyıcı olmayan levhalar (tip-P3)'e göre $13 < t \leq 20$ mm kalınlığında olan levhalar için kalınlık artımı 24 saatte en fazla % 14 olması gerektiği belirtilmiştir. Buna göre kalınlık artımı 24 saat için tüm gruplarda standart değerden yüksek bulunmuştur. Ancak levha içerisindeki atık kağıt oranı arttıkça genelde kalınlık artışı olduğu söylenebilir.

Şekil 1. Yoğunluk

Şekil 2. Kalınlık artışı (%)

Eğilme direnci ve elastikiyet modülü ortalama değerleri Çizelge 6'da gösterilmiştir.

Çizelge 6. Deneme levhalarına ait mekanik özellikler (ortalama \pm standart sapma).

Levha	Eğilme Direnci (N mm²)	Elastikiyet Modülü (N mm²)
A	12.05 (0.986)	1798.17 (120.97)
B	10.84 (0.409)	1770.81 (233.00)
C	8.66 (0.394)	1682.37 (407.82)
D	7.68 (1.22)	1407.30 (364.59)
E	6.15 (0.831)	1235.32 (282.26)
H	3.70 (0.323)	480.83 (39.32)
I	15.18 (2.09)	3022.80 (600.90)

Eğilme direnci en yüksek A grubu levhalarda 12 N/mm², en düşük H grubu levhalarda 3.70 N/mm² olarak tespit edilmiştir. Burada levha içerisindeki kağıt oranı arttıkça eğilme direncinde azalma meydana gelmektedir (Şekil 3). TS EN 312 (2012)'de kuru şartlarda kullanılan genel amaçlı levhalar (Tip P1) için gerekli özelliklerde 13 < t ≤ 20 kalınlıklarda eğilme mukavemeti minimum 10 N/mm² olması öngörülmüştür. Buna göre A ve B grubu levhalarda eğilme direnci standartlara uygun olup % 20'ye kadar kırpıntı kağıt karışımlarda kompozit malzeme üretiminde kullanılabilceğini göstermektedir.

Eğilmede elastikiyet modülü, eğilme direncine paralel olarak en yüksek A grubu levhalarda 1798 N/mm², en düşük H grubu levhalarda 480 N/mm² olarak tespit edilmiştir. Burada levha içerisindeki kağıt oranı arttıkça eğilme direncinde olduğu gibi elastikiyet modülünde de düşme olduğu görülmüştür (Şekil 4). TS EN 312 (2012) kuru şartlarda iç donanımlarda (mobilya dahil) kullanılacak 20 mm kalınlığa kadar olan yonga levhalar için elastikiyet modülü minimum 1600 N/mm² olması öngörülmüştür. Buna göre A,B ve C ile kontrol I grubu levha gruplarında elastikiyet modülü standartlara uygun olup %30'a kadar kırpıntı kağıt uygun karışımlarda kompozit malzeme üretiminde kullanılabilceğini göstermektedir.

Şekil 3. Eğilme Direnci

Şekil 4. Elastikiyet Modülü

SONUÇ VE ÖNERİLER

Elde edilen verilere göre atık kağıtlardan üretilen levhaların, gerek fiziksel ve gerekse mekanik özellikleri bakımından levha içerisinde % 20 oranına kadar kullanımının uygun olduğu görülmüştür. Ağaç malzemeye olan talep gün geçtikçe daha çok artış göstermektedir. Dolayısı ile oluşan talebe bağlı olarak orman kaynaklarında azalma, kaliteli ağaç malzemeye ulaşmada zorluklar ve malzeme fiyatlarında yüksek artışlar yaşanmaktadır. Bu nedenle; Kağıt atıkların, geri dönüşüm sonucunda tekrar üretimi sağlanarak yeni ve kaliteli ürünlerin kazandırılması hammadde açığında önemli ve etkin bir rol oynayabilir. Kağıt atıklar, yakılmayarak atmosfere salınmadığı için tekrar üretime kazandırılması ile karbon emisyonunun azaltılmasına katkı sağlaması söz konusudur.

Ayrıca atıkların geri dönüşüm yoluyla yeni bir kullanım alanı yaratılarak değerlendirilmesi çevre sorunlarının azalmasında, hammadde rezervlerinin korunmasında ve yeni iş kolları ile istihdam alanlarının yaratılarak ekonomik açıdan kalkınmada önemli katkılar sağlayabilir. Tüm dünyada olduğu gibi Türkiye’de de bu konu ile ilgili yapılan araştırmalar ve akademik çalışmalar her geçen gün büyük önem kazanmaktadır. Buna göre kaynakların geri dönüşümle tekrar ürüne dönüştürülmesi, levha sektöründe üretim maliyetlerini kısmen azaltabileceği için çevresel ve istihdam koşullarına katkılar sağlayabilir.

Özet

Aile, toplumun temel birimi olarak kabul edilir ve bireylerin yaşamlarında önemli bir rol oynar. Evlilik doyumu, bireylerin kendi mutluluklarını artırabilir. Evlilik, insanların iyi hissetmelerini, sosyal bağlantılarını güçlendirmelerini ve psikolojik iyilik hallerini artırmalarını destekler. Bu nedenle, evlilik doyumunun artırılması ve sağlıklı bir evliliğin sürdürülmesi, sosyal ve psikolojik açıdan büyük bir öneme sahiptir. Bilişsel duygu düzenleme, duygusal deneyimlerimizi anlama, yönetme ve düzeltebilme yeteneğini ifade eder ve bu yetenekler, bir bireyin evlilikteki rolünü ve duygusal reaksiyonlarını şekillendirir. Aynı şekilde, benlik ayrışması da bir bireyin kimlik algısı ve evlilikteki rolünü etkileyebilir. Bu üç kavramı ebeveyn davranış stillerinin de etkilediği hakkında çalışmalar bulunmaktadır. Evlilik doyumu, benlik ayrışması ve bilişsel duygu düzenleme becerilerinin çocuk dönemindeki anne baba tutumları ile ilişkilendirip evlilik hayatına yansımalarını inceleyen bir araştırma bulunmamaktadır. Bu noktada, evlilik doyumu, benlik ayrışması ve bilişsel duygu düzenleme becerilerinin çocukluk dönemindeki ebeveyn tutumlarıyla ilişkisi üzerine odaklanacak bir araştırmanın önemi ortaya çıkıyor. Bu çalışma, çocukluk döneminde ebeveynlerin sergilediği tutumların, evlilik doyumu, benlik ayrışması ve bilişsel duygu düzenleme becerileri üzerindeki etkilerini anlamak için kapsamlı bir araştırma tasarımı gerektirebilir. Ayrıca, bu tür bir çalışma, bireylerin yetişme süreçlerindeki deneyimlerin, yetişkinlikteki ilişkilerine olan etkilerini anlamak için genişlemiş bir psikolojik model sunabilir. Sonuç olarak, bu araştırma, çocukluk dönemindeki aile dinamiklerinin, yetişkinlerin evlilik hayatlarındaki duygusal, bilişsel ve ilişkisel özellikleri üzerindeki etkisini anlamak adına önemli bir katkı sağlayabilir.

Anahtar kelimeler: Evlilik, Evlilik Doyumu, Bilişsel Duygu Düzenleme Stratejileri, Benlik Ayrışması

**COGNITIVE EMOTION REGULATION SKILLS, MARRIAGE SATISFACTION
AND SELF-DISSOCIATION LEVELS OF MARRIED INDIVIDUALS**

Abstract

Family is considered the essential unit of community and plays an important role in the lives of people. Marital satisfaction can increase individuals' own happiness. Marriage supports people in feeling good, strengthening social connections, and enhancing their psychological well-being. Therefore, increasing marital satisfaction and maintaining a healthy marriage is of great social and psychological importance. Cognitive emotion regulation refers to the ability to understand, manage, and adjust our emotional experiences, and these abilities shape an individual's role and emotional reactions in marriage. Likewise, self-dissociation can affect an individual's sense of identity and role in marriage. There are studies showing that these three concepts are also affected by parental behavioral styles. There is no research examining the relationship between marital satisfaction, self-dissociation and cognitive emotion regulation skills with parental attitudes during childhood and their reflections on married life. This study may require a comprehensive research design to understand the effects of parental attitudes during childhood on marital satisfaction, self-differentiation, and cognitive emotion regulation skills. Furthermore, a study of this nature could present an expanded psychological model to comprehend how individuals' experiences during their formative years impact their relationships in adulthood. As a result, this research could provide a significant contribution towards understanding the impact of family dynamics during childhood on the emotional, cognitive, and relational characteristics in adults' married lives.

Keywords: Marriage, Marital Satisfaction, Cognitive Emotion Regulation Strategies, Self-Dissociation

Giriş

Evlilik, bireylerin duygusal ve sosyal ihtiyaçlarını karşılamak, destek bulmak ve birlikte büyüme amacıyla önemli bir kurumsal birlikteliktir. Evlilik, yaşam boyu sürebilen bir yolculuğun başlangıcıdır ve kişilerin hayatlarını bir araya getirmek için karmaşık bir süreçtir. Bu sürecin başarısı, çiftlerin aralarındaki ilişkinin niteliği ve her bir eşin kişisel tatmini ile yakından ilişkilidir. Evlilik doyumu, bu ilişkisel başarıyı ölçen temel bir faktördür.

Evlilik doyumu, bir çiftin evliliklerindeki memnuniyet düzeyini yansıtan bir kavramdır ve bu memnuniyet, birçok faktöre dayanmaktadır. Bu faktörlerden biri, bireylerin bilişsel duygu düzenleme becerileri ve benlik ayrışması gibi psikolojik özellikleri olabilir. Bilişsel duygu düzenleme becerileri, kişilerin duygusal tepkileri anlama, yönetme ve düzeltebilme yeteneğini ifade eder. Benlik ayrışması ise bir bireyin kendi kimliğini ve kendisini nasıl algıladığını tanımlar. Bu psikolojik özellikler, bir kişinin evliliğindeki rolünü ve duygusal tepkilerini nasıl dengelediğini etkileyebilir.

Ebeveyn tutumları da, bireylerin kişisel gelişimi üzerinde önemli bir etkiye sahiptir. Ebeveynlerin çocuklarına olan yaklaşımı ve tutumları, çocukların benlik ayrışması ve duygu düzenleme becerilerini şekillendirebilir. Bu nedenle, ebeveyn tutumlarının evlilik doyumu, bilişsel duygu düzenleme stratejileri ve benlik ayrışması üzerindeki etkisini incelemek, evlilik araştırmaları açısından önemlidir.

Bu araştırmanın amacı, benlik ayrışmasının evlilik doyumuyla ve bilişsel duygu düzenleme stratejileriyle ilişkisini daha ayrıntılı anlamak üzere bu konularda yapılmış ulaşılabilen araştırmaları incelemektir.

2- EVLİLİK DOYUMU

Evlilik doyumu, çiftlerin birbirleriyle olan ilişkilerinde tatmin edici bir seviyeye ulaşmalarınıdır. Evlilik doyumu, çiftlerin birbirine karşı duygusal, fiziksel ve cinsel olarak tatmin olması ile ilgilidir. Evlilik doyumu, birçok faktöre bağlıdır. Bunlar arasında iletişim, dürüstlük, saygı, bağlılık, güven, benzer değerler ve hedefler gibi faktörler yer alır. Aynı zamanda, cinsel uyum, duygusal yakınlık ve çiftlerin birbirine karşı romantik hissetmeleri de evlilik doyumunu etkileyen faktörler arasındadır. Evlilik doyumunun düşük olması, çiftlerin arasında sorunlara ve çatışmalara neden olabilir. Bununla birlikte, evlilik doyumunun yüksek olması, çiftlerin arasındaki bağları güçlendirir ve ilişkilerini daha tatmin edici hale getirir.

Evlilik doyumunu artırmak için, çiftlerin birbirleriyle açık, dürüst ve yapıcı bir şekilde iletişim kurmaları önemlidir. Çiftlerin birbirlerinin ihtiyaçlarına saygı duymaları, birbirlerini

desteklemeleri ve birlikte zaman geçirmeleri de evlilik doyumunu artırabilir. Ayrıca, çiftlerin birbirine karşı romantik ve cinsel olarak ilgi duymaları, evlilik doyumunu artıran diğer faktörler arasındadır. Evlilik doyumu, çiftlerin birbirleriyle tatmin edici bir ilişki kurmaları ve birlikte mutlu bir hayat sürdürmeleri için önemlidir. Evlilik doyumunu artırmak için, çiftlerin birbirleriyle açık, dürüst ve yapıcı bir şekilde iletişim kurmaları, birbirlerine saygı duymaları ve birlikte zaman geçirmeleri önemlidir. Anne-baba tutumlarının evlilik doyumuyla ilişkili olduğu düşünülmektedir. Araştırmalar, tutarlı ve sevgi dolu bir anne-baba tutumunun, çocukların ileride evlilik doyumlarının daha yüksek olmasıyla ilişkili olduğunu göstermektedir. Örneğin, sıcaklık ve ilgi gösteren bir anne-baba tutumu, çocukların duygusal olarak daha sağlıklı yetişmelerine ve dolayısıyla evliliklerinde daha tatmin edici bir ilişki kurmalarına yardımcı olabilir. Bunun yanı sıra, çocukların anne-baba ile sağlıklı bir iletişim kurabilmesi, onların evliliklerinde de açık ve sağlıklı bir iletişim kurmalarına yardımcı olabilir. Bununla birlikte, baskıcı, eleştirel veya tutarsız bir anne-baba tutumunun, çocukların ileride evliliklerinde daha düşük bir doyum seviyesine sahip olmalarıyla ilişkili olduğu bulunmuştur. Bu tür bir anne-baba tutumu, çocukların duygusal ihtiyaçlarını karşılamakta zorlanmalarına ve kendilerini yeterince sevildiklerine inanmamalarına neden olabilir. Buda, çocukların evliliklerinde mutsuzluk, iletişim sorunları ve diğer sorunlara neden olabilir. Sevgi dolu, tutarlı ve destekleyici bir anne-baba tutumu, çocukların duygusal ihtiyaçlarını karşılamalarına ve sağlıklı bir şekilde yetişmelerine yardımcı olabilir. Buda, çocukların ileride daha tatmin edici bir evlilik kurmalarına katkıda bulunabilir.

3- BİLİŞSEL DUYGU DÜZENLEMENİN STRATEJİSİ

Bilişsel duygu düzenlemenin tanımında, bireylerin genel yaşam olaylarında veya stresli durumlarda duygularını kontrol etmesini ve bu süreçte kullandıkları başa çıkmaya yönelik stratejiler yer alır. Duygular, kişinin bilişsel, davranışsal ve fizyolojik tepkileri aracılığıyla ortaya çıkabilir (Lopes, Salovey, Beers ve Cote, 2005). Belirli tekniklerle duyguların devamı, azalması ya da artması düzenlenebilir; özellikle üst düzey bilişsel yetenekler bu düzenlemeyi gerçekleştirmede etkili olabilir. Gross ve ark. (2003), duyguların uygun bir şekilde düzenlendiğinde genel iyilik halini artırabileceğini iddia etmişlerdir. Ancak, uygun olmayan bir düzenleme, fiziksel rahatsızlıklara ve iyilik halinin azalmasına yol açabilir.

Bilişsel süreçler, duyguları tanıma, düzenleme ve kontrol etme sürecinde işlevsel bir rol oynar. Bu süreçler, bilinçli ve bilinçdışı olarak iki aşamada gerçekleşir. Bilinçli bilişsel süreçler, bilişsel duygu düzenleme sürecinde önemli bir rol oynar. Bilişsel duygu düzenleme stratejileri, uyumlu ve uyumsuz olarak sınıflandırılır. Uyumlu stratejiler arasında kabul etme, plana

odaklanma, olumlu tekrar odaklanma, olumlu tekrar değerlendirme ve olayın değerini azaltma bulunur. Uyumsuz stratejiler ise kendini suçlama, başkalarını suçlama, ruminasyon ve felaketleştirmeyi içerir. Bilişsel duygu düzenleme stratejileri, bireylerin duygu ve stresle baş etme yöntemleri olarak tanımlanabilir. Bu stratejiler, bir olaya verilen tepkiyi, düşünce kalıplarını değiştirme veya doğrudan duygulara ve davranışlara müdahale ederek değiştirme amacını taşır.

4- BENLİK AYRIŞMASI

Benliğin farklılaşması, kişinin hem duygu ve düşüncelerinin farkındalığını hem de başkalarıyla ilişkisiz biçimde onlardan bağımsız olmasını ifade eder. Düşük farklılaşma durumunda, kişi gerçek durumlarla duygularını ayırt etmede güçlük yaşar ve genellikle duygusal tepkiler vererek davranış sergiler ya da karar alırlar ve savunmasız durumda olduklarından ailede içinde çatışmalar yaşanır. Diğer taraftan, yüksek farklılaşma düzeyine sahip bireyler, düşünce ve duygularının farkında olup, her ikisine de yaşamlarında yer tutar. Ancak duygularının mantıksal süreçlerini yönlendirmesine engel olurlar. Durumlar karşısındaki duruşları açık ve net olup, çeşitli durumlara kolayca uyum sağlarlar (Polat ve İlhan, 2018). Benlik ayrışması, bir kişinin kendisi hakkında bütüncül bir algıya sahip olamaması ve farklı kişilik özelliklerinin, tutumların veya düşüncelerin çelişkili bir şekilde bir araya gelmesi durumudur. Bu durum, kişinin kendisi hakkında tutarlı bir benlik algısı oluşturamamasına ve başkalarıyla ilişkilerinde güçlük çekmesine neden olabilir. Benlik ayrışması genellikle çocukluk döneminde başlayabilir ve birçok nedeni olabilir. Örneğin, duygusal istismar veya ihmal, aile içi şiddet, ayrılık veya kayıp gibi çocukluk travmaları, benlik ayrışması için risk faktörleri olabilir. Ayrıca, bazı psikiyatrik bozukluklar, özellikle borderline kişilik bozukluğu gibi kişilik bozuklukları, benlik ayrışması ile ilişkilendirilir. Benlik ayrışması, kendini zarar verme davranışları gibi ciddi sonuçlara da yol açabilir. Tedavi, genellikle terapi ve psikoterapi yoluyla yapılır. Tedavi amaçlarından biri, bireyin bütüncül bir benlik algısı geliştirmesine yardımcı olmaktır. Terapi ayrıca, kişinin geçmişte yaşadığı travmaları işlemesine, duygusal yönelimini iyileştirmesine ve kişilik özelliklerini daha tutarlı hale getirmesine yardımcı olabilir.

5- ÇALIŞMANIN AMACI VE YÖNTEMİ

Bu araştırmanın amacı ulaşılabilen çalışmaların bulgularından hareketle evli bireylerde evlilik doyumu, bilişsel duygu düzenleme stratejileri ve benlik ayrışmasına ilişkin faktörleri belirlemektir. Bu amaç nedeniyle bu çalışmada sistematik derleme yöntemi kullanılmıştır. Bu yöntem, araştırma kapsamındaki kavramlarla ilgili araştırmaların kapsamlı incelenmesi ve çeşitli dâhil etme ve dahil etmeme kriterleri kullanılarak hangi çalışmaların incelemeye

alınacağıının belirlenmesi, ayrıca dâhil edilen arařtırmalardaki bulguların analiz edilmesini ierir (Karaam, 2013). Bu arařtırmada sistematik derleme yntemi kullanılarak evli bireylerde evlilik doyumu, biliřsel duygu dzenleme stratejileri ve benlik ayrıřması kavramalarına iliřkin 2015- 2023 yılları arasındaki ulařılabilen arařtırma makalelerin ve yapılan tezlerin deęerlendirilmesi yapılmıřtır. Bu arařtırmalara ulařmak iin akademik veri tabanlarında tarama yapılmıřtır. Bu arařtırmanın amacına ynelik olarak ařaęıdaki sorular oluřturulmuřtur.

1. Evli bireylerde evlilik doyumu ile iliřkili faktrler nelerdir?
2. Evli bireylerde biliřsel duygu dzenleme stratejileri ile iliřkili faktrler nelerdir?
3. Evli bireylerde benlik ayrıřması ile iliřkili faktrler nelerdir?

Bu alıřmaya iliřkin oluřturulan sorulara uygun řekilde uygulanan sistematik derleme srecindeki taramaya ynelik aramalarda ‘evli bireyler* evlilik doyumu’ ‘benlik ayrıřması* biliřsel duygu dzenleme stratejileri’ ve ‘ebeveyn tutumları’ řeklinde aramalar yapılmıřtır. Ulařılan yayınlarda incelemeye alınan 15 arařtırmanın 5 tanesi evlilik doyumu, 5 tanesi biliřsel duygu dzenleme stratejileri ve 5 tanesi benlik ayrıřması ile ilgili olduęu belirlenmiřtir. Bu arařtırmaların incelenmesinde arařtırmaların amaları ve soruları bařlıca etken olmuřtur.

Sistematik derlemenin tanımında aıklandığı řekilde bu arařtırmada eřitli dahil etme ltleri kullanılmıřtır. Bu ltlerin; yayınların 2015-2023 tarihlerinde yayınlanması, evli bireylerde evlilik doyumu ile ilgili olması, biliřsel duygu dzenleme stratejileri ile ilgili olması, benlik ayrıřması ile ilgili olması,  deęiřkeni iermesi genlik yařantıları ve evli bireyleri kapsamasına dikkat edilmiřtir.

6- BULGULAR

Bu arařtırmada incelemeye alınan 22 yayının, 15’i, yayının tr, yayınlanma yılı, alıřma adı ve uygulandıęı yař dzeyi řeklinde ana bařlıklar dikkate alınarak incelenmiřtir ve ulařılan bilgiler liste řeklinde verilmiřtir. Biliřsel duygu dzenleme becerilerine iliřkin ulařılan alıřmalar ile ilgili olarak ařaęıda kısa aıklama ve bilgiler sunulmuřtur.

Konu	Çalışmanın Başlığı	Yaş Aralığı	Yıl	Yayın Türü
Bilişsel duygu düzenleme becerileri	Bilişsel Esnekliğin Bilişsel Duygu Düzenleme Üzerindeki Etkisi	18-26 yaş	2020	makale
	Genç Yetişkinlerin Çocukluk Çağındaki Olumsuz Yaşantıları, Öz-şefkati ve Duygu Düzenleme Becerileri Depresyon Belirtilerini Yordaması	18-25 yaş	2020	makale

	İstismar-İhmal Geçmişi ve Romantik İlişkideki Bağlanma: Bilişsel Duygu Düzenlemenin Ve Erken Dönem Uyumsuz Şemalarının Rolü	18-65	2023	Doktora Tezi

Kocabıyık ve arkadaşları (2017), genç yetişkinlerdeki bilişsel duygu düzenlemeye ilişkin tarzlar ve ilişkisel bağımlı benliğin kurgusu üzerine yaptıkları araştırmada, ilişkisel bağımlı benlik kurguları ile belirli bilişsel duygu düzenleme stratejileri arasında farklılıklar olduğunu ve bazı stratejilerin daha fazla ilişkilendirildiğini, bazılarının ise bu kurgularla daha az bağlantılı olduğu sonucuna ulaşmıştır.

Çocukluk çağındaki olumsuz yaşantıların, özşefkatin ve duygu düzenlemeye yönelik becerilerin genç yetişkinlerdeki depresyon belirtilerini nasıl etkilediği üzerine Akcan ve Taşören (2020) tarafından yapılan çalışmada elde edilen bulgulara göre, depresyon belirtileri, sosyal yalıtılmışlık belirtileri ile pozitif yönde ilişkili bulunmuştur.

Kubin Mete'nin (2023) yaptığı çalışmada çocukluk çağı travmalarının duygu düzenleme güçlükleri ile ilişkisi incelenmiştir ve çocukluk çağındaki travmaların uyumlu biçimdeki duygu düzenlemeyi negatif yönde, uyumsuz biçimdeki duygu düzenlemeyi ise pozitif yönde yordadığı belirlenmiştir. Aşağıda evlilik doyumu ile ilgili incelenen yayınlara ilişkin özet bilgi ve açıklamalar verilmiştir.

Konu	Araştırmanın Başlığı	Yaş Aralığı	Yıl	Yayın Türü
Evlilik doyumunu	Evli Bireylerin Evlilik Doyumunun Yaşam Doyumuyla İlişkisinde Benlik Saygısının Aracı Rolü	30-40 yaş	2016	Makale
	Evli Bireylerde Evlilik Değerleri, Evlilik Doyumu ile Evlilik Tipleri	36-40 yaş ort.	2019	Makale
	Evlilik Doyumunda Anne Baba Tutumlarının Etkisi	Yaş ort. 32.76	2016	Makale
	Evlilikteki Empatinin, Evlilik Doyumunun Affetme ile İlişkisinde Evlilik Farkındalığındaki Aracı Rol	18 yaş ve üstü	2020	Doktora Tezi
	Evli Bireylerde Evlilik Değeri, Evlilik Doyumu ve Evliliğin Tipleri	40.50. yaş ort	2019	Doktora Tezi

Yıldız ve Baytemir'in (2016) yaptığı araştırmada evlilik doyumunun yaşam doyumuyla olumlu yönde doğrudan ilişkili olduğu ve evlilik doyumunun yaşam doyumunu üzerindeki toplam etkisinin anlamlı düzeyde olduğu belirlenmiştir.

Demirli ve Kendir'in (2016) yaptığı araştırmada evlilik doyumunun demokratik anne baba tutumuyla anlamlı düzeyde ilişkili olduğu; bireylerin demokratik tutum düzeyinin evlilik doyum düzeyini artırdığı bulunmuştur ve evlilik doyumunu üzerinde eşler arasındaki yaş farkının, gelir düzeyinin, eğitim durumunun, çocuk sayısının anlamlı düzeyde farklılaşmaya neden olduğu belirlenmiştir.

Şahin'in (2020) yaptığı araştırmada evlilikte farkındalık, evlilik doyumunu ve evlilikte empati düzeyi arasında anlamlı düzeyde ilişki tespit edilmemiştir.

Çatal ve Kalkan'ın (2019) yaptığı çalışmada evlilikteki tiplerin ve evlilikteki değerlerin evlilikteki doyum düzeyini önemli düzeyde yordadığı saptanmıştır.

Ceylan (2023) tarafından araştırmada toplumsal cinsiyet rollerine yönelik tutumların ile kişilerin arası affetme düzeyi arasında pozitif yönlü önemli düzeyde ilişki; benliğin farklılaşması düzeyi arasında ise önemli düzeyde ilişki olmadığı; benliğin farklılaşması ve kişilerarası affetme düzeyi arasında ise negatif yönde anlamlı ilişki olduğu gösterilmiştir. Aşağıda benlik ayrışmasına ilişkin ulaşılan yayınlar ile ilgili özet açıklama ve bilgiler sunulmuştur.

Konu	Çalışmanın Başlığı	Yaş Aralığı	Yıl	Yayın Türü
Benlik Ayırışması	Evli Bireylerin Çift Uyumunda ve Psikolojik Belirtilerde Benlik Farklılaşması	20-60 yaş	2018	Makale
	Evliliğin İlişki Kalitesinin Benlik Yönünden Değerlendirmesi: Benlik Farklılaşmasında ve İlişki Özgünlüğü	18-63 yaş	2019	Makale
	Evli Bireylerde Erken Dönemdeki Uyumsuzluk Şemaları ve Benliğin Farklılaşmasının Evlilik İlişisini Yordaması	25-44 yaş	2021	Makale
	Romantik İlişkilerin Algılanan İstismarı: Şemalar, Cinsiyet Rollerini, Affetmenin Ve Benlik Farklılaşması	18 -40 yaş	2023	Doktora tezi
	Yetişkinlerdeki Çocukluk Çağı Travmaları, Benlik Farklılaşması Ve Psikolojik Sağlık Düzeyi	19-70 yaş	2023	YL tezi

Polat ve İlhan'ın (2018) yaptığı araştırmanın sonuçlarına göre, iç içe geçme ve duygusal tepkisellik alt boyutları ile çift uyumu arasında anlamlı düzeyde ilişki olmadığı saptanmıştır.

Kalkan ve Aydoğan'ın (2019) yaptığı çalışmada, farklılaşmış bir benlik yapısına sahip olmanın evlilik ilişkisi kalitesine olumlu katkı sağladığı ve başkalarına bağımlı olmak yerine ilişkilerde sağlıklı bir denge kurabilen, net ve özerk bir benlik yapısına olmanın kaliteli bir evlilik ilişkisi yaşama olasılıklarının artabileceği sonucuna ulaşmıştır. Çanakçı'nın (2023) çalışmasında benlik farklılaşmasının cinsiyete göre değiştiğini ve gelir düzeyinin de bu durumu etkilediği ve kişilerin çocukluk çağı travması ve benlik farklılaşması düzeyleri arasında negatif yönde anlamlı bir ilişki olduğu bulgusuna ulaşılmıştır.

Tönbül ve Kocayörük (2021) tarafından gerçekleştirilen çalışmada, evli bireylerde erken dönemki uyumsuz şemaların ve benliğin farklılaşma düzeylerinin evlilik ilişkisine ilişkin inançları nasıl etkilediği incelenmiştir ve evlilik ilişkisiyle ilgili akılcı olmayan inançların erken dönemdeki uyumsuz şema alanlarıyla pozitif yönde ve orta düzeyde ilişkili olduğu tespit edilmiştir. Bu bulgulara dayanarak, erken dönemdeki uyumsuz şemaların artmasıyla birlikte, evlilik ilişkisindeki akılcı olmayan inançların artma eğiliminde olduğu belirlenmiştir.

7. SONUÇ VE ÖNERİLER

Akcan ve Taşören'in (2020) çocukluk çağındaki olumsuz yaşantıların, öz-şefkatin ve duygu düzenleme becerilerinin genç yetişkinlerin depresyon belirtilerini etkilediği üzerine yaptıkları çalışma, bu faktörlerin depresyonla ilişkili olduğunu göstermiştir. Bulgulara göre, çocukluk

çağdaki olumsuz yaşantıların, duygu düzenlemeyle ilgili becerilerinin ve öz-şefkatteki eksikliğin depresyon belirtileriyle ilişkili olduğu ve ebeveyn tutumlarının, özellikle duygusal ihtiyaçların karşılanması, öz-şefkatin gelişimi ve duygu düzenleme becerilerine etkisinin önemini vurgulanmaktadır. Ebeveynlerin duygusal destek ve çocukların duygusal ihtiyaçlarını karşılamaya yönelik tutumları, ileriki dönemde bireylerin duygusal sağlığı ve depresyon belirtileriyle ilişkili olabilir. Bu bağlamda, duygusal ihtiyaçların dikkate alınması, duygusal düzenleme ve öz-şefkat becerilerinin geliştirilmesine yönelik önemli bir adımdır.

Ceylan'ın (2023) çalışmasında değerlendirilen diğer değişkenler arasında, toplumsal cinsiyet rolleri tutumları ile yüksek standartlar, zedelenmiş sınırlar ve diğeri yönelimlilik şema alanları arasında pozitif yönde anlamlı ilişki tespit edilmiştir. Kişiler arası affetme düzeyi ile pozitif yönde anlamlı ilişki saptanmıştır. Benliğin farklılaşması düzeyi ile anlamlı yönde ilişki bulunmamıştır. Ancak, benliğin farklılaşması ve kişilerarası affetme düzeyi arasında negatif yönlü anlamlı düzeyde ilişki bulunmuştur. Çatal ve Kalkan'ın (2019) çalışması, evlilik tipleri ve evlilik değerlerinin evlilik doyumunu anlamlı bir şekilde yordadığını göstermiştir. Geleneksel, ilişkisi özerk ve özerk evlilik tipleri ile bireylerin evlilik değerlerinin evlilik doyumunu etkilediği sonucuna varılmıştır.

Bu bağlamda, demokratik anne baba tutumu ve demokratik tutum düzeyinin evlilik doyumunu artırıcı etkisi göz önünde bulundurularak, aile içi iletişim ve ebeveyn tutumlarına dikkat edilmelidir. Ayrıca, bireyler arasındaki farklı şema alanları ile benlik farklılaşması ve affetme düzeyleri arasındaki ilişkilerin incelenmesi, bireylerin duygusal sağlığı ve ilişkisel dinamikler üzerinde derinlemesine anlayış sağlayabilir. Son olarak, evlilik tipleri ve evlilik değerlerinin evlilik doyumuna etkisi göz önünde bulundurularak, çiftler arasındaki uyum ve değer odaklı bir iletişim, sağlıklı bir evlilik ilişkisi için destekleyici olabilir.

Çanakçı'nın (2023) araştırması, benlik farklılaşmasının cinsiyete ve gelir düzeyine bağlı olarak değiştiğini ve çocukluk çağı travmasının benlik farklılaşması düzeyleriyle negatif yönde ilişkili olduğunu bulmuştur. Özellikle çocukluk döneminde yaşanan istismarın, benlik farklılaşmasının iç içe geçme boyutunu anlamlı şekilde etkilediği gözlemlenmiştir. Bu bulgular, çocukluk çağı travmalarının uzun vadeli etkilerinin fiziksel, zihinsel ve duygusal sorunlara yol açabileceği yönünde önemli bir göstergedir. Ayrıca, Tönbül ve Kocayörük'ün (2021) çalışması, erken dönem uyumsuz şemalar ile evlilik ilişkisine yönelik akılcı olmayan inançlar arasında pozitif yönlü ve orta düzeyde bir ilişki olduğunu ortaya koymuştur. Bu, erken dönem uyumsuz şemaların artmasıyla birlikte evlilik ilişkisine yönelik akılcı olmayan inançların da artabileceği fikrini desteklemektedir. Bu bağlamda, çocukluk çağı travmaları ile benlik farklılaşması

arasındaki ilişki ve erken dönem uyumsuz şemaların evlilik ilişkisi inançları üzerindeki etkisi, terapötik müdahalelerde dikkate alınmalıdır. Evlilik öncesi danışmanlık süreçlerinde, bu faktörlerin göz önünde bulundurulması, çiftlerin daha sağlıklı ve sürdürülebilir bir ilişki geliştirmelerine yardımcı olabilir. Ayrıca, bireylerin çocukluk çağı deneyimlerinin ve erken dönem şemalarının evlilik ilişkisine etkisi, psikolojik destek ve danışmanlık hizmetlerinin planlanması ve sunulması açısından önemlidir.

Alanyazın incelemesinde yurtdışı çalışmalarında özellikle 2015 öncesinde daha çok araştırma olduğu görülmektedir. Belirlenen tarih aralıklarındaki çalışmalara bakmak araştırmayı sınırlandırmıştır. Bu çalışmanın sonuçlarına dayanarak, gelecekteki araştırmaların aile dinamiklerini daha derinlemesine incelemeye odaklanması önerilebilir. Özellikle, ebeveyn tutumlarının çocukların bilişsel duygu düzenleme becerileri ve benlik ayrışması üzerindeki etkilerini daha fazla araştıran çalışmalara ihtiyaç vardır.

Özet

Yapmış olduğumuz çalışmamızın amacı, şalvar güreşi yapmış genç güreşçilere uygulanan pliometrik çalışmaların seçilmiş bazı motor beceriler (uzun atlama, esneklik, denge, çeviklik, 20 m) üzerine akut etkisinin araştırılmasıdır. Bu amaçla çalışmaya katılan şalvar güreşi yapmış 19 genç güreşçi randomize şekilde kontrol (n=9) ve deney (n=10) gruplarına ayrılmıştır. Deney grubu genel ısınmanın öncesinde ip atlama, squat, diz çekme, engel üzerinden yana atlama ve durarak uzun atlama gibi egzersizleri yaptıktan sonra ısınma egzersizlerini yaparak güreş çalışmasına geçtiler. Kontrol grubu ise sadece geleneksel güreş ısınma egzersizlerini yaparak güreş çalışmasına geçtiler. Verilerin analizinde SPSS 21.0 programından yararlanılmıştır. Normallik sınaması için Shapiro-Wilk testi uygulandı. İstatistiksel sonuçlar 0.05 anlamlılık düzeylerinde değerlendirildi. Grupların ön test ve son testleri arasındaki farkın analizi için Paired Sample T testi, gruplar arasındaki ön test ve son test farkın analizi için ise Independent Sample T testi kullanılmıştır. Veriler ortalama, standart sapma olarak sunuldu. Yapılan istatistiki değerlendirme sonucunda deney grubunun uzun atlama, esneklik ve 20 m ölçümlerinde son test lehine anlamlılık bulunurken ($p<0.05$), kontrol grubunun test değerlerinde anlamlılık tespit edilememiştir. Deney ve kontrol grubunun ön test değerleri karşılaştırılmasında anlamlılık bulunmazken, son test değerlerinde ise deney grubu lehine esneklik değerinde anlamlılık tespit edilmiştir. Sonuç olarak; şalvar güreşi yapmış genç güreşçilere antrenmandan önce uygulanan uyarıcı nitelikli egzersizlerin akut olarak bazı motor becerilerde olumlu yönde etkiler sağladığı bazı becerilerde ise bir olumlu ya da olumsuz etki göstermediği söylenebilir. Bundan sonra yapılacak olan çalışmalarda şalvar güreşi yapmış sporculara yönelik uygulanacak uyarıcı nitelikli antrenmanların daha geniş zamanı içerecek şekilde programlanması önerilebilir.

Anahtar Kelimeler: Motor beceri, pliometrik çalışma, şalvar güreşi

**ACUTE EFFECT OF PLYOMETRIC WORKS APPLIED TO YOUNG WRESTLERS
WHO PERFORMED SHALWAR WRESTLING ON SOME SELECTED MOTOR
SKILLS**

Abstract

The aim of our study is to investigate the acute effect of plyometric exercises applied to young wrestlers who have practiced shalwar wrestling on some selected motor skills (long jump, flexibility, balance, agility, 20 m). For this purpose, 19 young wrestlers who participated in the study and participated in shalwar wrestling were randomly divided into control (n = 9) and experimental (n = 10) groups. Before the general warm-up, the experimental group did exercises such as jumping rope, squats, knee pulls, sideways jumping over obstacles and standing long jump, and then they started wrestling by doing warm-up exercises. The control group moved on to wrestling training by doing only traditional wrestling warm-up exercises. SPSS 21.0 program was used to analyze the data. Shapiro-Wilk test was applied to test normality. Statistical results were evaluated at 0.05 significance levels. Paired Sample T test was used to analyze the difference between the pretest and posttest of the groups, and the Independent Sample T test was used to analyze the difference between the pretest and posttest between the groups. Data are presented as mean and standard deviation. As a result of the statistical evaluation, there was a significance in favor of the post-test in the long jump, flexibility and 20 m measurements of the experimental group ($p < 0.05$), while no significance was detected in the test values of the control group. While there was no significance in comparing the pre-test values of the experimental and control groups, a significance was detected in the flexibility value in favor of the experimental group in the post-test values. As a result; It can be said that the stimulating exercises applied to young wrestlers who have practiced shalwar wrestling before training have acute positive effects on some motor skills, and do not have a positive or negative effect on some skills. In future studies, it may be suggested that stimulating training sessions for athletes who have performed shalwar wrestling should be programmed to include a longer period of time.

Keywords: Motor skills, plyometric training, shalwar wrestling

Giriş

Güreş, iki güreşçinin ya da sporcuların boyutları belli olan özel yapılmış bir brandalı minder üzerinde, araç kullanmaksızın Dünya Güreş birliğinin belirlediği kurallara uygun biçimde teknik, beceri, kuvvet ve zekâlarını kullanarak birbirlerine üstünlük kurma mücadelesi olarak tanımlanır. Bu mücadele sırasında gereksinim duyulan enerji ihtiyacının karşılanması ve meydana gelen yorgunluğa karşı konulabilmesi için maksimum oranda vücut sistemlerinin çalışmasına da ihtiyaç duyulur. Böylece yapısal (antropometrik) ve fonksiyonel (fizyolojik) özellikler güreşte performansın önemli belirleyici kriterleri olarak ifade edilmektedir (Kürkçü ve ark., 2009). Güreş sadece rakibi yenmek için yapılan ayak tekniklerinden oluşan mücadele olmayıp aynı zamanda yüksek dayanıklılık (aerobik, anaerobik, solunum fonksiyonları), kuvvet, sürat, çabukluk, esneklik, denge, reaksiyon ve strateji gibi sportif performans ve kontrol gerektiren bir spordur (Akyüz ve ark., 2010).). Türklerin örf, adet, gelenek göreneklere içerisinde güreşin yeri her zaman ayrı tutulmuştur. Diğer taraftan Türkiye'nin hemen her bölgesinde birbirinden farklı karakucak güreşi, yağlı pehlivan güreşleri, şalvar güreşi, aba güreşi gibi güreş müsabakaları yapılmakta ve yarışmalar düzenlenmektedir (Özdamar, 1988; Demirci, 1999). Şalvar güreşi; ismini kıyafetinden alır. Ayrıca bu kıyafet, İslam öncesi Türk geleneğine dayanmaktadır. Şalvar güreşi keçi kılından sağlamca dokuma, diz kapağı üstünde şort uzunluğundaki giysiyle yapılan geleneksel bir güreştir (Türkmen ve Ark, 2011). Şalvar güreşinin diğer geleneksel güreşlere kıyasla minder güreşine en yakın güreş olduğu söylenebilir. Fakat şalvar güreşinde tüm hareketler ayakta icra edilir. Minder güreşinde uygulanan tek paça, şalvar oyunu, dış çangal, deve bağlama, gıcırı bağlama, boşa kaldırma, Karakucak, aşirtma, eşek bağdası, yan çangal, boşa kaldırma vb. oyunların tamamı ayakta yapılmaktadır. Bu nedenle pehlivanın göbeği ya da dizleri yere değdiği zaman müsabaka tekrar ayakta başlamaktadır. Mücadelede yenilgi, rakibin oyunu ile pehlivanın göbeğinin gökyüzünü görmesiyle oluşmaktadır. Ayrıca müsabaka sonunda rakibini yenen pehlivanın, yendiği güreşçi tarafından en az iki kişi ile güreş yapmadan şalvarı çıkarması yasaklanmıştır (İşler 1997).

Pliometrik antrenman, temel olarak patlayıcı kuvvet gerektiren durumlarda is gücünü artırmak için yapılan bir antrenman türüdür (Ergun ve Baltacı, 1997). Pliometrik çalışmalarda hedef, daha fazla elastik kuvvetle alakalı olmakla beraber kasın ekzantrik kasılmadan sonra, konsantrik kasılmada kısa sürede maksimum kuvvetin çok hızlı bir şekilde uygulanmasını meydana getirmektir. Bundan dolayı yüksek süratte bir kasılma ile kas-sinir sisteminin mukavemetinin aşılması sonucunda elastik kuvvet meydana getirir. Bu çalışma pozitif- negatif yönlü bir kuvvet çalışması olmakla birlikte, kinetik enerjiyi olabildiğince hızlı ve verimli bir

biçimde kullanmayı amaç edinir ve patlayıcı sıçrama kuvvetinin performansını artırır (Brown ve ark., 1986). Pliometrik antrenman, doruk kuvvet ile patlayıcı güç arasındaki ilişkiyi geliştirmektedir. Pliometrik antrenmanlar bugün süratli bir şekilde kuvvetin yerine getirilmesinde ve güç üretiminde çok etkili antrenman metodu olarak yaygın bir kullanıma sahiptir. Koşmaya, sıçramaya, sekmeye, atlamaya, yükselmeye ve fırlatmaya dayalı sporlarda pliometrik zorunlu bir antrenman olarak kullanılır hale gelmiştir (Yüksel, 2001). Pliometrik çalışmaların temel amacı öncelikle elastik kuvvetle alakalı olarak kısa zamanda büyük seviyede çabuk bir şekilde tatbik edilerek performansta kazanımlar elde etmektir.

MATERYAL VE METOT

Çalışma Dizayını

Bu çalışmaya, şalvar güreşi yapmış 19 genç güreşçi katılmış bu güreşçiler ise randomize şekilde kontrol (n=9) ve deney (n=10) gruplarına ayrılmıştır. Deney grubu genel ısınmanın öncesinde ip atlama, squat, diz çekme, engel üzerinden yana atlama ve durarak uzun atlama gibi egzersizleri yaptıktan sonra ısınma egzersizlerini yaparak güreş çalışmasına geçmiştir. Kontrol grubu ise sadece geleneksel güreş ısınma egzersizlerini yaparak güreş çalışmasına geçmiştir. Yapılan antrenman sonunda her iki grubun durarak uzun atlama, esneklik, denge, çeviklik ve 20 metre sürat test ölçümleri kayıt altına alınmıştır.

Performans Testleri

Durarak uzun atlama testinde mesafeyi belirlemek için mezura kullanılmıştır. Katılımcı, kollarını geriye alarak squat pozisyonunda ve her iki ayağı birbirine paralel olarak başlama çizgisinin gerisinde bekler. Daha sonra kollarını öne yukarı doğru hareket ettirerek sıçrar. Ayakları yerden ayrılır ayrılmaz bacaklarını büker ve kollarını öne doğru sallamaya devam eder. Katılımcı; ayakları paralel olarak, gövdesi bükülü ve kolları öne uzanmış olarak yere düşer. Durarak uzun atlama testinde, başlangıç çizgisi ile katılımcının çizgiye en yakın temas ettiği yer arasındaki mesafe, cm cinsinden ölçülmüştür. Test iki defa yapılmış ve iyi olan değer kaydedilmiştir. Esneklik ölçümü için; test sehpası; uzunluk 35 cm, genişlik 45 cm, yükseklik 32 cm olan Otur-Eriş testi esnekliğinin ölçülmesi için kullanıldı. Denekler ayak tabanlarını Otur-Eriş sehpasının kendilerine bakan yüzüne yerleştirdiler. Elleri ile sehpanın üzerine doğru dizlerini bükmeden ileri uzanabildiği kadar uzandılar ve 2 saniye sabit olarak beklediler. Uzanılabilen mesafe santimetre olarak kaydedildi (Karakaş, 2017). Araştırmaya katılan deneklerin denge ölçümleri Flamingo denge aleti ile ölçüldü. Denek, 50 cm. uzunluğunda, 4 cm. yüksekliğinde ve 3 cm. genişliğinde tahta bir denge aletin üzerine çıkarak 1 dk boyunca

dengede kalmaya çalıştı. Denge bozulduğunda (ayağını tutarken bırakırsa, tahtadan yere düşerse, vücudunun herhangi bir bölgesiyle yere dokunursa ve benzeri) süre-zaman durduruldu. Denek, denge aletine çıkarak dengesini tekrar sağladığında, süre kaldığı yerden devam etti. Bir dakika süreyle test bu şekilde devam etti. Süre tamamlandığında, araştırma grubunun her denge sağlama teşebbüsü (düşükten sonra) sayıldı ve bu sayı test bitiminde bir dakika süre tamamlandığında, araştırma grubunun puanı olarak kaydedildi (Deforche ve ark., 2003). Sporcuların çeviklik değerini ölçmek için Pro-agility çeviklik testi kullanılmıştır. Pro-agility çeviklik test alanı, başlangıç çizgisinin 4,57 m soluna ve sağına işaretlerin yerleştirilmesi şeklinde belirlenmiştir. Başlangıç çizgisine fotosel kapısı yerleştirilmiştir. Tekrarlı geçiş zamanları bu sayede alınabilmektedir. Teste başlamadan önce katılımcı başlangıç çizgisinde hazır hale gelir. Teste başladığında önce sağdaki işarete, sonra da soldaki işarete dokunarak başlangıç çizgisinden geçerek testi sonlandırır (Bayraktar, 2013; Özbay ve ark., 2018). Denekler, 20 m belirlenmiş alanda yüksek çıkış ile maksimal hız ile 20 m koşar. Koşulan süre sn cinsinden süreölçer ile kaydedilir. Çalışmaya katılanlara test iki defa tekrar edilerek en iyi sonuç kaydedilmiştir (Öktem ve Şentürk, 2017).

İstatistiksel Analiz

Araştırma sonunda elde edilen verilerin; tasnif edilmesinde ve yüzdeler farklarının hesaplanmasında Excel programı (Microsoft Office, sürüm 2013, Microsoft Corp., Redmond, WA, ABD), istatistiksel olarak analiz edilmesinde ise SPSS paket programı (SPSS for Windows, sürüm 22.0, SPSS Inc., Chicago, Illinois, ABD) kullanıldı. Veriler ortalama, standart sapma olarak sunuldu. Normallik sınaması için Shapiro-Wilk testi uygulandı. İstatistiksel sonuçlar 0.05 anlamlılık düzeylerinde değerlendirildi. Grupların ön test ve son testleri arasındaki farkın analizi için Paired Sample T testi, gruplar arasındaki ön test ve son test farkın analizi için ise Independent Sample T testi kullanılmıştır. Veriler ortalama, standart sapma olarak sunulmuştur.

BULGULAR

Tablo 1. Çalışmaya katılan grupların tanımlayıcı özellikleri

		N	Min,	Maks,	Ort,	SS
Deney Grubu	Yaş (yıl)	10	21,00	24,00	22,50	1,18
	Boy (cm)	10	1,67	1,82	1,74	0,050
	Kilo (kg)	10	65,00	95,00	76,10	9,62
Kontrol Grubu	Yaş (yıl)	9	21,00	25,00	22,67	1,32
	Boy (cm)	9	168,00	183,00	174,78	4,60
	Kilo (kg)	9	60,00	90,00	74,22	10,02

Tablo 2. Grupların ön test ve son test grup içi karşılaştırmaları

			Ort,	SS	p	
Deney grubu	Uzun Atlama	Ön Test	218,10	26,81	0,035*

			Son Test	227,00	9,87	
Esneklik		Ön Test	34,11	2,15	0,438	
		Son Test	33,44	2,74		
Denge		Ön Test	5,11	3,76	0,482	
		Son Test	4,67	2,40		
Çeviklik		Ön Test	4,88	0,20	0,566	
		Son Test	4,86	0,16		
20 metre		Ön Test	3,27	0,14	0,420	
		Son Test	3,29	0,09		

*(P<0,050)

Tablo 2’de deney grubunun ön test son test değerleri incelendiğinde uzun atlama, esneklik ve 20 m. değerlerinde son test lehinde istatistiksel açıdan anlamlılık bulunmuştur (p<0.05). Kontrol grubunun ön test son test değerleri incelendiğinde ise uzun atlama, esneklik, denge,

çeviklik ve 20 m. değerlerinde akut değerlendirmeye göre anlamlılık tespit edilememiştir ($p < 0.05$).

Tablo 3. Grupların ön test değerlerinin karşılaştırılması

	Grup	N	Ort,	SS	t	p
Uzun atlama	Kontrol Grubu	9	223,11	14,60	0,497	0,625
	Deney Grubu	10	218,10	26,81		
Esneklik	Kontrol Grubu	9	34,11	2,15	0,122	0,904
	Deney Grubu	10	34,00	1,83		
Denge	Kontrol Grubu	9	5,11	3,76	-,053	0,958
	Deney Grubu	10	5,20	3,55		
Çeviklik	Kontrol Grubu	9	4,88	0,20	-,937	0,362
	Deney Grubu	10	5,02	0,43		
20 metre	Kontrol Grubu	9	3,27	0,13	0,099	0,561
	Deney Grubu	10	3,22	0,20		

Tablo 3’de verilmiş olan istatistiksel analiz sonuçlarına göre grupların ön test değerlerinde uzun atlama, esneklik, denge, çeviklik ve 20 m. değerlerinde $p < 0.05$ düzeyinde anlamlılık olmadığı tespit edilmiştir.

Tablo 4. Grupların son test değerlerinin karşılaştırılması

	Grup	N	Ort,	SS	t	p
Uzun atlama	Kontrol Grubu	9	227,00	9,87	0,637	0,532
	Deney Grubu	10	221,30	25,09		
Esneklik	Kontrol Grubu	9	33,44	2,74	-2,246	0,032
	Deney Grubu	10	36,00	2,21		
Denge	Kontrol Grubu	9	4,67	2,40	-,025	0,981
	Deney Grubu	10	4,70	3,37		
Çeviklik	Kontrol Grubu	9	4,86	0,16	-,246	0,809
	Deney Grubu	10	4,89	0,36		
20 metre	Kontrol Grubu	9	3,29	0,09	-,391	0,701
	Deney Grubu	10	3,31	0,13		

Tablo 3’de verilmiş olan istatistiksel analiz sonuçlarına göre grupların son test değerlerinin kıyaslamasında esneklik değerlerinde $p < 0.05$ düzeyinde deney grubu lehine anlamlılık tespit edilirken, uzun atlama, denge, çeviklik ve 20 m. değerlerinde ise anlamlılık olmadığı ortaya çıkmıştır.

TARTIŞMA VE SONUÇ

Vücuttaki etki mekanizmalarına göre güreş; ağırlıklı olarak anaerobik enerji sisteminin kullanıldığı, sporcularda esneklik, hız, kuvvet ve dayanıklılık gibi fizyolojik özelliklerin gelişmesine olanak sağlayan spor dallarından birisi olarak bilinmektedir. Bu çalışmada şalvar güreşi yapmış genç güreşçilere uygulanan pliometrik çalışmaların seçilmiş bazı motor beceriler (uzun atlama, esneklik, denge, çeviklik, 20 m) üzerine akut etkisinin araştırılması amaçlanmıştır. Ortaya çıkan sonuçlara göre deney grubunun durarak uzun atlama, esneklik ve 20 metre sürat değerlerinde son test lehinde anlamlılık bulunurken ($p<0.05$), denge ve çeviklik değerlerinde iyileşmeler olsa da anlamlılık ortaya çıkmamıştır. Kontrol grubunun test değerlerine de herhangi bir anlamlılık tespit edilmemiştir. Gruplar arasındaki ön test değerleri karşılaştırılmasında anlamlılık bulunmazken son test değerleri karşılaştırılmasında deney grubu lehine esneklik değerlerinde anlamlılık tespit edilmiştir ($p<0,05$).

Gerçekleştirilen bir çalışmada 15-16 yaş güreşçilerin durarak uzun atlama değerleri 219 ± 15.84 cm ve 17-18 yaş grubu güreşçilerin ise 220.73 ± 16.06 cm olduğu tespit edilmiştir (Aydos ve Kürkçü 1997). 12-14 yaşındaki güreşçiler üzerine yapılan bir araştırmada uzun atlama değeri ön test ölçümünde 194,10 cm ve 8 haftalık çalışmanın sonrasındaki ölçümde ise 198,00 cm olarak bulunmuştur (Bağcı 2016). Durarak uzun atlama sonuçları 14 yaş grubu güreşçilerde 181,94 cm, 15 yaş grubu güreşçilerde 197,95 cm olduğu belirtilmektedir (Bayraktar ve ark., 2012). Müsabakalarda ve çalışmalarda karmaşık beceriler gerektiren güreşte başarılı olmak için esnekliğin de önemli bir faktör olduğu kaçınılmaz bir gerçektir. Esneklik becerisi iyi olan güreşçi geniş orandaki hareketlerin uygulanmasında ve tekniklerin tatbik edilmesinde pozitif avantaja sahip olarak görülmektedir. Güreşte tüm sezonda gerçekleştirilen çalışmalarda güreşçilerin tüm performans öğelerinde olduğu gibi esnekliğin de yüksek değerde olması amacı güdülmektedir (Cicioğlu ve ark. 2007). Güreş çalışmalarına ilave olarak gerçekleştirilen esneklik antrenmanları güreşçilere daha geniş olarak hareket edebilme olanağı sağlamaktadır. Yapılan bir akademik çalışmada genç güreşçilerin esneklik değeri $29,8\pm 5$ cm olduğu ortaya çıkmıştır (Baykuş, 1989). Ümit milli takım düzeyinde müsabık 18 güreşçinin esneklik değeri $31,8\pm 6$ cm olduğu ortaya çıkmıştır (Ziyagil,1991). Başka bir araştırmada 17-18 yaşında olan ve serbest güreş milli takım sporcusu 32 güreşçinin esneklikleri $36,4\pm 5$ cm olduğu tespit edilmiştir (Şahin,2000).

Farklı branşlardaki sporcuların denge performansları karşılaştırılmış boy uzunluğu arttıkça dominant ve nondominant statik denge skorlarının arttığı yani, kısa boylu sporcuların

dengelerini sağlamada daha başarılı oldukları tespit edilmiştir (Erkmen ve ark., 2007). Era ve arkadaşları (1996) tarafından yapılan bir araştırmada vücut ağırlığı arttıkça statik denge skorlarının da arttığı, vücut ağırlığının artmasının denge performansını olumsuz yönde etkilediği belirlenmiştir. Genç elit güreşçilerin fiziksel ve fizyolojik özelliklerinin karşılaştırılmasının yapıldığı bir çalışmada güreşçilerin çeviklik özelliklerini belirlemek için illionis çeviklik testi uygulanmış, milli takıma seçilen güreşçilerin çeviklik test ortalaması $16,3 \pm 0,6$ olduğu, milli takıma seçilmeyen güreşçilerin çeviklik test ortalaması $17,0 \pm 0,9$ olduğu bulunmuştur (Demirkan ve ark., 2012). İri, Engin ve Aktuğ (2018) tarafından yapılan bir araştırmada güreşçi çocuklara uygulanan 8 haftalık denge antrenmanlarının statik-dinamik denge, çeviklik ve sürat performansına etkisi araştırılmıştır. Çalışmanın neticesinde 8 haftalık denge antrenmanlarının vücut yağ yüzdelerinde azalma, statik-dinamik denge ve çeviklik performanslarında artış sağladığı belirtilmiştir.

Çabuk kuvvet antrenmanları öncesinde 16-17 yaşındaki güreşçilerin 20 metre sürat koşusu değerleri, deney grubu 2,85 sn, antrenman sonrası 2,78 sn, kontrol grubu antrenman öncesi 2,87 sn, antrenman sonrası 2,91 sn olarak tespit edilmiştir (Gökdemir ve ark., 1999). Güreşçilere 12 hafta antrenman programı uygulandıktan sonra 20 metre koşu değerleri antrenman programı öncesinde 2,76 sn antrenman sonrası ise 3,71 sn olarak tespit edilmiştir (Kürkçü ve ark., 2009). Kılıç, tarafından 14–16 yaşındaki güreşçilere çabuk kuvvet antrenmanı uygulanmış ve 20 m koşu test sonuçları çalışma grubu antrenman öncesi 3.48 sn, antrenman sonrası 3.39 sn, kontrol grubunun antrenman öncesi 3.61 sn, antrenman sonrası 3.49 sn olarak tespit edilmiştir.

ÖNERİLER

Geleneksel güreşler arasında yer alan şalvar güreşi modern güreşlere en yakın özellikte bir güreştir. Dolayısıyla şalvar güreşindeki elde edilecek fiziksel ve psikolojik kazanımlar modern güreş müsabakalarında da sporculara büyük katkılar sağlayacaktır. Şalvar güreşi yapmış güreşçiler üzerinde yapmış olduğumuz bu çalışmada akut olarak sporculara uygulanan pliometrik çalışmaların deney grubunun bazı motorik beceriler üzerine olumlu katkılar sağladığı söylenebilir.

Çalışmada elde edilen sonuçlara göre antrenör ve sporcuların içerisinde birçok motorik özelliği barındıran güreşte bu özelliklerin geliştirilmesi ve müsabakalarda başarının sağlanabilmesi için antrenman planlamalarına pliometrik çalışmaları da dahil etmenin sporcuların başarıları üzerinde olumlu sonuçlar ortaya çıkarabileceği düşünülmektedir.

Özet

Çalışmada daha önce spor yapmamış genç bayanlara uygulanan 8 haftalık temel hareket eğitiminin atletik performansı etkileyip etkilemediğini belirleme amaçlanmıştır. Araştırmaya deney grubu n=14 (yaş 18,36) kontrol grubu n=13 (yaş 19,15) olarak iki grup dâhil edilmiştir. Deney grubuna 8 hafta boyunca haftada 2 gün olacak şekilde belirlenmiş temel hareket eğitimlerini içeren antrenman programı uygulanmış, kontrol grubuna ise herhangi bir antrenman programı uygulanmamıştır. Atletik performans değerlerini belirlemek için şınav, mekik, esneklik, uzun atlama, çeviklik ve 20 metre değerleri ölçümleri yapılmıştır. Verilerin analiz edilmesinde SPSS 21.0 programı kullanılmıştır. Yapılan istatistiksel değerlendirme sonucunda deney grubunun ön test son test değerlendirmesinde son test lehine şınav, mekik, uzun atlama, çeviklik ve 20 metre değerlerinde anlamlılık tespit edilmiştir. Kontrol grubu değerlerinde ise ön test son test değerleri arasında herhangi bir anlamlılık olmadığı tespit edilmiştir. Grupların ön test değerleri arasında herhangi bir anlamlılık tespit edilmemiştir. Grupların son test değerlerinin kıyaslanmasında ise deney grubunun grup ortalamalarının kontrol grubunun ortalamalarına göre daha iyi olduğu fakat gruplar arasında istatistiksel olarak anlamlılık olmadığı tespit edilmiştir. Sonuç olarak; genç bayanlara uygulanan temel hareket eğitimleri atletik performansı olumlu yönde etkilediği söylenebilir. Bundan sonra yapılacak çalışmalarda uygulanacak olan temel hareketlerin daha çeşitli olarak belirlenmesi, yüklenmelerin giderek artırılması ve hareket eğitiminin daha uzun süre uygulanmasının sonuçlara daha fazla etki yapacağı düşünülmektedir.

Anahtar kelimeler: Atletik performans, genç bayan, temel hareket

**DOES 8 WEEKS BASIC MOVEMENT TRAINING APPLIED TO YOUNG WOMEN
AFFECT ATHLETIC PERFORMANCE?**

Abstract

The aim of the study was to determine whether 8-week basic movement training applied to young women who had never done sports before affected athletic performance. Two groups were included in the research: experimental group n=14 (age 18.36) and control group n=13 (age 19.15). A training program containing basic movement training was applied to the experimental group 2 days a week for 8 weeks, while no training program was applied to the control group. To determine athletic performance values, push-up, shuttle, flexibility, long jump, agility and 20 meter values were measured. SPSS 21.0 program was used to analyze the data. As a result of the statistical evaluation, in the pre-test post-test evaluation of the experimental group, a significance was determined in the values of push-ups, sit-ups, long jump, agility and 20 meters in favor of the post-test. In the control group values, it was determined that there was no significance between the pre-test and post-test values. No significance was detected between the pre-test values of the groups. When comparing the post-test values of the groups, it was determined that the group averages of the experimental group were better than the averages of the control group, but there was no statistical significance between the groups. As a result; It can be said that basic movement training applied to young women positively affects athletic performance. It is thought that determining more variety of basic movements to be applied in future studies, gradually increasing the loads and applying movement training for a longer period of time will have a greater impact on the results.

Keywords: Athletic performance, young woman, basic movement

Giriş

Hareket insanoğlunun yaşamında en temel özellik olarak yer almasının yanında insanlara oldukça büyük katkılarda sağlamaktadır. Bireylerin sağlıklı olması, sağlığını koruması ve temel ihtiyaçlarını karşılaması için harekete ihtiyaç duyulmaktadır. Teknolojinin gelişmesiyle birlikte insanoğlunun hayatında olumlu gelişmeler olmasıyla birlikte olumsuz etkiler de ortaya çıkmaktadır. Bu olumsuz etkilerin başında ise hareketsizlik yer almaktadır. Küçük yaşlarda itibaren bireyler teknolojik cihazlarla iç içe hayat sürmekte, günün büyük bölümünü telefon, tablet ve bilgisayar gibi elektronik cihazlar başında geçirmektedir.

Hareket eğitimi günümüzde oldukça önemli bir yere sahiptir. Çağımızda önemli yere sahip olan bu hareket eğitiminin farklı tanımlamaları da yapılmıştır. Hareket eğitimi; paylaşma, duyguları ifade etme, bireysel amaç ve hedef belirlemeyi öte yandan bireyin bir şeylerden yada birilerinden bağımsız olarak hareket etme duygusunu kazanmak için birden fazla olanaklar sağlamaktadır. Hareket eğitimi; gündelik hayat ve fiziksel olarak aktif yaşamayı ifade etmektedir (Tüfekçioğlu, 2003). Hareket eğitiminin eğitime küçük yaşlarda başlanması gerekmektedir. Bireylerin gündelik stresten uzaklaşması, başkalarıyla paylaşmayı öğrenmesi, daha etkin ve verimli düşünmesinin yanında hareket tepkisinin de kazanılması için tercih edilecek bir yöntemdir. Hareket eğitiminin temel amacı esas olarak, bireylerin kendi bedenini tanıması, bedenini etkili ve verimli olarak kullanması, kendisinde bulunan kapasiteyi arttırması, koordinasyonunu geliştirilmesi, dayanıklılık ve kuvvet gibi fiziksel özelliklerinin arttırılmasıdır. Diğer taraftan ise temel hareketin en temel amacı, bireylerin yaşamı süresince düzenli olarak fiziksel çalışmalara katılım sağlaması ve bireyin benliğindeki gelişimine paralel olarak zihinsel ve toplumsal olarak da gelişimlerine katkı sağlamaktır. Erken çocukluk döneminde kazanılan temel devinim becerileri, gelecek dönemdeki bireylerin fiziksel çalışmalara da etkili bir şekilde katılmasına olanak sağlamaktadır (Gallahue, 1982). Bireylere uygulanacak hareket eğitimi planlaması yapılırken mevcut grup özelliklerinin bilhassa göz önüne alınması gerekmektedir (Özer, 2000).

Hareket eğitimi uygulamalarında hedeflenen noktalara varılabilmesi için çalışmaları yapacak kişilerin bazı önemli noktalara dikkat etmesi kaçınılmazdır (Kırıcı, 2008).

- Çalışmaları uygulayacak bireylerin mutlaka öğretim yöntemlerine hâkim olması gerekmektedir.
- Çalışmaların uygulanacağı grubun sayıyı makul düzeyde olması gerekmektedir.

- Çalışmaya katılan her bireyin farklı olabileceği düşüncesi dikkate alınarak öğretilen becerilerin bireylerin öğrenme seviyesine ve düzeyine uygun hale getirilmesi gerekmektedir.

Bireylerdeki mevcut olan motor gelişim, vücudun kontrolünü ve koordinasyonunu ifade etmektedir. Bu gelişim ise temel hareketlerin temelini meydana getirmektedir. Söz konusu hareketler ise, sıçrama, koşma, tırmanma, takla atma, yakalama gibi hareketler olarak karşımıza çıkmaktadır. Bireylerde ortaya çıkacak becerilerin geliştirilmesi ve öğrenilmesi hareket eğitimi çalışmalarının temelini oluşturmaktadır. Hareket eğitimi çalışmaları içerisinde bireylerde bütünsel olarak gelişim olanağı sağlanabilir. Bireylerdeki kazanılan beceriler onların çalışmalardan zevk almasına ve grup adaptasyonunu oldukça kolay bir şekilde elde etmesine katkı sağlamaktadır. Bireylerin kazanmış oldukları beceriler oluşabilecek boş zamanlarını değerlendirmesi ve boş zamanlarını nasıl kullanacaklarını bilmesinin neticesinde yaşam biçimlerinin de etkilenmesine olanak sağlamaktadır (Aracı, 2004).

MATERYAL VE METOT

Çalışma Dizaynı

Çalışmamıza daha önce spor yapmamış 27 genç bayan katılmış, bu bayanlar ise randomize bir deney (n:14) grubu ve kontrol (n:13) grubu olarak gruplara ayrılmıştır. Deney grubu uyarlanmış 8 haftalık haftada 2 gün olacak şekilde temel hareket antrenman programı uygulanmış, kontrol grubuna ise herhangi bir çalışma programı uygulanmamış bireyler rutin yaşamlarına devam etmiştir. Bireylerin atletik performans değerlerini belirlemek için şınav, mekik, esneklik, durarak uzun atlama, çeviklik ve 20 metre değerleri ölçümleri yapılarak kayıt altına alınmıştır.

Tablo 1. Temel hareket antrenman programı

1. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)		40 dakika yürüme, koşma, zıplama, kayma adımları, galop hareketleri çalışması
2. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)	10 Dakika önceki ders tekrarı	30 eğilme, esnetme, bükülme, çekme, dönme, itme ve çekme hareketleri çalışması
3. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)	10 Dakika önceki ders tekrarı	30 dakika öne ve geriye toplu takla hareketleri çalışması
4. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)	10 Dakika önceki ders tekrarı	30 dakika şınav, mekik, squat, plank hareketi çalışması
5. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)	10 Dakika önceki ders tekrarı	30 dakika pliometrik (squat jump, split squat jump, tuck jumps, bounding) çalışmaları
6. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)	10 Dakika önceki ders tekrarı	30 dakika Denge hareketleri çalışması
7. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)	10 Dakika önceki ders tekrarı	30 dakika Kısa mesafe koşu çalışması
8. Hafta	10 dakika ısınma koşusu	10 dakika hayvan yürüyüşleri (ayı yürüyüşü, yengeç yürüyüşü, ördek yürüyüşü, timsah yürüyüşü, kedi yürüyüşü, kanguru zıplaması, kurbağa hareketi, tırtıl hareketi, fil yürüyüşü)	10 Dakika önceki ders tekrarı	30 dakika Şınav, mekik, squat, plank, burpee hareketleri çalışması

Performans Testleri

Sporcuların 30 sn mekik testi için 1/1000 hassasiyetli el kronometresi kullanıldı. Sporculara, sırt üstü yatar durumda, dizler bükülü, eller ensede ve ayak tabanları yere temasta iken başla komutuyla 30 sn süreyle tekrar edebildikleri kadar mekik yaptırıldı. Mekik çekme esnasında ayakların yerden temasının kesilmemesi için ayaklar tutuldu ve test başlamadan önce her deneğe bir deneme yaptırıldı. Sporcuların yere yattıklarında omuzlarının yere, doğrulduklarında ise dirseklerinin dizlerine değmesine dikkat edildi, 30 saniye içerisinde tekrar edebildiği mekik sayısı kaydedildi (Pekel, 2007). Sporcuların 30 sn şınav testi için 1/1000 hassasiyetli el kronometresi kullanıldı. Sporculara, başla komutuyla 30 sn süreyle şınav yaptırıldı. Sporcular yere uzanmış vaziyette yüzleri yere bakacak şekilde, ayaklar dizlerden gergin ve diz yere temas etmeden gergin vaziyette vücut ağırlığı ayakuçları ile kollar üzerinde iken vücutlarını kaldırıp indirerek yapıldı. 30 saniye içerisinde tekrar edebildiği şınav sayısı kaydedildi (Pekel, 2007). Esneklik ölçümü için; test sehpası; uzunluk 35 cm, genişlik 45 cm, yükseklik 32 cm olan Otur-Eriş testi esnekliğinin ölçülmesi için kullanıldı. Denekler ayak tabanlarını Otur-Eriş sehпасının kendilerine bakan yüzüne yerleştirdiler. Elleri ile sehpanın üzerine doğru dizlerini bükmeden ileri uzanabildiği kadar uzandılar ve 2 saniye sabit olarak beklediler. Uzanılabilen mesafe santimetre olarak kaydedildi (Karakaş, 2017).

Durarak uzun atlama testinde mesafeyi belirlemek için mezura kullanılmıştır. Katılımcı, kollarını geriye alarak squat pozisyonunda ve her iki ayağı birbirine paralel olarak başlama çizgisinin gerisinde bekler. Daha sonra kollarını öne yukarı doğru hareket ettirerek sıçrar. Ayakları yerden ayrılır ayrılmaz bacaklarını büker ve kollarını öne doğru sallamaya devam eder. Katılımcı; ayakları paralel olarak, gövdesi bükülü ve kolları öne uzanmış olarak yere düşer. Durarak uzun atlama testinde, başlangıç çizgisi ile katılımcının çizgiye en yakın temas ettiği yer arasındaki mesafe, cm cinsinden ölçülmüştür. Test iki defa yapılmış ve iyi olan değer kaydedilmiştir. Sporcuların çeviklik değerini ölçmek için Pro-agility çeviklik testi kullanılmıştır. Pro-agility çeviklik test alanı, başlangıç çizgisinin 4,57 m soluna ve sağına işaretlerin yerleştirilmesi şeklinde belirlenmiştir. Başlangıç çizgisine fotosel kapısı yerleştirilmiştir. Tekrarlı geçiş zamanları bu sayede alınabilmiştir. Teste başlamadan önce katılımcı başlangıç çizgisinde hazır hale gelir. Teste başladığında önce sağdaki işarete, sonra da soldaki işarete dokunarak başlangıç çizgisinden geçerek testi sonlandırır (Bayraktar, 2013; Özbay ve ark., 2018). Denekler, 20 m belirlenmiş alanda yüksek çıkış ile maksimal hız ile 20 m koşar. Koşulan süre sn cinsinden süreölçer ile kaydedilir. Çalışmaya katılanlara test iki defa tekrar edilerek en iyi sonuç kaydedilmiştir (Öktem ve Şentürk, 2017).

İstatistiksel Analiz

Araştırma sonunda elde edilen verilerin; tasnif edilmesinde ve yüzdelik farkların hesaplanmasında Excel programı (Microsoft Office, sürüm 2013, Microsoft Corp., Redmond, WA, ABD), istatistiksel olarak analiz edilmesinde ise SPSS paket programı (SPSS for Windows, sürüm 22.0, SPSS Inc., Chicago, Illinois, ABD) kullanıldı. Veriler ortalama, standart sapma olarak sunuldu. Normallik sınaması için Shapiro-Wilk testi uygulandı. İstatistiksel sonuçlar 0.05 anlamlılık düzeylerinde değerlendirildi. Grupların ön test ve son testleri arasındaki farkın analizi için Paired Sample T testi, gruplar arasındaki ön test ve son test farkın analizi için ise Independent Sample T testi kullanılmıştır. Veriler ortalama, standart sapma olarak sunulmuştur.

BULGULAR

Tablo 1. Çalışmaya katılan grupların tanımlayıcı özellikleri

		N	Min,	Maks,	Ort,	SS
Deney Grubu	Yaş (yıl)	14	18,00	20,00	18,36	0,63
	Boy (cm)	14	158,00	173,00	164,29	4,36

	Esneklik (cm)	Ön Test	32,15	3,91	,331	0,746
		Son Test	32,00	4,10		
	Uzun atlama (cm)	Ön Test	186,62	13,29	2,133	0,054
		Son Test	175,38	19,05		
	Çeviklik (sn)	Ön Test	5,44	0,36	-1,079	0,302
		Son Test	5,58	0,40		
	20 Metre (sn)	Ön Test	4,94	0,42	-1,202	0,253
		Son Test	5,13	0,57		

*(P<0,050)

Tablo 2’de deney grubunun ön test son test değerleri incelendiğinde şınav, mekik, uzun atlama, çeviklik ve 20 metre değerlerinde son test lehinde istatistiksel açıdan anlamlılık bulunmuş (p<0.05), esneklik değerlerinde ise anlamlılık bulunamamıştır. Kontrol grubunun ön test son test değerleri incelendiğinde ise şınav, mekik, esneklik, uzun atlama, çeviklik ve 20 metre değerlerinde anlamlılık tespit edilememiştir (p<0.05).

Tablo 3. Grupların ön test değerlerinin karşılaştırılması

	Grup	N	Ort.	SS	t	p
Mekik (adet)	Deney	14	23,71	9,53	-,333	0,742
	Kontrol	13	24,77	6,51		
Şınav (adet)	Deney	14	23,43	8,15	-,908	0,373
	Kontrol	13	25,77	4,62		
Esneklik (cm)	Deney	14	31,29	6,17	-,433	0,669
	Kontrol	13	32,15	3,91		
Uzun atlama (cm)	Deney	14	176,07	22,93	-1,446	0,161
	Kontrol	13	186,62	13,29		
Çeviklik (sn)	Deney	14	5,44	0,36	2,231	0,035*
	Kontrol	13	5,78	0,42		
20 Metre (sn)	Deney	14	4,84	0,49	-,531	0,600
	Kontrol	13	4,94	0,42		

Tablo 3’de verilmiş olan istatistiksel analiz sonuçlarına göre grupların ön test değerlerinde deney grubunun lehine çeviklik değerinde $p < 0.05$ düzeyinde anlamlılık olduğu, şınav mekik, esneklik, uzun atlama ve 20 değerlerinde ise anlamlılık olmadığı görülmektedir.

Tablo 4. Grupların son test değerlerinin karşılaştırılması

	Grup	N	Ort.	SS	t	p
Mekik (adet)	Deney	14	26,07	7,24	1,361	0,186
	Kontrol	13	25,15	4,58		
Şınav (adet)	Deney	14	27,14	8,592	0,390	0,700
	Kontrol	13	23,23	6,00		
Esneklik (cm)	Deney	14	32,64	6,74	0,296	0,769
	Kontrol	13	32,00	4,10		
Uzun atlama (cm)	Deney	14	184,93	22,79	1,176	0,251
	Kontrol	13	175,38	19,05		
Çeviklik (sn)	Deney	14	5,58	0,40	0,335	0,741
	Kontrol	13	5,63	0,40		
20 Metre (sn)	Deney	14	4,75	0,48	-1,895	0,070
	Kontrol	13	5,13	0,57		

Tablo 3’de verilmiş olan istatistiksel analiz sonuçlarına göre grupların son test değerlerinin kıyaslamasında şınav, mekik, esneklik, uzun atlama, çeviklik ve 20 metre değerlerinde ortalama olarak deney grubunun kontrol grubuna göre daha iyi sonuçlara sahip olduğu, ancak gruplar arasında herhangi bir anlamlılık olmadığı görülmektedir.

TARTIŞMA VE SONUÇ

Temel hareket eğitimi, hareketlerin keşfedilerek üretilmesi veya ortaya çıkarılması olarak tanımlanmaktadır (Kuruoğlu 2016). Dikkatin sağlanması, düşüncenin belirli bir noktaya odaklanması gibi temel yeteneklerin gelişimi için kullanılan bir yöntemdir. Bu bilgiler ışığında çalışmamızda genç bayanlara uygulanan 8 haftalık temel hareket eğitiminin atletik performansa (şınava, mekik, esneklik, uzun atlama, çeviklik ve 20 metre) olan etkilerinin belirlenmesi amaçlanmıştır. Elde edilen sonuçlara göre deney grubu ön test son test değerlendirmesinde son test lehine şınava, mekik, uzun atlama, çeviklik ve 20 metre değerlerinde anlamlılık olduğu ortaya çıkmıştır ($p < 0.05$) tespit edilmiştir. Gruplar arası son test değerlerinin kıyaslanmasında ise deney grubunun grup ortalamalarının kontrol grubunun ortalamalarına göre daha iyi olduğu fakat gruplar arasında istatistiksel olarak anlamlılık olmadığı tespit edilmiştir.

Kız yüzücüler üzerinde yapılan bir araştırmada, denek grubu ön test dikey sıçrama (cm) ortalaması $25,104 \pm 3,35762$, esneklik ortalaması $162,000 \pm 9,08295$, 20 metre sürat (sn) ortalaması $4,226 \pm 0,26255$, denek grubu son test dikey sıçrama (cm) ortalaması $24,488 \pm 4,08437$, esneklik ortalaması $159,000 \pm 4,18330$, 20 metre sürat (sn) ortalaması $4,072 \pm 0,25696$ olarak tespit edilmiştir (Kuruoğlu, 2016). Yapılan bir çalışmada dikey sıçrama ortalamaları $18,03 \pm 5,28$, 20 metre sürat ortalamaları ise $4,47 \pm 0,94$ olarak bulunmuştur (Ayan ve ark., 2008).

Temel hareket eğitimi deney grubu ön ve son test durarak uzun atlama, dinamik denge, statik denge sol, çabukluk parametrelerinde istatistiksel açıdan anlamlı farklılık olduğu tespit edilmiştir (Yıldırım, 2023). Gerçekleştirilen bir çalışmada durarak uzun atlama performansı açısından özel beden eğitimi uygulayan grup lehine anlamlı fark ($p < 0,05$) tespit etmiştir (Şen, 2004). Yapılan bir araştırmada deney ve kontrol grubunun sabit uzun atlama puanlarının deney öncesinden deney sonrasına anlamlı bir farklılık gösterdiğini bulmuştur (Şen, 2004). Hareket eğitimi uygulaması ile gerçekleştirilen bir çalışmada, uygulanan hareket eğitimi programı ile katılımcıların motor becerileri arasındaki ilişki incelenmiş ve sonuç olarak, deneysel grubu çabukluk değerlerinde son test lehine anlamlılık olduğu tespit edilmiştir (Özbar, 2007). Akgün (2019)'nün yapmış olduğu çalışmada, planlı bir hareket eğitimi uygulamasını 8 hafta süresince sürdürmüş ve ön test son test karşılaştırmalarında, hareket eğitimi alan grupta çabukluk becerisi de dâhil olmak üzere birçok motor becerinin iyileştiği, geliştiği saptanmıştır sonucuna ulaşmıştır (Akgün, 2019). 6-8 yaşlarındaki siyah ve beyaz çocuğa esneklik, çeviklik, uzun atlama ve koşu testleri uygulanan bir çalışmada; çeviklik, uzun atlama ve koşu performansının

yaşla birlikte arttığını, esneklik performansının ise yaşla birlikte azaldığını belirlemiştir (Milne ve ark., 1976).

ÖNERİLER

Temel hareket eğitimi çocukluk çağında itibaren bireylere uygulanmakta ileri yaşlardaki bazı temel becerilerin kazanılmasına katkı sağlamak için tercih edilmektedir. Geçmiş dönemde temel hareket eğitimi almamış bireylere ilerleyen dönemlerde verilecek temel hareket eğitimlerinin de bazı atletik performansı olumlu yönde etkileyeceği düşünülmektedir. Performansta ortaya çıkan olumlu sonuçlar neticesinde bireyler arasında sağlıklı olmak ve sağlığı korumak için temel hareket eğitimini tercih edilmesinde zamanının geç olmadığı her yaşta yapılan çalışmaların katkılarının olacağına farkına varmalarının sağlanması gerektiği önerilebilir. Yapılacak çalışmalarda eğitimlerin 8 haftalık sürenin uzatılması (10-12 hafta) gibi gelişimler daha fazla olabilir. Çalışmalara katılım sayısının artırılmasıyla daha kapsamlı sonuçlar ortaya çıkabilir. Çalışma programlarının haftada iki günden fazla planlanması yapılabilir. Yapılacak çalışmalarda içeriğin geliştirilerek planlanması sonucunda atletik performans üzerine oluşabilecek etkilerine bakılabilir.

Bireylerin bazı temel becerileri elde edebilmesi için küçük yaşlarda temel hareket eğitimi alması sağlanması, bu eğitimi almamış olsa bile ilerleyen dönemlerde bu eğitime tabi tutularak bu temel becerilerin kazanılması sağlanabilir.

Özet

Günümüzün hızla dijitalleşen dünyasında, iletişim stratejileri giderek karmaşıklaşmakta ve geleneksel yöntemlerin ötesine geçmektedir. Bu ortamda, halkla ilişkilerin temel dinamikleri de evrilmekte ve Veri Odaklı Halkla İlişkiler bu dönüşümün öncüsü olarak öne çıkmaktadır. Geleneksel halkla ilişkiler stratejilerinden ayrılan bu yaklaşım, veri ve analitik kullanımını merkeze alarak iletişim kampanyalarının şekillenmesinde yeni bir perspektif sunmaktadır. Bu perspektifin kritik önemini anlamak, günümüzün halkla ilişkiler profesyonelleri için vazgeçilmezdir. Veriye dayalı halkla ilişkiler, işletmelerin daha etkili iletişim sağlaması ve hedef kitleleri daha iyi anlaması için güçlü bir araç olarak öne çıkmaktadır. Bu yaklaşım, günümüzün veri odaklı iş dünyasında önemli bir rol oynamakta ve başarılı iletişim stratejilerinin temelini oluşturmaktadır. Veriye dayalı halkla ilişkiler, halkla ilişkiler kampanyalarını ve faaliyetlerini optimize etmek amacıyla veri ve analitik yöntemlerin kullanılmasını ifade etmektedir. Bu stratejik yaklaşım, halkla ilişkiler stratejilerinin ölçümlerini ve etkinliğini izlemeyi içermektedir. Büyük veri analitiği ve ölçüm yöntemleri hedef kitlelerin, müşteri davranışlarının ve pazar eğilimlerinin anlaşılmasında önemli bir rol oynamaktadır. Bu verilere dayalı bilgiler, karar alıcıları yönlendirerek daha etkili iletişim stratejileri oluşturmayı ve daha iyi sonuçlar elde etmeyi mümkün kılmaktadır. Bu çalışmada veri odaklı halkla ilişkilerin temel halkla ilişkiler prensipleri açıklanarak bu yaklaşımın halkla ilişkiler alanındaki konumlandırılması tartışılmıştır. Büyük veri analitiği ve ölçüm yöntemlerinin bu yaklaşımdaki rolüne odaklanılarak, bu tekniklerin nasıl daha etkili iletişim stratejileri oluşturmak için kullanılabileceğini incelenmiştir. Ayrıca bu çalışmada veri odaklı halkla ilişkilerin günümüzün hızla değişen iletişim ortamında nasıl işlev gördüğünü ve bu yaklaşımın halkla ilişkilerin gelecekteki rolünün ne olabileceği ele alınmıştır. Bu yeni perspektif, iletişim stratejilerinin daha veri odaklı ve etkili bir şekilde yönetilmesine imkan sağlayarak başarıyı yakalamak isteyen halkla ilişkiler uzmanları için kritik bir öneme sahiptir. Günümüz halkla ilişkiler alanında büyük veri analitiği ve ölçüm yöntemlerinin rolü giderek artmaktadır. Veriye dayalı halkla ilişkiler stratejilerinin uygulanması kuruluşların veri ve araştırmaya dayalı bilinçli kararlar almasını sağlamaktadır. Bu şekilde kuruluşlar elde ettikleri verilerden çıkan farkındalıkla yeni iş fırsatları belirleyebilir, müşterilere daha iyi hizmet sunabilir, satışları artırabilir ve genel performanslarını daha üst seviyelere taşıyabilirler.

Anahtar Kelimeler: Veri, Büyük Veri Analitiği, Halkla İlişkiler

**DATA-DRIVEN PUBLIC RELATIONS:
THE ROLE OF BIG DATA ANALYTICS AND MEASUREMENT GUIDELINES**

Abstract

In today's rapidly digitising world, communication strategies are becoming increasingly complex and go beyond traditional methods. In this environment, the fundamental dynamics of public relations are also evolving, and data-driven public relations is at the forefront of this transformation. This approach, which differs from traditional public relations strategies, offers a new perspective on the design of communication campaigns by centralising the use of data and analytics. Understanding the critical importance of this perspective is essential for today's PR professionals. Data-driven public relations is a powerful tool for companies to communicate more effectively and better understand their target audiences. This approach plays an important role in today's data-driven business world and forms the basis of successful communication strategies. Data-driven public relations refers to the use of data and analytical methods to optimise public relations campaigns and activities. This strategic approach involves monitoring the metrics and effectiveness of public relations strategies. Big data analytics and measurement methods play an important role in understanding target audiences, customer behaviour and market trends. This data-driven information enables decision-makers to create more effective communication strategies and achieve better results. This study outlines the basic principles of data-driven public relations and discusses the positioning of this approach in the field of public relations. It focuses on the role of big data analytics and measurement methods in this approach, and examines how these techniques can be used to create more effective communication strategies. It also explores how data-driven public relations works in today's rapidly changing communications environment and what the future role of public relations might be. This new perspective is critical for PR professionals who want to succeed by enabling more data-driven and effective management of communication strategies. The role of big data analytics and measurement methods is growing in today's public relations field. Implementing data-driven PR strategies enables organisations to make informed decisions based on data and research. As a result, organisations can take the awareness generated by data to new levels, identify business opportunities, better serve customers, increase sales and improve overall performance.

Keywords: Data, big data analytics, public relations

Giriş

Modern halkla ilişkilerde veriler, halkla ilişkiler stratejilerini ve karar alma süreçlerini bilgilendirmede çok önemli bir rol oynamaktadır [1]. Büyük miktarda veriyi toplama ve analiz etme yeteneği, halkla ilişkiler profesyonellerinin hedef kitleleri hakkında bilgi edinmeleri, medyadaki gelişmeleri izlemeleri ve kampanyalarının başarısını takip etmeleri için yeni fırsatlar yaratmıştır. Halkla İlişkiler uzmanları, verilerden yararlanarak varsayımlar veya tahminler yerine gerçek dünyadaki öngörülere dayanan daha hedefe yönelik ve etkili stratejiler geliştirmektedirler. Bu, daha iyi kampanya sonuçlarına ve daha iyi genel sonuçlara yol açmaktadır.

Halkla ilişkilerde veri kullanmanın en önemli faydalarından biri kampanya başarısını ölçebilme yeteneğidir [2]. Halkla ilişkiler uzmanları, web sitesi trafiği, sosyal medya etkileşimi ve medyada yer alma oranları gibi ölçümleri izleyerek kampanyalarının nasıl performans gösterdiğine dair daha derin bir anlayış kazanabilirler. Bu, kaynakların nasıl tahsis edileceği ve stratejilerini maksimum etki için nasıl ayarlayacakları konusunda veriye dayalı kararlar almalarına imkan tanımaktadır. Ayrıca veriler, halkla ilişkiler uzmanlarının iyileştirilecek alanları tespit etmelerine ve zaman içinde taktiklerini geliştirmelerine yardımcı olarak gelecekte daha da iyi sonuçlara ulaşmalarına yardımcı olabilir.

Bununla yanında veriler, halkla ilişkiler çabalarını sürekli olarak iyileştirmek ve standartların ilerisinde kalmak için kullanılabilir[3]. Halkla ilişkiler uzmanları, sektör trendlerini izleyerek, rakiplerin faaliyetlerini takip ederek ve izleyici davranışlarını analiz ederek yeni fırsatları belirleyebilir ve stratejilerini buna göre uyarlayabilir. Bu onların rekabette önde olmalarına ve zaman içinde hedef kitleleriyle daha güçlü ilişkiler kurmalarına yardımcı olabilir. Bununla birlikte veriler, halkla ilişkiler profesyonellerinin potansiyel sorunları büyük sorunlara dönüşmeden önce tespit etmelerine yardımcı olabilir ve bu sorunları çözmek ve olumlu bir itibarı korumak için proaktif adımlar atmalarına imkan tanır[4]. Genel olarak, günümüzün hızlı tempolu, veri odaklı dünyasında halkla ilişkilerde veri kullanımı giderek daha önemli hale gelmekte ve bu eğilimi benimseyen halkla ilişkiler profesyonellerinin, daha iyi sonuçlar ve daha iyi genel sonuçlar açısından önemli faydalar görmektedir[5].

1. Veri Odaklı Halkla İlişkiler

Veriye dayalı halkla ilişkiler, halkla ilişkiler kampanyalarını ve faaliyetlerini bilgilendirmek ve şekillendirmek için veri ve analitiği kullanmayı içeren stratejik bir yaklaşımdır. Bu yaklaşım, veriye dayalı halkla ilişkilerin özü olan halkla ilişkiler stratejilerinin metriklerinin ve etkinliğinin izlenmesini içerir [6]. Veriye dayalı halkla ilişkiler, karar vermeyi yönlendirmek ve daha iyi sonuçlar elde etmek için verileri kullanmakla ilgilidir. Hedef kitleler, müşteri davranışları ve pazar eğilimleri hakkında fikir edinmek için büyük veri analitiği ve ölçüm yöntemlerinin kullanılmasını içerir [7]. Özünde, veriye dayalı halkla ilişkiler, halkla ilişkiler kampanyalarını ve faaliyetlerini bilgilendirmek ve optimize etmek için verileri kullanmak, daha etkili iletişim ve daha iyi iş sonuçları elde etmekle ilgilidir.

Büyük veri analitiği ve ölçüm yöntemleri, veriye dayalı halkla ilişkilerde kritik bir rol oynar. Büyük veri analitiği, gizli kalıpları, korelasyonları ve pazar eğilimlerini ortaya çıkarmak için büyük veri kümelerini incelemeyi içerir [8]. Bu yaklaşım, halkla ilişkiler profesyonellerinin hedef kitleleri hakkında bilgi edinmelerine, daha etkili mesajlaşma stratejileri geliştirmelerine ve kampanyalarının etkisini ölçmelerine imkan tanır [9]. Medya izleme, duyarlılık analizi ve sosyal medya analitiği gibi ölçüm yöntemleri, halkla ilişkiler uzmanlarına kampanyalarının başarısını izlemek ve veri odaklı kararlar almak için ihtiyaç duydukları verileri sağlar [10][11]. Halkla ilişkiler uzmanları, büyük veri analitiği ve ölçüm yöntemlerinden yararlanarak hedef kitlelerini daha iyi anlayabilir ve daha etkili iletişim stratejileri geliştirebilir.

Dijital medya ve sosyal ağların yükselişiyle birlikte, halkla ilişkiler profesyonellerinin kampanyalarını bilgilendirmek ve optimize etmek için kullanılacak zengin veri kaynakları vardır [12]. Veriye dayalı halkla ilişkileri benimseyen halkla ilişkiler uzmanları, daha etkili iletişim stratejileri geliştirerek, müşteri katılımını iyileştirerek ve daha iyi iş sonuçları elde ederek rekabet avantajı elde edebilirler [13]. Bu nedenle, veriye dayalı halkla ilişkiler, hedef kitleleriyle etkili bir şekilde iletişim kurmak ve iş hedeflerine ulaşmak isteyen herhangi bir kuruluş için temel bir araçtır [11].

1.1. Veriye Dayalı Halkla İlişkilerin Sağladığı Yararlar

Halkla ilişkilerde büyük veri analitiğinin kullanılması, hedef kitlelerin iyileştirilmiş hedeflemesi ve segmentasyonu da dahil olmak üzere birçok avantaja sahiptir. Halkla ilişkiler uzmanları, veriye dayalı yöntemler kullanarak hedef kitlelerini daha iyi anlayabilir ve mesajlarını belirli gruplara uyarlayabilir [6]. Bu, daha etkili iletişime ve hedef kitleyle daha fazla etkileşime yol açabilir. Ek olarak, büyük veri analitiği, daha önce gözden kaçmış

olabilecek yeni hedef kitlelerin belirlenmesine yardımcı olabilir, bu da genişletilmiş erişime ve artan etkiye yol açar [14]. Bu nedenle, veriye dayalı yöntemleri halkla ilişkiler stratejilerine dahil etmek, daha iyi hedefleme ve segmentasyona yol açabilir ve sonuç olarak daha başarılı kampanyalarla sonuçlanması mümkündür.

Veriye dayalı halkla ilişkilerin bir başka yararı da, izleyici davranışını ve tercihlerini daha iyi anlamayı sağlamasıdır. Halkla ilişkiler uzmanları, izleyici etkileşimleri ve halkla ilişkiler materyalleriyle etkileşim hakkındaki verileri analiz ederek, hangi tür mesajlaşma ve iletişim yöntemlerinin en etkili olduğuna dair fikir edinebilir [15]. Bu, halkla ilişkiler stratejileri ve taktikleri hakkında daha bilinçli kararlar alınmasına ve daha etkili kampanyalara yol açabilir. Ek olarak, büyük veri analitiği, izleyici davranışındaki eğilimleri ve kalıpları belirlemeye yardımcı olabilir ve gelecekteki halkla ilişkiler çabaları için değerli bilgiler sağlar [16]. Halkla ilişkiler uzmanları bu bilgileri kullanarak daha bilinçli kararlar alabilir ve daha iyi sonuçlar elde edebilir.

Son olarak, veriye dayalı halkla ilişkiler gelişmiş karar vermeye yol açabilir. Halkla ilişkiler uzmanları, büyük veri analitiğini kullanarak stratejik karar verme sürecini bilgilendirebilecek zengin bilgilere erişebilir [17]. Bu, kitle davranışı, pazar eğilimleri ve halkla ilişkiler kampanyalarının etkinliğine ilişkin öngörülerini içerir. Halkla ilişkiler uzmanları, bu verilerden yararlanarak mesajlaşma, taktikler ve genel strateji hakkında daha bilinçli kararlar alabilir ve sonuç olarak daha başarılı kampanyalara yol açabilir [6].

Genel olarak ifade etmek gerekirse, veriye dayalı yöntemlerin kullanımı, halkla ilişkiler stratejilerini sadeleştirilmiş temel yöntemlerden daha ileri düzeye taşıyarak, gelişmiş hedefleme ve segmentasyona, kitle davranışları ile tercihlerinin daha iyi anlaşılmasına ve kararların daha etkili bir şekilde ilerlemesine imkan sağlayabilir.

1.2. Halkla İlişkilerde Büyük Veri Analitiği

Halkla ilişkiler alanında büyük veri analitiği giderek daha önemli hale gelmektedir. Bu, öngörü elde etmek ve eyleme geçirilebilir öneriler sağlamak için kullanılacak kalıpları ve eğilimleri belirlemek için büyük veri setlerinin toplanmasını ve analiz edilmesini içerir [8]. Büyük verinin yükselişiyle birlikte, veriye dayalı karar verme daha yaygın hale geldi ve halkla ilişkiler uzmanları, stratejilerini bilgilendirmek ve kampanyalarının başarısını ölçmek için verileri kullanmaktadır [14]. Büyük verinin stratejik iletişimde uygulanması için, büyük verinin kullanılacağı iletişim sürecinin aşamalarını özetleyen bir çerçeve geliştirilmiştir [15].

Verilerin toplanması ve analizi, halkla ilişkilerde modern ölçüm tekniklerinin temel bir bileşeni haline gelmiştir. Halkla ilişkiler uzmanları, bir kampanyanın başarısı hakkında veri toplayarak iddialarını destekleyebilir ve gelecekteki stratejiler hakkında veriye dayalı kararlar alabilir [9]. Büyük veri ve analitik arasındaki farklar, analiz edilen veri setlerinin hacmi, hızı ve çeşitliliğinde yatmaktadır. Büyük veri, çok büyük veri kümelerini ifade ederken, analitik bu veri kümelerini faydalı bilgilere dönüştürmeyi içermektedir [18]. Halkla ilişkiler uzmanları, büyük veri analitiğini kullanarak kampanyalarının etkinliği hakkında değerli bilgiler edinebilir ve stratejilerini geliştirmek için veriye dayalı kararlar alabilirler [8].

Büyük veri kümelerinden bilgi ve faydalı öngörüler çıkarmak, büyük veri analitiğinin önemli bir yönüdür ve bu, halkla ilişkiler de dahil olmak üzere çeşitli uygulama alanlarında akıllı karar verme için kullanılabilir [19]. Veriye dayalı karar verme, kararları yalnızca sezgiye değil, verilerin analizine dayandırmayı içerir [14]. Halkla ilişkilerde veri bilimi ve büyük veri analitiğinin kullanılması, karar vermeyi kolaylaştırabilen ve halkla ilişkiler kampanyalarının etkinliğini artırabilen büyük veri kümelerinden eyleme geçirilebilir öngörülerin ve bilgilerin çıkarılmasına imkan tanır [20]. Halkla ilişkiler analitiği, halkla ilişkiler çabalarını ölçmek, analiz etmek ve optimize etmek için verileri kullanma sürecidir ve halkla ilişkiler uzmanlarının stratejilerini düzenlemelerini ve genel başarılarının artmasını sağlar [21].

2. Veriye Dayalı Halkla İlişkilerde Ölçümlene Yöntemleri

Ölçülebilir hedefler ve temel performans göstergeleri KPI'lar (Key Performance Indicator) belirlemek, veri odaklı halkla ilişkiler için ölçüm yöntemlerinin uygulanmasında önemli bir ilk adımdır [22]. KPI'lar, önceden belirlenmiş hedeflere veya hedeflere karşı bir halkla ilişkiler kampanyasının başarısını ölçen ölçülebilir metriklerdir [23]. KPI merkezli bir yaklaşım, veri analitiği stratejisi etrafında yönetim uygulamalarının geliştirilmesini sağlamalıdır, çünkü bu, veri toplama ve analizinin iş hedeflerine ulaşmaya odaklanmasını sağlamaya yardımcı olacaktır [24]. Halkla ilişkiler uzmanları, net hedefler ve KPI'lar belirleyerek kampanyalarının etkinliğini ölçebilir ve stratejilerini optimize etmek için veriye dayalı kararlar alabilir [25].

Kampanya performansının değerlendirilmesi, veriye dayalı halkla ilişkiler ölçüm yöntemlerinin bir diğer kritik yönüdür. Veri analitiği araçları, halkla ilişkiler uzmanlarının kampanyalarının başarısını değerlendirmek için web sitesi trafiği, sosyal medya etkileşimi ve medyadan bahsetmeler gibi kampanya metriklerini izlemesine ve analiz etmesine yardımcı olabilir [9]. Halkla ilişkiler uzmanları, bu ölçümleri analiz ederek, kampanyalarını optimize etmelerine ve

gelecekte daha etkili stratejiler oluşturmalarına yardımcı olan eğilimleri ve kalıpları belirleyebilir [21].

Yatırım getirisini ROI (Return on Investment) ve etkiyi ölçmek de veriye dayalı halkla ilişkiler ölçüm yöntemlerinin önemli bir bileşenidir. Halkla ilişkiler uzmanları, kampanya maliyetleri ve sonuçları hakkındaki verileri analiz ederek kampanyalarının yatırım getirisini belirleyebilir ve çabalarının iş hedefleri üzerindeki etkisini gösterebilir [16]. Tahmine dayalı modelleme gibi gelişmiş analitik araçları, halkla ilişkiler uzmanlarının kampanyalarının potansiyel etkisini tahmin etmelerine ve stratejilerini optimize etmek için veriye dayalı kararlar almalarına yardımcı olabilir [26]. Halkla ilişkiler uzmanları, bu ölçüm yöntemlerini kullanarak çalışmalarının değerini gösterebilir ve kuruluşlarının başarısı üzerinde önemli bir etki yaratabilir [27].

2.1. Veri Odaklı Halkla İlişkilerde Sosyal Medyanın Rolü

Sosyal medya, hedef kitlenin davranışları ve tercihleri hakkında değerli bilgiler sağladığı için veriye dayalı halkla ilişkilerde çok önemli bir rol oynar. Sosyal dinleme ve izleme, halkla ilişkiler uzmanlarının markaları, endüstrileri veya rakipleriyle ilgili çevrimiçi konuşmaları takip etmelerini ve analiz etmelerini sağlar. Halkla ilişkiler uzmanları, sosyal medya kanallarını izleyerek, ortaya çıkan trendleri, tüketici duyarlılığını ve derhal ele alınması gereken potansiyel sorunları belirleyebilir. Bu bilgi, hedef kitleye ulaşmada ilgili ve etkili olmalarını sağlayarak halkla ilişkiler stratejilerini ve taktiklerini bilgilendirmek için kullanılabilir [10].

Sosyal medya ölçümlerinin analizi, veriye dayalı halkla ilişkilerin bir başka kritik yönüdür. Erişim, katılım ve duyarlılık gibi sosyal medya ölçümleri, halkla ilişkiler kampanyalarının etkinliğine ilişkin değerli bilgiler sağlayabilir [28]. Halkla ilişkiler uzmanları, bu ölçümleri analiz ederek çabalarının etkisini belirleyebilir ve kampanyalarını optimize etmek için veriye dayalı kararlar alabilir. Örneğin, bir halkla ilişkiler kampanyası istenen katılımı sağlamıyorsa, halkla ilişkiler uzmanları temel nedeni belirlemek ve stratejilerini buna göre ayarlamak için sosyal medya ölçümlerini kullanabilir [10].

Son olarak, sosyal medya stratejilerinin geliştirilmesi, veri odaklı halkla ilişkilerin temel bir bileşenidir. Sosyal medya analitiği, halkla ilişkiler uzmanlarının en iyi hedef kitleleri belirlemesine, izleyici davranışını anlamasına ve hedeflerine ulaşmak için veriye dayalı stratejiler geliştirmesine yardımcı olabilir [29]. Halkla ilişkiler uzmanları, büyük veri analitiği tekniklerinden yararlanarak sosyal ağların 5 V'sini, yani hız, hacim, değer, çeşitlilik ve doğruluk hakkında daha iyi bir anlayış kazanabilirler [30]. Bu bilgi, hedef kitlede yankı uyandıran,

katılımı artıran ve iş sonuçlarını yönlendiren hedeflenen sosyal medya stratejileri geliştirmek için kullanılabilir [15].

2.3. Geleneksel ve Dijital Halkla İlişkilerin Entegrasyonu

Günümüzün dijital çağında, geleneksel halkla ilişkiler ile dijital halkla ilişkiler stratejilerini entegre etmek, başarılı bir halkla ilişkiler kampanyası için çok önemlidir. Bu entegrasyon, hedef kitlelerle daha geniş erişim ve daha etkili iletişim sağlar. Bununla birlikte, bu tür kampanyaların başarısını sağlamak için, veriye dayalı halkla ilişkiler yöntemlerini kullanarak etkinliklerini izlemek ve ölçmek esastır [6]. Veriye dayalı halkla ilişkiler, halkla ilişkiler çabalarında kararlara ve stratejilere rehberlik etmek için verilerin kullanılmasını ifade eder [7]. Halkla ilişkiler uzmanları, geleneksel ve dijital halkla ilişkiler stratejilerini birleştirerek ve kararları yönlendirmek için verileri kullanarak, hedef kitlelerine ulaşan ve istenen sonuçları elde eden daha etkili ve verimli kampanyalar oluşturabilir.

Entegre halkla ilişkiler kampanyalarının etkinliğini ölçmek çok önemlidir. Modern ölçüm teknikleriyle, halkla ilişkiler kampanyaları artık başarılarıyla ilgili iddiaları destekleyecek verilere sahiptir. Bu veriler, gelecekteki kampanyaları bilgilendirmek ve gerektiğinde stratejileri ayarlamak için kullanılabilir. Verilerden elde edilen analitik, stratejik planlamanın, ölçmenin ve fikirleri uygulamaya koymanın önemli bir yönüdür. Veriye dayalı bir halkla ilişkiler stratejisi oluşturmak, entegrasyon, uyum, kusursuz yürütme ve sağlam bir ölçüm yaklaşımı gerektirir. Sosyal medya izleme, halkla ilişkiler uzmanları için büyük veri analizinin önemli bir yönüdür. Halkla ilişkiler uzmanları, sosyal medyadan gelen verileri analiz ederek hedef kitlelerini daha iyi anlayabilir ve kampanyalarını onların ihtiyaçlarına göre şekillendirebilir.

Veriye dayalı yöntemleri kullanan başarılı entegre halkla ilişkiler kampanyaları arasında Always'in "kız gibi" ifadesiyle ilişkili olumsuz çağrışımları değiştirmeyi amaçlayan #LikeAGirl kampanyası örnek olarak verilebilir [9]. Başka bir örnek, güzellik standartlarına meydan okumaya ve vücut pozitifliğini teşvik etmeye çalışan Dove Real Beauty kampanyasıdır [27]. Her iki kampanya da geleneksel ve dijital halkla ilişkiler stratejilerinin bir kombinasyonunu kullanmış ve bunların etkinliğini veriye dayalı halkla ilişkiler yöntemleriyle ölçmüştür. Bunu yaparak hedeflerine ulaşabildiler ve hedef kitleleri üzerinde kalıcı olumlu etkiler yaratabilmişlerdir.

2.4. Veriye Dayalı Halkla İlişkilerde Zorluklar

Veriye dayalı halkla ilişkiler, modern halkla ilişkilerin önemli bir yönü haline gelmiştir, ancak aynı zamanda çeşitli zorluklara da yol açmaktadır. En önemli zorluklardan biri veri gizliliği ve güvenlik endişeleridir. Halkla ilişkilerde veri toplama ve analizi daha yaygın hale geldikçe, şirketler tüketicilerin bilgilerini korumak için etik ve yasal yönergeleri takip ettiklerinden emin olmalıdırlar [31]. Ek olarak, veri analitiğinin karmaşıklığı önemli bir zorluk olabilir. Büyük veri analitiği, karmaşık ve zaman alıcı bir süreç olabilen kalıpları ve eğilimleri ortaya çıkarmak için çok miktarda veriyi incelemeyi içerir [8]. Bu, bir halkla ilişkiler ekibinde kolayca bulunamayan özel bilgi ve uzmanlık gerektirir.

Veriye dayalı halkla ilişkiler yöntemlerini benimsemedeki bir başka zorluk da değişime karşı dirençtir. Pek çok profesyonel, özellikle geçmişte veri analitiğine güvenmeden başarılı olmuşlarsa, yeni yöntemleri benimsemeye karşı dirençli olabilir [14]. Ancak, veriye dayalı karar vermenin faydaları göz ardı edilemez. Veriye dayalı halkla ilişkileri benimsemeyen şirketler, daha bilinçli kararlar almak için verileri kullanan rakiplerinin gerisinde kalma riskiyle karşı karşıyadır [32]. Ayrıca, yeni yöntemlerin benimsenmesi, bazı kuruluşlar için önemli bir engel olabilen kaynaklara ve eğitime yatırım yapılmasını gerektirir [33].

Zorluklara rağmen veriye dayalı halkla ilişkiler, şirketlerin iletişim stratejilerini geliştirmeleri için önemli fırsatlar sunmaktadır. Şirketler, veri analitiğinden yararlanarak, tüketici davranışları ve tercihleri hakkında öngörüler elde edebilir, bu da onların mesajlarını ve taktiklerini hedef kitlelerinde daha iyi yankı uyandıracak şekilde uyarlayabilirler[15]. Ek olarak, veriye dayalı halkla ilişkiler, şirketlerin kampanyalarının etkinliğini ölçmelerine ve etkilerini optimize etmek için gerçek zamanlı ayarlamalar yapmalarına fırsat tanır [10]. Sonuç olarak, veriye dayalı halkla ilişkilerin faydaları, zorluklardan daha ağır basar ve bu yaklaşımı benimseyen şirketlerin iletişim stratejilerinde ve genel başarılarında önemli gelişmeler görmeleri muhtemeldir.

2.5. Veri Odaklı Halkla İlişkilerin Geleceği

Halkla ilişkilerin geleceği, büyük ölçüde teknoloji ve analitikteki gelişmelere bağlıdır. Gizli kalıpları ve pazar eğilimlerini ortaya çıkarmak için büyük miktarda verinin incelenmesini içeren büyük veri analitiği, halkla ilişkiler endüstrisinde giderek daha önemli hale gelmiştir [8]. Kararları sezgi yerine veri analizine dayandırmayı içeren veriye dayalı karar verme, endüstride de popüler bir uygulama haline gelmiştir [14]. Teknoloji gelişmeye devam ettikçe, veri analizi için mevcut araçlar ve yöntemler de gelişecektir. Bu, halkla ilişkiler profesyonellerinin hedef

kitleleri hakkında daha derin öngörüler elde etmelerini, daha etkili kampanyalar oluşturmalarını ve başarıyı daha doğru bir şekilde ölçmelerini sağlayacaktır [15].

Halkla ilişkilerde verilerin önemi son yıllarda önemli ölçüde artmıştır. Modern ölçüm teknikleriyle, halkla ilişkiler kampanyaları artık ne kadar başarılı olduklarına dair iddiaları destekleyecek verilere sahiptir. Otonom veya yarı otonom veri analizi tekniklerinin kullanılmasını içeren gelişmiş analitik, halkla ilişkilerde stratejik planlama ve ölçümün kritik bir yönü haline gelmiştir [34]. Halkla ilişkiler kampanyalarından toplanan veriler, halkla ilişkiler çabaları için değerini kanıtladığı ve halkla ilişkiler uzmanlarının veriye dayalı kararlar vermesini sağladığı için herhangi bir halkla ilişkiler planı için hayati önem taşır [9]. Sonuç olarak, verileri etkili bir şekilde toplama, analiz etme ve kullanma yeteneği, halkla ilişkiler kampanyalarının başarısında kilit bir faktör olmaya devam edecektir [6].

Halkla ilişkiler uygulamalarının daha veri odaklı bir yaklaşıma doğru evrimi, yeni stratejilerin ve tekniklerin geliştirilmesine yol açmıştır. Veriye dayalı halkla ilişkiler, veri analizi tarafından yönlendirilen stratejiler ve çabaları ifade etmektedir. Artık halkla ilişkiler öğrencileri ve profesyonellerinin veriye dayalı halkla ilişkiler hakkında bilgi edinmeleri için kitaplar ve çevrimiçi topluluklar dahil olmak üzere çok sayıda kaynak mevcuttur [10][15][5]. Endüstri gelişmeye devam ettikçe, veriye dayalı halkla ilişkilerin halkla ilişkiler kampanyalarının başarısı için daha da kritik hale geleceği açıktır. Halkla ilişkiler uzmanları, hedef kitleler hakkında fikir edinmek, daha etkili kampanyalar oluşturmak ve başarıyı daha doğru bir şekilde ölçmek için verileri kullanarak eğrinin bir adım önünde kalabilir ve daha iyi sonuçlar elde edebilir.

2.6. Veri Odaklı Halkla İlişkiler Örnek Çalışmaları

Veriye dayalı halkla ilişkiler, günümüzün dijital çağında giderek daha önemli hale gelmiştir. Veriye dayalı halkla ilişkiler kampanyalarının çok sayıda başarılı örneği vardır. unlara Airbnb tarafından sağlanan ve kilit etkileyicileri belirlemek ve marka bilinirliğini artırmak için hedeflenen içerik oluşturmak için verileri kullanan bir tanesi de dahildir [9]. Başka bir örnek, Always'in hedef kitlede yankı uyandıran bir mesaj oluşturmak için verileri kullanan ve satışlarda önemli bir artış sağlayan "Like a Girl" kampanyasıdır [10]. Bu kampanyalar, veri odaklı halkla ilişkilerin belirli amaç ve hedeflere ulaşmadaki gücünü göstermektedir.

Stratejilerin ve sonuçların analizi, veriye dayalı halkla ilişkilerin önemli bir bileşenidir. Halkla ilişkiler uzmanları, verileri analiz ederek hedef kitlelerine ulaşmada ve hedeflerine ulaşmada hangi stratejilerin en etkili olduğunu belirleyebilir. Örneğin, veri analizi, sosyal medya veya

geleneksel medya kuruluşları gibi belirli bir kitleye ulaşmak için en etkili kanalların belirlenmesine yardımcı olabilir [10]. Ek olarak, bir halkla ilişkiler kampanyasının başarısını ölçmek için gösterim sayısı, katılım oranları ve dönüşümler gibi veriler kullanılabilir [11]. Bu analiz, halkla ilişkiler uzmanlarının stratejilerini iyileştirmelerini sağlar.

Alınan dersler ve en iyi uygulamalar, gelecekteki veriye dayalı halkla ilişkiler kampanyalarının başarısı için çok önemlidir. En iyi uygulamalardan biri, belirli hedefler belirlemek ve bunlara ulaşmak için veriye dayalı stratejiler geliştirmektir. Kilit paydaşları dahil etmek ve öngörülerini ve fırsatları ortaya çıkarmak için ilgili verileri toplamak da önemlidir. Ek olarak, büyük veri analitiğinin stratejik iletişimdeki rolünü anlamak önemlidir [15]. Halkla ilişkiler uzmanları, önceki kampanyalardan öğrenerek ve en iyi uygulamaları uygulayarak, veriye dayalı halkla ilişkiler çabalarını geliştirmeye ve daha büyük başarılar elde etmeye devam edebilir.

Sonuç

Sonuç olarak, halkla ilişkilerde büyük veri analitiği ve ölçüm yöntemlerinin rolü günümüzün halkla ilişkiler ortamında giderek daha önemli hale gelmiştir. Veriye dayalı halkla ilişkiler stratejilerinin kullanılması, kuruluşların verilere ve araştırmaya dayalı bilinçli kararlar almasını sağlamaktadır. Kuruluşlar, verilerden elde edilen öngörülerden yararlanarak yeni iş fırsatlarını belirleyebilmekte, müşterilere daha iyi hizmet verebilmekte, satışları artırabilmekte ve genel performansı iyileştirebilmektedir.

Veriye dayalı halkla ilişkilerin önemi, kuruluşların işlerini ölçmelerine ve işleri hakkında daha fazla bilgi sahibi olmalarına yardımcı olduğu gerçeğinde de açıktır [18]. Veri ve analitik, halkla ilişkiler stratejilerini yönlendirmede, yaklaşımı seçmede, performansı artırmada ve harekete geçirici mesajı gerçekleştirmede önemli bir rol oynamaktadır. Ayrıca, bir halkla ilişkiler kampanyasından toplanan veriler, halkla ilişkiler çabalarının değerinin kanıtını gösterdiğinden, herhangi bir halkla ilişkiler planı için hayati önem taşımaktadır [9].

Bu bulguların ışığında, halkla ilişkiler profesyonellerinin veriye dayalı yöntemleri benimsemesi ve bunları günlük uygulamalarına dahil etmesi çok önemlidir. Halkla ilişkiler ortamı gelişmeye devam ederken, başarıyı artırmak için bir adım önünde olmak ve büyük veri analitiğinin ve ölçüm yöntemlerinin gücünden yararlanmak zorundadır. Halkla ilişkiler uzmanları bunu yaparak çabalarının değerini dikkat çekmesi ve kuruluşları üzerinde önemli bir etki oluşturması mümkün hale gelecektir [12][27][6][35].

Özet

Müslümanlar ve Bizans İmparatorluğu arasındaki ilişkiler, İslam'ın erken dönemlerinden itibaren izlenebilir. Hz. Peygamber, 628 yılında Bizans İmparatoru Herakleios'a bir davet mektubu göndermek amacıyla Dihye b. Halife'yi elçi olarak göndermiştir. Bu erken dönem temasları, zaman içinde hem savaşlar hem de diplomatik ilişkiler aracılığıyla devam etmiştir. Bu bağlamda, Bizans İmparatorluğu ile ilişki kuran devletlerden biri, Büveyhîler olarak bilinen Şîî karakterli devlettir. 10-11. yüzyıllarda (334/945-447/1055) İran ve Irak topraklarında hüküm süren Büveyhîler, Sünni Müslümanlar üzerinde egemenlik kurmuşlardır. General Bardas'ın II. Basileios dönemindeki isyanı başarısızlıkla sonuçlanmış ve sonrasında sığınak olarak Büveyhîler'e yönelmiştir. Bu olayın ardından, II. Basileios, General Bardas'ı teslim almak amacıyla Büveyhî sarayına bir elçi göndermiş, ancak olumlu bir yanıt alamamıştır. Dönemin Büveyhî hükümdarı Adudüddeve, General Bardas ile ilgili yazılı bir yanıt verme amacıyla bir elçi gönderme kararı almış ve bu görev için tanınmış İslam âlimi Bâkılânî'yi seçmiştir. Bâkılânî, hem kelim hem de fıkıh usûlünde otorite kabul edilen bir âlim olarak bilinir. Parlak zekâsı ve münazaralardaki ustalığı, dönemin hükümdarı Adudüddeve'nin dikkatini çekmiş ve Bâkılânî, yargı teşkilatının en üst düzey yöneticisi olan "Kādılkudât" makamına atanmıştır. Ayrıca Adudüddeve, Bâkılânî'yi oğlu Simnânuddeve'yi yetiştirmekle görevlendirmiş ve Bâkılânî, meşhur kelim eseri "et-Temhîd"i ona ithaf etmiştir. Bâkılânî'nin liderliğindeki Bizans İmparatorluk sarayına gönderilen elçilik heyeti, General Bardas meselesi gibi çeşitli önemli konuları içeren bir dosya taşımıştır. Bu görev, sadece diplomatik bir ziyaret olmaktan öte bir amacı ifade etmiş ve bu nedenle bir âlimin seçilmesine neden olmuştur. Bu çalışmada bir kelim ve fıkıh âlimi olan Bâkılânî'nin Bizans sarayında kurduğu diyaloglar ve Hristiyan din adamlarıyla yapmış olduğu münazara konu edinmiştir. Çalışmanın amacı, Bâkılânî'nin Bizans sarayında kurduğu diyaloglar ve Hristiyan din adamlarıyla yapmış olduğu münazaraları inceleyerek, ortaçağ döneminde İslam ve Hristiyanlık arasındaki fikri ve dini etkileşimleri değerlendirmektir.

Anahtar Kelimeler: Bâkılânî, Büveyhîler, Bizans Sarayı, İslam, Hristiyanlık.

**THE APOSTLE BĀQILLĀNĪ: A MEDIEVAL MUSLIM SCHOLAR'S DIALOGUES
AT THE BYZANTINE COURT AND DEBATES WITH CHRISTIAN CLERICS**

Abstract

Throughout Islamic history, relations between Muslims and the Byzantine Empire can be traced from the early periods of Islam. In 628, the Prophet sent Dihya b. Khalifa as an envoy to send a letter of invitation to the Byzantine Emperor Heraclius. These early contacts continued over time through both wars and diplomatic relations. In this context, one of the states that established relations with the Byzantine Empire was the Shiite state known as the Būveyhids. The Būveyhids, who ruled in Iran and Iraq in the 10th-11th centuries (334/945-447/1055), established sovereignty over Sunni Muslims. The rebellion of General Bardas during the reign of Basileios II ended in failure, after which he turned to the Buchavids for refuge. Following this event, Basileios II sent an envoy to the Būveyhî court to receive General Bardas, but did not receive a favourable response. Adud al-Dawla, the Bughawid ruler of the period, decided to send an envoy to give a written reply about General Bardas and chose al-Bāqillānī for this task. Al-Bāqillānī is known as a scholar who is considered an authority in both theology and the *usul al-fiqh*. His brilliant intellect and mastery in debates attracted the attention of the ruler of the time, Adud al-Dawla, and he was appointed to the position of "Kādilkudāt", the highest executive of the judicial organisation. Furthermore, Adud al-Dawla assigned al-Bāqillānī to educate his son Simnān al-Dawla, to whom al-Bāqillānī dedicated his famous theological work "al-Tamhīd". The embassy delegation to the Byzantine Imperial court, led by al-Bāqillānī, carried a dossier containing various important issues, such as the issue of General Bardas. This mission was more than just a diplomatic visit and therefore led to the selection of a scholar. This study focuses on the dialogues that al-Bāqillānī, a scholar of theology and *fiqh*, established in the Byzantine court and his debates with Christian clerics. The aim of the study is to evaluate the intellectual and religious interactions between Islam and Christianity in the medieval period by examining the dialogues that al-Bāqillānī established in the Byzantine court and his debates with Christian clergymen.

Keywords: al-Bāqillānī, al-Buwayhids, Byzantine court, Islam, Christianity.

Giriş

İslam'ın ortaya çıkışından itibaren, Müslümanlar ve Hristiyanlar arasında bir dizi münazara yaşandığı bilinmektedir. İlk Müslüman-Hristiyan münazarası, Hz. Peygamber ile kadim Yakubî mezhebi mensuplarından olan Necran Hristiyanları arasında gerçekleşmiştir. Daha sonraki dönemlerde bu tür münazaraların benzerleri, Emevî ve Abbâsî saraylarında da sıkça görülmüştür. Yahyâ ed-Dimeşkî'nin Emevî sarayında yaptığı Müslümanlarla münazaralar, bu etkileşimlerin ünlü örneklerinden biridir. Abbâsî Halifesi Mehdî ile Nesturî Patriği Timotheus ve Hârûnürreşîd ile Hristiyan bir tabip arasında yaşanan münazaralar ise İslam tarihindeki diyalogların önemli örneklerindedir. Halifelerin, bazen iki farklı din mensubunu huzuruna çağırarak münazara düzenlettikleri sıkça gözlemlenen bir uygulamadır (Karadaş Çağfer, 2009, s. 2).

Bizans ile diplomatik ilişkilerin kökleri Hz. Peygamber dönemine kadar gitmektedir. 628 yılında Herakleios'a gönderilen bir mektup, İslam'ı tanıtmak amacıyla atılan ilk adımlardan biridir. Ardından 629 Mûte ve 632'de Tebük savaşları, diplomatik ilişkilerin farklı bir yansıması olarak değerlendirilebilir. Dört halife dönemindeki fetih hareketleri de genellikle Bizans topraklarına yönelikti. Emeviler döneminde İstanbul'a seferler düzenlendi ve Abbasiler döneminde bu seferlere devam edildi. Savaşların acı yönlerinin yanı sıra, savaşan taraflar arasında bilimsel ve siyasi açıdan diplomatik ilişkilere yol açtığı da bilinen bir gerçektir. Müslümanlarla Bizans arasındaki savaşların, bilimsel ve siyasi birçok ilişkiye ve bazı diplomatik faaliyetlere yol açtığı, bu faaliyetlerin bazılarında münazaraların yapıldığı kaynaklarda belirtilmiştir. Bu münazaralar genellikle dini nitelik taşımaktadır. Bâkılânî'nin Bizans sarayında gerçekleştirdiği münazara da, genel olarak diğer münazara örnekleriyle benzer bir içeriğe sahiptir (Karadaş Çağfer, 2009, s. 3).

II. Basileios'un tahta çıkışında General Bardas isyan etmiş, ancak isyan başarısızlıkla sonuçlanmıştır. Bardas, başarısız isyanın ardından Diyarbakır'a sığınmış olabilir. Muhtemelen bu dönemde Diyarbakır, Şîî karakterli Büveyhî devletinin sınırları içinde yer alıyordu (İzzeddin İbnü'l-Esîr, 1987, s. 7/702-704). Bardas'ın takibinden sonra Büveyhî hükümdarı, Bardas'ı Diyarbakır'dan alarak Bağdat'ta hapsedirmiştir (Karadaş Çağfer, 2009, s. 12). İmparator, Bardas'ı teslim etmek amacıyla elçi gönderdiği halde sonuç alamamıştır.

Büveyhî hükümdarı Adudüdevle, Bizans ile ilişkilerini düzeltme amacıyla ve kendisine gönderilen mektuba cevap verme ihtiyacı hissetmiştir. Bu amaçla Bizans'a gönderilecek heyetin başkanlığını yapmak üzere Kâdî Ebu Bekr el-Bâkılânî'yi (ö. 403/1013) elçi olarak

görevlendirdi. Kaynaklarda ziyaretin 380/990 yılında gerçekleştiği belirtilse de, bu ziyaretin 371/372 yılları içinde gerçekleştiği daha makul görünmektedir. Çünkü Bâkılânî'nin elçi olarak görevlendirilmesi, Adudüdevle döneminde olmuştur. Adudüdevle ise 372/983 yılında vefat etmiştir (Karadaş Cağfer, 2009, s. 12).

Asıl adı Kâdî Ebû Bekr Muhammed b. Tayyib olan Bâkılânî'nin doğumu hakkında kesin bir bilgi bulunmamakla birlikte, genellikle 330/941-42 yıllarında doğduğuna inanılmaktadır. Ailesinin bakla ticaretiyle uğraşması sebebiyle ilk dönemlerde "İbnü'l-Bâkılânî" lakabıyla anılan Bâkılânî, daha sonra "Bâkılânî" olarak tanınmıştır (Gölcük Şerafaddin, 1991, s. 531).

Bâkılânî, İslam ilimlerinin teşekkül ettiği, felsefe ve tasavvufun gelişmeye tuttuğu 10 ve 11. Yüzyıl ortamında yetişen bir Eş'arî kelamcısı ve Mâlikî fakihidir. Pratik zekâsı, güçlü hafızası, derin vukufu, başarılı münazaraları, üstün hitabeti ve çok yönlü ilmi şahsiyetiyle tanınan Bâkılânî, döneminde öne çıkan bir âlim olarak bilinir (Gölcük Şerafaddin, 1991, s. 532). Nitekim Bâkılânî'nin uzun bir süre boyunca gece uyumadan 20 sayfa yazdığı rivayet edilmektedir (Ebü'l-Fidâ İbn Kesîr, 1990, s. 11/350). (Ebû Bekr Ahmed b. Alî b. Sâbit el-Bağdâdî, 2001, s. 3/366) belirttiği üzere yazdıkları başkalarından alıntı yapmadan, yalnızca kendi bilgi birikimiyle şekillenmiştir. Kelam ilminde öncü bir figür olmanın yanı sıra, fıkıh usulünde de Mü'tazile'nin öncü isimlerinden Kadı Abdulcebbar ile birlikte bu ilmi açıklama ve düzenleme konusunda önemli bir konumda bulunan mütekellim usulünün büyük alimlerinden biri olarak kabul edilir (Bedrüddîn, Zerkeşî, 1992, s. 1/6)

Devletlerarası ilişkilerde, elçilerin siyasi yetkinliği, deneyimi ve etkisi büyük bir öneme sahiptir. Bu faktörler, hem görev yaptıkları ülkeyi hem de bağlı oldukları devleti doğrudan etkilerdi. Bu nedenle, elçilik görevini üstlenen kişilerin siyasete hâkim, mevcut diplomatik konuları bilen bireyler arasından seçilmesine özen gösterilirdi (Gözübüyük Sevil, 2018, s. 98). Ancak, Bâkılânî'nin siyasete hâkim olmaması ve mevcut diplomatik konuları bilmemesine rağmen hükümdar Adudüdevle tarafından elçi olarak seçilmesi dikkat çekicidir. Bu durum, Bâkılânî'nin daha önce Adudüdevle'nin huzurunda güçlü bilim adamlarıyla yaptığı başarılı münazaralara dayanmaktadır.

Örneğin Bâkılânî'ye dair ilginç bir anekdot kaynaklarda şu şekilde anlatılır: Bir gün, Râfizîlerden önde gelen İbn Muallim ve arkadaşları, sohbet ettikleri sırada Bâkılânî'yi uzaktan gözlemlemişlerdir. İbn Muallim, Bâkılânî'yi görerek, "şeytan geliyor" demiştir. Bâkılânî, bu ifadeyi duyar duymaz yanlarına yaklaşmış ve onlara Kur'an'dan şu ayeti okumuştur: "Görmedin mi, biz şeytanları kâfirlerin üzerine musallat ettik..." (Meryem, 19/83). Bâkılânî'nin bu ayeti

okuma amacı, eğer kendisi "şeytan" olarak nitelendiriliyorsa, ona bu lakabı takanların "kâfir" olduğunu ifade etmektir (Bağdâdî, 2001, s. 3/364).

Günümüzde, kamu diplomasisinin etki gücünü artıran temel aktörlerden biri kültürel diplomasi olarak öne çıkmaktadır (*Türkiye'nin Yumuşak Güç Enstrümanı Olarak Kültürel Diplomasi ve İletişim*, 2022, s. 9). Kültürel diplomasiyi kullanan bir ülke, kendi kültür ve değerlerini kullanarak, uluslararası alanda kendisine yönelik hayranlık veya takdir oluşturmayı hedefler (*Türkiye'nin Yumuşak Güç Enstrümanı Olarak Kültürel Diplomasi ve İletişim*, 2022, s. 23). Bir tanıma göre kültürel diplomasi, "ulusların kendi kültürel öğelerini bir iletişim kanalı olarak kullanarak kendilerini tanıtmalarına odaklanmaktadır" (*Türkiye'nin Yumuşak Güç Enstrümanı Olarak Kültürel Diplomasi ve İletişim*, 2022, s. 13).

Bâkılânî'nin diplomatik temasları, kültürel diplomasi kavramı çerçevesinde değerlendirilebilir. (Kâdî İyâz, 1983, s. 7/57) ifadesine göre, Adudüdevle'nin Bâkılânî'yi elçi seçmesindeki temel amaç, İslam'ın izzet ve itibarını Hristiyanlar karşısında ispat etmektir.

Kültürel diplomasinin bir yararı da ilişkilerin sertleştiği durumlarda gerilimi azaltma potansiyeline sahip olmasıdır (*Türkiye'nin Yumuşak Güç Enstrümanı Olarak Kültürel Diplomasi ve İletişim*, 2022, s. 21). Örneğin, General Bardas olayında, İmparator Basilios elçi göndererek Büveyhî devletinden isyancı Generali talep ettiğinde, Adudüdevle bu durumu yumuşatmak için elçi gönderme yoluna gitmiştir. Bu noktada, bilgi ve münazara yeteneği bakımından öne çıkan Bâkılânî'nin heyetin başında gönderilmesi, ilişkileri yumuşatma amacına hizmet etmiştir. Ayrıca, bu diplomatik temaslar sırasında kültürel etkileşimlerin öne çıkması, taraflar arasında anlayış ve uyumun artmasına katkı sağlamış olabilir.

Bu çalışma, 4./10. yüzyılda Bizans'a elçi olarak gönderilen Eş'arî kelamcısı el-Bâkılânî'nin Bizans sarayında dönemin imparatoru ve patriği ile yaptığı görüşmelere odaklanmaktadır. Bu kapsamda Hz. Muhammed'in ayı ikiye böldüğü mucizesi, Hz. İsa'nın mahiyeti, Tanrı ile insanlığın tek bir bedende birleşmesi ve Hristiyan rahiplerin iffeti gibi konulara eldeki metinlerden yola çıkarak değinilecektir. Çalışmada, el-Bâkılânî'nin kendisinden bize ulaşan görüşme metinleri kültürel diplomasi çerçevesinde değerlendirmeye çalışılacaktır.

BÂKILLÂNÎ'NİN BİZANS SEYAHATI VE MÜNAZARALARI

Bâkılânî'nin Bizans'a elçi olarak gönderilmesi konusunu seyahat için yapılan hazırlıklar ve sarayda gerçekleştirdiği münazaralar şeklinde iki ana bölümde değerlendirilebilir.

1. Seyahat İçin Hazırlıklar

Büveyhî hükümdarı Adudüddavle Bizans imparatoruna bir mektupla Kadî Ebû Bekr el-Bâkılânî elçi olarak görevlendirdi. Onun bu görev için seçilmesinin nedeni (Kādî İyâz, 1983, s. 7/57) belirttiği üzere İslam'ın izzetini ve itibarını Hristiyanlar karşısında yükseltmek içindi Bâkılânî'nin kelamcı olması, pratik bir zekaya sahip olması ve münazaracı yönünün güçlü olması bu görev için nedenli isabetli bir karar olduğu ileriki açıklamalarda görülecektir.

Bâkılânî, seyahate çıkmadan önce Büveyhî veziriyle bir görüşme gerçekleştirdi. Bu görüşmede vezir, Bâkılânî'ye şans ve uğur getirmesi amacıyla bir burç aldığını ifade etti. Buna karşılık Bâkılânî, hayır ve şerrin, sevinç ve üzüntünün yıldızların hareketlerine değil, her şeyin yaratıcısı olan Allah'a bağlı olduğunu vurguladı. Ayrıca bu tür inanışların toplum içinde var olduğuna dikkat çekti (Kādî İyâz, 1983, s. 58).

Vezir, görüşmesinde ısrarlıydı, Bâkılânî'yi İbn Sûfî adında bir müneccimle münazara yapmaya ikna etmek için çaba sarf etti. Ancak İbn Sûfî, Bâkılânî'nin kelam ilmindeki bilgilerle verdiği cevaplar karşısında sadece "Ben kelamcı birisiyle münazara yapamam" dedi ve Bâkılânî ile ancak bir mantıkçıyla münazara yapabileceğini belirtti. Bunun üzerine İbn Sûfî, Ebû Süleyman adında bir mantıkçıyı çağırdı. Mantıkçıyla gerçekleştirdiği münazara sonucunda başarılı bir performans sergileyen Bâkılânî, vezir tarafından iyi dileklerle uğurlandı (Kādî İyâz, 1983, s. 7/59).

Bu münazaradan devlet geleneğinde elçilerin uğurlanmasının vezirlerin sorumluluğunda olduğu anlaşılmaktadır. Aynı zamanda, şans getirdiğine inanılan burçların hareketlerinin dikkatlice takip edildiği ifade edilebilir. Diğer bir önemli nokta ise herkesin kendi uzmanlık alanına göre hareket etmesidir. Tartışmanın devamında Bâkılânî, Ebû Süleyman adında bir mantıkçıyla münazara yaptıktan sonra Ebû Süleyman, iki ilmin birbirinden farklı olduğunu belirterek münazarada her ilim erbabının kendi alanındaki kişilerle yapmasını istemektedir (Kādî İyâz, 1983, s. 7/59).

2. Bâkılânî Bizans Sarayında

Kaynaklardan elde edilen bilgilere Bâkılânî, uzun bir yolculuktan sonra Bizans sarayına varmıştır. Heyetin geldiğini öğrenen imparator, karşılama için saraydan birisi görevlendirdi. Saray görevlisi ya gelen heyeti küçük düşürmek ya da protokol kurallarına riayet etmeleri için onların sarık ve ayakkabılarını çıkarmalarını istedi. Fakat görevli onların tülbentle imparatorun huzuruna çıkabileceğini ifade etti.

Bâkıllânî, bu uygulamayı reddetti ve görevliye kendi yerel kıyafetiyle huzura çıkarılmadığı takdirde mektubun imparatorun okunmasının yeterli olacağını belirterek geri döneceğini söyledi. Bu durum görevli tarafından imparatora bildirilir. İmparator bunun sebebini öğrenmek istediğini söyledi. Görevli Bâkıllânî'ye bunun sebebini sordu. Bâkıllânî, bunun sebebini şöyle açıkladı: "Ben, Müslümanların ilim adamlarından biriyim. Benden istediğiniz aşağılanma ve küçük düşürülmedir. Halbuki Yüce Allah bizi İslâm ile yüceltti ve Hz. Muhammed (sav) ile üstün kıldı. Ayrıca hükümdarlar, sanları gereği elçi gönderdiklerinde onların küçük düşürülmelerini değil, değerlerinin yüceltilmelerini beklerler. Üstelik heyet başkanı bir ilim adamı ise, bu daha çok beklenir." Bu durum kendisine iletildiğinde İmparator, "Bırakın o ve yanındakiler istedikleri gibi girsinler" emrini verdi (Kādî İyâz, 1983, s. 7/60-61).

Görüşme sırasında saray görevlisi tarafından sarık ve ayakkabının çıkarılma talebinin, heyetin küçük düşürülme amacını taşıdığı görülmektedir. Zira görevli, tülbentle imparatorun huzuruna çıkarılabileceklerini ifade etmektedir. Ayrıca, mektubun Büveyhî hükümdarı tarafından bizzat kaleme alındığı çıkarımı da yapılabilir. Çünkü Bâkıllânî, yerel kıyafetiyle imparatorun huzuruna kabul edilmemesi durumunda, "mektubu alın, okuyun, cevabını yazın, ve biz dönelim" demiştir. Mektubun başkaları tarafından yazılması durumu ise diplomatik krizlere yol açabilir. Bu bağlamda, günümüzdeki bir olayda (<https://www.aa.com.tr/tr/dunya/abde-bu-kez-baska-bir-diplomatik-protokol-sorunu/2210006>) Ukrayna Devlet Başkanı Zelenskiy tarafından AB Komisyonu Başkanı von der Leyen'e gönderilen resmi davet mektubuna von der Leyen'in değil, özel kalem müdürünün cevap yazdığı ortaya çıkmıştır.

Bâkıllânî, ısrarlı bir şekilde ilim adamı olduğunu vurgulayarak taviz vermeden ilim adamına yakışır bir şekilde davranmış ve özgüvenle hareket etmiştir. Onuruna verilen yemeğe ancak prensipleri doğrultusunda katılabileceğini belirterek aksi takdirde katılmayacağını ifade etmiştir. Görevli, "sofrada hoşunuza gitmeyecek bir yiyecek olmayacak. Sunulanları beğeneceğinizi umuyoruz. Çünkü siz, diğer elçiler gibi değil, yüce bir konumdasınız. Aramızda rahatsızlık yaratan domuz eti gibi şeyler soframızda bulunmamaktadır" şeklinde bir güvence vermiştir. (Kādî İyâz, 1983, s. 7/61).

Kabul onayı alınmasına rağmen, imparatorun heyeti küçük düşürme çabalarının devam ettiği söylenebilir. Çünkü Bâkıllânî, heyetle birlikte dinlenmek için ayrılan yere gittikten bir müddet sonra, imparatorun huzuruna çıkmak üzere geldiğinde, rivayetlere göre imparator, heyetin huzura girmesi için rükû pozisyonunda geçilebilecek olan kapının arkasına kendi tahtını koyar. Bâkıllânî, bu durumu anlayarak pratik zekâsıyla hareket eder ve diplomatik kurallara aykırı

olan bu aşığlayıcı durumu bertaraf etmek amacıyla arkasını dönerek içeri adım atar. Bu manevra, kralın kurduğu tuzaktan kaçınmasını sağlar ve saygın bir diplomatik duruş sergiler (Bağdâdî, 2001, s. 3/364).

3. Bizans Sarayında Yaptığı Münazaralar

Saraydaki münazaralar, akşam yemeğinden sonra üç oturum gerçekleşmiş, ancak bu oturumlar bir tür kokteyl formatında düzenlenmiştir. Zira Bâkılânî'nin ifadelerinden bir oturumdan diğerine geçtiği anlaşılmaktadır. Aynı şekilde, imparator, Bâkılânî'nin ilmi birikimini fark edince her seferinde onu başka bir din adamıyla tartışmaya yönlendirmiştir (Karadaş Çağfer, 2009, ss. 7-9).

Bâkılânî, bu oturumlarda özellikle teolojik münazaralar gerçekleştirmiştir. Kaynaklarda, Bâkılânî'nin ayın yarılması ve Hz. İsa'nın ilah olma konularını tartıştığı belirtilmiştir. Dördüncü oturum ise farklı bir günde yapılmıştır. Çünkü kaynaklarda imparatorun farklı bir günde randevu verdiği ve Bâkılânî'nin oldukça ihtişamlı bir elbiseyle bu oturuma katıldığı belirtilir (Karadaş Çağfer, 2009, s. 10). Beşinci bir oturum olarak ise her ne kadar tüm kaynaklarda geçmese bile "ifk" hadisesi olarak bilinen Hz. Âişe'ye atılan iftira olayını içermektedir (Ebü'l-Kâsım İbn Asâkir, 1389, ss. 218-219).

3. 1. I. Oturum: Ayın Yarılması Hadisesi

Büveyhî hükümdarı mektubunda Bâkılânî için "Müslümanların sözcüsü ve münazaracısı" şeklinde bir ifade kullanmıştır (Kādî İyâz, 1983, s. 7/61). Muhtemelen Bâkılânî'nin bu özelliğini çok merak etmiş olacak ki; münazara için hemen hazırlıklara başlanmasını istemiştir. Nitekim daha önce de belirtildiği gibi hükümdarın huzurunda hem de özel olarak Sünnî çevrelerden Şiîlere, Mu'tezile âlimlerinden hatta münecimlere kadar geniş bir yelpazede gerçekleştirmiştir.

Yemek sonrasında, tespit edildiği kadarıyla üç oturum şeklinde münazaralar yapılmıştır. Bu münazaralardan biri, Hz. Peygamber'in ayın yarılması mucizesidir. İmparator, tüm insanların bu olayı görmemişken, böyle bir mucizenin gerçekliğini nasıl savunabildiğini sormuştur. Bâkılânî'nin cevabı şu şekildedir: "Sofranın etrafındaki insanlar görebilirken, burada bulunmayanlar bunu görmemektedir. Bu durum, sofranın varlığına zarar verir mi?" fakat imparator Bâkılânî'yi zor durumda bırakma derdinde idi. Bu yüzden Patrik'i çağırdı. Muhtemelen gelen din adamı coğrafya ve felsefe bilgisine sahip bir din adamıydı. Bu yüzden Bâkılânî coğrafi bilgilerle cevap vermiştir. Ona "Dünyanın küre şeklinde olduğu bilinmektedir.

Bir yerde Ay veya Güneş tutulması yaşanırken, diğer bazı yerlerde bu olay meydana gelmemektedir. Bu tutulmaların bazı yerlerde yaşanmaması, bu olayın meydana gelmediğini göstermez"(Ebû Ali Ömer es-Sekûnî, 1976, s. 247) diye cevap vermiştir.

Bâkılânî'nin ifade etmek istediği, bu olayın özel bir durum olduğudur. Ayrıca, dünyanın küresel bir şekle sahip olduğuna dair vurgu yaparak, bu açıklama ortaçağda yaşamış Müslüman bir bilginin entelektüel seviyesini yansıtmaktadır. İkinci cevap olarak Bâkılânî teolojik bir takım değerlendirmelerde bulunur. Ona göre Hz. İsa'ya gökyüzünden indirildiğine inanılan sofranın hakikati neyse ayın yarılması da öyledir. Çünkü sofranın indirilmesi hadisesi Müslümanlar dışında Yahudiler ve diğer din mensupları tarafından kabul edilmemesine rağmen bu Hristiyanlar açısından inanılması gereken bir olaydır (Kâdî İyâz, 1983, s. 7/64).

3. 2. II. Oturum Hz. İsa'nın Yaratılışı

Kaynaklardan anlaşıldığı kadarıyla imparator Bâkılânî'yi yanına alarak başka bir topluluğa götürdü ve ona Hz. İsa'nın yaratılışıyla ilgili soru sordu. Bâkılânî, cevabını Kur'an ayetiyle verir: "Şüphesiz, Allah Katında İsa'nın durumu, Âdem'in durumu gibidir. Onu topraktan yarattı, sonra ona 'ol' dedi, o da hemen oldu" (Kur'an Yolu, Âli İmrân, 3/59). Ancak bu cevap, Hz. İsa'yı ilah olarak gören imparatorun hoşuna gitmez. Onlardan gelen itirazlar üzerine Bâkılânî, "Allah ne çocuk edinir ne de eş; öyleyse İsa'nın kardeşi, dedesi, amcası, halası kimdir?" diye sorarak noktayı koyar. Hristiyan din adamları, Hz. İsa'nın gerçekleştirdiği mucizeleri anlatarak ölüleri dirilttiğini ve çeşitli hastalıkları iyileştirdiğini savunurlar. Bâkılânî ise bu olayların Allah'ın dilemesiyle gerçekleştiğini ve mucizelerin Allah'ın peygamberlerine bahşettiği bir armağan olduğunu vurgular. Ayrıca, eğer Hz. İsa'nın ölüleri dirilttiği iddia ediliyorsa, bu durumda Hz. Musa'nın Kızıldeniz'i kendi iradesiyle ikiye ayırdığı da gündeme gelir; bu da ona göre, mucizelerin Allah'ın peygamberlerini desteklemek ve muhalifleri aciz bırakmak için verilen bir armağan olduğunu ve Allah'ın iradesiyle gerçekleştiğini gösterir (Kâdî İyâz, 1983, s. 7/65-66).

3. 3. III. Oturum Hz. İsa'nın Beşer Olması

Bu oturumun ikinci oturumun devamı olduğu söylenebilir. Çünkü önceki oturumlarda imparator ve Patrik soru sorarken bu oturumda Bâkılânî'nin soru sormuştur.

Bâkılânî imparatora şöyle bir soru sorar: "ilahî olanla beşerî olanın birleşmesi ne demektir?" (Hz. İsa'yı kastediyor) İmparator " bununla yani tanrının insan şeklinde yeryüzüne inmesiyle insanları helak olmaktan kurtarmak içindi" dedi. Bunun üzerine Bâkılânî, ona şu soruyu sordu:

"Mesih, öldürüleceğini, çarmıha gerileceğini, kendisine bu tür şeylerin yapılacağını ve Yahudilerin ona inanmayacağını biliyor muydu? Eğer 'O, Yahudilerin kendisine yapmak istedikleri şeyi bilmiyordu' dersek, bu durumda onun ilahlığının geçerliliği ve gerçekliği söz konusu olamaz. İlah olması geçerli ve gerçek değilse, O'nun Tanrı'nın Oğlu olma iddiası da geçerli değil ve gerçek dışı olur. Eğer 'Anılan şeyleri biliyordu' dersek, bu durumda O'nun bilgeliği sorgulanmalıdır. Bu durumda O, hikmet sahibi değildi demektir, çünkü hikmet, kişiyi bela ve musibetlerden korur." Bu ifadeler karşısında İmparator, sessiz kalmak zorunda kaldı (Kādî İyâz, 1983, s. 7/65-66).

3. 4. IV. Oturum Hz. İsa'nın Allah'ın Oğlu Olması

İlk üç oturumdan sonra imparator Hristiyanların toplantı yaptıkları bir yerde münazara yaptırmak için randevu verdi. Oturum düzeni kuruldu. Bâkılânî oldukça şık bir elbiseyle geldi. İmparator onu oturduğu kürsünün yanında olan başka bir kürsüye oturttu. Hristiyan din adamı Patrik de toplantıya katıldı. Herkes yerini aldı. Patrik geldiğinde Bâkılânî, onu selamladıktan sonra ona " aile efradınız, çoluk-çocuğunuz nasıllar?" diye hitap etti. Bu sözler başta Patrik olmak üzere orada bulunanların ağırına gitti. Çünkü Hristiyan din adamlarına çocuk demek, onlara evlenmemeleri gerektiğini hatırlatan saygısız bir ifadedir. Bunu fark eden Bâkılânî, bu durumu değerlendirerek hemen şu sözleri sarf eder: "Siz Allah'a çocuk isnat ederken yüzünüz düşmez" (bu noktada Hz. İsa'nın Allah'ın oğlu olduğu inancını ima etmektedir), "ama Patrik'e çocuk isnat edilmesine karşı çıkıyorsunuz"(Ebü'l-Abbâs Şemsüddîn Ahmed b. Hallikân, 1978, s. 219). Buna cevap veremediler. Kaynaklarda bu münazaradan sonra imparatorun din adamına dönerek "bu şeytana nasıl bir muamelede bulunalım" diye danıştığı Patrik, imparatora şunları söyledi: "Gerekli adımları at, sultanlarına lütüfkâr davran, ona hediyeler gönder ve eğer mümkünse bu Iraklıyı hemen ülkenden çıkar. Aksi takdirde, Hristiyanlar arasında bir fitne çıkmasından endişe ederim." İmparator, patriğin önerilerini uygun buldu ve hızla Adudüddevle'ye nazik ve olumlu bir cevap mektubu yazdı. Ayrıca, birlikte gönderilmek üzere değerli hediyeleri hazırlattı. Yanlarında birçok Müslüman esir ve Kur'an Mushaf'ı bulunuyordu. Güvenli bir yere kadar, yanlarına bir asker müfrezesinin eşlik etmesini emretti (Kādî İyâz, 1983, s. 7/68)

3. 5. İfk Hadisesiyle İlgili Yaptığı Münazara

Bu konuyla münazaranın önceki oturumlarla beraber mi, yoksa başka bir oturum şeklinde gerçekleştiğiyle ilgili bilgi bulunmamaktadır. Bâkılânî'nin Bizans sarayında yaptığı münazaraları oturum şeklinde aktaran Kādî İyâz'ın eserinde bu konu yer almamaktadır. Fakat

(İbn Asâkir, 1389, ss. 218-219) aktardığı gibi bu konu da Bâkılânî'nin yapmış olduğu münazaralardan biri olarak zikredilebilir. Çünkü tarih boyunca Hristiyanların Müslümanlara sordukları sorulardan biri "ifk"¹ hadisesidir.

Hristiyan din adamlarından biri alaycı bir üslupla "Peygamberinizin (ifk hadisesini kast ederek) eşi Aişe'ye ne olmuştu?". Bu olaya karşı Bâkılânî, hem hazır cevap hem de sorularla karşılık verebilen yetenekli bir âlim olarak öne çıkar. Bâkılânî, hem Hz. Âişe'nin hem de Hz. Meryem'in suçsuz ve iffetli kadınlar olduğunu belirttikten sonra, Hz. Âişe'ye yöneltilen iftiranın gerçek olması durumunda bile, Hz. Âişe'nin çocuksuz öldüğü bilgisinin bulunduğunu ifade eder. Ayrıca, Hz. Meryem'in evlenmeden çocuk doğurduğu ve kendisine benzer bir iftiranın atıldığına dikkat çeker. Buna göre, Bâkılânî, Hz. Meryem'e yöneltilen iftiranın, Hz. Âişe'ye yapılan iftiradan daha büyük bir iftira olduğunu vurgular. İfadenin temelinde, Hristiyan din adamlarına hitaben, kendi peygamberlerine yönelik yapılan iftiranın, onların anladığı çerçevede daha büyük bir çelişki içerdiği düşüncesi yatar (İbn Kesîr, 1990, s. 11/350).

SONUÇ

Bâkılânî'nin Bizans sarayındaki münazara, IV/X. Yüzyılın siyasi, dini ve kültürel durumunu yansıtan önemli bir belge olarak değerlendirilebilir. Ancak, münazara hakkında eldeki bilgilerin tek taraflı olması ve Bizans kaynaklarında geçmemesi, sağlıklı bir değerlendirmeyi engellemektedir.

Ele alınan münazarada, elçinin uğurlanışı ve karşılanması gibi detaylara yer verilmesi, dönemin diplomasi protokolünü yansıtmaya açısından önemli bir katkı sunmaktadır. Elde edilen bilgiler, bu münazaranın sadece iki farklı inanç sistemini değil, aynı zamanda diplomatik ilişkilerin dinamiklerini de anlamak adına önemlidir. Ayrıca Bâkılânî'nin Bizans sarayını gözlemlemesi

¹ İfk olayının gelişimi şu şekildedir: Hz. Peygamber ve beraberindeki gaziler, 627 yılında Müreysî Gazvesinden dönerken bir mola yerinde durmuşlardı. Hz. Âişe, mola sırasında düşürdüğü gerdanlığını bulmak için deve üzerindeki tahtrevandan inip aramaya başladı. Ordu, onu fark etmeyip devam edince, geride bekleyerek kendisini alacaklarını umdu. Safvân b. Muattal, mola yerini kontrol etmek ve unutulmuş eşyaları toplamak için dönerken Hz. Âişe'yi orada gördü ve devesine bindirip yanlarına getirdi.

Bu olay, başlangıçta pek dikkat çekmedi, ancak münafıklardan Abdullah b. Ubey'in bu durumu büyütmesi ve saptırmasıyla Hz. Âişe aleyhine bir iftira kampanyasına dönüştü. Ortaya çıkan dedikodu ve fitne, Hz. Peygamber'i, Hz. Âişe'yi ve tüm Müslümanları bir ay boyunca derinden üzdü.

Yüce Allah'ın indirdiği Nur Suresi ayetleriyle bu kampanyanın bir iftira olduğu açıkça belirtildi: "İftira atanlar sizden küçük bir gruptur. Bunu bir şer olarak görmeyin, aksine o bir hayırdır. O iftira edenlerden her birine iftirası nispetinde bir günah vardır. Bu iftira işinde başrol oynayana, büyük bir azâb söz konusudur. Bu iftirayı duyduğunuzda, mümin erkekler ve kadınlar, 'Bu apaçık bir iftiradır.' deyip birbiriniz hakkında iyi duygular ve düşünceler içinde olmanız gerekmez miydi? Dört şahid getirseler ya! Eğer dört şahid getiremiyorlarsa Allah katında onlar yalancılardır." (Nûr 24/11-13)

Bu ayetlerle Hz. Âişe, Yüce Allah tarafından aklanmış oldu. Bk. (<https://islam-tr.org/konu/bizans-sarayinda-bir-islam-alimi-bakillani>). 59505.08/11/2023).

ve bu deneyimleri aktarması, o döneme ait devlet kurumlarını günümüze taşıma konusunda önemli bir kaynak sağlamaktadır.

Münazarada ele alınan konular İslam'ın ilk döneminde gerçekleşen münazara örnekleriyle paralellik göstermektedir. Bu münazaranın diğer münazaralardan farkı ilk defa İslam coğrafyasının dışında gerçekleşmiş olmasıdır. Bâkılânî'nin, İslam coğrafyası dışında böyle bir münazara gerçekleştirmesi, onun donanımlı bir ilim adamı ve münazara konusunda yetkin bir kişi olduğunu göstermektedir.

Münazara sırasında yaşanan gerilime rağmen, tartışmanın hoşgörü ortamında geçtiği söylenebilir. Münazara, günümüzde kamu diplomasinin bir parçası olan kültürel diplomasisinin erken örneklerinden biri olarak kabul edilebilir. Çünkü kültürel diplomaside ilişkilerin sertleştiği bir dönemde gerilimi azaltma amacı taşımaktadır. Münazaranın sonunda İmparatorun Bâkılânî ve heyette bulunan diğer kişilere hediyeler vermesi, Büveyhî hükümdarına bir mektup göndermesi ve ayrıca henüz hangi sebeple esir tuttuğunu bilmediğimiz Müslüman esirleri ve ele geçirdiği Kur'an Mushaflarını geri vermesi bunu göstermektedir.

Devlet düzeyinde gerçekleştirilen münazarayı günümüzde yürütülen "psikolojik savaşın" bir örneği olarak değerlendirmek mümkündür. Çünkü bu çalışmada anlatıldığı gibi, münazara, iki karşıt görüşün mücadelesi gibi bir müsabaka olarak ortaya çıkmıştır, adeta iki güçlü pehlivanın güreşmesi veya iki devletin savaşı gibi gerçekleşmiştir.

Bâkılânî'nin ilim adamı kimliğini koruyarak seyahat boyunca taviz vermemesi, saygı gösterilmesi gereken bir tutumu yansıtmaktadır. Bu durum, ilim adamının özgüvenini ve kültürel diplomasi alanındaki etkinliğini göstermektedir.

BANKACILIK SEKTÖRÜNDE SATIŞ BASKISININ ÖRGÜTSEL SİNİZME ETKİSİNİN ANALİZİ: KIRŞEHİR İLİ ÖRNEĞİ

Elmas AK

Ahi Evran Üniversitesi, Sosyal Bilimler Enstitüsü, İşletme Ana Bilim Dalı, Yönetim ve Organizasyon

Email:ak.elmas@ogr.ahievran.edu.tr

Özet

Günümüzde giderek artan rekabet koşulları karşısında, piyasaların değişmesi ve hizmet sektörünün gelişmesiyle birlikte örgütlerin çalışanlarından beklentileri farklılaşmaya başlamıştır. Teknolojik gelişmeler ile birlikte, bankacılık sektörü de değişmekte, yaşanan sorunlar geçmişe oranla çeşitlenmekte ve çalışanların işyerlerindeki stres sorunu gün geçtikçe artmaktadır. Artan sorunların başında banka çalışanlarının hedef baskısı altında yoğun stres yaşaması ve bu stres davranışını yönetememesi, sorun çözme becerilerinden yoksun kalması, kendi haline sorunlarla baş etme kapasitesinin geliştirememesine istinaden ‘sinik davranışlar’ göstermesi durumu ortaya çıkmıştır. Banka çalışanlarının yaşamış olduğu ‘mesleki tükenmişlik’ onları sinizme itmiştir. Bu çalışma ile hedef baskısı ve örgütsel sinizm kavramları arasındaki ilişkileri tespit etmek amaçlanmıştır. Çalışmanın ana kütesini Kırşehir ili sınırları içindeki kamu ve özel sektör banka personeli oluşturmaktadır. Çalışmanın amacı, bankacılık sektöründe ki satış baskısının örgütsel sinizm üzerinde aracılık rolünün olup olmadığının tespit edilmesidir.

Anahtar Sözcükler: Bankacılık Sektörü, Hedef Baskısı (Satış Baskısı) , Örgütsel Sinizm.

ANALYSIS OF THE EFFECT OF SALES PRESSURE ON ORGANIZATIONAL CYNICISM IN THE BANKING SECTOR: THE CASE OF KIRŞEHİR PROVINCE

Abstract

Today, in the face of increasingly competitive conditions, with the change of markets and the development of the service sector, the expectations of organizations from their employees have begun to differ. Along with technological developments, the banking sector is also changing, the problems experienced are becoming more diverse compared to the past, and the stress problem of employees in the workplace is increasing day by day. One of the increasing problems is that bank employees experience intense stress under target pressure and cannot manage this stress behavior, lack problem-solving skills, and show "cynical behavior" due to their inability to develop the capacity to deal with problems on their own. The "professional burnout" experienced by bank employees has pushed them into cynicism. This study aimed to determine the relationships between the concepts of goal pressure and organizational cynicism. The main population of the study consists of public and private sector bank personnel within the borders of Kırşehir province. The aim of the study is to determine whether sales pressure in the banking sector has a mediating role on organizational cynicism.

Key Words: Banking Sector, Target Pressure (Sales Pressure), Organizational Cynicism.

Giriş

Bankacılık sektörü, finansal sektör içinde önemli bir alt sektör olarak yer almaktadır ve ekonomik faaliyetin kalbi durumundadır. Ekonomik büyümenin finansmanında önemli bir rol oynar. Tasarruf sahiplerinin, hane halkının, girişimcilerin, yatırımcının, üreticinin, özel ve kamu sektörünün çok önemli bir paydaşıdır (www.tbb.org.tr).

Bankacılık; finansal hizmetlerin gerçekleştirildiği sektör olup, bireylerin ve işletmelerin mali ihtiyaçlarını karşılamaktadır. Teknolojinin gelişmesi ile birlikte bankacılık sektörü de bu gelişmeye paralel olarak büyük değişim yaşamıştır. Böylelikle finansal işlemler daha hızlı erişilebilir hale gelmiştir. Bunun sonucu olarak bankalar sadece yerel pazarlarda değil, küresel pazarlarda da rekabete açık hale gelmiştir. Değişen pazar ortamında ayakta kalabilmek için yenilikçi ürünler ve hizmetler sunmaya başlayan sektördeki bankalar rekabetin gittikçe artmasına yol açmıştır. Bankalar arasındaki bu rekabet, bankaların kendi şubeleri arasında bile kendini göstermektedir. Karlılık ve en büyük olma yarışı, bankaların ürün yelpazesinin her geçen gün genişlemesine, bu da çalışan personelin iş yükünün giderek artmasına yol açmaktadır (Taşkın vd, 2010: 12). Rekabetin artması ile birlikte bankalar personellerinden daha yüksek performans bekleyebilmektedirler. Bu da personelin mevcut iş yükünü arttırmakta ve personelin daha fazla stres yaşamasına yol açmaktadır.

En basit tanımıyla hedef; varılmak istenen nokta olarak tanımlanabilir (Seferoğlu, 2012:1). Bir hayalin, bir fikrin, belirli bir tarih ve zaman çerçevesinde, eyleme dönüştürülerek, harekete geçirilmesi de hedef kavramının başka bir tanımıdır (Onaran 1981:205).Hedef baskısının en yaygın olarak görüldüğü sektörlerden biri bankacılık sektörüdür. Bankacılık sektöründe görülen hedef baskısı; banka çalışanın performansının düşmesine, verimsizliğe, ruhsal ve bedensel sağlığında bozulmaya yol açıp örgüt içinde de örgütsel sinizme ortam hazırlamaktadır.

Günümüzde örgütsel sinizm, örgütün dürüstlükten, adaletten ve doğruluktan yoksun olduğuna inanmaları sonucu çalışanların örgütüne karşı olumsuz duygu ve güvensiz tutum geliştirmesi ile ortaya çıkmaktadır (Abraham, 2000; Karacaoğlu ve İnce, 2012).Personelin işyerinde genellikle negatif bir tutum geliştirdiği durumu ifade etmektedir. Bu durum, işyerinde umutsuzluk, motivasyon kaybı, performansta düşüşe neden olabilmektedir.

YÖNTEM

Araştırmanın Amacı ve Önemi

Hedef baskısı ve örgütsel sinizm kavramları son yıllarda başta örgütsel davranış olmak üzere birçok disiplinin ilgi odağı olmuştur. Ancak ülkemizde gerek örgütsel sinizm ve gerekse hedef

baskısı konularında çok fazla teorik araştırma yapılmamıştır. Bu çalışma ile hedef baskısı ve örgütsel sinizm kavramları arasındaki ilişkileri tespit etmek amaçlanmıştır.

Tüm bu araştırmaları göz önüne alarak gerçekleştirilen bu araştırmanın amacı hedef baskısı ile örgütsel sinizm arasındaki ilişkileri ortaya koyacak bir model oluşturmak ve test etmektir.

Araştırmanın Kapsam ve Sınırlılıkları

Çalışmanın ana kütlesi Kırşehir ili sınırları içindeki kamu ve özel sektör banka personelidir. Çalışmada kartopu örnekleme yöntemi kullanılmıştır. Ankete katılan şube personelleri ilk olarak tesadüfi belirlenmiştir. Sonrasında kendileri gibi satış baskısına maruz kalan diğer bankacı personellere de anketi ulaştırmaları istenmiştir. Kırşehir ili içerisindeki kamu ve özel sektör bankalarının hepsi çalışma kapsamına dâhil edilmiştir.

Örneklem Kitle

Araştırmanın örneklem kitle Kırşehir’de faaliyet gösteren kamu ve özel bankalarıdır. Kırşehir’de ki mevcut bankalarda çalışan toplam 297 banka çalışanı ve yöneticileri arasından 100 kişi bu ankete katılmışlardır.

Verilerin Toplama Aracı

Bu çalışmada; katılanlara ait yaş, cinsiyet, statü, görev yapılan birim, sektördeki deneyim yılı ve bankanın türü olmak üzere 6 demografik soruya ankette yer verilmiştir.

Araştırmanın amacını gerçekleştirmek üzere, satış baskısı ve örgütsel sinizm kavramı üzerine literatür taraması yapılmıştır. Yapılan tarama sonucunda her iki kavram için en uygun ölçekler belirlenmiş ve anket çalışması hazırlanmıştır. Hazırlanan anket çalışması 2 aşamadan oluşmaktadır. Anket formunun ilk bölümü katılımcıların hedef baskısı algılarını belirlemek amacıyla Soygür ve Aydın tarafından geliştirilen tek boyutlu ve 8 ifadeden oluşan Hedef Baskısı ölçeğinden oluşmaktadır. Anket formunun ikinci bölümünü ise Brandes, Dharwadkar ve Dean (1999) tarafından geliştirilmiş olan 13 maddelik ve araştırmacı tarafından açıklayıcı ve doğrulayıcı faktör analizleriyle geçerlik ve güvenilirlik çalışmaları yapılmış “ Örgütsel Sinizm Ölçeği” oluşturmaktadır.

Araştırmada Hedef Baskısı Ölçeği ve Sinizm ölçeği kullanılmıştır. Elde edilen bulgular SPSS programı ile analiz edilmiştir. Katılımcıların demografik özelliklerine göre dağılımlarının belirlenmesinde frekans ve yüzde analizinin yanı sıra araştırmada kullanılan ölçeklere ait katılımcıların düzeylerinin belirlenmesinde ortalama ve standart sapma kullanılmıştır. Ölçeklerin güvenilirliklerinin incelenmesi için cronbach’s alpha güvenilirlik analizi yapılmış ve tüm ölçüm araçlarına ait güvenilirlik düzeylerinin 0.70’in üzerinde olduğu belirlenmiştir. Ölçeklerin faktör yapılarının bu çalışmanın örnekleme içinde doğrulanıp doğrulanmadığının test

edilmesi için LISREL 8.7 programı yardımı ile DFA analizi yapılmıştır. DFA’da modelin uygunluğunun tespit edilmesinde kullanılan çeşitli uyum indeksleri bulunmaktadır. Bu çalışmada Ki kare uyum iyiliği indeksi ile birlikte, CFI, RMSEA, SRMR, NFI, NNFI gibi uyum kriterleride dikkate alınmış olup uyum aralıkları tablo 1’de verilmiştir (Schermele-Engel ve Moosbrugger, 2003). Araştırmanın amacına uygun olarak kurulan hipotez ve alt problemlerin test edilmesinde istatistiksel olarak %95 güven düzeyinde test edilmiş olup bağımsız değişkenler ile bağımlı değişkenlerin arasındaki ilişkinin verilerin dağılımın normal olması nedeniyle Pearson Korelasyon analizi yapılmıştır. Aynı zamanda ölçümlere göre ikili gruplar arasındaki farkın belirlenmesinde bağımsız örneklem t-testi, ikiden fazla gruplar için tek yönlü Anova testi yapılmıştır.

Tablo 1: Araştırmada Kullanılan Uyum İndeksleri Aralıkları

Uyum Kriterleri	Mükemmel Uyum	Kabul Edilebilir Uyum
χ^2/df	≤ 3	≤ 5
RMSEA	$0 < RMSEA < 0.05$	$0.05 \leq RMSEA \leq 0.10$
SRMR	$0 \leq SRMR < 0.05$	$0.05 \leq SRMR \leq 0.10$
NFI	$0.95 \leq NFI \leq 1$	$0.90 \leq NFI \leq 0.95$
NNFI	$0.95 \leq NNFI \leq 1$	$0.90 \leq NNFI \leq 0.95$
CFI	$0.95 \leq CFI \leq 1$	$0.90 \leq CFI \leq 0.95$

BULGULAR ve YORUMLAR

Araştırmanın bu kısmında araştırmada ulaşılan bulgulara ait analiz sonuçlarına yer verilmiştir.

Geçerlilik ve Güvenirlilik

Ölçeklere Ait Güvenirlilik Düzeyleri ve DFA Sonuçları

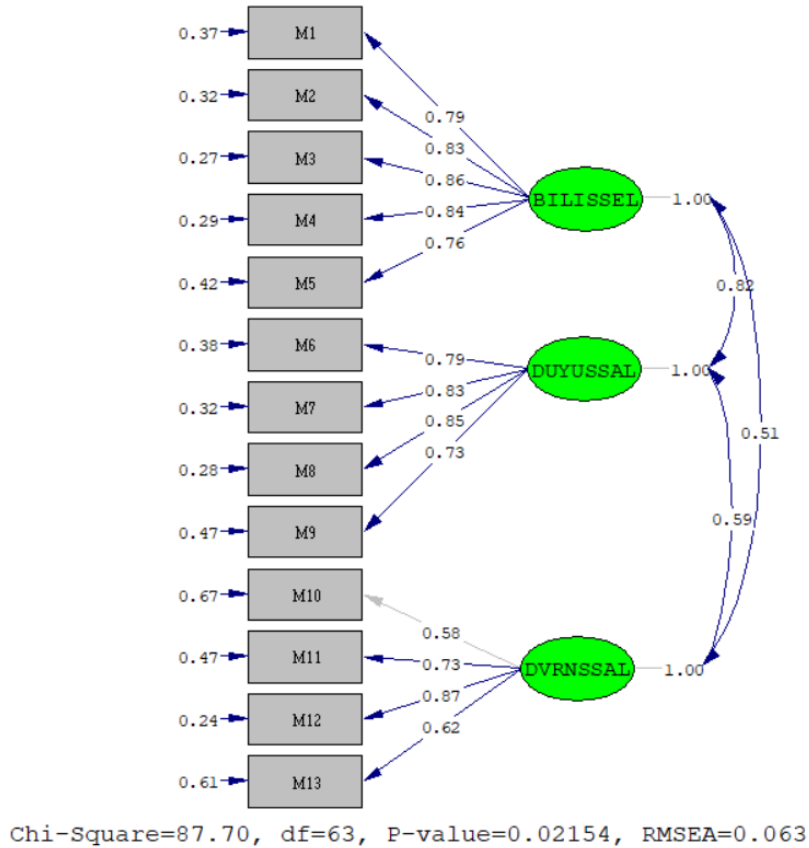

Tablo 2: Araştırmada Kullanılan Ölçme Araçlarının Bu Çalışmaya Ait Güvenirlilik Düzeyleri

Ölçümler	Cronbach’s Alpha
Bilişsel Boyut	0,906
Duyuşsal Boyut	0,868
Davranışsal Boyut	0,733
Sinizm Ölçeği	0,902
Hedef Baskısı Ölçeği	0,939

Araştırmada kullanılan ölçeklere ait güvenilirlik düzeylerinin incelenmesinde cronbach's alpha güvenilirlik analizi yapılmış olup, her bir ölçeğin ve alt boyutunun güvenilirlik düzeyinin yüksek düzeyde olduğu belirlenmiştir (Cronbach's alpha>0.70).

Örgütsel Sinizm Ölçeğine Ait DFA Sonuçları
Ölçeğin açıklanan faktör yapısının doğrulanıp doğrulanmadığının belirlenmesi için doğrulayıcı faktör analizi yapılmıştır. Ölçeğin DFA'sına ait path diyagramı şekil 1'de sunulmuştur.

Şekil 1 incelendiğinde örgütsel sinizm ölçeği aracının DFA bulgularına göre, maddelere ait faktör yük değerlerinin 0.58–0.86 arasında olduğu görülmektedir. Bu değerler faktör yükleri sınırları için kabul görülen değerlerdir. Maddeler ile örtük değişkenler arasındaki korelasyonların anlamlı olduğu belirlenmiştir ($t>2,58$). Path diyagramları incelendiğinde maddeler arasında modifikasyon yapılmasına gerek duyulmamış olup M10 maddesinin faktör yükü 0.50'nin üzerinde olması için fiksleme yapılmıştır. Ölçekteki tüm maddelere ait t değerinin 2.58'den büyük olduğu bu nedenle tüm maddelere ait faktör yüklerinin ölçek boyutları üzerindeki etkilerinin %99 güven düzeyinde anlamlı olduğu belirlenmiştir. DFA sonucu ulaşılan uyum indekslerine ait sonuçlar tablo 4'de gösterilmiştir.

Şekil 1: Örgütsel Sinizm Ölçeğine Ait DFA Path Diyagramı

Tablo 3: Örgütsel Sinizm Ölçeği Uyum İyiliği Değerleri

X ² /df	RMSEA	CFI	NNFI	NFI	SRMR
1,392	0,063	0,98	0,98	0,94	0,092

Bir modelin bütün olarak kabul edilebilir olması için raporlanan uyum iyiliği değerlerinin kabul edilebilir veya mükemmel uyum sınırları içerisinde düşmesi gerekmektedir. DFA sonucu elde edilen uyum kriterleri değerleri incelendiğinde X² değerinin df değerine olan oranının 1,392 ile mükemmel uyum düzeyinde, RMSEA değerinin ise 0,063 ile kabul edilebilir uyum düzeyinde olduğu, diğer uyum değerlerinin de mükemmel ve kabul edilebilir uyum değerleri içerisinde yer aldığı belirlenmiştir. Bu sonuç açıklanan faktör yapısının doğrulandığını göstermektedir.

Hedef Baskısı Ölçeğine Ait DFA Sonuçları

Ölçeğin açıklanan faktör yapısının doğrulanıp doğrulanmadığının belirlenmesi için doğrulayıcı faktör analizi yapılmıştır. Ölçeğin DFA'ına ait path diyagramı şekil 2'de sunulmuştur.

Chi-Square=29.33, df=17, P-value=0.03157, RMSEA=0.086

Şekil 2: Hedef Baskısı Ölçeğine Ait DFA Path Diyagramı

Şekil 2 incelendiğinde örgütsel sinizm ölçme aracının DFA bulgularına göre, maddelere ait faktör yük değerlerinin 0.71–0.89 arasında olduğu görülmektedir. Bu değerler faktör yükleri sınırları için kabul görülen değerlerdir. Maddeler ile örtük değişkenler arasındaki korelasyonların anlamlı olduğu belirlenmiştir ($t > 2,58$). Path diyagramları incelendiğinde modelin kabul edilebilir uyum aralığına gelmesi için Madde 1- Madde 2, Madde 2-Madde3 ve Madde 6-Madde 7 arasında modifikasyon yapılmasına gerek duyulmuştur. Ölçekteki tüm maddelere ait t değerinin 2.58'den büyük olduğu bu nedenle tüm maddelere ait faktör yüklerinin ölçek boyutları üzerindeki etkilerinin %99 güven düzeyinde anlamlı olduğu belirlenmiştir. DFA sonucu ulaşılan uyum indekslerine ait sonuçlar tablo 5'de gösterilmiştir.

Tablo 4: Hedef Baskısı Ölçeği Uyum İyiliği Değerleri

Modifikasyon	X²/df	RMSEA	CFI	NNFI	NFI	SRMR
Öncesi	3,997	0,175	0,96	0,94	0,94	0,050
Sonrası	1,725	0,086	0,99	0,99	0,98	0,036

DFA sonucu elde edilen uyum kriterleri değerleri incelendiğinde X² değerinin df değerine olan oranının 1,725 ile mükemmel uyum düzeyinde, RMSEA değerinin ise 0,086 ile kabul edilebilir uyum düzeyinde olduğu, diğer uyum değerlerinin de mükemmel ve kabul edilebilir uyum değerleri içerisinde yer aldığı belirlenmiştir. Bu sonuç açıklanan faktör yapısının doğrulandığını göstermektedir.

Demografik Bulgular

Araştırmanın demografik özelliklerine ait bulgular Tablo 2'de verilmiştir.

Tablo 5: Katılımcıların Demografik Özelliklerine Ait Bulgular

Demografik	Grup	n	%
Çalıştığınız Banka	Özel	61	61,6
	Resmi	38	38,4
Göreviniz	Gişe görevlisi	35	35,4
	Müdür	8	8,1
	Uzman	17	17,2
	Yönetmen	16	16,2
	Diğer	23	23,2
Görev yaptığınız birim	Bireysel bankacılık	34	34,3
	Operasyon	22	22,2
	Ticari bankacılık	20	20,2
	Diğer	23	23,2
Cinsiyetiniz	Erkek	36	36,4
	Kadın	63	63,6
Yaşınız	21-30 yaş	17	17,2
	31-40 yaş	57	57,6
	41-50 yaş	23	23,2
	51 yaş ve üzeri	2	2,0
Kaç senedir Bankacılık sektöründesiniz?	1-5 sene	26	26,3
	6-10 sene	29	29,3
	11-15 sene	30	30,3
	16 sene ve üzeri	14	14,1
	Toplam	99	100,0

Araştırma kapsamında toplan 99 katılımcıya ulaşılmış olup katılımcıların %61,6'sının özel bankada çalıştığı, %38,4'ünün resmi bankada çalıştığı belirlenmiştir. Katılımcıların %35,4'ünün gişe görevlisi olduğu, %8,1'inin müdür olduğu, %17,2'sinin uzman olduğu, %16,2'sinin yönetmen olduğu, %23,2'sinin diğer görevlerde çalıştığı belirlenmiştir. Katılımcıların %34,3'ünün bireysel bankacılık bölümünde, %22,2'sinin operasyon bölümünde,

%20,2'sinin ticari bankacılık bölümünde ve %23,2'sinin diğer bölümlerde görev yaptığı belirlenmiştir. Katılımcıların %36,4'ünün erkek, %63,6'sının kadın olduğu belirlenmiştir. Katılımcıların %17,2'sinin 21-30 yaşlarında, %57,6'sının 31-40 yaşlarında, %23,2'sinin 41-50 yaşlarında olduğu ve %2,0'sinin 51 yaş ve üzeri olduğu belirlenmiştir. Katılımcıların %26,3'ünün 1-5 senedir bankacılık sektöründe olduğu, %29,3'ünün 6-10 senedir bankacılık sektöründe olduğu, %30,3'ünün 11-15 senedir bankacılık sektöründe olduğu ve %14,1'inin 16 sene ve üzerinde bankacılık sektöründe olduğu belirlenmiştir.

Verilerin Dağılımı ve Betimsel Bulgulara Ait Sonuçlar

Tablo 6: Verilerin Dağılımı

Ölçümler	Merkezi Eğilim		Basıklık-Çarpıklık	
	Ortalama	Medyan	Basıklık	Çarpıklık
İş Stresi Ölçeği	3,21	3,15	-0,53	0,12
Hedef Baskısı Ölçeği	3,60	3,63	-0,68	-0,33

Normal dağılım analizi sonucunda incelenen merkezi eğilim ölçümlerinden ortalama-medyanın birbirine yakınlığı ve basıklık ile çarpıklığın ± 2 arasında olması nedeniyle elde edilen verilerin normal dağılımdan geldiği belirlenmiştir (George ve Mallery 2010). Aynı zamanda araştırmaya dâhil olan katılımcı sayısı yeterli olduğu için ($n \geq 30$) merkezi limit teoreminden hareketle istatistiksel açıdan daha güçlü olan parametrik yöntemlere başvurulmuştur (Ghasemi ve Zahediasl, 2012).

Tablo 7: Ölçeklere Ait Betimsel Bulgular

Ölçümler	Ort.	S.s.
Bilişsel Boyut	3,08	0,89
Duyuşsal Boyut	3,18	0,92
Davranışsal Boyut	3,40	0,78
Sinizm Ölçeği	3,21	0,72
Hedef Baskısı Ölçeği	3,60	0,93

Likert formatında oluşturulan ölçeklerde elde edilen puanlar sonucu katılımcıların yanıtlarının düzeylerinin hesaplanmasında 0,8 puan aralığı ($4/5=0,80$) kullanılmıştır. Bu durumda Likert yapıdaki ölçeğin başlangıç puanı olan 1 puanın üzerine 0,8'lik puan aralığı eklenerek her ölçüm düzeyine denk gelen aralık hesaplanmaktadır. Bu durumda 1-1,80 aralığı "çok düşük", 1,81-2,6

aralığı “düşük”, 2,61-3,4 aralığı “orta”, 3,41-4,2 aralığı “yüksek” ve 4,21-5,0 aralığı “çok yüksek” düzeyi temsil etmektedir ve eğer ölçek toplam puan ile hesaplanıyorsa o zaman bu aralıklar madde sayısı ile çarpılması gerekir (Durmaz 2020). Katılımcıların sinizm düzeylerinin orta düzeyde olduğu belirlenmiş olup (Ort.=3,21), en yüksek düzeye ait faktörün 3,40'lık ortalama ile davranışsal boyutu olduğu belirlenmiştir.

Katılımcıların hedef baskısı düzeylerinin yüksek düzeyde olduğu belirlenmiştir (Ort.=3,60).

Araştırmanın Hipotezine Ait Sonuçlar

H₁: Sinizm boyutları ile hedef baskısı boyutları arasında anlamlı bir ilişki vardır.

H₂: Hedef baskısı düzeylerinin sinizm düzeyleri üzerinde anlamlı bir etkisi vardır.

H₃: Hedef baskısı düzeylerinin sinizm boyutları üzerinde anlamlı bir etkisi vardır.

Tablo 8: Değişkenler Arasındaki İlişkiye Ait Analiz Sonuçları

Değişkenler		Bilişsel Boyut	Duyuşsal Boyut	Davranışsal Boyut	Sinizm Ölçeği	Hedef Baskısı Ölçeği
Bilişsel Boyut	r	1	0,730*	0,358*	0,884*	0,567*
	p		0,000	0,000	0,000	0,000
Duyuşsal Boyut	r		1	0,444*	0,891*	0,604*
	p			0,000	0,000	0,000
Davranışsal Boyut	r			1	0,679*	0,361*
	p				0,000	0,000
Sinizm Ölçeği	r				1	0,629*
	p					0,000
Hedef Baskısı Ölçeği	r					1
	p					

*p<0,05

Korelasyon analizi incelendiğinde katılımcıların sinizm düzeyleri ile hedef baskısı düzeyleri arasında pozitif yönlü gizli düzeyde bir ilişki bulunmuştur (r=0.629; p<0.05). Sinizm boyutları ile hedef baskısı düzeyleri arasındaki ilişki incelendiğinde, en güçlü düzeyde ilişkinin duyuşsal boyut ile hedef baskısı düzeyleri arasında olduğu belirlenmiştir (r=0. 604; p<0.05). Araştırmanın 1.hipotezi kabul edilmiştir.

Araştırmanın ikinci ve üçüncü hipotezlerin test edilmesinde regresyon analizi yapılmıştır. Regresyon analizi yapılmadan önce regresyon analizlerinin varsayımları olan verilerin

dağılımının normal olması, değişkenler arasında ilişkinin olması ve değişkenler arasında oto korelasyon ve çoklu bağıntı problemlerinin olmaması durumları incelenmiştir. Araştırma kapsamında modele dâhil edilen verilerin dağılımının normal dağılım olduğu tablo 3’de verilmiştir. Modele dâhil edilen değişkenler arasındaki ilişkinin anlamlı olmadığı sonucu ise tablo 5’te verilmiştir. Modeldeki her yol katsayısına ait regresyon modeli için otokorelasyon olup olmadığının incelenmesinde Durbin Watson değerine bakılmış ve bu değerinin 1-3 arasında olması nedeniyle kurulan her regresyon katsayısı için oto korelasyon olmadığına karar verilmiştir (Field, 2005). Aynı zamanda araştırma modelinde bağımsız değişkenin faktörlerinin bağımlı değişken üzerindeki etkisinin incelenmesi için bağımsız değişkenlerin birden fazla olması nedeniyle çoklu doğrusal regresyon modeli yapılmış olup ilgili modelde çoklu bağıntı olup olmadığına karar verirken VIF değeri incelenmiş ve VIF değerinin 10’nun altında olması nedeniyle çoklu bağıntı probleminin olmadığı belirlenmiştir (Field, 2005). Tüm bu bilgiler ışığında kurulan regresyon analizlerine ait varsayımların karşıladığını belirlenmiştir.

Tablo 9: Hedef Baskısı Düzeylerinin Sinizm Düzeyleri Üzerindeki Etkisine Ait Regresyon Analizi

Değişkenler	β	s.h	t	p
Sabit	1,467	0,226	6,497	0,000*
Hedef Baskısı Ölçeği	0,484	0,061	7,972	0,000*

* $p < 0.05$; Doğrusal regresyon analizi yapılmıştır.

F:63,545; F(P):0.000; Durbin-Watson: 1,889; R²:0,390

Bağımsız: Hedef Baskısı Ölçeği

Bağımlı: Sinizm Ölçeği

Tablo 9’da yer alan değerler incelendiğinde, hedef baskısı düzeylerinin sinizm düzeyi üzerindeki etkisinin ($\beta = 0,484$; $t = 7,972$; $p < 0,05$) anlamlı olduğu belirlendiğinden araştırmanın ikinci hipotezinin kabul edilmiştir. Bu sonuç katılımcıların hedef baskısı düzeylerinde bir birimlik iyileştirme olduğunda sinizm düzeylerinde 0,484 birimlik iyileştirme olacağı anlamına gelmektedir. Hedef baskısı düzeylerinin tek başına sinizm düzeylerinin %39,0’unu açıkladığı belirlenmiştir (R²:0,390). Regresyon eşitliği aşağıda verilmiştir.

$$\text{Sinizm} = 1,467 + 0,484 * \text{Hedef Baskısı}$$

Tablo 10: Hedef Baskısı Düzeylerinin Bilişsel Boyut Üzerindeki Etkisine Ait Regresyon Analizi

Değişkenler	β	s.h	t	p
Sabit	1,137	0,297	3,833	0,000*
Hedef Baskısı Ölçeği	0,540	0,08	6,777	0,000*

* $p < 0.05$; Doğrusal regresyon analizi yapılmıştır.

F:45,932; F(P):0.000; Durbin-Watson: 2,104; R²:0,314

Bağımsız: Hedef Baskısı Ölçeği

Bağımlı: Bilişsel Boyut

Regresyon analizi incelendiğinde hedef baskısı düzeylerinin bilişsel boyut üzerindeki etkisinin ($\beta = 0,540$; $t = 6,777$; $p < 0,05$) anlamlı olduğu belirlendiğinden araştırmanın üçüncü hipotezi bilişsel boyut için kabul edilmiştir. Bu sonuç katılımcıların hedef baskısı düzeylerinde bir birimlik iyileştirme olduğunda bilişsel boyut düzeylerinde 0,540 birimlik iyileştirme olacağı anlamına gelmektedir. Hedef baskısı düzeylerinin tek başına bilişsel boyut düzeylerinin %31,4'ünü açıkladığı belirlenmiştir (R²: 0,314). Regresyon eşitliği aşağıda verilmiştir.

$$\text{Bilişsel Boyut} = 1,137 + 0,540 * \text{Hedef Baskısı}$$

Tablo 11: Hedef Baskısı Düzeylerinin Duyuşsal Boyut Üzerindeki Etkisine Ait Regresyon Analizi

Değişkenler	β	s.h	t	p
Sabit	1,035	0,297	3,486	0,001*
Hedef Baskısı Ölçeği	0,595	0,08	7,456	0,000*

* $p < 0.05$; Doğrusal regresyon analizi yapılmıştır.

F:55,588; F(P):0.000; Durbin-Watson: 1,494; R²:0,358

Bağımsız: Hedef Baskısı Ölçeği

Bağımlı: Duyuşsal Boyut

Regresyon analizi incelendiğinde hedef baskısı düzeylerinin duyuşsal boyut üzerindeki etkisinin ($\beta = 0,595$; $t = 7,456$; $p < 0,05$) anlamlı olduğu belirlendiğinden araştırmanın üçüncü hipotezi duyuşsal boyut için kabul edilmiştir. Bu sonuç katılımcıların hedef baskısı düzeylerinde bir birimlik iyileştirme olduğunda duyuşsal boyut düzeylerinde 0,595 birimlik iyileştirme olacağı anlamına gelmektedir. Hedef baskısı düzeylerinin tek başına duyuşsal boyut

düzeylerinin %35,8'ini açıkladığı belirlenmiştir ($R^2:0,358$). Regresyon eşitliği aşağıda verilmiştir.

Duyuşsal Boyut: $1,035+0,595*\text{Hedef Baskısı}$

Araştırmaya katılım sağlayan bireylerin sinizm boyutları ve hedef baskısı düzeyleri ile bankada buldukları birim arasında anlamlı bir fark bulunup bulunmadığını bulgulamak amacı ile tek yönlü anova analizi yapılmıştır. Bu analiz sonucunda birim ile hedef baskısı arasında anlamlı bir farklılaşma bulunmuştur ($p=0.012<0,05$). Farklılaşmanın hangi gruptan kaynaklandığının incelenmesi için yapılan scheffe testi sonucu ortalamalar incelendiğinde farklılığın operasyon biriminde görev alanlar ile diğer birimlerde görev alanlar arasında kaynaklandığı ve operasyon biriminde görev alanların hedef baskısı düzeylerinin daha yüksek olduğu belirlenmiştir. Araştırmaya katılım sağlayan bireylerin sinizm boyutları ve hedef baskısı düzeyleri ile eğitim düzeyleri arasında anlamlı bir fark bulunup bulunmadığını bulgulamak amacı ile tek yönlü Anova analizi yapılmıştır. Bu analiz sonucunda katılımcıların eğitim düzeyleri ile sinizm boyutları ve hedef baskısı düzeyleri arasında anlamlı bir fark bulunamamıştır ($p>0,05$).

SONUÇ

Çalışmanın amacı, bankacılık sektöründe ki satış baskısının örgütsel sinizm üzerinde aracılık rolünün olup olmadığının tespit edilmesidir. Elde edilen bulgular değerlendirildiğinde, bahse konu değişkenler arası anlamlı bir ilişkinin varlığı ve satış baskısı sonucu ortaya çıkan örgütsel sinizmin, banka personelinin üzerinde olumsuz etki yarattığı tespit edilmiştir.

Çalışanlar üzerinde satış baskısı arttığı zaman örgütsel sinizmin de buna paralel olarak arttığı ve satış baskısı ile örgütsel sinizm arasında pozitif yönlü ilişki olduğu tespit edilmiştir. Bu bağlamda, temelde çalışan personelin örgütüne karşı güven duymaması ve olumsuz hisler beslemesi gibi negatif/olumsuz duygu durumlara atıfta bulunan örgütsel sinizm algısı çalışanda arttıkça örgütüne karşı duyduğu bağlılık hissinde bir azalma meydana geleceği muhtemel bir sonuç olarak karşımıza çıkmaktadır.

Çalışmada, banka personelinin kurumuna(örgüte) yönelik geliştirdiği olumsuz duygu durumların sonucunda kurumun(örgütün) kendisine karşı dürüst olmadığına/davranmadığına kanaat getirmesi sonucu oluşan ve örgütsel sinizmin boyutlarına bakıldığında yani ölçeklere ait betimsel bulgular incelendiğinde; katılımcıların hedef baskısı düzeylerinin yüksek düzeyde olduğu belirlenmiş olup; en yüksek düzeye ait faktörün davranışsal boyut olduğu belirlenmiştir. Korelasyon analizi incelendiğinde sinizm boyutları ile hedef baskısı düzeyleri arasındaki ilişki incelendiğinde, en güçlü düzeyde ilişkinin duyuşsal boyut ile hedef baskısı düzeyleri arasında olduğu belirlenmiştir. Araştırmanın 1.hipotezi kabul edilmiştir. Hedef baskısı düzeylerinin sinizm düzeyleri üzerindeki etkisine ait regresyon analizi incelendiğinde katılımcıların hedef baskısı düzeylerinde bir birimlik iyileştirme olduğunda davranışsal boyut düzeylerinde de

iyileştirme olacağı belirlenmiştir. Araştırmanın 2.hipotezi de kabul edilmiştir. Katılım sağlayan bireylerin sinizm boyutları incelendiğinde özel bankada çalışanların bilişsel boyut düzeylerinin resmi bankada çalışanlara göre daha yüksek olduğu görülmüştür. Özel bankada çalışanların duyuşsal boyut düzeylerinin resmi bankada çalışanlara göre daha yüksek olduğu görülmüştür. Böylelikle araştırmanın 3.hipotezi de kabul edilmiştir. Bankacılık sektöründe; banka personelinin üzerindeki satış baskısının örgütsel sinizm üzerindeki etkisine ilişkin olarak gerçekleştirilen bu çalışmanın analizleri neticesinde satış baskısının örgütsel sinizm üzerinde aracılık rolü oynadığı tespit edilmiş olup çalışma kapsamında elde edilen bulgular da yazında konuyla ilgili yapılan çalışmaları destekler nitelikte olduğu ifade edilebilecektir.

ÖNERİLER

- ✓ Bankada çalışanların motivasyon düzeylerinin artırılması için yönetim kadrosunun ve insan kaynakları birimlerinin koordineli bir şekilde aktivite planlaması gerekmektedir.
- ✓ Kurum kültürünün benimsenmesi, yaygınlaşması ve çalışanlarda kuruma aidiyet oluşması için eğitimler yapılmalıdır.
- ✓ Hedef baskısını ortadan kaldıracak durumlardan biri de yüksek hedeflerin azaltılması ve hedef tutturana personele motive olması açısından hedef primlerinin yüksek ödenmesidir.
- ✓ Örgütsel sinizmin olumluya çevrilmesi için düzenli yapılacak personel görüşmeleriyle, çalışanların sorunlarının dinlenmesi, sinik davranışları olumluya çevirecektir.
- ✓ Sinizm ortamlarına kurum idarecilerinin girmesi, sorunu yerinde teşhis edip çözmesi, sinizmin kurum kültürü olmasına en başından engel olmasıyla sonuçlanacaktır. Çalışanların sadece hedefleri değil psikolojik sağlamlıkları da takip edilmelidir.
- ✓ Bankacılık sektöründeki aktörler sadece karlılık anlayışından uzaklaşarak, evrensel gelişimleri takip etmeli ve çalışanın da "biricik" ve "değerli" olduğunu hissettirecek uygulamaları devreye sokmalıdır.
- ✓ Aynı zamanda piyasayı düzenleyen devlet organlarının, banka çalışanlarının ve ailelerinin daha insani şartlarda çalışması ve yaşaması için, yasal düzenlemelerin bir kısmını çalışanlar lehine iyileştirmelidir.
- ✓ Mesai saatleri konusunda düzenlemeler yine çalışanların lehine yapılmalı, "zoraki gönüllü" mesailerin önüne geçilmelidir.
- ✓ Ödüllendirme ve terfilerde çalışanların olumlu çaba ve katkıları asla gözden kaçmamalı, ödüllendirme davranışlarının adil olması, işini iyi yapan personellerin sayısının

artmasına, bu da aslında ilk hedeflenen bankanın karlılık oranlarına olumlu katkı sağlamasına vesile olacaktır.

- ✓ Son olarak; Sürekli artarak devam eden hedeflerin olması, yetersizlik ve mesleki tükenmişlik nedeniyle çalışanın motivasyonunun düşmesi durumu değiştirilerek, her sorunda önlerine getirilen ‘iş akdi fes’ seçeneğinin koz olarak kullanılmaması gerekmektedir.

Abstract

In the landscape of particle physics, the precise identification of meson decays is a cornerstone for exploring fundamental forces and validating theoretical models. The decay of J/ψ mesons to electron-positron pairs ($J/\psi \rightarrow e^+e^-$) offers a window into the dynamics of the strong force, mediated by Quantum Chromodynamics (QCD). The presented study introduces a category-based machine learning method, specifically the CatBoost algorithm, to discriminate $J/\psi \rightarrow e^+e^-$ events from the dataset collected at the Large Hadron Collider (LHC). The use of CatBoost harnesses the power of gradient boosting frameworks alongside categorical feature support to enhance the identification of J/ψ decays from the large dataset obtained from high-energy collision experiments. The implementation of CatBoost, outlining the preprocessing of input data, feature engineering, and the optimization of hyperparameters tailored to the characteristics of the decay channel under study. Performance of the model is quantified by machine learning metrics such as precision, recall, F1-score and area under receiver operating characteristic curve (AUC ROC).

Keywords: J/ψ , dielectron, CatBoost, machine learning, particle physics.

Introduction

The discovery of the J/ψ meson, called also charmonium, in 1974 [1, 2] marked a watershed moment in particle physics, fundamentally transforming understanding of the subatomic world. This meson, a bound state consisting of a charm quark and its corresponding antiquark ($c\bar{c}$), has a mass of about $3096.9 \pm 0.006 \text{ MeV}/c^2$ [3] and played a significant role in confirming the existence of a fourth quark type, the charm quark, thus supporting the quark model of hadronic structure [4, 5].

The importance of the J/ψ meson lies in its unique properties. It is relatively long-lived for a meson, with a lifetime of about $\sim 10^{-21}$ seconds [3], and it predominantly decays into hadrons due to strong interaction. However, its decay into lepton pairs such as electron-positron (e^+e^-) pairs provides a clean signature for experimental detection and allows precise measurements of its properties, crucial for testing various aspects of the Standard Model [6] of particle physics [7, 8, 9, 10]. Studying the J/ψ meson provides investigation of the strong force, one of the four fundamental forces, which is described by Quantum Chromodynamics (QCD) [11]. The J/ψ meson's decays are sensitive to the QCD dynamics at various energy scales, offering insights into the behavior of quarks and gluons, partonic state of the matter, under extreme conditions reached at the high energy collisions.

The Large Hadron Collider (LHC) [12] provides an opportunity to study the production of J/ψ mesons at high energy collisions. Analysis of the charmonium state formed in high energy collisions in a massive amount of data has a complex procedure since it requires computational and physics knowledge. In addition, this process is more challenging for the analysis of specific decay channels, like $J/\psi \rightarrow e^+e^-$, due to the presence of background in which cut based computational analysis is used leading loosing some of the J/ψ information [13].

The intricacy of these analyses necessitates advanced data processing and analysis methods. Traditional techniques, while effective, often require extensive computation time and resources. The advent of machine learning (ML) and artificial intelligence (AI) offers a potential alternative with their ability to learn from data and make predictions or decisions, are particularly suited to handling the complex, high-dimensional data produced by the LHC. Studies have presented the effectiveness of ML methods [14-18] in various fields demonstrating their potential to revolutionize data

analysis in high-energy. Additionally, the integration of ML in high-energy physics not only enhances the efficiency of data analysis but also opens new avenues for discoveries, allowing for more nuanced and rapid interpretation of experimental results. This integration signifies a paradigm shift in how data from large-scale physics experiments are processed and understood, marking a new era in the exploration of the fundamental particles and forces that constitute the universe. Therefore, in this study performance of CatBoost [19] algorithm, one of the improved version of Gradient Boosting Decision Tree (GBDT) [20], to reconstruct the $J/\psi \rightarrow e^+e^-$ at the LHC was investigated.

CatBoost Algorithm: A Gradient Boosting Framework

CatBoost (Categorical Boosting) [19] is a high-performance gradient boosting library, particularly renowned for its efficiency in handling categorical data. Compared to the other machine learning algorithms, it has ability to process categorical features directly. This capability eliminates the need for the extensive data preprocessing typically required by algorithms that cannot inherently handle non-numeric data. This feature is particularly useful in complex data environments like those encountered in particle physics, where datasets often contain a heterogeneous mix of data types [19].

Unlike traditional boosting methods, CatBoost employs a symmetric tree structure that reduces overfitting and improves model performance. The algorithm also features an innovative ordering principle called 'ordered boosting', which helps in combating the prediction shift caused by a naïve treatment of categorical variables. This method enhances the accuracy and robustness of the model, making it highly reliable for critical analyses [20]. In addition, the algorithm optimizes binary decision trees using oblivious trees, where all decisions at the same tree level are based on the same feature and threshold. This approach not only simplifies the model but also speeds up the learning process, allowing for faster analysis of large datasets, a common characteristic of particle physics experiments [20]. The model is improved to be accessible to both novice and experienced machine learning practitioners, with a range of parameters that can be tuned for specific needs. Since it is compatible with multiple programming languages and can be deployed in a variety of computing environments, it is a flexible ML tool for applications in different fields [19].

ANALYSIS

Dataset

In the study, proton–proton collision data collected by the Compact Muon Solenoid (CMS) [21] experiment at $\sqrt{s} = 7$ TeV in 2010 were used to reconstruct of J/ψ production from its dielectron decay channel [22–24]. A total of 10015 events including e^+e^+ , e^-e^- , and dielectron pairs from 2 to 5 GeV having characteristic and kinematic features of the particles were studied with Python implementation of the CatBoost algorithm.

The dataset contains various characteristics for each pair of particles, including their momentum components (p_x , p_y , p_z), transverse momentum (p_t), energy (E), pseudorapidity (η), and azimuthal angle (ϕ). Additionally, information about the charges of each pair partner (q_1 , q_2) and the mass of the reconstructed J/ψ particle (M) is available. In the process of identifying the J/ψ signal distribution using the CatBoost algorithm, the particle and kinematic features, were used except for η and ϕ . The opening angle (α) [25] between the particle pairs and the transverse momentum of the mother particle (P_t) were computed to be used as features for classification of the meson signal class. As in standard particle physics analysis, $\Delta\eta$ and $\Delta\phi$ values of each pairs, which represent the absolute differences in η and ϕ between two particles in the same event [26, 27], were then included as additional features in the algorithm to assess the correlation between the particles.

Implementation of CatBoost Algorithm

This study aims to evaluate the performance of the CatBoost model in detecting J/ψ production through its decay into dielectrons. For this purpose, electrons and positrons are classified based on their track properties, requiring each to have a momentum (p_t) above 1.3 GeV/c and opposite charges, which are standard criteria to enhance particle measurement accuracy. Additionally, a precise mass cut is necessary to create significant sidebands and minimize background interference. The selection of the signal class is based on particles whose mass (M) is within ± 0.3 GeV/ c^2 of the official J/ψ mass. Unlike traditional methods that lose signal information due to cuts on alpha (α), delta eta ($\Delta\eta$), and delta phi ($\Delta\phi$) features, this technique uses these parameters as key indicators to identify the charmonium state. By using these selection criteria, out of 10015 events 2438 of them includes J/ψ particle. The rest of the events were considered

as background. The features used in the analysis is listed in Table 1.

Table 1. List of the features used in the CatBoost algorithm.

Parameter	Definition
p_t	Transverse momentum of each particle.
P_t	Transverse momentum of mother particle.
$\Delta\eta$	Difference of pseudorapidity between pairs.
$\Delta\phi$	Difference of azimuthal angle between pairs.
Q	Charge of each particle.
α	Opening angle between pair partners.
M	Mass of the mother particle.

For the model application, 75% of the data were separated for training and rest were for the test. The hyperparameters of the model was also tuned before its application. In CatBoost algorithm number of decision trees which is also called number of iterations was selected 100. In addition, the depth of each tree was preferred as 10. Lastly, learning rate of the model which controls how much the model is adjusted during each step of the learning process was optimized to 0.1.

RESULTS

Model Performance Metrics

In ML, the sensitivity, precision, and F1 score values are used for evaluation of the model performances which are determined from confusion matrix [28]. The matrix is a table representation of the actual class information in the dataset and the predictions of the machine learning model. An example of an error matrix is given in Figure 1. In the figure, the actual values represent the class information of the dataset, while the predicted values represent the class information obtained as a result of the model application. In the matrix, the positive class represents the J/ψ meson, while the negative class represents the background. The confusion matrix determines how the applied model categorizes the data. In Figure 1, (i) true positive (TP) indicates that the data belonging to the J/ψ meson signal class was correctly identified by the method; (ii) true negative (TN) shows that the data belonging to the background class was correctly identified by the model; (iii) false negative (FN) shows that the J/ψ meson signal in the data was detected as background by the algorithm; and (iv) false positive (FP) shows that the data belonging to the background class was identified as a J/ψ meson signal by the model. In the most ideal situation, the values of FP and FN are expected to be 0.

True	Negative	Positive
	Negative	Positive
Negative	True Negative (TN)	False Positive (FP)
Positive	False Negative (FN)	True Positive (TP)
	Negative	Positive
	Predicted	

Figure 1. An example of confusion matrix.

Sensitivity will be the ratio of the J/ψ meson class correctly identified by the model in the dataset to the entire correct signal class. It will be calculated using the parameters in the matrix as shown in Equation 1 [29]. Precision will indicate the performance of the ML model in signal determination and will be determined by Equation 2 [29]. The F1 score, which evaluates the model's performance by considering both sensitivity and precision, will be calculated as a harmonic mean as shown in Equation 3 [29].

$$\text{Sensitivity} = \frac{TP}{TP + FN} \tag{1}$$

$$\text{Precision} = \frac{TP}{TP + FP} \tag{2}$$

$$\text{F1 score} = \frac{2 \times \text{Sensitivity} \times \text{Precision}}{\text{Sensitivity} + \text{Precision}} \tag{3}$$

For measuring the performance of the ML model, the "Receiver Operating Characteristic Curve (ROC)" method is also used. It is based on (i) determining the sensitivity and (ii) the "false positive rate ($FPR = FP / (FP + TN)$)" criteria, (iii) creating two-dimensional graphs of these, and (iv) calculating the area under the curve (AUC ROC). AUC ROC is a measure of how well two classes can be distinguished by the model [30]. A high AUC ROC value indicates the model's power in differentiating classes. An area greater than 0.9 can be interpreted as excellent classification [30].

Evaluation of CatBoost Performance:

To understand J/ψ meson signal identification performance of the CatBoost algorithm confusion matrix was derived represented in Figure 2. From the figure it is summarized that the model only classifies 7 background events as the meson signal. In addition, the model predicts 1 signal event as background.

Figure 2. Confusion matrix of CatBoost model implementation to the dataset.

Table 2 presents the average sensitivity, precision, and F1-score of CatBoost algorithm derived from the confusion matrix represented in Figure 2. The associated AUC-ROC values is also given in Table 2. From the table it is concluded that Cat Boost algorithm achieves a 99.986% success in predicting the ground state of charmonium, with a sensitivity of 99.771% and a precision of 99.433%. Predicted J/ψ invariant mass spectrum by CatBoost is demonstrated in Figure 3. As it is understood from the figure the algorithm performed well even if the signal is quite low.

Table 2. Performance of CatBoost algorithm along with the associated AUC-ROC values.

Sensitivity	Precision	F-1 Score	AUC ROC
0.99711	0.99433	0.99571	0.99986

CONCLUSION

This paper has successfully demonstrated the remarkable efficacy of the CatBoost algorithm in identifying $J/\psi \rightarrow e^+e^-$ decay events in high-energy physics experiments, specifically within the context of data collected at the LHC. The key performance metrics, as detailed in Table 2 and Figure 2, underscore the exceptional capabilities of CatBoost in handling complex, large-scale datasets. The algorithm has shown extraordinary accuracy, with a 99.986% success rate in predicting the ground state of charmonium, along with a high sensitivity of 99.771% and a precision of 99.433%. These results highlight model's potential as a transformative tool in particle physics research.

Figure 3. Predicted J/ψ invariant mass spectrum by CatBoost.

The impressive AUC-ROC values associated with the CatBoost model reinforce its reliability and predictive power. This research lays the groundwork for broader applications of machine learning algorithms in particle physics. The success of CatBoost in this study encourages further exploration into other sophisticated data-driven approaches that could potentially uncover deeper insights and accelerate scientific discoveries.

Özet

Bu araştırmada orta çocukluk döneminde anne ve babalara güvenli bağlanma düzeyleri arasındaki ilişkinin ve bu düzeyleri etkileyen faktörlerin incelenmesi amaçlanmaktadır. Bu amaçla orta çocukluk dönemindeki 204 çocuk araştırmaya dahil edilmiştir. Araştırmada veri toplama aracı olarak Kerns Güvenli Bağlanma Ölçeği Anne ve Baba Formları ve Kişisel Bilgi Formu kullanılmıştır. Gerçekleştirilen analizler sonucunda, çocukların anne ve babalarına güvenli bağlanma düzeyleri arasında orta düzeyde anlamlı pozitif bir ilişki olduğu belirlenmiştir. Çocukların anne ve babalarına güvenli bağlanma düzeyleri cinsiyete, anne ve baba öğrenim düzeyine, annelerin sosyal aktivitelere götürme sıklıklarına göre farklılaşmamıştır. Babaların çocuklarını sosyal aktivitelere götürme sıklıkları ile hem anneye hem de babaya güvenli bağlanma düzeyleri arasında anlamlı pozitif yönde bir ilişki tespit edilmiştir. Anneler tarafından istenen gebelik sonucu dünyaya gelme durumlarına göre çocukların annelerine güvenli bağlanma düzeyleri anlamlı farklılık gösterirken, babalarına güvenli bağlanma düzeyleri anlamlı farklılık göstermemiştir. Babalar tarafından istenen gebelik sonucu dünyaya gelme durumlarına, annelerin doğumdan sonra bebek bakımında eşlerinden destek alma durumlarına, babaların doğumdan sonra bebeklerinin bakımını üstlenme durumlarına göre ise çocukların babalarına güvenli bağlanma düzeyleri anlamlı düzeyde farklılaşırken, annelerine güvenli bağlanma düzeyleri anlamlı olarak farklılaşmamıştır.

Anahtar Kelimeler: Anne, baba, güvenli bağlanma, orta çocukluk.

**AN EXAMINING THE RELATIONSHIP BETWEEN SECURE ATTACHMENT
LEVELS TO MOTHERS AND FATHERS IN MIDDLE CHILDHOOD AND THE
FACTORS INFLUENCING THESE LEVELS**

Abstract

This research aims to examine the relationship between secure attachment levels to mothers and fathers in middle childhood, along with the factors influencing these levels. For this purpose, a total of 204 children in middle childhood were included in the study. The data collection tools used in the research were Kerns Secure Attachment Scale for Mothers and Fathers, along with a Personal Information Form. The analyses conducted revealed a moderately significant positive relationship between children's secure attachment levels to mothers and fathers. The secure attachment levels of children to their mothers and fathers did not vary based on gender, parental educational levels, or the frequency of mothers' involvement in social activities. However, a significant positive relationship was found between fathers' frequency of taking their children to social activities and the secure attachment levels to both mothers and fathers. The secure attachment levels of children to their mothers showed significant differences based on the circumstances of being desired by mothers during pregnancy, while the secure attachment levels to fathers did not exhibit significant differences. The secure attachment levels of children to their fathers significantly varied based on whether the pregnancy was desired by fathers, the extent of support mothers received from their partners in infant care after birth, and the extent to which fathers took on the responsibility of caring for their infants after birth. However, the secure attachment levels of children to their mothers did not show significant differences in relation to these factors.

Keywords: Secure Attachment, Middle Childhood, Mother, Father.

Giriş

Bağlanma Kuramı'nı geliştiren Bowlby (1969)'e göre bağlanma, yaşamın ilk yıllarında bebek ve bakım veren arasında gelişen duygusal ilişkidir. Bebek ve bakım veren arasında kurulan bağlanma ilişkisi yaşam boyu özellikle duygusal yaşantılarında insanları yönlendiren önemli bir kaynak oluşturmaktadır (Bowlby, 1973; 1988). Bağlanma ilişkisi bebek ve bakım veren arasındaki etkileşimin kalitesine göre şekillenmektedir. Bebekler doğuştan bakım verenleriyle yakınlığı sağlayacak ve koruyacak bir dizi davranışa sahiptir. Bu davranışlar "bağlanma davranışı" olarak adlandırılmaktadır. Ağlama, gülme, gülümseme, seslenme, çığlık atma gibi davranışlar bebeklerin sevgi, ilgi, yakınlık, bakım ve fizyolojik ihtiyaçlarının karşılanması için bakım verenlerine yönelttikleri bağlanma davranışlarıdır. Bakım verenlerin bu davranışlara verdikleri yanıtlar bağlanma ilişkisinin niteliğini belirlemektedir (Bowlby, 1982; 1988). Bakım verenlerin bağlanma davranışlarına verdikleri uygun yanıtlar ve bu davranışları yanıtlamada gecikmemeleri, ilgi, sevgi ve duyarlılıkla bebeklerine yaklaşmaları güvenli bağlanma ilişkisinin gelişmesini sağlamaktadır. Bakım verenlerin, bağlanma davranışlarına yanıt vermedeki tutarsızlıkları, ilgi, sevgi ve duyarlılıktaki eksiklikleri ise güvensiz bağlanma ilişkisi ile sonuçlanmaktadır (Cassidy, 1994; Diehl, Elnick, Bourbeau ve Labouvie-Vief, 1998).

Bağlanma ilişkisi içerisinde bahsi geçen bakım verenler genellikle annelerdir; fakat anne yokluğunda bebekler kendilerine bakım veren yetişkinleri de bağlanma figürü olarak seçebilmektedir. Bebeklerin ilk bağlanma ilişkisini kurdukları yetişkinler Bağlanma Kuramı'nda birinci/birincil bağlanma figürleri olarak adlandırılmaktadır. Bebekler bakım ihtiyaçları azaldıkça ve bağımsız hareket yetenekleri geliştikçe yakınlık duydukları farklı figürleri de bağlanma figürleri olarak belirlemektedir. İkincil bağlanma figürleri adı verilen bu figürler öncelik aile içerisinde seçilmektedir. Babalar, kardeşler bağlanma kuramında ikincil bağlanma kuramları olarak adlandırılmaktadır (Ainsworth ve ark.1978; Hazan ve Shaver, 1994). Bowlby (1969) ikincil bağlanma figürlerinden özellikle babaların, bebeklerin/çocukların yaşam boyu duygusal yaşantılarının belirleyicisi olarak önemli bir yere sahip olduklarını bildirmektedir. Bowlby (1982)'ye göre çocukların birincil bağlanma figürleriyle kurdukları bağlanma ilişkisi ikincil bağlanma figürlerinden olan babalarla kurulan bağlanma ilişkisini etkileyebilmektedir. Anneleriyle güven temelli ilişkiler kuran bebeklerin, babalarıyla da güven temelli ilişkiler kurmaya yatkın oldukları, güvensiz anne-bebek ilişkisinin babalarla kurulacak bağlanma ilişkisini de zedeleyebileceği bildirilmektedir.

Çocukların, bağlanma figürleriyle kurdukları bağlanma ilişkisi gelişimlerini çok yönlü etkilemektedir. Anneleriyle güvenli bağlanma ilişkisi kuran çocuklar bakım verenleriyle kurdukları güven temelli ilişkileri akran ilişkilerine ve sosyal ilişkilerine taşımaktadır (Collins Clark ve Shaver, 1996). Bu çocukların sosyal ortamlara daha kolay uyum sağladıkları ve akran ilişkilerinin daha iyi olduğu, öz güvenlerinin yüksek olduğu, insanlarla iyi düzeyde iletişim kurabildikleri bildirilmektedir. (Waters, Hamilton ve Weinfield, 2000). Birincil bakım verenleriyle güvensiz bağlanma geliştiren çocukların bağlanma ilişkisi yoluyla kazanamadıkları temel güven duygusu eksikliğinin kurdukları diğer ilişkileri de olumsuz etkilediği bildirilmektedir. Güvensiz bağlanma stiline sahip çocukların sosyal ortamlara kolay uyum sağlayamadıkları, akran ilişkilerinde güçlükler yaşadıkları, öz güvenlerinin beklenen düzeyde olmadığı, diğer insanlarla iletişim kurmada sınırlılık yaşayabildikleri bildirilmektedir. (Bowlby, 1977; Belsky, 2005). Damar (2019) araştırmasında, orta çocukluk döneminde, çocukların prososyal davranışlarıyla bağlanma güvenlikleri arasında anlamlı ve pozitif yönde bir ilişki olduğunu belirlemiştir. Sumbaş ve Sezer (2017) orta okul öğrencilerinde, güvenli bağlanmanın çocukların umut düzeyini ve kendilerine yönelik pozitif algılarını olumlu yönde etkilediğini saptamıştır. Birincil bağlanma figürleri olan annelerle kurulan bağlanma ilişkisi gibi ikincil bağlanma figürlerinden olan babalarla kurulan bağlanma ilişkisi de çocukların gelişimleri üzerinde etkilidir. (Grossmann ve ark., 2002; Rosenberg ve Wilcox, 2006). Deneault ve arkadaşları (2021) gerçekleştirdikleri metanaliz çalışmasında çocukların babalarıyla bağlanma düzeyleri ile içselleştirilmiş ve dışsallaştırılmış davranış problemleri arasında negatif yönde bir ilişki olduğunu belirlemişlerdir. Dumont ve Paquette (2013) araştırmalarında baba-çocuk bağlanma güvenliğinin çocukların sosyal-duygusal gelişimlerini olumlu yönde etkilediğini belirlemişlerdir. Bureau ve arkadaşları (2017) okul öncesi dönemde çocukların problem davranışlarıyla babalarına bağlanma güvenlikleri arasında güçlü bir ilişki olduğunu, babalarıyla bağlanma düzeyleri düştükçe, problem davranışların arttığını tespit etmişlerdir.

Bu araştırmada çocukların gelişimlerinde oldukça önemli bir yere sahip olan anne ve babalarına güvenli bağlanma düzeyleri arasındaki ilişki ve bu düzeyleri etkileyen faktörlerin incelenmesi amaçlanmaktadır. Araştırma bulgularının kuramsal alt yapıya, literatüre ve bağlanma araştırmalarına katkı sağlayacağı, araştırmacılara yol gösterici olacağı düşünülmektedir.

Materyal ve Yöntem

Araştırma Modeli

Bu araştırma, tarama modelinde betimsel bir araştırmadır. Bu araştırma ile orta çocukluk döneminde annelere ve babalara bağlanma düzeyi arasındaki ilişki ve bu düzeyi etkileyen faktörlerin incelenmesi amaçlandığı için betimsel tarama modeli kullanılmıştır. Tarama modelleri; geçmişte veya halen var olan bir durumu, var olduğu şekli ile betimlemeyi amaçlayan araştırma yaklaşımıdır (Karasar, 2006).

Katılımcılar

Araştırmanın evrenini Tekirdağ ili Süleymanpaşa İlçesi' nde Milli Eğitim Bakanlığına bağlı ortaokullarda 2021-2022 eğitim öğretim yılında, 5. ve 6. Sınıflarda öğrenim gören 10 ve 11 yaş arası çocuklar oluşturmaktadır. Araştırmanın örneklemini, belirtilen okullar arasından basit tesadüfi örnekleme yöntemi ile belirlenen dört okuldaki, tam ailelerden gelen, normal gelişim gösteren 204 çocuk ve ebeveynleri oluşturmaktadır.

Araştırmaya dahil edilen çocuklar ve ailelere ilişkin demografik dağılımlar Çizelge 1.'de verilmiştir.

Çizelge 1. Araştırmaya Dahil Edilen Çocuklar ve Ailelerin Sosyo-Demografik Özelliklerine Göre Frekans ve Yüzde Değerleri

Sosyo-Demografik Özellikler	Gruplar	f	%
Cinsiyet	Kız	100	49,0
	Erkek	104	51,0
Anne öğrenim düzeyi	Okur-Yazar veya İlköğretim	71	34,8
	Ortaokul	34	16,7
	Lise	52	25,5
	Lisans ve Üzeri	47	23,0
Baba öğrenim düzeyi	Okur-Yazar veya İlköğretim	46	22,5
	Ortaokul	29	14,2
	Lise	63	30,9
Anne istenen/beklenen gebelik	Lisans ve Üzeri	66	32,4
	Evet	182	89,2
Baba istenen/beklenen gebelik	Hayır	22	10,8
	Evet	176	86,3
Anne bebek bakıma eş desteği	Hayır	28	13,7
	Hiçbir zaman	22	10,8
	Ara sıra	107	52,5
Baba bebek bakımını üstlenme	Her zaman	75	36,7
	Hiçbir zaman	14	6,9
	Ara sıra	103	50,5
Anne sosyal aktivitelere götürme	Her zaman	87	42,6
	Evet	168	82,4
	Hayır	20	9,8
Baba sosyal aktivitelere götürme	Ara Sıra	16	7,8
	Evet	146	71,6
	Hayır	44	21,5
	Ara Sıra	14	6,9

Çizelge 1. incelendiğinde araştırmaya katılan çocukların %49,0'ının (n=100) kız, %51,0 'ının (n=104) erkek olduğu görülmektedir. Ebeveynlerin eğitim düzeyine bakıldığında annelerinin %34,8 'inin (n=71) okur-yazar veya ilköğretim, %16,7' sinin (n=34) ortaokul, %25,5' inin (n=52) lise, %23,0' ının (n=47) lisans ve üzeri, babalarının %22,5' inin (n=46) okur-yazar veya ilköğretim, %14,2' sinin (n=29) ortaokul, %30,9'unun (n=63) lise, %32,4 'ünün (n=66) lisans ve üzeri mezunu olduğu görülmektedir. Çocukların ebeveynleri tarafından istenen/beklenen gebelik sonucu dünyaya gelme durumları incelendiğinde anneleri tarafından %89,2' sinin (n=182) istenen, %10,8' inin (n=22) istenmeyen, babaları tarafından %86,3'ünün (n=176) istenen %13,7'sinin (n=28) istenmeyen bir gebelik sonucu dünyaya geldiği ortaya çıkmaktadır. Bebeklik döneminde annelerin bebek bakımında eşlerinden aldıkları desteğe göre değerlendirildiğinde %10'8'inin (n=22) hiçbir zaman destek almadığı, %52,5'inin (n=107) ara sıra, %36,7'sinin (n=75) her zaman destek aldığı, babaların bebeklik dönemlerinde bakımlarını üstlenme durumlarına göre ise %6,9'unun (n=14) hiçbir zaman üstlenmediği, %50,5' inin (n=103) ara sıra, %42,6' sının (n=87) her zaman üstlendiği tespit edilmiştir. Çocukların ebeveynlerinin sosyal aktivitelere götürme durumları incelendiğinde annelerinin %82,4' ünün (n=168) götürdüğü, %9,82inin (n= 20) götürmediği, %7,8' inin (n=16) ara sıra götürdüğü, babalarının %71,6' sının (n=146) götürdüğü, %21,5'inin (n=44) götürmediği, %6,9'unun ise ara sıra götürdüğü görülmektedir.

Veri Toplama Araçları

Anne ve Baba Bilgi Formları

Araştırmacı tarafından anne ve babalara yönelik ayrı iki form hazırlanmıştır. Anne bilgi formunda çocuğun yaşı, cinsiyeti, annenin öğrenim düzeyi, doğumdan sonra bebek bakımında eşinden destek alma ve çocuğuyla sosyal aktivitelere gitme durumu; baba bilgi formunda baba öğrenim düzeyi, bebeklik döneminde çocuğunun bakımını üstlenme ve çocuğuyla sosyal aktivitelere gitme durumuyla ilgili sorulara yer verilmiştir.

Kerns Güvenli Bağlanma Ölçeği (KGBÖ)

Kerns, Klepac ve Cole (1996) tarafından geliştirilen Kerns Güvenli Bağlanma Ölçeği (KGBÖ) on beş maddeden oluşmaktadır. Orta çocukluk ve ergenlik öncesi dönemdeki çocuklara uygun olarak geliştirilen on beş maddeli ölçek çocukların bağlanma figürlerinin (a) duyarlı ve ulaşılabilir olacaklarına ne oranda güvendiklerini, (b) stres altında iken bağlanma figürlerine güvenme eğilimlerini ve (c) bağlanma figürleri ile iletişim kurma kolaylığını ve isteklilik

düzeylerini ölçmeyi amaçlamaktadır. Çocuklar ölçeği hem anne hem de babaları için ayrı olarak doldurmaktadırlar. Ölçekten en az 15 puan, en fazla 60 puan alınabilmektedir. 1, 3, 4, 9, 10, 13, 15. Maddeler ters kodlanmaktadır. Yüksek puanlar ebeveynlere karşı güvenli bağlanmaya karşılık gelmektedir (Sümer ve Anafarta-Şendağ, 2009).

Ölçeğin Türkçe'ye çevrilmesi ve uyarlanması Sümer ve Anafarta-Şendağ (2009) tarafından yapılmıştır. Ölçeğin Cronbach alfa iç tutarlık katsayıları anne formu için .84 ve baba formu için .88 olarak bulunmuştur. Ölçeğin geçerlik çalışmaları kapsamında anne ve baba formları için ayrı ayrı ana bileşenler (faktör) analizi yapılmıştır. Yapılan çalışmada hem anne hem de baba formu için KGBÖ'nün tek boyut üzerinden ebeveynlere güvenli bağlanma düzeyini ölçtüğü görülmüştür. Bu çalışmada anne formu için Cronbach alfa iç tutarlık katsayısı .82, baba formu için Cronbach alfa iç tutarlık katsayıları .80 olarak bulunmuştur.

Verilerin Analizi

Araştırmadan elde edilen verilerin analizi için Statistical Package for Social Sciences (SPSS) 22 bilgisayar programı kullanılmıştır. Sosyo-demografik verilerin değerlendirilmesinde sayı ve yüzdeler hesaplanmıştır. Araştırmadan elde edilen verilerin analizinde öncelikle parametrik test koşullarının sağlanıp sağlanmadığına ilişkin normallik testi yapılmıştır. Kolmogorov- Smirnov Testi ile Basıklık-Çarpıklık Katsayısı ölçek verilerinin normal dağılmadığını göstermiştir. Parametrik olmayan testlerin kullanıldığı çalışmada iki grubun karşılaştırılmasında Mann Whitney U testi, üç ve daha fazla grubun karşılaştırılmasında Kruskal Wallis-H Testi kullanılmıştır. Ölçekler arasındaki korelasyon ise Spearman Korelasyon Analizi ile hesaplanmıştır. Araştırmada anlamlılık düzeyi .05 olarak kabul edilmiştir.

Çizelge 2. Kerns Anne ve Baba Güvenli Bağlanma Ölçeklerine İlişkin Kolmogorov - Smirnov ve Basıklık -Çarpıklık Testi Sonuçları

	Kolmogorov-Smirnov Testi		Basıklık Çarpıklık Katsayısı		
	Z	Sd	p	Skewness	Kurtosis
Kerns Güvenli Bağlanma Ölçeği					
Anne	.133	204	.00	-,974	-,210
Baba	.141	204	.00	-,564	-,210

Çizelge 2.'de ölçekler ve alt boyutlarına ilişkin normallik testleri sonuçları incelendiğinde, Kolmogorov-Smirnov testi sonucunda; Kerns Anne ve Baba Güvenli Bağlanma Ölçeklerinin dağılımının normal olmadığı belirlenmiştir ($p > 0,01$). Bunun için ek olarak Basıklık-Çarpıklık Katsayısı ve Grafik dağılım testlerine bakılmıştır. Büyüköztürk ve arkadaşları (2010)'na göre; bir değişkenin normal dağılıp dağılmadığı mantıksal bir karardır. Bir dağılımın tam normal

olması ihtimali çok düşük olmakla birlikte, normallik incelemesi yaparken aslında normallikten önemli ölçüde sapma gösterip göstermediğine bakılmalıdır. Bunun için de incelenen üç temel nokta vardır. Bu sayıların -1 ile +1 aralığında yer alması gereklidir. İkinci nokta Shapiro-Wilk ve Kolmogorov-Simirnov testidir. Grup büyüklüğünün 50'den küçük olması durumunda Shapiro-Wilk, 50'den büyük olması durumunda ise Kolmogorov-Simirnov Testi puanlarının normal dağılıp dağılmadığını incelemek için kullanılmaktadır. Araştırma grubunda çocukların sayısının 50'den fazla olması nedeniyle Kolmogorov-Simirnov testi uygun bulunmuştur. Üçüncü kriterde dağılım grafiklerinin normal dağılıma benzemesidir. Histogram grafiği dağılımın normallikten saptığını göstermiştir. Bu bakımdan tüm bu kriterler göz önünde bulundurularak; Kerns Anne ve Baba Güvenli Bağlanma Ölçekleri puan dağılımının normal dağılım göstermemesi nedeniyle parametrik olmayan testler kullanılmıştır. Niceliksel verilerin karşılaştırılmasında ikiden fazla grup durumunda, normal dağılım göstermeyen parametrelerin gruplar arası karşılaştırmalarında Kruskal Wallis H Testi kullanılmıştır ve farklılığın anlamlı çıkması durumuna ikili grupların karşılaştırılmasında Mann Whitney U testinden yararlanılmıştır (Büyüköztürk 2006).

Ölçekler normal dağılıma sahip olmadıkları için kolerasyon analizi olarak Pearson Kolerasyonu katsayısına bakılmıştır. İki değişken arasında Pearson Kolerasyon katsayısının yorumunda $r=0.00 - 0,25$ çok zayıf, $0,26 - 0,49$ zayıf, $0,50-0,69$ orta, $0,70-0,89$ yüksek, $0,90 -1,00$ çok yüksek düzeyde ilişki kabul edilmektedir (Kalaycı, 2010).

Bulgular

Bu bölümde araştırma bulguları Çizelge 3. İle Çizelge 12. Arasında sunulmaktadır.

Çizelge 3. Kerns Anne ve Baba Güvenli Bağlanma Ölçeklerine İlişkin Pearson Kolerasyonu Sonuçları

Çizelge 12. incelendiğinde babaların sosyal aktivitelere götürme durumlarına göre çocukların Kerns Anne ($x^2 = 8,793$; $p < ,05$) ve Baba ($x^2 = 22,914$; $p < ,01$) Güvenli Bağlanma Ölçekleri puan ortalamalarının anlamlı düzeyde farklılaştığı ortaya çıkmaktadır. Gruplar arası farkın belirlenebilmesi için yapılan One Withney U testi sonuçlarına göre babalarının sosyal aktivitelere götürdüğü çocukların babaları vakit buldukça götüren ve götürmeyenlere göre babalarına, götüren babalara sahip çocukların götürmeyenlere göre annelerine daha yüksek düzeyde güvenli bağlanma sergiledikleri ortaya çıkmaktadır.

Tartışma

Bu araştırmada orta çocukluk döneminde anne ve babalara güvenli bağlanma düzeyini etkileyen faktörlerin incelenmesi amaçlanmaktadır. Araştırmada ilk önce parametrik koşulların sağlanıp sağlanmadığını belirlemek amacıyla normallik testleri yapılmıştır. Daha sonra annelere ve babalara güvenli bağlanma düzeyi arasındaki kolerasyon değerlendirilip, anne ve babalara güvenli bağlanma düzeyi çeşitli değişkenler açısından incelenmiştir.

Anne ve Babaya Bağlanma Korelasyonu;

Bowlby (1969) çocukların genellikle birincil bağlanma figürlerinin anneler olduğunu; fakat bebeklerin ilk birkaç ay içerisinde babalarına da bağlanma sergilediklerini, anneye olan bağlanma ilişkisinin babayla olan bağlanma ilişkisinin güçlü bir yordayıcısı olduğunu bildirmektedir. Bağlanma davranışlarının en belirgin olduğu yedi ve sekizinci aylardan başlayarak bebekler anne ve babalarını gördüklerinde gülümseyerek yakınlaşmayı istemektedir. Anneye güvenli bağlanan bebekler bu bağlanma davranışını diğer bağlanma figürlerine de sergileme eğilimindedir. Çocukların bağlanma güvenlikleri anne-babaların şefkati ve duyarlılığı ile beslenmektedir (Bee ve Boyd, 2009). Fox, Kimmerly ve Schafer (1991) çocukların anne ve babalarına bağlanmaları arasındaki uyumu değerlendirmek amacıyla gerçekleştirdikleri meta analiz çalışmalarında anne ve babaya bağlanmanın birbirinin belirleyicisi olduğunu saptamışlardır. Literatür değerlendirildiğinde de anne ve babaya bağlanmanın birbirinden bağımsız olmadığı ortaya çıkmaktadır.

Cinsiyet

Araştırmada, cinsiyete göre çocukların Kerns Anne ve Baba Güvenli Bağlanma ölçeklerinden aldıkları puan ortalamalarının anlamlı düzeyde farklılaşmadığı saptanmıştır ($p>0.05$). Bağlanmanın cinsiyetle ilişkisiyle ilgili literatürde iki yaygın görüş bulunmaktadır. Birincisi ebeveynlere bağlanmanın cinsiyete göre farklılaşmaması, ikincisi ise kız çocuklarının erkek çocuklara göre ebeveynlerine daha güvenli bağlanmasıdır. Bağlanmanın cinsiyete göre farklılaşmaması genellikle anneliğin içgüdüsel bir davranış olması ve anne davranışlarının çocukların cinsiyetlerine göre farklılaşmamasıyla, kız çocuklarının lehine sonuçlanması ise onların duygusal farklılıkları nedeniyle ebeveynlerinden sevgi ve sıcaklığı almaya daha açık olmaları, bu farklılıktan kaynaklanan davranış biçimleri ve ebeveyn tutumlarıyla açıklanmaktadır (İlhan-Ildız ve Ahmetoğlu, 2016). Kerns, Tomich, Aspelmeier ve Contreras (2000), Lecompte ve arkadaşları (2014) araştırmalarında bulgularla tutarlı bir şekilde bağlanma güvenliğinin cinsiyete göre farklılaşmadığını saptamışlardır. Cohn (1990) ise bağlanmanın cinsiyete göre anlamlı düzeyde farklılaşmamasına rağmen kız çocuklarının ortalama puanlarının, erkek çocuklarından daha yüksek olduğunu vurgulanmaktadır. Pierrehumbert ve arkadaşları (2009) ise araştırmalarında projektif hikâye temelli bağlanma ölçüm yöntemini kullanarak kız çocuklarının erkeklere göre hikayelerinde bağlanma figürleriyle daha yakın ve sıcak bir ilişkiden bahsettiklerini bildirmektedir. Bulgulara göre kız çocuklarının, erkek çocuklara göre ortalama puanları daha yüksektir. Literatürden yola çıkarak bağlanma

figürlerinin erken dönemlerden başlayarak bağlanmanın kurulması için gerekli olan sarılma, sıcaklık, duyarlılık ve tutarlılık gibi davranışları cinsiyet ayrımı yapmadan çocuklarına gösterdiklerini; fakat kız çocuklarının duygusal yapılarındaki farklılıktan dolayı bu davranışlardan daha fazla sıcaklık ve şefkat algıladıkları düşünülebilir.

Anne ve Baba Öğrenim Düzeyi

Araştırmada anne öğrenim düzeyine göre çocukların Kerns Anne ve Baba Güvenli Bağlanma ölçeklerinden aldıkları puan ortalamalarının anlamlı düzeyde farklılaşmadığı tespit edilmiştir ($p>0.05$). Literatürde bulgularla tutarlılık gösteren araştırma sonuçları yer almaktadır. İlhan-Ildız ve Ahmetoğlu (2016) annelerin öğrenim düzeylerine göre çocukların bağlanma stilleri arasında anlamlı farklılık olmadığını belirlemiş, bu durumu bağlanmanın kurulması sırasında önemli olan, dokunma, temel ihtiyaçların karşılanması, hassasiyet, sevgiyi verebilme gibi davranışların farklı öğrenim düzeyindeki anne ve babalar tarafından da rahatlıkla yerine getirilebilir davranışlar olmasıyla açıklamışlardır. Carlson (1995) çalışmasında annenin öğrenim düzeyinin annelik davranışını etkilemediğini bunun nedeninin de anneliğin kadının doğasında var olan bir duygu olmasıyla açıklamaktadır. Çocukların anne-babalarına güvenli bağlanma düzeylerinin anne öğrenim durumuna göre farklılaşmamasının nedeninin evrensel olarak anne-çocuk ilişkisinin doğum öncesi dönemde gelişmeye başlaması ve annelik davranışlarının içgüdüsel olarak gelişmesi, aynı zamanda gelişen teknoloji ile tüm sosyo-kültürel düzeydeki annelerin anne-çocuk ilişkisiyle ilgili bilgilere kolay erişebilme imkanı olması, bu durumunda düşük öğrenim düzeyine sahip annelerin de farkındalıklarını arttırmasına neden olduğu düşünülebilir. Araştırmada babaların öğrenim düzeyine göre çocukların Kerns Anne ve Baba Güvenli Bağlanma ölçekleri puan ortalamalarının anlamlı düzeyde farklılaşmadığı ortaya konulmuştur ($p>0.05$). Benzer şekilde Karaboğa (2011), Nwoke (2013), İlhan-Ildız ve Ahmetoğlu (2016) babaların öğrenim durumları ile çocukların bağlanma güvenlikleri arasında anlamlı bir farklılık olmadığını belirlemişlerdir. Bağlanmanın gelişiminde bakım yoluyla çocuğun beslenme gibi fizyolojik ihtiyaçlarının giderilmesinin önemi vurgulanmaktadır (Bowlby, 1969; 1982). Hewlett (2000) çalışmasında çoğu kültürde babaların çocuklarının bakımında oldukça az yer aldığından bahsetmektedir. Özellikle kültürümüzde geleneksel aile yapısının etkilerinin devam etmesi babaların çocukların bakımından uzak kalmalarıyla sonuçlanmaktadır. Bu durum babaların öğrenim düzeyine göre ölçeklerden alınan puanların anlamlı düzeyde farklılaşmamasının nedeni olarak düşünülebilir. Literatürde babaların eğitim düzeyi ile çocuklarda bağlanma arasında anlamlı ilişkilerin tespit

edildiği arařtırmalarda bulunmaktadır. Crittenden ve Claussen (2003), Seven (2006), bu alıřmalara rnek gsterilebilir.

Anne ve Baba Tarafından İstenen Gebelik Sonucu Dnyaya Gelme

Anneler tarafından istenen gebelik sonucu dnyaya gelme durumlarına gre ocukların Kerns Baba Gvenli Baėlanma leėi puan ortalaması anlamlı dzeyde farklılařmazken ($p>0.05$), Kerns Anne Gvenli Baėlanma leėi puan ortalaması anlamlı dzeyde farklılařmaktadır ($p<0.05$). Anneleri tarafından istenen/beklenen bir gebelik sonucu dnyaya gelen ocuklar istenmeyen gebelik sonucu dnyaya gelenlere gre annelerine daha yksek dzeyde gvenli baėlanma gstermiřlerdir. Anneleri tarafından istenen/beklenen bir gebelik sonucu dnyaya gelen ocuklar istenmeyen gebelik sonucu dnyaya gelenlere gre annelerine daha yksek dzeyde gvenli baėlanma gstermiřlerdir. Yavuzer (2000) annelerin istenmeyen bir gebelik sonucunda dnyaya gelen bebeklerine karřı fke duyabileceėini, bakım ve ihtiyalarıyla ilgilenme konusunda isteksizlik yařayabileceėini, istenen gebelik sonucunda dnyaya gelen bebeklerine ise sevgi, ilgi ve duyarlılıkla yaklařacaėını bildirmektedir. zkan ve arkadařları (2013) arařtırmasında doėumdan sonra annelik rolnn bařarıyla gerekleřtirilmesinde gebelik ncesi ve sırasında hazır bulunuřluėun nemini tespit etmiřtir. Baėlanmanın kurulmasında ilk ayların nemi dřnldėnde istenen/beklenen gebelik sonucunda dnyaya gelmeyen bebeklere, annelerinin en ok bakım, ilgi ve sevgiye ihtiya duydukları ilk dnemlerde beklenen řekilde karřılık vermemesinin ocuklarda gvenli baėlanma dzeyinin dřmesine neden olduėu dřnlebilir.

Arařtırmada babalar tarafından istenen gebelik sonucu dnyaya gelme durumlarına gre ocukların Kerns Anne Gvenli Baėlanma leėi puan ortalaması anlamlı dzeyde farklılařmazken ($p>0.05$), Kerns Baba Gvenli Baėlanma leėi puan ortalaması anlamlı dzeyde farklılařmaktadır ($p<0.05$). Babaları tarafından istenen/beklenen bir gebelik sonucu dnyaya gelen ocuklar istenmeyen gebelik sonucu dnyaya gelenlere gre babalarına daha yksek dzeyde gvenli baėlanma gstermiřlerdir. Babalık duygusunun doėumdan sonraki dnemlerde kazanıldıėı bilinmektedir. Babalık duygusunun oluřumundaki nemli bir faktr ise babalıėa hazırbulunuřluktur. Babalıėa hazırbulunuřluėu olan babalar babalık roln abuk kabullenirken, hazırbulunuřluėu olmayan babaların babalıėı kabullenmesinin zaman aldıėı ve ilk zamanlar bebeklerine karřı ilgisiz olabilecekleri bildirilmektedir (Axinn, Barber ve Thornton, 1998). İstenen-beklenen gebelik sonucunda dnyaya gelmeyen ocukların babalarının, babalık roln benimsemede ve bebeklerini kabullenmede glk yařamasının

bağlanmanın kurulması için gerekli olan fiziksel temas, ilgi ve duyarlılık gibi davranışları sergilemede sınırlılığa yol açtığı, bu durumda çocukların güvenli bağlanma düzeylerini olumsuz etkilediği düşünülebilir.

Doğum Sonrası Bebek Bakımı

Araştırmada annelerin doğumdan sonra bebek bakımında eşlerinden aldıkları desteğe göre Kerns Anne Güvenli Bağlanma Ölçeği puan ortalamasının anlamlı düzeyde farklılaşmadığı ($p>0.05$), Kerns Baba Güvenli Bağlanma Ölçeği puan ortalamasının ise anlamlı düzeyde farklılaştığı tespit edilmiştir ($p<0.05$). Bebek bakımında eşlerinden her zaman destek alan annelere sahip çocukların ara sıra destek alanlara ve hiçbir zaman destek almayanlara; ara sıra destek alanların ise hiçbir zaman destek almayan annelere sahip olanlara göre babalarına güvenli bağlanma düzeylerinin daha yüksek olduğu ortaya çıkmıştır. Araştırmada babaların doğumdan sonra bebeklerinin bakımını üstlenme durumlarına göre çocukların Kerns Anne Güvenli Bağlanma Ölçeği puan ortalamasının anlamlı düzeyde farklılaşmadığı ($p>0.05$), Kerns Baba Güvenli Bağlanma Ölçeği puan ortalamasının ise anlamlı düzeyde farklılaştığı belirlenmiştir ($p<0.05$). Doğumdan sonra çocuklarının bakımını her zaman üstlenen babalara sahip çocukların ara sıra üstlenen ve hiçbir zaman üstlenmeyenlere göre babalarına güvenli bağlanma düzeylerinin daha yüksek olduğu tespit edilmiştir. Literatür incelendiğinde konuyla ilgili önemli bulgulara rastlanmaktadır. Babalar çocuklar için önemli bir duygusal güven kaynağıdır. Çocukların temel bakımına babaların erken dönemlerdeki katılımı, bebeklik dönemindeki sevecen davranışları ve duygusal tepkileri kabul edişleri, üzgün veya korkulu durumlarda bebeklerini fiziksel temasla rahatlatmaları yüksek düzeyde güvenli bağlanma ilişkisinin kurulmasında önemlidir (Scott ve Hunt, 2011; Rosenberg ve Wilcox, 2006). Cox ve arkadaşları (1992) 3 aylık bebekler üzerinde yaptığı araştırmasında, bebeklerin annelerin yanı sıra babalarıyla da etkileşim içerisinde olduklarını gözlemlemiştir ve “pozitif” ebeveyn-bebek etkileşiminin annelerde olduğu gibi babalarla da kurulan güvenli bağlanma ilişkisi üzerinde belirleyici olduğunu tespit etmiştir. Lundy (2002) ise ilk zamanlardaki bebek-baba etkileşiminin bağlanma güvenliğinin önemli bir yordayıcısı olduğunu ortaya koymaktadır. Annenin çocukla ilişkisinin en önemli evresi doğumdan hemen önce başlayan ve doğumdan sonraki birkaç ayı içerisine alan evredir. Bu dönemde annelerin özellikle eş desteğine ihtiyaçları bulunmaktadır (Yavuzer, 2000). Annelerin doğum sonrasında eşlerinden bebek bakımı konusunda aldıkları destek hem annelik rolünü benimsemelerinde hem de kaygı, depresyon gibi doğum sonrası oluşabilecek olumsuz duygu durumlarına karşı korunmalarında oldukça

önemlidir (Van der Akker, 2012). Bulgulardan yola çıkarak babalık rolünün erken dönemlerde benimsenmesinin ilerleyen dönemlerde de babalık davranışları üzerinde olumlu etkileri olduğu düşünülebilir. Rohner (1998) babaların çocuklarına karşı sıcaklık, sevgi, ilgi ve yakınlığının çocuklar üzerinde anneler kadar hatta bazı durumlarda annelerden daha etkili olduğunu bildirmektedir. Bulgular ve literatürdeki araştırmalar değerlendirildiğinde bağlanmanın kurulmasından kritik dönemler olan ilk aylarda babaların bebek bakımında eşlerine destek olmaları ve bebek bakımını üstlenmeleri çocukların güvenli bağlanma düzeylerini artırdığı söylenebilir.

Çocukları Sosyal Aktivitelere Götürme

Araştırmada annelerin sosyal aktivitelere götürme durumlarına göre çocukların Kerns Anne ve Baba Güvenli Bağlanma Ölçeği puan ortalamalarının anlamlı düzeyde farklılaşmadığı ortaya konmuştur ($p>0.05$). Araştırmada babaların sosyal aktivitelere götürme durumlarına göre Çocukların Kerns Anne ($p<0.05$) ve Baba ($p<0.01$) Güvenli Bağlanma Ölçeği puan ortalamalarının anlamlı düzeyde farklılaştığı ortaya konulmuştur. Babalarının sosyal aktivitelere götürdüğü çocukların babaları vakit buldukça götüren ve götürmeyenlere göre babalarına daha yüksek düzeyde güvenli bağlandıkları, götüren babalara sahip çocukların götürmeyenlere göre annelerine daha yüksek düzeyde güvenli bağlanma sergiledikleri ortaya çıkmaktadır. Babalarının sosyal aktivitelere götürdüğü çocuklar hem annelerine hem de babalarına daha yüksek düzeyde güvenli bağlanma sergilemiştir. Anne ve babaların çocuklarıyla etkileşim biçimleri farklılık göstermektedir. Özellikle 90'lı yıllardan itibaren, babaların bebeklikten başlayarak çocuklarıyla etkileşim biçimlerinin annelerinkinden çok daha farklı olduğuna dair görüşler dile getirilmeye başlanmıştır (Sroufe, Cooper ve DeHart, 1992). Babaların çocukların yaşamlarına katılımları annelere göre sınırlılık göstermektedir Babalar çocuklarla etkinliklere katılan, oyun oynayan, derslerine yardımcı olan ve anneye bu yönleriyle destek olan yetişkinler olarak görülmektedir (Shannon, Tamis-LeMonda, London ve Cabrera, 2002). Cox ve arkadaşları (1992) bağlanma ilişkisinde babanın çocuklarla arkadaşlığının, baba duyarlılığından daha etkili olduğu sonucuna ulaşmıştır. Bulgulara göre çocukların sosyal aktivitelere katılımında annelere göre değil, babalara göre ölçeklerden alınan puanların farklılaşması annelik rolünün daha çok çocuk bakımı ve ev düzeniyle, babalık rolünün ise bebeklik döneminden başlayarak oyun oynama, birlikte aktivitelere katılma ve etkinlikler yapma ile ilişkilendirilmesiyle, çocukların babalarıyla bu tür aktiviteler yoluyla etkileşim kurmalarıyla bunun sonucu olarak da babalarının sosyal aktivitelere her zaman götüren

çocukların babalarına daha güvenli bağlanmaları ve daha olumlu ebeveynlik davranışları algılamalarıyla açıklanabilir.

Sonuç ve Öneriler

Orta çocukluk döneminde anne ve babalara güvenli bağlanma düzeyi ile bu düzeyleri etkileyen faktörlerin incelenmesi amacıyla gerçekleştirilen bu araştırmada, anne ve babalara güvenli bağlanma düzeyi arasında orta düzeyde anlamlı ve pozitif bir ilişki olduğu ortaya çıkmıştır. Çocukların annelerine ve babalarına güvenli bağlanma düzeyini etkileyen faktörlerle ilgili ise bağlanma kuramı alt yapısıyla desteklenen önemli bulgular elde edilmiştir. Betimsel bir çalışma olan bu araştırma tarama modeliyle gerçekleştirilmiştir ve değerlendirme aracı olarak ölçek kullanılmıştır. Araştırmaya orta çocukluk dönemindeki çocuklar dahil edilmiştir. Konuyla ilgili bundan sonraki araştırmalarda nitel araştırma yöntemlerinden gözlem ve görüşme yöntemleri kullanılabilir, boylamsal araştırmalar tasarlanabilir. Çalışma grubu olarak orta çocukluk dönemine ilave olarak okul öncesi dönemdeki çocuklar ve ergenlerle araştırmalar gerçekleştirilebilir.

Abstract

As it is obvious from Afghanistan's past and figures show, Afghan migration has a long history. Here we are going to start the discussion from 1978 until now. However, after Haft Saur's 1978 coup d'état, a large wave of migration to Iran and Pakistan took place, and the Soviet government's actions led to revolutions and resistance against the government in various provinces across the country. During the war, basic infrastructures of the country were destroyed, and a big number of people immigrated to Iran and Pakistan, which was estimated more than six million by 1992 year. For those people who spoke Pashtu language and were Sunni, they preferred to live in Pakistan, and Shia Muslim preferred living in Iran. After falling the government of doctor Najibullah most of those people, who had been immigrants came back to the country but internal war inside the country made people to be displaced and leave the country, and this was the second round of immigration. During the 1996 and 2001 that was the ruling time of Taliban in Afghanistan, where around 33% of Afghans lived in the absolute poverty and couldn't meet the basic needs of their life that in term couldn't help the decline in the migration .

Keywords: Afghan migration, Economi, 1996

Introduction

Since 40 years Afghanistan has been in the external and internal conflicts. due to security, corruption, poverty, lack of employment, and some other political, cultural and economical factors people of afghanistan have been being made to decide for the external immigration. As per the suvey of Asia Foundation more than 35% of Afghans answered yes to the question “ whether an opportunity given to you would like to leave the country?” (The Asia Foundation, 2019).

People who spoke Pashtu language and were Sunni , they preferred to live in Pakistan, and Shia Muslim preferred living in Iran (Noor, 2006). After falling the government of doctor Najibullah most of those people, who had been immigrants came back to the country but internal war inside the country made people to be displaced and leave the country, and this was the second round of immigration (Erfani, 2016). During the 1996 and 2001 that was the ruling time of Taliban in Afghanistan, where around 33% of Afghans lived in the absolute poverty and couldn't meet the basic needs of their life that in term couldn't help the decline in the migration. Moreover during the regime of Taliban due to the systematic persecution most of Hazara tribe moved to Iran (Dimitriadi, 2013). Overall, Afghanistan's two main migration periods led nearly a third of the population in Pakistan , Iran and other nations to seek relief (Koepke, 2011). Following 2001 both Iran and Pakistan were changing their policies for Afghan migrants, and with the course of time due to foreign aid, per capita income got increased which caused Afghans to seek new routes and destination countries like Australia and European countries. According to President of Afghan migrant and refugees as mentioned in Dimitriadi (2013), three category people want to settle in the European countries, those who are in risk due to their political belief, those who look for the safe place, and those who want to go there in order to seek better economic conditions. In Pakistan and Iran, Afghan refugees could be divided into three categories, those who migrated before 1980, those who went to these countries after 9/11, and those who are economic migrants (Noor, 2006). If it is talked about the Afghan refugees in Pakistan, issue is divided into two parts, which are before 9/11 and after 9/11. During the 1980s Pakistan government adopted open door policy for the Afghan refugees, which caused to come big number of refugees to the country in order to achieve their goals in the war against Soviet union and Afghan government (Noor, 2006). In 1990s specially in 1995 Pakistan government faced shortage of resources from donors to assist the refugees, which caused to announce those refugees who came to Pakistan after 1995 as illegal refugees, likewise the discontinuation of aids by the international communities made Pakistan to close the border.

After 9/11 in 2001 with air strike of American and coalition forces Pakistan used against Afghan refugees closed door policy in order to decrease the security problem and to prevent the refugees from entrance to Pakistan. In 1960s and 1970s there were thousands Afghan migrants in Iran, during refugee crisis Iran was unwilling for international assistance, refugees were not required to live in the camps (Noor, 2006). In Post 9/11 like Pakistan, Iran also closed the border with Afghanistan.

According to Bansak, Simpson and Zavodny (2015), Factors, which has impact on immigration, could be divided into two groups, which are consisting of push and pull factors, both of them can be divided into economic and non-economic factors. In push economic factors poverty, High taxes, High unemployment and over population are included, whereas in pull economic factors demand for labor, high wages, generous welfare, strong economic growth, technology, and low cost of living (Bansak, Simpson, and Zavodny, 2015). In the push non economic factors discrimination, poor health care, corruption, war, compulsory military services, natural disaster and famine are included, and these factors plus non economic pull factors that are consisting of family network, rights and freedom, property rights, law and order and amenities helps the migration.

In the push factors one of the basic causes of migration is poverty, according to Murrugarra, Larrison, and Sasin, (2011) Now, high income gaps between locations-especially countries-continue to inspire people to move away poverty through migration they argue that those people who are migrated to developed societies or destinations could help their societies by remittances, which could be used in the different kinds of investment. Since 2001 Afghans are suffering from conflicts, which in term create problems for the economic growth that causes a decline in the employment, and make people to migrate to other countries. As per the report issued by cited in Center for Research and Regional Studies (February 10, 2018) due to low employment rate and worse economic conditions most of the youth like to immigrate , and in the report WorldBank (2018), it was mentioned that during 1990 war induced migrants were 95% of all migrants but in 2015 economic migrants were 50%, which is equal with 2.25 million migrants and due to adding 400000 Afghans to work force will help the number of migrants to increase. In the pull economic factors remittances play important role in Afghan immigration to other countries. These remittances could influence different aspects of life, and cause relative welfare (Adams, 2011). Remittances and contributions from the Afghan emigrants play a significant role in Afghanistan's stability and rehabilitation, even though the precise amount is difficult to determine (Agah, 2013). According to IFAD (2013), In 2012, the International Fund for

Agriculture and Development (IFAD) reported the money transfer flow to Afghanistan to be US\$ 3.2bn. It therefore, accounted for more than 16 percent of Afghanistan gross Domestic product in that fiscal year.

In the push non-economic factors one of the basic factors that Afghans want to leave their country is insecurity. According to The Asia Foundation (2019), more than 17% of migrants leave Afghanistan due to insecurity. More than 100000 civilians have been killed in the last ten years in Afghanistan (“Afghanistan: Civilian casualties”, 2020).

If it is talked about the impact of demographic factors on the immigration, young generation mostly like to immigrates to other countries, as the 67% of Aghan generation have less than 26 years of age (Schmeidl, 2014). In the case of gender according to Tyler & Schmeidl, in the large cities of Afghanistan women are more vulnerable, and have hardship to access to education, health and employment. Overall women more are displaced internally relative to men and Their external migration is marginalized (Schmeidl, 2014).

One of the factors, which plays secondary not primary role in migration is education, except of those in which young people want to go abroad for higher education or for better place (Browne, 2017). In the survey of Asia foundation more than 43% of educated people want to leave their country (The Asia Foundation, 2019). People may give reason education for their migration or give reason their children education for their migration. Some of the few specific points of consensus is that well-educated individuals in low-income contexts are more likely to relocate in higher-income places, due to a mix of higher financial opportunities, higher expectations and lack of sufficient jobs in their home environment (Browne, 2017).

PROBLEMS INFLUENCES AFGHANS’ EXTERNAL IMMIGRATION DECISIONS IN THE LAST EIGHT YEARS: AN OVERVIEW

In the above paragraphs, we divided the Afghan immigration into four Phases. First started in the 1979 due to Soviet Invasion, second started with the beginning of internal war, third started with Taliban regime and the fourth one took place during the US invasion, where Afghans seek new route for the immigration due to changing policy of Iran and Pakistan toward the Afghan refugees. After US invasion, international communities put their effort to help Afghans and provide them a better welfare, but still Afghans facing problems in their social, economic, political, and educational life, which made them to immigrate some other countries. The following graph shows the percentage of those Afghans, who want to leave the country as per the survey of Asia Foundation.

Figure 1. Percentage of Those Afghans Who Want To Leave The Afghanistan During The Last Eight Years

As per the figure 1, more than 37% of male correspondents says yes to the question “ whether you are given a chance would you like to leave the Afghanistan?” , less than 35.5% of female want to leave the country, and overall more than 36.5% of Afghan want to leave the country. As the figure shows males slightly want to emigrate more than females, and one of the reasons is male’s economic immigration. According to Echavez, Mosawi and Leah (2016) Afghanistan is a country where traditional rules are more dominant, and male is considered breadwinner. so, the reason could be males’ employment seeking that causes their willing to immigrate relative to female. In 2016, less people want to live abroad because in this year complaints are less than next three years.

Figure 2. Percentage of Complaints Based on Years

(The Asia Foundation, 2019)

As per the figure 2 problem faced by Afghans are seen less in 2016 relative 2017, 2018, and 2019.

The basic problems that Afghans give as reasons for immigration are as under in the following graph. Respondents asked to give two reasons that why they want to leave Afghanistan in Graph 2 and 3 we have those reasons due to what Afghans want to leave their country. The reasons explained in two separate figures, in figure one we have first mentioned reason and in figure 2 second mentioned reasons are provided.

Figure 3. Why would you leave Afghanistan? (First Mention average of 2011-2019)

(The Asia Foundation, 2019)

As per the figure 3 most of the Afghans, who want to leave Afghanistan give insecurity, unemployment, bad economy, corruption, being of not fair education and uncertainty as reasons.

Figure 4. Why would you leave Afghanistan? (Second Mention average of 2011-2019)

(The Asia Foundation, 2019)

Figure 4 explains the second reason due to which Afghans are made to leave their country. Here are so major problems insecurity, unemployment, corruption, low education, uncertainty, and weak government. One of the basic problems is insecurity and economic problem according to the report of the ministry of Refugee and Repatriations (2020), more than 50% immigrated to Iran, and Pakistan due to insecurity and less than 50% emigration took place due to economic problems. Another reason that Afghans give, as reason for their immigration is corruption, as it is seen from the figure 2 more than 3% of the people say they want to leave their country because of corruption. According to Merkle, Reinold, and Seigel (2018), corruption in home country could lead migration aspiration, could facilitate migration, and could directly and indirectly shapes aspiration for migration. According to Shaheed (2019), from 2005 till 2018 Afghanistan averaged score is less than 15 where 0 score is used for highly corrupt and 100 for clean and as per the report in the 2018 Afghanistan has been amongst the top 10 most corrupt countries. Another reasons of Afghans for immigration is education. In the developing countries people with high education and rising income cause of their education when they are at low end of income distribution. In neoclassical models, more education in the origin country facilitate way for people to leave their countries temporarily or permanently. In the last 40 years, Afghanistan has been in the different kinds of conflicts, which causes to create uncertainty about future that in term has positive effect on the deciding about external migration from country. Since almost 19 years there has been conflict between Afghan government and Taliban, and according to the survey of Asia Foundation, in 2019 more than 30% of Afghans are saying that reconciliation between Taliban and Afghan government is impossible The Asia Foundation (2019) , this itself create uncertainty that in term causes of migration to abroad. Weak government also play crucial role in the immigration decision, which is one of the push factors. According to World Migration (2003), Weak working rates, poor pay or pensions, misplacement of talent, violation of human rights, underemployment, political unrest, lack of testing facilities, inefficient agencies, disrespect for local talent, prejudice in recruitment and promotion, inequality, inadequate access to quality education, and the demand for a better urban life are among the factors listed which causes of immigration to abroad country. Ethnic problem is also in one of the reasons for Afghans those want to leave their country, as per the report of Pajhwak Afghan News 25% of Afghans are victims of racial, linguistic and religious oppression, while 14 percent suffer adverse results from the action (Ahmadzai, and Salehai, 2019).

As per the report of the Pajhwak Afghan News, discrimination problems are divided into three categories from which ethnicity is the problem that is faced by more Afghans than the other two. Less than one percent of the respondents in the second mention say that they want to leave the country due to the absence of freedom of women in the country. Since 2003 progress seen in the gender equality in Afghanistan but still women in Afghanistan face widespread insecurity, lack of housing standards, economic inequality, sexual harassment challenges and health problems and well-being (Women for Women International, 2018). According to Ray (2019) nearly half (47%) of Afghan women want to immigrate to abroad, and the surveys of GALLUP shows that Afghan women in the world were the least satisfied women.

The mentioned survey conducted in the 34 provinces of Afghanistan in which the age of respondents is bigger than 18 years for the period 2016-2019.

3. CONCLUSION

In this study we examined the role of socio-economic, political and demographic factors in the external migration decision in case of Afghanistan. Immigration waves could be divided into three phases, first started with the invasion of Soviet Union, second started with internal conflict, third with Taliban regime and the fourth one, started during the invasion of US and coalition armies.

In the 1990s, 95% of immigrants were induced, and in the last decades economic migrants have been close to 50%. Problems due to which Afghans want to leave their country mainly are; insecurity, lack of employment, lack of infrastructures, lack of opportunities, and weak government.

As per the survey of Asia Foundation, the top six countries, where most of the Afghans want to live are; Iran, Turkey, Germany, Saudi Arabia, USA, and Pakistan.

Most of the remittances sent to Afghanistan come from Iran, Pakistan, Saudi Arabia, Germany, USA and UK, the real amount of remittances is many-time bigger than the official amount. There was strong correlation between remittances and household consumption of Afghanistan. As per the results of our estimation those people are more likely to leave the country, who are young, educated, have access to information (through TV and Internet), non-Pashtun (due to ethnopolitics), male, singles, non-believer in reconciliation with Taliban, and those who have more relatives and friends in abroad.

Özet

Dünya ekonomisindeki değişim dinamiğinin etkilendiği en önemli politik araçlardan biri para politikasıdır. Bunun önemli bir sebebi günümüzde hızla değişen ve gelişen piyasalar finansal piyasalardır. Bu gelişmeler finansal sistemin düzenli işlemlerini sağlamak adına Merkez bankalarına ve para politikası uygulamalarına önemli görevler yüklemiştir. Hükümetin para arzını kontrol etmek için izlediği politikalar bütünü para politikasıdır (Ünsal,2000: 399). Ülkelerin para politikasını yürüten kurum merkez bankasıdır. Her ülkenin merkez bankası bir tür özel kamu iktisadi kuruluşudur. Merkez bankaları para politikaları uygularken ve para arzlarını belirlerken paranın dolaşım hızını dikkate almaktadır. Özellikle teknolojik gelişme ve finansal yenilikle kendini gösteren son dönem paranın dolaşım hızı açısından merkez bankalarına yeni sorumluluklar yüklemiştir. Bu sorumluluk öğrenme, bilgi ve yeni değişime uyum içinde gerekli olan sorumluluktur. Merkez bankasına yenilik ve değişim ortamında düşen sorumluluk, etkinliği, güvenliği ve etkin parasal kontrolü aynı anda sağlamaktır. Merkez bankaları bu sorumluluklarını piyasaları gözetim altında tutarak uyguladıkları para politikası ile gerçekleştireceklerdir (Kaplan, 1999: 12). Fakat, yenilik ve değişim merkez bankalarının finansal sistemin sağlıklı bir şekilde işlemlerini ve enflasyonsuz bir ortamda sürdürülebilir bir büyüme oranının gerçekleşmesini giderek zorlaştırmaktadır. Çünkü finansal yeniliklerdeki değişim ve gelişmeler paranın tanımını değiştirmeye başlamıştır. Yapısal değişiklikler ve finansal yeniliklere paralel olarak önceden bir politika belirlenmeye temel olabilecek bir parasal ilişkiyi tahmin edebilmek zorlaşmıştır (Günel,2006:73). Bu durum bütünselleşmiş ekonomi politikalarını da başarısız kılmış, bütünleşmiş politikaların başarısızlığı da para politikalarını etkilemiştir. Çünkü para birimlerinin amaç fonksiyonunu gerçekleştirmede en çok öğrenip bilgi bilgi akışını gerçekleştirdikleri ve birebir etkilendikleri para ve paraya dair konulardır. Onun için değişimin baş döndürücü hızla olduğu finansal piyasalarda para politikasının ve merkez bankasının dinamik yapıda olması gerekmektedir.

**POLICY DESIGN IN ECONOMIC POLICY: AN EVALUATION ON THE
EFFECTIVENESS OF MONETARY POLICY**

Abstract

One of the most important political tools that affects the dynamics of change in the world economy is monetary policy. An important reason for this is the rapidly changing and developing financial markets today. These developments have imposed important duties on central banks and monetary policy practices in order to ensure the regular functioning of the financial system. Monetary policy is the set of policies followed by the government to control the money supply (Ünsal, 2000: 399). The institution that carries out the monetary policy of the countries is the central bank. The central bank of every country is a type of private public economic institution. Central banks take into account the speed of circulation of money when implementing monetary policies and determining money supplies. The recent period, especially with technological development and financial innovation, has imposed new responsibilities on central banks in terms of the speed of circulation of money. This responsibility is the responsibility required for learning, knowledge and adaptation to new change. The responsibility of the central bank in an environment of innovation and change is to ensure efficiency, security and effective monetary control at the same time. Central banks will fulfill these responsibilities through the monetary policy they implement by keeping the markets under surveillance (Kaplan, 1999: 12). However, innovation and change make it increasingly difficult for central banks to ensure the healthy functioning of the financial system and to achieve a sustainable growth rate in an inflation-free environment. Because changes and developments in financial innovations have begun to change the definition of money. In parallel with structural changes and financial innovations, it has become difficult to predict a monetary relationship that could be the basis for determining a policy in advance (Günel, 2006:73). This situation also made integrated economic policies unsuccessful, and the failure of integrated policies also affected monetary policies. Because it is money and money-related issues that land units learn the most and flow information from, and are directly affected by, in achieving their objective function. Therefore, in financial markets where change occurs at a dizzying pace, monetary policy and the central bank must have a dynamic structure.

Giriş

Ekonomi politikasının amacı makro ekonomide kalıcı ve sürdürülebilir istikrarı sağlamak ve geleceği öngörülebilir kılmaktır. Karar birimlerini amaç fonksiyonunu gerçekleştirebileceği, kurumsal değişimin sağlandığı çevresel koşulları oluşturmaktır. Bunun için ekonomi politikası mali ve parasal kurallar bütünüdür (Karaçor, 2012:13).

Para politikası en geniş anlamıyla var olan koşullara göre, ekonominin likiditesini (harcama potansiyelini) artırmak ya da azaltmak demektir. Para politikası parasal araçlarla ulaşılmak istenen ekonomik amaçlar arasında ilişki kurmaktır. Önceden para politikası ekonomik büyümeden enflasyonla mücadeleyle, işsizliği önlemekten dış ticareti geliştirmeye kadar bütün amaçları gerçekleştirmeyi hedefliyordu. Oysa günümüzde para politikası yalnızca iç pazarın istikrarını (fiyat istikrarı) hedeflemeye yönelmiştir. Böylelikle modern para politikasının tanımlanmış parasal araçların ülke parasının değerini ve istikrarını korumak amacıyla kullanılması şeklinde yapılmaya başlanmıştır (Eğilmez, 2010:229). Fiyat istikrarını sağlamak, yani enflasyonu önlemek amacıyla merkez bankasının para arzını kontrol etmek için takip ettiği politikalar bütünü para politikasını oluşturur. Para politikası merkez bankaları tarafından yürütülmektedir ve amacı para arzını kontrol etmektir. Belirli amaçlara ulaşmak için para arzını artırıp, azaltılması para arzı kontrolünü oluşturur. Merkez bankası para arzını kontrol ederken, bir başka ifade ile para politikası uygularken başlıca üç enstrümanı kullanır: Açık piyasa işlemleri, reeskont oranı, kanuni karşılık oranıdır. Para arzı, parasal taban ile para çarpanının çarpımına eşittir. Merkez Bankası açık piyasa işlemleri ve reeskont oranı ile parasal tabanı, kanuni karşılık oranı ile de para çarpanı büyüklüğünü belirler.

Para arzını artırmak ya da azaltmak için kullanılan araçlardan biri Açık Piyasa İşlemleri (APİ)'dir. APİ finansal varlıkların merkez bankası tarafından ya birincil piyasada ya da ikincil piyasada alınıp satılmasıdır. APİ bankacılık sisteminin toplam rezervlerini daraltmak veya genişletmek suretiyle ülke para arzını etkilemeye yönelik işlemlerdir. Kısaca APİ para arzını, faiz hadlerini ve kredi hacmini etkilemek amacıyla merkez bankalarınca piyasalarda finansal araçların doğrudan doğruya alınıp satılmasıdır. Alım ve satıma konu olan finansal araçlar hazine bonusu, devlet tahvili, merkez bankası senetleri, birinci derece özel sektör senetleri ve yabancı paralar olarak sayılabilir. Merkez Bankası bazen kasasındaki devlet tahvilini satarak piyasadan para çeker, kredi nakit miktarını artırır; bazen de devlet tahvil miktarını alarak piyasaya para sürer, kendi nakit miktarını azaltır. Merkez Bankası APİ yolu ile devlet tahvili sattığı zaman para arzı azalır, devlet tahvili satın aldığı zaman parasını peşin ödediği için para

arzı artar. Merkez Bankası para arzını artırmak istediği zaman devlet tahvili satın alarak, para arzını azaltmak istediği zaman devlet tahvili satacaktır.

Para arzını etkileyen bir diğer araç reeskont oranıdır. Nakit para rezervleri geçici olarak belirli düzeyin altına inen bankalar, Merkez Bankasından borçlanarak kaynak yaratırlar. Merkez Bankasının bankalara sağladığı bu kaynağa uyguladığı faize reeskont denir. Reeskont oranının artması ve azalması para arzını etkiler. Merkez Bankası reeskont faiz oranını artırdığında, bankaların borçlanma maliyetleri artacağı için borç almak istemeyecekler ve para arzı kısıllacaktır. Merkez Bankası reeskont faizini düşürdüğünde ise bankalar borç talebinde bulunacak ve para arzı artacaktır. Buna göre, Merkez Bankası para arzını artırmak istediğinde reeskont oranını düşürecek; para arzını azaltmak istediğinde reeskont oranını artıracaktır.

Kanuni (zorunlu) karşılık oranı da para arzını etkileyen bir başka para politikası aracıdır. Bankalara yatırılan mevduatın belirli bir oranı kanuni karşılık olarak Merkez Bankasına yatırılması zorunludur. Amaç tasarruf sahiplerini korumaktır. Banka mevduatının, Merkez Bankasına yatırılması zorunlu olan payına kanuni karşılık oranı denir. Bu oran arttırıldığı zaman, bankaların piyasaya verecekleri kredi miktarı azalacak, dolayısıyla para arzı azalacaktır. Merkez Bankası tarafından bu oran azaltıldığı zaman, bankaların piyasaya verecekleri kredi miktarı artarak para arzını artırıcı etki oluşturacaktır.

Merkez Bankası, açık piyasa işlemleri, reeskont oranı ve kanuni karşılık oranı gibi para politikası araçlarını kullanarak, sıkı ve genişletici para politikalarını uygular. Merkez Bankasının bu araçları para arzını azaltma yönünde kullanması sıkı para politikasını oluşturur. Para arzının azalması, faiz oranını yükseltir. Aynı zamanda, para arzının azalması devlet tahvil fiyatlarını düşüreceği için, devlet tahvilinin faizi yükselir. Merkez Bankasının para politikası araçlarını para arzını artırıcı yönde kullanılması genişletici para politikasını oluşturur. Genişletici para politikası para arzını artırdığı için faiz oranını düşürür. Merkez Bankası tahvil satın alınca, piyasada tahvil arzı azalacak, tahvil arzının azalması tahvil fiyatını yükseltecek ve tahvil faizi düşecektir. Görüldüğü gibi, Merkez Bankası uyguladığı sıkı ve genişletici para politikalarıyla ekonomiyi etkilemektedir. Bu etki para politikasından para arzına, faiz oranına, toplam talebe ve en son olarak üretim ve istihdama doğru kanalize olmaktadır.

Merkez Bankasının uyguladığı para politikası ilk olarak para arzını etkiler. Para arzı sırasıyla faiz oranını, faiz oranı toplam talebi, toplam talep de üretim ve istihdamı etkiler. Demek ki para politikası, Merkez Bankasının para politikası araçları yardımıyla ekonomideki toplam talebi kontrol etme politikasıdır (Bocutoğlu, 2011:169).

Bu çerçevede Merkez Bankalarının;

i-Alacağı para politikası kararlarının ekonomiyi hangi yolla etkileyerek temel amaçlara ulaşılmasını sağlayacağını bilmesi,

ii-Uyguladığı para politikası stratejisi doğrultusunda paranın miktarını/maliyetini nasıl belirleyeceğine karar vermesi gerekmektedir.

Bu karar, uygulanan politikaların başarısı için temel şarttır. Ancak, verilmesi oldukça zor bir karardır. Çünkü para otoritesi tarafından alınan kararların ve uygulanan politikaların ekonomiyi ne şekilde etkileyeceğinin tam olarak formüle edilmemesi bu durumun “kara kutu” (black box) olarak adlandırılmasına neden olmuştur. Bu durum özellikle küreselleşme süreciyle daha da belirgin hal almıştır (Önder, 2005).

Küreselleşme süreci, rekabeti ve dolayısıyla finansal kuruluşlar ile piyasaların etkinliğini artırmak ve finansal hizmetleri sunanlar ile talep edenlerin risklerini dağıtmalarına ve riskten korunmalarına (hedging) imkân sağlamak gibi yararlarının yanı sıra, merkez bankaları ve para politikası uygulamaları için pek de hoş olmayan sonuçları da beraberinde getirmiştir. Günümüzde merkez bankalarının finansal sistemin sağlıklı bir şekilde işlemesi ve enflasyonsuz bir ortamda sürdürülebilir bir büyüme oranına ulaşması giderek zorlaşmaktadır. Kısaca, küreselleşme sağladığı faydaların yanı sıra, uluslararası entegrasyonu ve karşılıklı bağımlılığı artırmış, merkez bankalarının denetimini zorlaştırmış ve ulusal piyasaların birbirine bağımlılığını artırarak riskin daha hızlı yayılmasına neden olmuştur. Bu nedenle finansal sistemin içinde en önemli kurumlar merkez bankalarıdır. Merkez bankalarının temel amacı, ülkede fiyat istikrarını sağlayarak, sürdürülebilir büyümeye katkıda bulunmak ve finans sisteminin sağlıklı işlemini sağlamaktır (Günel, 2006). Merkez bankaları para politikaları uygularken ve para arzlarını belirlerken paranın dolaşım hızını dikkate almaktadır. Özellikle teknolojik gelişme ve finansal yenilikle kendini gösteren son dönem paranın dolaşım hızı açısından merkez bankalarına yeni sorumluluklar yüklemiştir. Bu sorumluluk öğrenme, bilgi ve yeni değişime uyum için gerekli olan sorumluluktur. Merkez Bankasına yenilik ve değişim ortamında düşen sorumluluk, etkinliği, güvenliği ve etkin parasal kontrolü aynı anda sağlamaktır. Merkez bankaları bu sorumluluklarını piyasaları gözetim altında tutarak uyguladıkları para politikası ile gerçekleştireceklerdir (Kaplan, 1999). Bunun için değişimin baş döndürücü hızla olduğu finansal piyasalarda para politikasının ve Merkez Bankasının dinamik yapıda olması gerekmektedir. Çünkü Merkez Bankası beşinci karar birimi olarak değerlendirilen ekonomi politikası yapıcılarında biridir. Dolayısıyla bir karar birimi olarak öğrenme ve bilgi sürecini etkin bir şekilde alıp bunu piyasalara yansıtmalıdır. Yani Merkez

Bankası hem bilgi arz eden hem de bilgi talep eden bir karar birimidir. Uyguladığı para politikasının başarısı bilgi boşluğu maliyetini minimum düzeye indirerek bilgi arzı ile bilgi talebi arasındaki dengeyi oluşturmaya bağlıdır (Ünsal, 2000). Merkez bankalarının bu fonksiyonu yerine getirebilmesi için bağımsız olması gerekmektedir. Çünkü Merkez Bankası amaç fonksiyonu hedefine bağımsızlık süreci ile ulaşabilecektir. Çünkü bağımsızlık politikaları şeffaf kılacaktır. Son dönemlerde Merkez Bankası bağımsızlığı “birinci en iyi” değil “ikinci en iyi” olarak tanımlansa da yine Merkez Bankasının bilgi akışının amaç fonksiyonu doğrultusunda gerçekleşmesi için bağımsızlık önemli bir kriter olarak bulunmaktadır (Serin, 1987:93).

Finansal sistemin sağlıklı işlemesi için para politikası hedeflerinin mikro politika olarak da adlandırılan bankacılık politikaları ile bütünleştirilmesi gerekmektedir. Çünkü bankacılık yapısında ortaya çıkacak sorunlar finansal sisteme yayılarak güveni sarsacak, politikaların etkinliğini zayıflatacaktır. Onun için merkez bankalarının birinci görevi fiyat istikrarını sağlamaktan çıkmış, finansal sistemin istikrarı olmuştur. Bu oluşum merkez bankalarının son başvuru mercii olma (lender of last resort) fonksiyonunu ön plana çıkarmıştır (Günel, 2001: 72).

Sağlıklı işleyen finansal piyasalar ekonomileri kurumsal değişime taşıyacak, tersi durum ise küreselleşme sürecinde birtakım riskleri beraberinde getirecektir. Bu riskleri en aza indirmek için bankacılık sisteminin yapısı ve denetiminin etkin olduğu (ekonomik birlikler tarafından kontrol, üst kurullar vb.) iyi işleyen bir bankacılık yapısının finansal sistem ile bütünleşmesi gerekmektedir. Hem merkez bankalarının görevlerini yerine getirebilmesi hem de para politikasının amacına ulaşılabilmesi için finansal sistemin istikrarlı olması gerekmektedir. Finansal istikrarı sağlamada bankacılık sisteminin yapısıyla birlikte merkez bankalarının kurumsal yapısı da önemlidir. Bu açıdan da bakıldığında merkez bankalarının siyasi iktidarların (hükümet) etkisinde olmaması, yani özerk veya bağımsız olması önemlidir. Bağımsızlık, merkez bankalarına uygulayacakları para politikaları ile piyasalarda etkinliği, güvenliği ve etkin parasal kontrolü aynı anda sağlama imkanı verecektir. Beşinci karar birimi olarak kendisinin ve diğer karar birimlerinin (birey, firma, devlet, örgüt ve birlikler) amaç fonksiyonununun gerçekleşmesini sağlayacak, politikaları başarılı kılacaktır.

2. MERKEZ BANKASININ BAĞIMSIZLIĞI

Küreselleşme süreci, Merkez bankacılığı ve para politikası uygulamalarında birçok değişimi beraberinde getirmiştir. Politika uygulamalarında başarı, bu değişimin gerçekleştirilip gerçekleştirilemediğine bağlı olmuştur.

1980'lerden başlayarak, parasal programlamaya (monetary targeting) dayalı politikaların etkileri azalmaya başlamış ve mali ve teknik yeniliklere paralel olarak, döviz kuru ve kısa vadeli faiz politikaları ön plana çıkmıştır. Çünkü, para arzının dışsal olduğu varsayımına dayanan monetarist yaklaşımın bir sonucu olan parasal programlama, teknolojik ve finansal yenilikler sonucu paranın içselliği ön plana çıkınca önemini yitirmiştir. Dolayısıyla, para arzını hedeflemeden ziyade enflasyon hedeflemesi ön plana çıkmıştır. 1980'lerin ortalarından itibaren aşamalı olarak merkez bankaları, paranın miktarından ziyade fiyatının, faiz oranlarının kontrolüne yönelmeye başlamışlar, parasal büyüklükler daha çok izlenen öncü gösterge niteliğine dönüşmüştür.

1990'lı yıllara gelindiğinde ise tartışmalar, operasyonel tekniklerden (faiz oranı-para tabanı kontrolü) Merkez Bankası bağımsızlığı, sorumluluğu ve güvenilirliği gibi yapısal sorunlara doğru kaymıştır. 1980'li yıllar Merkez Bankası bağımsızlığının artık "olmazsa olmaz" olarak görülen, para politikası stratejisi açısından ise "enflasyon hedeflemesi"ne geçişin yaygınlaştığı bir dönemdir.

Burada sözü edilen Merkez Bankasının para politikası hedeflerini belirlemede bağımsız olması anlamına gelen amaç bağımsızlığı değil, hedeflenen enflasyon oranına ulaşılabilme için kullanacağı para politikası araçlarını serbestçe belirleyebilmesi ve kullanılması anlamına gelen araç bağımsızlığıdır (Johnson, 1999: 81). Araç bağımsızlığı mali baskınlığın olmamasını istikrarlı ve güçlü mali sektörün varlığını gerektirmektedir. Hükümetin finansman ihtiyacına göre para politikasının belirlendiği mali baskınlık durumunda, Merkez Bankasının öncelikle hedefi, fiyat istikrarı olmaktan çıkmakta ve enflasyon hedeflemesi gerçekleşmemektedir. Bu durumda, kamu sektörü gelirleri büyük ölçüde senyoraj gelirlerinden veya devlet tahvili ihraçlarından sağlanmaktadır.

Kamu finansmanının senyoraj gelirlerinden sağlandığı ülkelerde, mali krizin önlenmesi amacıyla mali desteğe ihtiyaç duyulacağı beklentisi oluşmakta ve Merkez Bankasının itibarı zedelenmektedir. Mali kriz oluştuğunda ise, söz konusu mali destek uygulanmakta olan para politikasına ek bir yük getirmektedir (Khon, 2003). Fisher (1996), bu durumu Merkez Bankası bağımsızlığı açısından aslında bir "first best" dünyası kavramı değil "second best" dünyası kavramı olduğunu söylemektedir. Çünkü "first best" ortamında para ve maliye politikaları tam bir koordinasyon ve uyum içinde olacak ve Merkez Bankasının bağımsızlığına gerek kalmayacaktır. Fisher bu noktada ilginç bir tespitte bulunmaktadır: Merkez bankacıların çoğunun kendi pazarladığı, politik sistemlerin dar görünüşlü olmaya başladığı ve kısa vadeli politik faydalar için enflasyonist politikalara göz yumduğu mükemmel olmayan (second best)

bir dünyada ancak bağımsız bir Merkez Bankası enflasyon sorununu çözebilecektir. Bu bağlamda, özellikle mali otoritenin disipline olmadığı ülkelerde Merkez Bankası bağımsızlığı daha da önemli hale gelmektedir (Fisher, 1996). Aslında merkez bankalarının başarısızlığının asıl nedeni finansal gelişmeler nedeniyle, para tanımı, para arzı süreci ve para talebi fonksiyonunun değişikliğe uğramasıdır. Kısacası, Otmor Issing (1996)'in de belirttiği gibi, paranın değerini korumak için Merkez Bankasının bağımsızlığı gerekli olmakla birlikte yeterli değildir (Günel, 2001).

3. HESAP VEREBİLİRLİK ve ŞEFFAFLIK

Merkez Bankalarının para politikası uygulamalarında başarıya ulaşması, herhangi bir sorunla karşı karşıya kalmamaları hesap verebilir konumda olmalarını gerekli kılmaktadır.

Para politikası uygulamalarında politikaların etkilerini göstermede yaşanan gecikmeler, kamuoyunun para politikasının performansını takip edebilmesini ve ölçebilmesini zorlaştırması, Merkez Bankalarının hesap verebilir yapıya sahip olmalarını gerekli kılmaktadır. Beklenen politika etkilerinden sapma olması durumunda, Merkez Bankasından bu durumun nedeni ile ilgili açıklama beklenmektedir. Ayrıca, hesap verebilirlik, para politikasının siyasi baskılardan uzak kalmasını sağlayacaktır (Debelle, 1997: 77).

Etkin düzenleyici, denetleyici ve para politikası performansı aldıkları kararların hesabını verebilecek sorumlu otoritelerin varlığını gerektirmektedir. Hesap verebilirlik;

- a) Kısa süreli politik kaygılardan politikaların ayrılması,
- b) Ayrı kurumların potansiyel olarak çatışan amaçlarının uyumlaştırılması,
- c) Amaçlarda ve politikalarda açıklık,
- d) Politika kararlarının ve kararların altındaki kriterlerin şeffaflığı ile gerçekleştirilebilir.

Hesap verebilir bir Merkez Bankasının, uygulanan para politikası hakkında kamuoyunu bilgilendirirken yeterli derecede şeffaflığa sahip olması gerekmektedir. Şeffaflık, hem para otoritesinin kamuoyu ile iletişim kurmasını hem de güveni sağlayacaktır. Şeffaflık, özellikle bilgi çağı olarak adlandırdığımız içinde bulunduğumuz dönemde uygulanan politikaların başarısı için “olmazsa olmaz” bir şartı oluşturmaktadır. Para politikası uygulanmasında gizlilik ile politika uygulamalarında ve yönetiminde etkinlik ve tarafsızlığın daha iyi gözetileceği zannedebilecek ters etki yaratacaktır. Karar birimlerinin bilgi edinmesi engellendiği zaman “bilgi boşluğu” oluşacak ve politikalar başarısız olacaktır. Merkez Bankasının öncelendiği fiyat istikrarı amacına ulaşmasında “bilgi edinme hakkını” karar birimlerine sunması politika

etkinliğini beraberinde getirerek istikrarın oluşmasını sağlayacaktır. Ayrıca bu durum ekonomilerin gelişmişliğinin bir göstergesi olacaktır. Çünkü şeffaflık, yenilik ve değişim sürecine uyumu, kalkınma ve rekabeti gerçekleştirecektir. Ekonomiler gelişecektir, Aksi halde ise ekonomiler kurumsal değişimi sağlamayacak, istikrarsız bir ekonomik yapı içinde olacaklardır. Bu durum da uygulanan politikaların beklenen etkiyi gerçekleştirmesini engelleyecektir.

4. İSTİKRARLI MALİ SİSTEM

İstikrar ekonomik, politik ve sosyal göstergeler ve gözlemlenebilir kriterler bazında içinde bulunulan durumu göreceli olarak ifade eden bir kavramdır. Mutlak anlamda istikrar ekonomik, politik ve sosyal gelişmenin bir türevidir veya yansımasıdır. Ekonomide meydana gelen ekonomik ve politik dalgalanmalar piyasa ekonomisinin işlerliğini olumsuz yönde etkilediği için ekonomik ve politik istikrar gereklidir. Özellikle değişimin hızlı olduğu ve ekonomilerde kırılganlığın arttığı günümüzde bu gereklilik kendini daha da çok hissettirmektedir. Çünkü ekonomik faaliyetlerin istenilen sonuçları vermesi ve toplumun refah düzeyinin istenilen düzeye gelmesi mali sistemin istikrarına bağlıdır. İstikrarlı mali sistem para politikasının kredibilitesini artıracaktır. Mali krizlere karşı kırılgan olan gelişmekte olan ülkelerde mali istikrar Merkez Bankaları açısından büyük önem taşımaktadır. Etkin mali sistemde finansal yenilikler, bilgi etkileşim sürecini sağlayarak, bilgi boşluğunun, minimum olmasına katkı sağlayacaktır. Böylece karar birimleri öngörü hatalarına düşmeyecek ve para politikası etkin olacaktır. Etkinlik sonucu oluşan ekonomik başarı finansal serbestleşme süreciyle birlikte yabancı sermaye akımlarını artıracaktır. Özellikle gelişmekte olan ülkelerde yerli birikimin ülke ihtiyaç ve hedefleri için yetersiz kalması sebebiyle, yabancı sermaye bir ülkenin finansman kullanabilme kapasitesini artıracaktır. Bu sayede projelerin geleceğinin güven altına alınması sağlanmış olacaktır. Böylece rekabet içine giren gelişmekte olan ekonomiler kaynakların daha iyi dağılımını sağlayacaktır. Bir başka ifadeyle ekonomide likiditenin yükselmesiyle daha verimli yatırımlara bir yönelme olacaktır (Akdiş, 2000: 56).

Mali istikrarın sağlanamadığı durumda ise Merkez Bankası iki önemli sorun ile karşı karşıya kalacaktır; ilk olarak, finansal kuruluşların yükümlülüklerini yerine getirmek için Merkez Bankası fonlarını kullanması, Merkez Bankasının uyguladığı para politikası üzerindeki etkilerini sterilize etmesini güçleştirerek enflasyonist baskılara yol açacaktır. İkinci olarak, sıkı para politikası uygulanması durumunda faiz oranlarında meydana gelen artış yüksek borç

miktarı içinde bulunan finansal kuruluşların mali yapıları tehdit etmesi Merkez Bankasının para politikası uygulamadaki etkinliğini sınırlandıracaktır.

5. GELİŞMİŞ MALİ PİYASALAR

Mali istikrarın olmadığı, bankacılık sektörü ile mali sistemin zayıf olduğu ekonomilerde, para politikası etkin olamamaktadır. Çünkü bu koşullar, sistemi kırılğan hale getirerek Merkez Bankasının fiyat istikrarı hedefine odaklanmasını zorlaştırmaktadır. Bu durum, Merkez Bankasının açık piyasa işlemlerini yürütme yeteneğini sınırlamaktadır. Ayrıca gelişmiş mali piyasalar denge faiz oranları hakkında güvenilir bilgi verememekte ve kamu sektörü açıklarının finansmanında yetersiz hale gelmektedirler (Çolakoğlu, 2002).

Merkez bankaları açısından gelişmiş mali piyasalar para politikasının uygulanmasını kolaylaştıracaktır. Derin ve likit mali piyasalar piyasalarda işlem gören finansal enstrümanların fiyatlarındaki hareketlerin Merkez Bankasına ekonominin hedefleri ve piyasalardaki beklentilere ilişkin bilgi aktarım mekanizması sağlayacaktır. Ayrıca gelişmiş mali piyasalar yerli ve yabancı para cinsinden işlemlerin etkin bir şekilde yürütülmesini sağlayacaktır. Merkez bankalarının para politikalarını etkin bir şekilde uygulayabilmeleri bilançolarındaki hareketleri izleyebilmeleri, döviz rezervini yönetebilmeleri ve son borç veren merci olarak finansal kuruluşlara kredi verebilmeleri için yerli ve yabancı para cinsinden yüklü miktarda işlemi piyasalardaki fiyatları olumsuz yönde etkilemeden gerçekleştirebilmeleri gerekmektedir. Ayrıca mali piyasaların dolarizasyona izin vermeyecek kadar gelişmiş olduğu ekonomilerde para politikası daha etkin olarak uygulanmaktadır. Çünkü dolarizasyon para politikasının etkinliğini sınırlamakta, para politikasının değişen dünya dinamiklerine uyumunu zorlaştırmakta, sorunlara neden olmaktadır.

SONUÇ

Merkez bankaları bu sorumluluklarını piyasaları gözetim altında tutarak uyguladıkları para politikası ile gerçekleştireceklerdir (Kaplan, 1999: 12). Fakat, yenilik ve değişim merkez bankalarının finansal sistemin sağlıklı bir şekilde işlemlerini ve enflasyonsuz bir ortamda sürdürülebilir bir büyüme oranının gerçekleşmesini giderek zorlaştırmaktadır. Çünkü finansal yeniliklerdeki değişim ve gelişmeler paranın tanımını değiştirmeye başlamıştır. Yapısal değişiklikler ve finansal yeniliklere paralel olarak önceden bir politika belirlenmeye temel olabilecek bir parasal ilişkiyi tahmin edebilmek zorlaşmıştır (Günel,2006:73). bu durum bütünselleşmiş ekonomi politikalarını da başarısız kılmış, bütünleşmiş politikaların

başarısızlığı da para politikalarını etkilemiştir. Çünkü kara birimlerinin amaç fonksiyonunu gerçekleştirmede en çok öğrenip bilgi bilgi akışını gerçekleştirdikleri ve birebir etkilendikleri para ve paraya dair konulardır. Onun için değişimin baş döndürücü hızla olduğu finansal piyasalarda para politikasının ve merkez bankasının dinamik yapıda olması gerekmektedir. Çünkü merkez bankası öğrenen ekonomi sürecinde beşinci karar birimi olarak değerlendirdiğimiz ekonomi politikası yapımcılarından biridir. Dolayısıyla bir karar birimi olarak öğrenme ve bilgi sürecini etkin bir şekilde alıp bunu piyasalara yansıtmalıdır. Yani merkez bankası hem bilgi arz eden hem de bilgi talep eden bir karar birimidir. Uyguladığı para politikasının başarısı bilgi boşluğu maliyetini minimum düzeye indirerek bilgi arzı ile bilgi talebi arasındaki dengeyi oluşturmaya bağlıdır. Merkez bankalarının bu fonksiyonu yerine getirebilmesi için bağımsız olması gerekmektedir. Çünkü merkez bankası amaç fonksiyonu hedefine bağımsızlık süreci ile ulaşabilecektir. Çünkü bağımsız politikaları şeffaf kılacaktır. Son dönemde merkez bankası bağımsızlığı ‘birinci en iyi’ değil ‘ikinci en iyi’ olarak tanımlansa da yine de merkez bankasının bilgi akışını amaç fonksiyonu doğrultusunda gerçekleşmesi için bağımsızlık önemli bir kriter olarak bulunmaktadır (Serin, 1987:162). Finansal sistemin sağlıklı işlemesi için para politikası hedeflerinin mikro politika olarak da adlandırılan bankacılık politikaları ile bütünleştirilmesi bir yapının oluşturulması gerekmektedir. Çünkü bankacılık yapısında ortaya çıkacak sorunlar finansal sisteme yayılarak güveni sarsacak, politikaların etkinliğini zayıflatacaktır. Onun için merkez bankalarının birinci görevi fiyat istikrarını sağlamaktan çıkmış, finansal sistemin istikrarı olmuştur. Bu oluşum merkez bankalarının son başvuru merci olma (lender of last resort) fonksiyonunu ön plana çıkarmıştır. Sağlıklı işleyen finansal piyasalar ekonomileri kurumsal değişime taşıyacak, tersi durum ise küreselleşme sürecinde birtakım riskleri en aza indirmek için bankacılık sisteminin yapısı ve denetiminin etkin olduğu (ekonomik birlikler tarafından kontrol, üst kurular vb.) iyi işleyen bir bankacılık yapısının finansal sistem ile bütünleşmesi gerekmektedir. Hem merkez bankalarının görevlerini yerine getirebilmesi hem de para politikasının amacına ulaşabilmesi için finansal sistemin istikrarlı olması gerekmektedir. Finansal istikrarı sağlamada bankacılık sisteminin yapısıyla birlikte merkez bankalarının kurumsal yapısı da önemlidir. Bu açıdan da bakıldığında merkez bankalarının siyasi iktidarların (hükümet) etkisinde olmaması, yani özerk veya bağımsız olması önemlidir. Bağımsızlık, merkez bankalarına uygulayacakları para politikaları ile piyasa etkinliği güvenliği ve etkin parasal kontrolü aynı anda sağlama imkanı verecektir. Beşinci karar birimi olarak kendisinin ve diğer karar birimlerinin amaç fonksiyonununun gerçekleşmesini sağlayacak, politikaları başarılı kılacaktır.

Abstract

The importance of geothermal energy is growing rapidly in the world and in Türkiye due to the increasing demand for renewable energy resources. Türkiye ranks 1st in Europe and 3rd in the world in terms of geothermal energy potential. There are 415 geothermal wells in Türkiye with temperatures of 30°C and above. In 2022, Türkiye's power generation capacity is 38 companies, 1665 MWe of energy will be produced in 65 geothermal power plants. Using geothermal fluid, heating systems in 18 residential units provide heat equivalent to approximately 158,000 houses with a capacity of 1422 MWt. After Western Anatolia, Central Anatolia is the richest region in Türkiye in terms of geothermal potential. In order to determine the geothermal resource potential of the provinces of Niğde, Nevşehir and Aksaray in the Central Anatolian Region, geothermal fluids and surface waters collected from the field were investigated in terms of geochemical, hydrogeochemical and isotopic aspects. The Niğde, Nevşehir and Aksaray geothermal areas are divided into two groups: the area between the Tuz Gölü fault zone and the Kaçiboyduran-Melendiz fault, and the area north of the Keçiboyduran-Melendiz fault. In terms of hydro-geochemistry, the cold waters in the area are HCO₃-type mineral-poor waters, while the hot waters are SO₄-type waters. According to $\delta^{18}\text{O}$ and $\delta^2\text{H}$ isotope studies, the geothermal areas in the region have waters of meteoric origin fed from different depths. Silica geothermometer results show that the reservoir temperatures of geothermal areas in the region vary between 91 and 179 °C. According to all these studies, it appears that there is significant geothermal potential in the area. There is no problem with the reservoir or reservoir and overburden rocks of the geothermal system in the study area, but there is a problem with the geothermal fluid in the system.

Keywords: Niğde, Nevşehir, Aksaray, geothermal, hydrochemistry.

Introduction

The importance of geothermal energy is increasing rapidly in the world and in Türkiye due to the increasing demand for renewable energy resources. However, the easily exploitable and known resources (Tuscany-Italy and Western Anatolia-Türkiye) are rapidly depleting and therefore new and undiscovered resources need to be found. The study area, where the Neogene-Quaternary volcanism observed in our country is widespread, falls in the category of fields with low-medium enthalpy geothermal potential within the general distribution of geothermal fields in Türkiye. Within the region, geothermal areas such as Niğde (Narlıgöl, Çiftehhan, Deraldan), Aksaray (Ilısu, Ziga, Şahinkalesi) and Nevşehir (Kozaklı and Derinkuyu) springs have been used for balneotherapy and greenhouse purposes, especially in recent times (Figure 1).

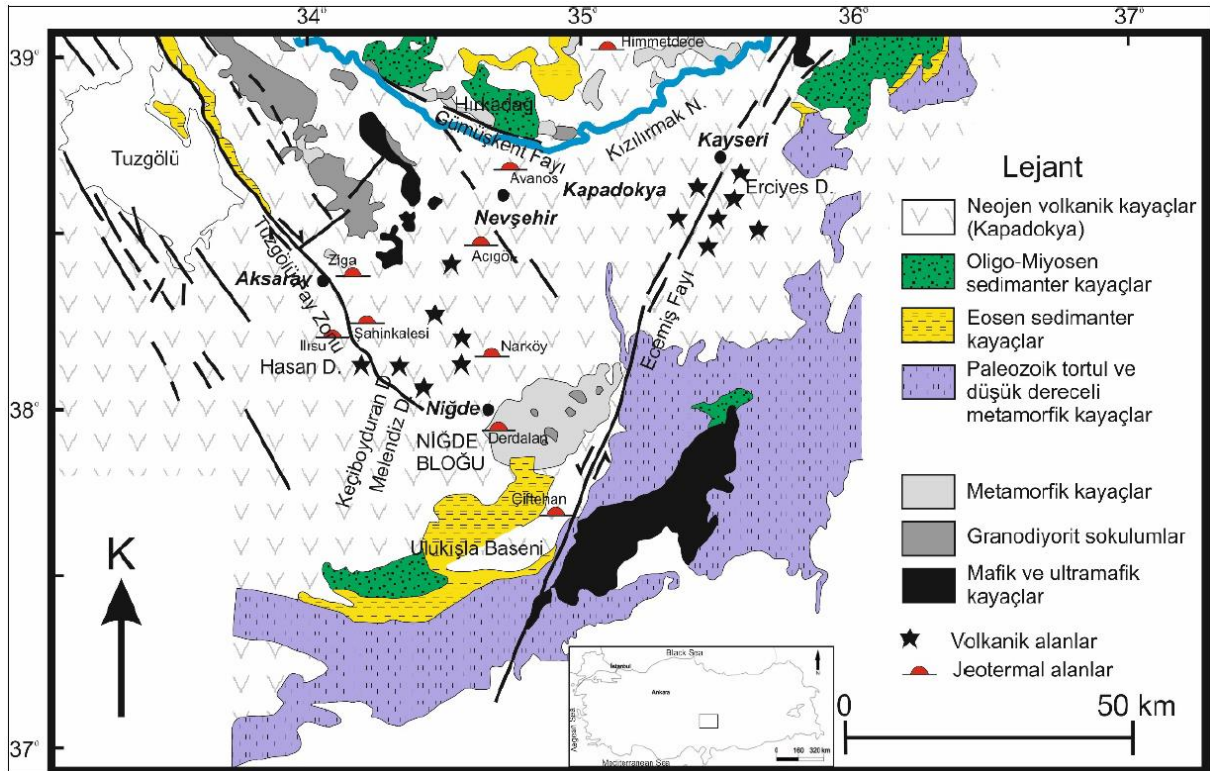

Figure 1. Landform and geology map of the study area (updated from Fayon et al., 2001, 1/100000 scale MTA maps were used).

These resources in the study area have the potential to contribute to the regional economy and employment. Geothermal resources in the study area are related to tectonism and volcanism (Figure 2). In the last fifty years, many studies have been carried out to understand the geological, volcanological and tectonic features of the region (Toprak and Göncüoğlu, 1993;

Dirik and Göncüoğlu, 1996; Özgür et al.) 2012; Şengör and Canitez, 2013; Şener, 2019). However, studies on the relationship between volcanism and tectonism of geothermal systems in the region are limited (Pasvanoğlu and Chandrasekharam, 2011; Şener et al. 2023). In this context, we aim to identify the geothermal systems in the study area, discuss the geological, structural and paleogeographical characteristics of the study area and its surroundings, hydrogeochemical findings and their results, and determine the potential and geological characteristics of the geothermal areas.

Figure 2. Movements of fault systems in the region from Miocene to present, A) Late Middle Miocene, B) Late Miocene-Early Pliocene, C) Late Pliocene Quaternary. (OKFZ: Orta Kızılırmak Fault Zone; DF: Derinkuyu Fault; EFZ: Ecemiş Fault Zone; KMF: Keçiboyduran-Melendiz Fault; NFZ: Niğde Fault Zone; TFZ: Tuzgölü Fault Zone) (Toprak and Göncüoğlu, 1993).

Changes in the geodynamic environment of the region, rotational movements and intersecting fault systems have most likely caused changes in the extensional rate and the development of crustal-scale fracture systems (Dirik et al., 1999). These faults and fracture systems 1) provide outlet routes for magma emplacement/eruption and 2) control the duration of magma in the

subsurface and hence its interaction with crustal material. The wide range of rock compositions within the same volcanic complex (calc-alkaline, tholeiite-alkaline transition and alkaline) can be directly explained by the residence time of the magma underground, which is controlled by tectonic movements. Based on these structural features, it can be predicted that the hydrothermal fluids in the Cappadocia geothermal province and the cracks and faults that release them are the product of a weakly stressed tectonic regime and that the magmatic elements that heat the system are related to the upward movement of the asthenosphere mentioned above. The paleotectonic structures that have developed in the region are pre-Middle Eocene structures and can be divided into three subgroups: (1) unconformities that formed before metamorphism, (2) folds that developed during metamorphism, and (3) structural elements that developed after metamorphism (Güncüoğlu and Toprak, 1992).

MATERIALS AND METHODS

In the study area, 6 water samples were collected during field studies and analysed to reflect the area. The results were also correlated with 7 water samples from Burçak (2009) and 6 water samples from Afşin et al. (2014), so a total of 19 water samples were analysed. In addition, major anion-cation and $\delta^{18}\text{O}$ - δD analyses were performed on all 19 water samples.

Hydrogeochemistry is an indispensable part of hydrogeological studies used to determine the chemical properties and qualities of groundwater, to investigate its origin, to study its possible relationships with surface and precipitation waters, to solve problems such as groundwater pollution and improvement, and similar research. The results of analyses of hot and cold water samples collected in the field were evaluated using Piper, Schoeller, Durov and Giggenbach plots generated in the Aquachem geochemistry program. The general purpose of geothermometers is to estimate the temperature of subsurface fluids (i.e. aquifer water temperature or reservoir temperature). Deep drilling is very expensive and time consuming. For this reason, estimating reservoir temperatures using various geothermal methods, which are applied prior to deep drilling to determine the water use areas, is an important part of geothermal research (Tarcan, 2002).

RESULTS

Chemical Classification of The Waters

According to the water chemistry results, the cold waters in the area are of Ca-Mg-HCO₃ and Ca-HCO₃ types; The hot and mineral waters containing tragacanth are of Ca-Na-SO₄ type;

Dertalan hot and mineral waters are of Ca-Mg-SO₄ type; Çiftehan thermal and mineral waters are of Na-Ca-SO₄ type; Acıgöl thermal and mineral waters are of Na-Ca-HCO₃-Cl type with B; Ziga hot and mineral waters are of Na-Cl-HCO₃ type with B content, and Şahinkalesi hot and mineral waters are of Ca-Na-HCO₃ type with low mineral content (Figure 3). Although it is observed that there is an increase in the amount of SO₄ in the cold waters of the study area, in the waters of the first geothermal system taken from the area between the Tuzgölü Fault and the Keçiboyduran-Melendiz Fault, as we move from NW to SE, the dominant anion in the waters is HCO₃. Based on this, it can be said that the waters in the study area are waters with deep circulation as they move from NW to SE.

Figure 3 a) Piper diagram of hot and cold water samples from the study area (Piper, 1944), b) Semi-logarithmic Schoeller diagram of hot and cold water samples from the study area.

According to the Piper diagram, hot water samples taken from the study area are Ca-Mg-SO₄ type water. Hot waters show a distribution of Ca+Mg>Na+K according to their cations and SO₄+Cl> HCO₃ according to their anions. In addition, cold water samples are Ca-Mg-HCO₃ type water. Hot waters show a distribution of Ca+Mg>Na+K according to their cations and HCO₃+CO₃>Cl+SO₄ according to their anions (Figure 3a). Although Na⁺, HCO₃⁻ and Cl⁻ are at the highest values in the waters taken from the north of the Keçiboyduran-Melendiz fault, they cannot be found in the waters with the highest temperature in the study area. Therefore, the excess Cl content in this region can be explained not by the temperature of the water but by the saline units in the basement. (Figure 3b).

Silica Geothermometers

Silica geothermometers give good results between 150-225 °C. At higher temperatures, rapid silica precipitation is observed in the hot fluid moving from the aquifer to the surface. For this

reason, water coming from reservoir rocks with a temperature above 225 °C does not reflect the true temperature. Silica geothermometers are made based on the aquifer temperature, which affects the chemical reaction or cooling of hot water as it rises. Different geothermometer calculations are used depending on the type of silica modification with which the silica dissolved in the hot water is in equilibrium. Therefore, different reservoir temperatures are calculated for different silica types. The silica temperature range of 304-311oC obtained from the waters of Çiftahan geothermal area was accepted as a deviation. According to the calculations of chalcedony and quartz geothermometers (Fournier, 1977a), the maximum reservoir temperatures to be expected in the Dertalan, Melendizdağ, Keçiboyduran Dağı, Hasandağ (Keçikalesi), Ziga, Acıgöl and Derinkuyu fields are 150-173 °C, 88-117 °C, 91-120 °C, 94-122 °C, 131-156 °C, 157-179 °C; 152-174 °C ve 102-130 °C respectively.

Cation Geothermometers

As a result of the Na-K-Mg triangle geothermometer evaluations of the waters in the study area, the waters in the geothermal areas within the Cappadocia geothermal province correspond to the immature water region. As a temperature isotherm, it corresponds to 100-125 °C. The waters in this area are located in the Mg corner, in the lowest parts of the fresh cold groundwater raw water zone (Figure 4). Figure 4 shows the distribution of hot and cold water samples in the study area according to their main cation relationships. The samples are far from the water-rock equilibrium line, so it can be said that the waters in the study area have not reached the water-rock equilibrium.

Figure 4. Maturity diagram of hot and cold water samples of the study area (Giggenbach, 1988).

$\delta^{18}\text{O}$ and δD Relationship of Waters

Examining the $\delta^{18}\text{O}$ and δD relationships of the 19 water samples analysed, it was found that the waters were meteoric, having infiltrated the rocks and heated due to the geothermal gradient as they descended and/or approached the magmatic masses. As a result of this study, which was based on the collection and analysis of water samples from geothermal sites within the study area, all the hot and cold waters in the geothermal sites of the study area are of meteoric origin.

Figure 5. $\delta^{18}\text{O}$ and δD plots of water from the study area according to VSMOW: Vienna Standard Mean Ocean Water (Craig and Gordon, 1965), GMWL: Global Meteoric Water Line (Craig, 1961); AMWL: Ankara Meteoric Water Line (IAEA/ WMO, 2004); MMWL: Mediterranean Meteoric Water Line (Gat and Carmi, 1987).

Considering the altitudes from which the waters in the study area were collected and the elevation gradient line of these waters (not shown), it can be said that the recharge area extends to Itulumaz Mountain in the SE and Hasandağ in the SW. Waters other than Bal_1, Com_1, Drt_1 and SDJ_5, which were collected from the south of the study area, deviated from the Global Meteoric Water Line because they were enriched in $\delta^{18}\text{O}$ as well as the effect of surface evaporation. This indicates that these waters have deeper circulation and interact with the rocks for a longer period of time and are partially enriched in $\delta^{18}\text{O}$. Based on this, it can be said that more evaporation from the geothermal areas within the study area is effective in the areas located in the SE compared to the areas located in the NW (Figure 5).

DISCUSSION

As a result, the data obtained from geothermometers and geochemical studies show that, in addition to the geothermal fields in study area, there is also the potential for similar or even hotter (suitable for energy production) geothermal fields to emerge as a result of monitoring the

continuity of the geothermal system. The relationship between volcanism and tectonism, and the resulting increase in the density of hydrothermal alteration zones, is greatest at the intersection of the fault systems affecting the study area. Deep exploration drilling is planned in the region, especially in the areas where the Tuzgölü fault and the Niğde fault zone intersect in the south of Melendizdağ, in the areas on the Keçiboyduran-Melendiz fault in the Ziga and Şahinkalesi regions, and in the areas between the Derinkuyu fault and the Göllüdağ fault in the south of Nevşehir. According to chalcedony and quartz geothermometers, the reservoir temperatures range from 48 to 180°C; also, the results obtained from two different silica geothermometer applications match up with each other. Considering the geothermometer temperatures, provinces such as Niğde and Aksaray with the highly radiogenic granite area are excellent resources for initiating Enhanced Geothermal System (EGS) projects for geothermal energy

Özet

Bu araştırmanın temel amacı 2018-2023 yılları arasında Türkiye’de yapılmış olan öğretmenlerin eğitim programı okuryazarlık düzeylerini belirleyen araştırmaları, cinsiyet değişkenine göre meta analiz yöntemiyle incelemektir. Bu amaçla yapılan alanyazın incelemesinde YÖKTEZ, Google Akademik ve Science Direct veri tabanları dikkate alınmıştır. Literatür incelemesinde 2018-2023 yıllarını kapsayan ve dâhil edilme kriterlerine uygun olan, konu alanı ile ilgili doktora tezi, yüksek lisans tezi ve makale türünde 37 araştırma meta analiz kapsamına dâhil edilmiştir. Araştırmanın örneklem grubu, 7319 kadın ve 5028 erkek öğretmen olmak üzere toplamda 12347 öğretmenden oluşmaktadır. Dâhil edilen her çalışma için kodlama formu oluşturulmuş ve analizler için CMA programından yararlanılmıştır. Analizler sonucunda araştırmada yayın yanlılığının olmadığı belirlenmiştir. Rastgele etkiler modeline göre eğitim programı okuryazarlığı genel etki büyüklüğü değerinin erkek öğretmenlerin lehine ve orta düzeyde daha yüksek olduğu belirlenmiştir ($g=0.080$).

Anahtar Kelimeler: Eğitim programı okuryazarlığı, öğretmen, cinsiyet, meta analiz.

META-ANALYSIS OF TEACHERS' EDUCATION PROGRAM LITERACY LEVELS

Abstract

The main purpose of this research is to examine the studies conducted in Turkey between 2018 and 2023 that determine the literacy levels of teachers' education programs using the meta-analysis method according to the gender variable. In the literature review conducted for this purpose, YÖKTEZ, Google Scholar, and Science Direct databases were scanned. As a result of the screening, 37 studies in the form of doctoral theses, master's theses, and articles related to the subject area, covering the years 2018-2023 and meeting the inclusion criteria, were included in the scope of the meta-analysis. The sample group of the research consists of 12347 teachers in total, 7319 female and 5028 male teachers. A coding form was created for each included study and the CMA program was used for analysis. According to the random effects model, it was determined that the general effect size value of curriculum literacy was moderately higher in favor of male teachers ($g = 0.080$).

Keywords: Curriculum literacy, teacher, gender, meta-analysis.

Giriş

Eğitim programları, eğitimi şekillendirecek olan değerlerin ortaya koyulması ve toplumun okullaşma ile ilgili amaçlarını gösteren bir plandır (Bolat, 2021: 2). Bu planlar eğitim kurumlarının çocuklar, gençler ve yetişkinler için hedeflediği tüm faaliyetleri içinde barındırır. Hangi hedeflerin bu plana dâhil edilmesi bir yandan kurumun diğer yandan ise milli eğitimin hedeflerine göredir (Özdemir, 2012: 372). Okullaşma ile alakalı hedefler siyasi ve ideolojik bir temele dayandırılır ve bir nevi siyasi bir belge şeklinde karşımıza çıkar. Dolayısıyla eğitim programları muhakkak içinde bulunulan toplumun kurucu değerlerini ve siyasal yapılarından etkilenmiştir (Bolat, 2021: 2). Ayrıca geliştirilen toplumun maddi ve de manevi değerlerini sürdürmek, gelecek kuşaklara aktarmak ve nitelikli insan yetiştirmek önemli amaçlarından (Sarica, 2021: 133).

Eğitim programının uygulayıcısı olan öğretmenlerin programı anlaması ve programın beklentileri doğrultusunda uygulaması da programın içeriği kadar önemlidir. Öğretmenlerin uygulayıcılar olarak program ve dönemin şartlarına uygun şekilde işe koşamadığı program, çok yetkin ve kusursuz dahi olsa yazılı bir plan olmaktan öteye geçemeyecektir (Demir ve Toraman, 2021: 1518). Bu bağlamda Bolat (2017: 127) program hakkında yeterli seviyede bilgi sahibi olmak, programın içerik ve beklentilerinden hareketle programı uygulamak, uygun öğrenme yaşantıları ve süreçlerini hazırlamak gibi yeterlilikleri temsil eden “eğitim programı okuryazarlığı” kavramını ele almıştır. Eğitim programı okuryazarlığı, eğitimde ve programın hedeflerine ulaşması noktasında niteliğin artırılması yönünden ele alınması gereken önemli bir yeterliliktir (Çetinkaya ve Tabak: 298).

Eğitim programı okuryazarlığı, programın felsefi, sosyal, ekonomik, psikolojik gibi temellerini, amaçlarını, ön planda olan değerlerini, becerilerini, yeterliklerini ve temeline aldığı öğrenme-öğretmen sürecini bilmekle alakalıdır. Öğretmen bunları eğitim durumu ile ölçme-değerlendirme süreciyle bağdaştırabilmeli ve tüm öğeler arasında ilişki kurabilmelidir. Program okuryazarı bir öğretmen programa yorum katabilir, doğru ve etkili bir şekilde planlama yaparak programı uygulayabilir (Özden, 2022: 216). Eğitim programları okuryazarlığı ile ilgili yapılan çalışmaların son yıllarda artış göstermesi bu yeterliliğin önem kazandığını göstermektedir (Bolat, 2017; Erdem ve Eğmir, 2018; Çetinkaya ve Tabak, 2019; Kahramanoğlu, 2019; Saral, 2019; Aslan, 2019; Erdamar ve Akpunar, 2020; Yar Yıldırım, 2020; Keskin, 2020; Sural ve Dedebeali, 2021; Nasırcı, 2022; Şahin ve Tekkol, 2023; Berkant ve Mansuroğlu, 2023). Ayrıca konu alanı ile ilgili yapılan çalışmalarda öğretmenlerin eğitim programı okuryazarlık düzeyleri

cinsiyete göre incelendiğinde farklı sonuçlara ulaşılmıştır. Yapılan bu çalışmalarda örneklem grubunda çoğunlukla öğretmenler, öğretmen adayları veya eğitim yöneticileri yer almıştır. Konu alanı ile ilgili nicel, nitel veya karma desenle yürütülmüş birçok çalışmaya ulaşılmış ancak meta-analiz yöntemi ile öğretmenlerin eğitim programı okuryazarlık düzeylerinin cinsiyet değişkenine göre incelendiği bir çalışmaya rastlanmamıştır. Eğitim programı okuryazarlığı ile ilgili genel ve bütüncül bir bakış açısı sunma ve sonraki araştırmalara kaynaklık etme noktasında bilgi birikimine olanak sağlaması amacıyla böyle bir araştırma yapma ihtiyacı ortaya çıkmıştır. Bu düşünceden hareketle, 2018-2023 yılları arasında Türkiye’de yapılmış olan öğretmenlerin eğitim programı okuryazarlık düzeylerini belirleyen araştırmaların, cinsiyet değişkenine göre meta analiz yöntemiyle incelenmesi bu araştırmanın temel amacıdır.

ARAŞTIRMA

Bu araştırmada sistematik sentezleme yöntemlerinden biri olan meta analiz yöntemi kullanılmıştır. Meta analiz yöntemi, belirli bir konuda birbirinden bağımsız farklı çalışmaların nicel bulgularını kullanarak istatistiksel olarak sentezleme ve yorumlama olarak tanımlanabilir (Cumming, 2012; Ellis, 2010; Yeşilyurt, 2021; Yeşilyurt ve diğerleri, 2019). Ayrıca meta analiz yöntemi belirli araştırmaların bir araya getirilerek ortak bir yargıya varılmasına olanak sağlar (Yeşilyurt, Gurbetoğlu ve Yılmaz, 2019). Bu araştırmada her çalışmanın etki büyüklüğünün ve genel etki büyüklüğünün hesaplanmasında Comprehensive Meta-Analysis (CMA) programından yararlanılmıştır.

Verilerin Toplanması

Öğretmenlerin eğitim programı okuryazarlığının konu edildiği bu çalışmanın veri kaynağını Türkiye’de yapılmış makaleler ve tezler oluşturmaktadır. İlgili çalışmalara ulaşmak amacıyla YÖKTEZ, Google Akademik ve Science Direct veri tabanları taranmıştır. Yapılan taramada “*eğitim programı okuryazarlık, eğitim programı okuryazarlığı, program okuryazarlık, program okuryazarlığı, curriculum literacy*” anahtar kelime olarak kullanılmıştır. Ulaşılan bu araştırmalardan dâhil edilme kriterlerine uygun olan 37 çalışma olduğu belirlenmiştir. Dâhil edilen bu çalışmalara ilişkin olarak araştırmanın örneklem grubu, 7319 kadın ve 5028 erkek öğretmen olmak üzere toplamda 12347 öğretmenden oluşmaktadır.

Dâhil Edilme Kriterleri

İlgili literatürde bulunan çalışmaların meta analize dâhil edilmesi için bir takım kriterler takip edilmiştir. Bu kriterler aşağıda sıralanmıştır.

1. Çalışmaların örneklem grubunun Türkiye’de olması,
2. Çalışmaların 2018-2023 (son yayınlanma tarihi: Ekim 2023) yılları arasında yapılmış olması,
3. Çalışmaların öğretmenlerin eğitim programı okuryazarlığında cinsiyet değişkenini içeren çalışmalar olması,
4. Çalışmaların etki büyüklüğünün hesaplanabilmesi için cinsiyet gruplarında örneklem büyüklüğü, ortalama puan, standart sapma değerlerinin rapor edilmesi.

Yapılan taramalar ve uygulanan kriterler doğrultusunda meta-analiz çalışmasında 9’u makale, 26’sı yüksek lisans tezi ve 2’si doktora tezi olmak üzere toplamda 37 çalışmanın etki büyüklüğü hesaplanmıştır.

Çalışmaların Kodlanması

Araştırma verilerinin sistemli şekilde gruplanması ve kolayca erişilebilmesi amacıyla araştırmanın kapsamına dâhil edilen her çalışma için kodlama formu oluşturulmuştur. Kodlama formu “Çalışma Künyesi” ve “Çalışma Verileri” isimli iki bölümden oluşturulmuştur. Çalışma künyesi bölümünde *çalışmanın numarası, çalışmanın adı, yayın yılı, yazar/yazarlar başlıklarına* yer verilmiştir. Çalışma verileri bölümü ise cinsiyet gruplarının *aritmetik ortalaması, standart sapması ve örneklem büyüklüğünü* içermektedir. Oluşturulan kodlama formlarına ilişkin kayıtların güvenilirliğini sağlamak amacıyla çalışmayı yürüten araştırmacılar dışındaki bir araştırmacı tarafından kodlama formlarının incelenmesi sağlanmıştır.

Yayın Yanlılığı

Yayın yanlılığı, birbirinden bağımsız çalışmaları bir araya getirmekten doğan potansiyel hatalardır (Çarkungöz & Ediz, 2009). Yayın yanlılığın olup olmadığı istatistiksel yöntemler (Huni Grafiği ve Begg and Mazumdar rank correlation) ile test edilmiştir.

BULGULAR

Eğitim programı okuryazarlık düzeylerini belirlemek amacıyla 2018 ile 2023 yılları arasında yapılmış çalışmalar incelenmiştir. Bu çalışmalardan ilk olarak dâhil edilme kriterlerine uygun olan 37 çalışma veri analizine dâhil edilmiştir. Analizler için Hedges’s g modeli kullanılmıştır. Rastgele veya sabit etkiler modeline karar vermek amacıyla heterojenlik testi yapılmıştır. Heterojenlik testinin istatistiksel verileri Şekil 1’ de yer almaktadır..

Model	Effect size and 95% confidence interval						Test of null (2-Tail)		Prediction Interval		Between-study		Other heterogeneity statistics			
	Number Studies	Point estimate	Standard error	Variance	Lower limit	Upper limit	Z-value	P-value	Lower limit	Upper limit	Tau	TauSq	Q-value	df (Q)	P-value	I-squared
Fixed	37	0,062	0,019	0,000	0,025	0,099	3,316	0,001					147,134	36	0,000	75,532
Random	37	0,080	0,039	0,001	0,004	0,156	2,072	0,038	-0,335	0,496	0,201	0,040				

Şekil 1. Heterojenlik Testi Sonuçları

Elde edilen bulgulara göre p değeri ($p=0,000$) $0,05$ 'ten küçüktür. Bu bulguya göre gruplar arasında anlamlı bir fark olduğu söylenebilir. Q değeri $147,134$ olan bu çalışmanın heterojen olduğu görülmektedir. Bu sebeple çalışmada Rastgele Etkiler Modeli ile analizlerin yapılmasına karar verilmiştir. Rastgele Etkiler Modelinin analiz sonuçları ise Şekil 2'de yer almaktadır.

Meta Analysis

Şekil 2. Rastgele Etkiler Modeli Altında Yapılan Analiz Sonuçları

Şekil 2'de, eğitim programı okuryazarlık değişkeninin cinsiyete göre incelenmesine ait orman grafiği verilmiştir. Bu grafik eğitim programı okuryazarlık düzeyini inceleyen 37 çalışmadan elde edilen Hedges's g değerlerini içermektedir. Grafikteki kareler her bir çalışmanın etki büyüklüğünü gösterirken iki yandan uzanan çizgiler de tahmin için %95 güven aralığını

göstermektedir. Şeklin en sonunda bulunan elmas şekli ise genel etkiyi gösterir. Çalışmanın genel etkisi Rastgele Etkiler Modeli'ne göre $g=0.080$ olarak hesaplanmıştır. Grafik incelendiğinde yapılan çalışmalarda erkekler lehine sonuçlara daha fazla ulaşılmıştır. Bireysel etki büyüklüğü en yüksek dört çalışma Bülbül, 2021 (EB: 1,728); Kahramanoğlu, 2019 (EB:0,401); Oruç, 2022 (EB:0,256) ve Aynas, 2023 (EB: 0,215) şeklinde bulunmuştur. Etki büyüklüğü en düşük dört çalışma ise Ustabulut, 2021 (EB:-0.311); Erdamar, 2020 (EB -0,300); Çınar, 2022 (EB: -0.207) ve Adem, 2023 (EB: -0,200) şeklinde sıralanmıştır.

Yayın yanlılığın var olup olmadığını belirlemek amacıyla ilk olarak huni saçılım grafiği bakılmıştır.

Şekil 3. Eğitim Programı Okuryazarlık Düzeyleri Verilerini İçeren 37 Çalışmanın Huni Saçılım Grafiği

Huni grafiğinin saçılımı incelendiğinde, çalışmaların daha çok huninin üst bölgesinde toplandığı görülmektedir. Huninin dışında kalan çalışmalar da mevcuttur. Bu bulgulardan yayın yanlılığın olup olmadığının belirlenememesi nedeniyle Begg and Mazumdar rank correlation istatistiklerine başvurulmuştur. Begg and Mazumdar rank correlation istatistik sonuçları Şekil 4'de verilmiştir.

Begg and Mazumdar rank correlation

Kendall's S statistic (P-Q) 42,00000

Kendall's tau without continuity correction

Tau 0,06306
z-value for tau 0,54931
P-value (1-tailed) 0,29140
P-value (2-tailed) 0,58279

Kendall's tau with continuity correction

Tau 0,06156
z-value for tau 0,53623
P-value (1-tailed) 0,29590
P-value (2-tailed) 0,59180

Şekil 4. Begg and Mazumdar Rank Correlation İstatistiği Sonuçları

Begg and Mazumdar rank correlation istatistiğine göre iki kuyruklu p değerinin 0.05'in altında, Tau değerinin ise 1.00'a yakın olması beklenir (Dinçer, 2022). Yapılan analizin bulgularına göre p değerinin 0.05'den büyük olması sebebiyle bu çalışmada yayın yanlılığın olmadığı sonucuna varılmıştır.

SONUÇ

Yapılan meta-analiz çalışmasının temel amacı öğretmenlerin eğitim programı okuryazarlık düzeyi açısından cinsiyet değişkeninin etki büyüklüğünü hesaplamaktır. Bunun için Türkiye'de yapılmış olan 37 makale ve tez çalışmaya dâhil edilmiştir. İncelenen 37 çalışmada 7319 kadın ve 5028 erkek öğretmen olmak üzere toplamda 12347 öğretmen toplam örneklemini oluşturmaktadır. Çalışmaların bireysel etki büyüklüklerinin hesabı için kodlama formları kullanılmış olup analizler gerçekleştirilmiştir. Daha sonra ise cinsiyet değişkenine bağlı olarak genel etki hesaplanmıştır.

Araştırmaya dâhil edilen çalışmalarda yayın yanlılığını test etmek amacıyla huni saçılım grafiği ve Begg and Mazumdar Rank Correlation istatistiği sonuçlarına bakılmıştır. Huni saçılım grafiğinde çalışmaların daha çok huninin üst bölgesinde toplandığı görülür. Begg and Mazumdar Rank Correalation istatistiğinin sonuçlarında ise iki kuyruklu p değeri ($p=,58$) yayın yanlılığın olmadığını kanıtlar. Yapılan heterojenlik testiyle gruplar arası anlamlı bir farkın olduğu belirlenmiştir. Hedges's g modeli kullanılarak Q değeri ($Q=147,134$) hesaplanmıştır. Bu durum çalışmaya dâhil edilen araştırma sonuçlarının heterojen bir dağılım gösterdiğini ispatlamaktadır. Heterojenlik testinin sonucuna göre rastgele etkiler modeli ile genel etki

büyüküğü hesaplanmıřtır. alıřmada genel etki büyüküğü ($g=0.080$) deęeri erkek öęretmenlerin lehine olup orta düzeyde daha yüksek olduęu görölmüřtür.

Akdeniz Üniversitesi, Sağlık Hizmetleri MYO, Tıbbi Görüntüleme Programı, Antalya.

Email: kayamahir@gmail.com

Özet

Köpeklerde vertebral kalp skoru (VHS) ve vertebral sol atrium boyutu (VLAS), sırasıyla kardiyomegali ve sol atriyal genişlemeyi tahmin etmek için yaygın olarak kullanılan iki radyografik kardiyak indekstir. Doğru VHS ve VLAS ölçümleri için kalbin ve kaudal vena kavanın tüm sınırlarının açık olması gerekir. Ne yazık ki, tavşanların lateral düz radyografilerinde kalp silüetinin kranial sınırı ve kaudal vena kava görülemez. Bu çalışmanın amacı sağlıklı, yetişkin 58 Yeni Zelanda beyaz tavşanında VHS ve VLAS için ekokardiyografiye dayalı referans aralıklarını tanımlamaktır. VHS ve VLAS kontrast sağ lateral torakal radyografilerden ölçüldü. Kontrast toraks radyogramlar, 1 ml/kg non-iyonik opak kontrast maddenin safen venden enjeksiyonu ile elde edildi. İki radyografik kardiyak indeks ve ekokardiyografik parametreler (diastol sonu sol ventrikül iç çapı (LVIDd) ve sol atriumun aorta oranı (LA/Ao)) arasındaki korelasyonlar değerlendirildi. Referans aralıkları ile ortalama veya medyan değerler VHS için $7,94 \pm 0,31$ vertebra (v) (7,2-8,6 v) ve VLAS için 1,5 v (1-2 v) idi. Vücut ağırlığının VHS ve VLAS üzerinde herhangi bir etkisi tespit edilmedi. VHS ve VLAS açısından erkekler (n=31) ve dişiler (n=27) arasında fark yoktu. VHS ile LVIDd ($r=0,538$, $P<0,0001$) veya VLAS ile LA/Ao ($r=0,629$, $P<0,0001$) arasında orta derecede pozitif korelasyon belirlendi. VHS ve VLAS değerlerinde aynı gözlemci için (intraobserver) mükemmel uyum bulundu (sınıf içi korelasyon katsayıları VHS için (ICC)=0,894, $P<0,0001$ ve VLAS için ICC=0,961, $P<0,0001$). Sonuç olarak kontrast torakal radyografi, VHS ve VLAS'ın doğru ölçümü için kolay, etkili ve komplikasyonsuz bir görüntüleme tekniğidir. Mevcut çalışma, VHS ve VLAS değerleri için referans aralıkları belirledi ve bu indekslerin ölçümlerinin tavşanlarda tekrarlanabilir ve güvenilir olduğunu gösterdi.

Anahtar Kelimeler: Ekokardiyografi, referans aralık, tavşan, vertebral kalp skoru, vertebral sol atrium boyutu.

**VERTEBRAL HEART SCORE AND VERTEBRAL LEFT ATRIAL SIZE: A
REFERENCE INTERVAL STUDY IN HEALTHY NEW ZEALAND WHITE
RABBITS BASED ON ECHOCARDIOGRAPHY**

Abstract

In dogs, VHS and VLS are two radiographic cardiac indices commonly used to predict cardiomegaly and left atrial enlargement, respectively. For accurate VHS and VLAS measurements, all borders of the heart and caudal vena cava must be clear. Unfortunately on lateral plain radiographs of rabbits, the cranial border of the heart silhouette and the caudal vena cava are not visible. The aim of this study was to define reference intervals for vertebral heart score (VHS) and vertebral left atrial size (VLAS) of healthy, adult 58 New Zealand white rabbits based on echocardiography. The VHS and VLAS were measured from contrast right lateral (RL) thoracic radiographs. The contrast thoracic radiographs were obtained by bolus injection of 1 ml/kg of non-ionic opaque contrast agent from saphenous vein. The correlations between two radiographic cardiac indices and echocardiographic parameters (left ventricle internal diameter in diastole (LVIDd) and ratio of left atrium to aort (LA/Ao)) were evaluated. The mean or median values with a reference interval were 7.94 ± 0.31 vertebrae (v) (7.2-8.6 v) for VHS or 1.5 v (1-2 v) for VLAS. No effect of body weight on VHS and VLAS was detected. There was no difference between males (n=31) and females (n=27) in VHS and VLAS. A moderate positive correlation was found between VHS and LVIDd ($r=0.538$, $P<0.0001$) or VLAS and LA/Ao ($r=0.629$, $P<0.0001$). Excellent intraobserver agreement was found for VHS and VLAS (intraclass correlation coefficients (ICC)=0.894, $P<0.0001$ for VHS and ICC=0.961, $P<0.0001$ for VLAS). In conclusion, contrast thoracic radiography is an easy, effective, and uncomplicated imaging technique for accurate measurements of VHS and VLAS. The present study provided a reference interval for values of VHS and VLAS, and demonstrated that measures of these indices are repeatable and reliable in rabbits.

Keywords: Echocardiography, rabbit, reference range, vertebral heart score, vertebral left atrial size

Giriş

Pet hayvan olarak daha popüler hale gelen tavşanlarda kalp hastalıkları son dönemlerde daha fazla teşhis edilmeye başlandı (Orcutt ve Malakoff, 2021). Pet tavşanlarda kardiyovasküler hastalıkların prevalansı % 2,6'dır (Ozawa ve ark., 2021). Ayrıca tavşanlar, ateroskleroz, endokardit ve ilaca bağlı kardiyomiyopatiler gibi kardiyovasküler hastalıklar için hayvan modeli olarak kullanılmaktadır (Pogwizd ve Bers, 2008). Kalp hastalıklarında kullanılan gelişmiş teşhis yöntemleri, hem pet hem de laboratuvar tavşanları için giderek daha önemli hale gelmiştir. Tavşanlarda toraks radyografisi, elektrokardiyografi ve ekokardiyografi kesin tanıya ulaşmada, tedavi planının geliştirilmesinde ve hastalık prognozunun takibine faydalıdır (Orcutt ve Malakoff, 2021). Ekokardiyografi, hem insan hem de veteriner hekimliğinde kardiyak morfolojinin ve fonksiyonların değerlendirilmesinde köklü bir yöntem olmasına rağmen, uygulayıcıya bağımlı bir yöntem olup, uluslararası yönergelere uygun olarak tekniğe ilişkin kapsamlı eğitim ve temel bilgi gerektirir. Toraks radyografileri, kalp silüetinin şeklinin ve boyutunun değerlendirilmesine izin vererek kalp hastalığı hakkında kritik bilgiler sağlar. Vertebral kalp skoru (VHS) ölçümleri, progresif kalp büyümesinin etkili bir göstergesidir (Buchanan, 2000). VHS, sağlıklı tavşanların (Moarabi ve ark. 2015; Turner Giannico ve ark., 2015; Onuma ve ark., 2010) yanı sıra köpeklerde (Buchanan, 2000), kedilerde (Lister & Buchanan, 2000), diğer hayvan türlerinde de rapor edilmiştir (Çetinkaya ve Kaya, 2022). VHS'de olduğu gibi, köpeklerde sol atriyum boyutunu objektif olarak değerlendirmesinde vertebral sol atriyum boyutu (VLAS) kullanılmaktadır (Malcom ve ark., 2018). Ayrıca, VLAS ayrıca sağlıklı (Çetinkaya ve Kaya, 2022) ve hipertrofik kardiyomiyopati sığıçanlarda (Şirin ve ark., 2022) kontrast toraks radyografisi kullanılarak tanımlanmıştır. Buna rağmen sağlıklı tavşanlarda VLAS değerinin referans aralığı bildirilmemiştir.

Sığıçanlarda olduğu gibi (Çetinkaya ve Kaya, 2022), tavşanların lateral torakal düz radyografilerinde kaudal vena kavanın (CaVC) ve kalp silüetinin kranial sınırının belirginliği oldukça yetersizdir (Turner Giannico ve ark., 2015). Bu radyografik özellik, VHS ve VLAS'ın hatalı ölçümüne neden olabilir. Hipotezimiz, torakal kontrast radyografilerde ölçüm bölgelerinin belirgin olması nedeniyle, kalp silüetinden bağımsız olarak, kalp büyüklüğünün ve sol atrium (LA) boyutunun daha doğru değerlendirilebileceği yönündedir. Dolayısıyla bu çalışmanın amacı, sağlıklı, yetişkin Yeni Zelanda beyaz (NZW) tavşanlarının ekokardiyografiye dayalı torakal kontrast radyografilerinden elde edilen VHS ve VLAS değerleri için referans aralıkları tanımlamaktır.

Gereç ve Yöntem

Deney protokolü Akdeniz Üniversitesi Hayvan Bakımı Etik Kurulu tarafından hayvanların kullanımına ilişkin olarak onaylandı (No: B.30.2.AKD.0.05.07.00/45). Fizik muayene, toraks radyografileri ve ekokardiyografi temelinde tüm hayvanlar sağlıklıydı. Tavşanların oskültasyonunda herhangi bir üfürüm, anormal kalp veya solunum sesi, aritmi; düz torakal radyografilerde pulmoner ve vasküler paternler, torasik vertebral anormallikleri, konjestif radyografik bulguları; ekokardiyografide kalp kapaklarında, sistolik ve diastolik fonksiyonlarda anormallikler, perikardial veya pleural efüzyon yoksa sağlıklı kabul edildi. Kontrast madde verilmesi için lateral safen venden damar yolu açıldı. Göğüs röntgeni ve ekokardiyografi sedasyon veya anestezi olmadan yapıldı.

Transtorasik 2 boyutlu (2D), M-mod ve Doppler görüntülemeyi içeren tam ekokardiyografik incelemeler, sektör problu (8-12 MHz) ultrasonografi cihazı (Mindray DC-80, Shenzhen Mindray Bio-medical Electronics, Çin) kullanılarak gerçekleştirildi. Sağ parasternal kısa eksen görünümünden papillar kaslar ve mitral kapak aralığından diastol sonu sol ventrikül iç çapı (LVIDd) M-mod ölçüm değerleri ve 2D transaortik görüntüden sol atrium (LA) ve aort (Ao) ölçümleri elde edildi ve LA/Ao oranı hesaplandı.

Her hayvan sağ lateral (RL) projeksiyonda hem düz hem de non-iyonik kontrast madde (1 ml/kg Iohexol (300 mg I/ml), Opaxol®, Opakim, Türkiye) safen venden verilerek görüntülendi. Ancak VHS ve VLAS ölçümleri RL kontrast radyografilerden yapıldı. Radyografik görüntüleri elde etmek için bilgisayarlı radyografi okuyucusu (FCR Prima T2, FujiFilm®, Tokyo, Japonya) kullanıldı. Radyografik ölçümler, ekokardiyografik sonuçlara kör olan gözlemci tarafından bilgisayar yazılımı (Image Intelligence™, FujiFilm®, Tokyo, Japonya) kullanarak yapıldı.

VHS'nin uzun ekseni (L) (trakea biforkasyonundan apekse kadar) ve kısa ekseni (S) (kalbin kaudal sınırı ile CaCV'nin dorsal sınırının kesişme noktasından kranial sınıra kadar) ölçüldü. Bu iki eksene ait ölçümler 4. torakal vertebranın kranialden başlanarak vertebral sayıya (v) dönüştürülüp toplanarak VHS değeri elde edildi (Buchanan, 2000). Trakea biforkasyonundan LA ve CaVC'nin kesişimine kadar olan mesafenin ölçülmesinden sonra VHS de olduğu gibi V değere dönüştürülerek VLAS elde edildi (Malcom ve ark., 2018). Aynı gözlemci, VHS ve VLAS için gözlemci uyumunu değerlendirmek amacıyla rastgele seçilen 10 tavşanın ölçümlerini 7 gün ara ile iki kez yaptı.

İstatistiksel analiz ticari yazılım (IBM SPSS İstatistik 22.0, SPSS Inc., ABD) üzerinde gerçekleştirilmiştir. Verilerin normalliğini test etmek için Shapiro-Wilk testi kullanıldı. Normal dağılan verileri ifade etmek için ortalama \pm standart sapma (SD), dağılmayan verileri ifade etmek için medyan ve çeyrekler arası aralık (IQR) kullanıldı. Erkekler ve dişiler arasındaki farkın belirlenmesinde, VLAS için Mann-Whitney U testi ve VHS iki örneklem t-testi kullanıldı. Radyografik ölçümler (VHS ve VLAS) ve ekokardiyografik veriler (LVIDd ve LA/Ao) arasındaki korelasyonlar zayıf: 0,1 ile 0,3, orta: 0,4 ile 0,6, yüksek: 0,7 ile 0,9 veya mükemmel: 1 katsayıları ile değerlendirildi (Dancey ve Reidy, 2007). Mevcut tavşan popülasyonundaki VHS ile literatürde bildirilen VHS'nin ortalama referans değerleri arasındaki farklar, tek-örneklem testi kullanılarak değerlendirildi. VHS daha önceki yayınlarda $7,99 \pm 0,58$ v (Onuma ve ark., 2010), $7,6 \pm 0,32$ v (Moarabi ve ark., 2015), $7,6 \pm 0,39$ v (Turner Giannico ve ark., 2015) ve $7,55 \pm 0,49$ v (Ngosurachet ve ark., 2022) olarak rapor edilmiştir. Gözlemci uyumu, sınıf içi korelasyon katsayısı (ICC) tahminleri ve %95 güven aralığı (CI) kullanılarak VHS ve VLAS için ICC değerleri $>0,8$ "iyi", $0,61-0,8$ arası "anlamlı", $0,41-0,6$ arası "orta", $0,21-0,4$ arası "yetersiz" ve $0-0,2$ arası "kötü" olarak kabul edildi (Puccinelli ve ark., 2021). $P < 0,05$ istatistiksel olarak önemli kabul edildi.

Bulgular

Analizlere 31'i (%53,44) erkek ve 27'si (%46,56) dişi olmak üzere 58 NZW tavşanı dahil edildi. Ortalama yaş, vücut ağırlığı (BW) ve kalp atım oranı (HR) değerleri sırasıyla $11,5 \pm 0,363$ ay (9-17 ay), $3,17 \pm 0,38$ kg (2,6-4,1 kg) ve $231,4 \pm 26,85$ bpm (197-289 bpm) idi. Hiçbir hayvanda kontrast maddeye bağlı bir sorun ve ölüm yaşanmadı. Düz radyografilerde kranial kalp sınırı, CaVC ve aort görülmezken, kontrast radyografilerde kalbin, sol atriumun ve CaVC'nin sınırları iyi derecede belirgindi. Böylece kontrast radyografilerden VHS ve VLAS herhangi bir sorun olmadan ölçüldü. Ekokardiyografik parametreler Tablo 1'de özetlenmiştir.

VHS'nin ortalama değeri (%95 CI ve minimum-maksimum değerler) $7,94 \pm 0,31$ v (7,83-8,04 v; 7,2-8,6 v) ve VLAS'ın medyan değeri (IQR) 1,5 v (1-2 v) idi. Erkekler [VHS için $8,04 \pm 0,23$ v (7,95-8,12 v); VLAS için 1,5 v (1,1-2 v)] ve dişiler [VHS için $7,89 \pm 0,36$ v (7,71-7,99 v), VLAS için 1,4 v (1 -1,9 v) arasında fark belirlenmedi.

Tablo 1 Yeni Zelanda beyaz tavşanlarında ekokardiyografik parametrelerin ortalama±SD, % 95 CI, and minimum-maksimum değerleri.

Parametreler	Ortalama ± SD	% 95 CI	Minimum-Maksimum
LVIDd (cm)	1.34±0.12	1.31-1.37	1.06-1.71
EF (%)	69.5±5.69	68-71	56-83
FS (%)	35.9±4.35	34.9-37.2	29-43
LA (cm)	0.89±0.12	0.86-0.92	0.66-1.22
Ao (cm)	0.75±0.09	0.73-0.78	0.59-0.95
LA/Ao	1.18±0.14	1.15-1.22	1-1.46

Kısaltmalar: SD, standart sapma; CI, güven aralığı; LVIDd, diastol sonu sol ventrikül iç çap; EF, ejeksiyon fraksiyonu; FS, fraksiyonel kısalma; LA, sol atrium; Ao, aorta; LA/Ao, sol atrium-aort oran.

Bu çalışmadaki ortalama VHS değeri ($7,94 \pm 0,31$ v), Moarabi ve ark. ($7,6 \pm 0,39$ v), Turner Garcia ve ark. ($7,6 \pm 0,32$ v) ve Ngosurachet ve ark. ($7,55 \pm 0,49$ v) tarafından belirlenen referans değerlerden daha yüksekti ($P < 0,002$), ancak Onuma ve ark. ($7,99 \pm 0,58$ v) tarafından önerilen referans değerinden önemli ölçüde farklı değildi ($P = 0,637$).

BW ile radyografik kardiyak indeksler arasında anlamlı bir korelasyon bulunamadı (VHS için $r = 0,031$, $P = 0,416$; VLAS için $r = 0,106$, $P = 0,231$). VHS ile LVIDd ($r = 0,538$, $P < 0,0001$) ve VLAS ile LA/Ao (and $r = 0,629$, $P < 0,0001$) arasında orta derecede pozitif korelasyon belirlendi.

ICC değerleri kullanılarak değerlendirilen gözlemci uyum değişkenliği VHS ($ICC = 0,894$, % 95 CI = $0,827-0,935$, $P < 0,0001$) ve VLAS ($ICC = 0,961$, % 95 CI = $0,935-0,977$, $P < 0,0001$) için mükemmeldi.

Tartışma ve Sonuç

Yapılan literatür taramaya dayanarak bildiğimiz kadarıyla bu çalışma, NZW tavşanlarında ekokardiyografik parametrelere dayalı olarak VHS ve VLAS için referans aralıkları öneren ilk çalışmadır. VHS, kalp hastalığından şüphelenilen hastalarda eksantrik hipertrofi veya dilate kardiyomyopatiye bağlı kardiyomegalinin değerlendirilmesinde geçerli bir yöntemdir (Buchanan, 2000). Normal tavşanlarda lateral radyografilerde kardiyak kranial sınırı, yumuşak doku opasitesi (timus ve intratorasik yağ) nedeniyle genellikle kranial mediastenden ayırt edilemez (Turner Giannico ve ark., 2015). Perikarddaki yağ, özellikle obez tavşanlarda, kalp silüetinin daha büyük görünmesine neden olur (Orcutt Malakoff, 2021). Tavşanlarda VHS ölçümleri tüm bu faktörlerden olumsuz etkilenebilir. Bu nedenle VHS referans aralıkları sağlıklı tavşanlarda tanımlanmış olmasına rağmen (19, 22, 24, 34), köpek ve kedilerin aksine klinik uygulamada yaygın olarak kullanılmamaktadır (Orcutt ve Malakoff, 2021). Bu çalışmada atrial genişlemeyi de dâhil etmek için VHS'nin kısa eksenini CaCV'nin dorsal sınırından ölçüldü (Buchanan, 2000). Bundan dolayı daha önceki çalışmalara (Onuma ve ark., 2010; Moarabi ve ark., 2015; Turner Garcia ve ark., 2015; Ngosurachet ve ark., 2022) göre VHS ölçümleri farklı yapılmıştır. Tavşanların lateral torakal düz radyografilerinde CaVC belirgin olmamasına rağmen (Turner Garcia ve ark., 2015), kontrast radyografilerde kalbin tüm

sınırlarının ve CaVC'nin görselleştirilmesi oldukça yeterliydi, böylece VHS ve VLAS kalp silüetinden bağımsız olarak sorunsuz bir şekilde ölçülebildi. Bu çalışmamızdaki ortalama VHS değeri, Onuma ve ark. (2010) hariç, önceki diğer üç çalışmadan (Moarabi ve ark., 2015; Turner Garcia ve ark., 2015; Ngosurachet ve ark., 2022) önemli derecede yüksekti. Bu istatistiksel fark, hem kontrast toraks radyogramlarının kullanılmasından hem de kalp kısa ekseninin diğer çalışmalardan farklı ölçülmesinden kaynaklanmaktadır.

VHS köpeklerde ırka özgü bir indekstir (Puccinelli ve ar., 2021). Bulldog, Boston Terrier, Boxer, Pug ve Cavalier King Charles spaniel (Bagardi ve ark., 2021; Jepsen-Grant ve ark., 2012) gibi bazı köpek ırklarında ortalama VHS değerleri Buchanan ve Bucheler (1995) tarafından bildirilen referans aralığının üzerindedir. Kedilerde toraks yapısı tek tip olmasına rağmen Moon Cain ırkı kedilerde VHS diğer kedi ırklarına göre daha yüksektir (Oliveira ve ark., 2014). Sıçanlarda VHS değerleri üzerine ırkın etkisi olduğu bildirilmiştir (Çetinkaya ve Kaya, 2022). Ancak farklı tavşan ırklarından elde edilen VHS değerleri arasında farklılık saptanmamıştır (Wiphusunti ve ark., 2020; Ngosurachet ve ark., 2022). Tavşanlarda VHS üzerine cinsiyetin etkisi olmasa da (Onuma ve ark., 2010; Moarabi ve ark., 2015; Turner Garcia ve ark., 2015), BW etki olduğu bildirilmiştir (Onuma ve ark., 2010). Ancak bu çalışmada radyografik kardiyak indeksler BW ile korele değildi. Bunun nedeni değerlerin vücut ağırlığı 2,6 ile 4,1 kg arasında olan tavşanlardan elde edilmiş olması olabilir.

Ozawa ve ark. (2021), pet tavşanlarda sol taraf kalp büyümesinin %54,1, sağ taraf kalp büyümesinin %51,4, hem sol hem de sağ taraf kalp büyümesinin prevalansının %27 olduğunu bildirmişlerdir. Bu çalışmada en sık dejeneratif kalp kapak hastalığı (%40,5) teşhis edilmiş olup, bunu dilate kardiyomiyopati (%18,9), sınıflandırılmamış kardiyomiyopati (%10,8), restriktif kardiyomiyopati (%8,1) ve hipertrofik kardiyomiyopati (%5,4) takip etmektedir. Bu kalp patolojileri, özellikle dejeneratif kapak hastalıkları, sonuçta atrium dilatasyonuna neden olacaktır. Mitral kapak hastalığı olan köpeklerde LA dilatasyonu güçlü bir prognostik faktördür ve konjestif yetmezliğin en bildik başlangıcıdır (Malcom ve ark., 2018). Köpeklerde LA boyutlarını objektif bir şekilde değerlendirmek mümkündür. Miksomatöz mitral kapak hastalığının tanısı VLAS ile radyografik olarak konulabilir (Lamb ve ark., 2001; Malcom ve ark., 2018; Mikawa ve ark., 2020). Mitral kapak hastalığı olmayan köpeklerde bildirilen değerler VLAS için 1,79 v ile 2,1 v arasındadır (Malcom ve ark., 2018; Baisan ve Vulpe, 2022). Sağlıklı sıçanlarda VLAS için ortalama değer 1,95 v'dır (Çetinkaya ve Kaya, 2022). Bu çalışmada VLAS hem köpeklere hem de sıçanlara göre daha düşüktü. VHS'ye benzer şekilde VLAS köpeklerde ırka özgü bir indekstir (Puccinelli ve ark., 2021; Baisan ve Vulpe, 2022). Bu

indekslerin tavşanlarda cinse özgü olup olmadığını belirlemek için şu an daha fazla araştırmaya ihtiyaç vardır. Köpeklerde kardiyomegaliyi belirlemek için VHS eşik değerinin belirlenmesinde ekokardiyografik vücut ağırlığına göre normalleştirilmiş LVIDd ($>1,7$) kriter olarak kullanılmaktadır. Ekokardiyografik LA/Ao oranı ($>1,6$) genellikle LA dilatasyonunu öngörmeye VLAS eşik değerinin belirlenmesinde bir kriter olarak benimsenmektedir (Sanchez Salguero ve ark., 2018; Mikawa ve ark., 2020). Bu iki ekokardiyografik kriterin eşik değerleri tavşanlarda belirlenmemiştir. Ancak bu çalışmada LVIDd ile VHS ve VLAS ile LA/Ao arasında pozitif korelasyon belirlenmesine dayanarak VHS ve VLAS ekokardiyografik değerlendirme yapma olanağı olmayan veteriner klinisyenler ve kardiyovasküler deneysel çalışma yapan araştırmacılar için kalp büyüklüğünün ve LA boyutlarının nicel değerlendirmesine izin verebilir.

Sonuç olarak; torakal kontrast radyografisi, radyografik kardiyak indekslerin doğru ölçümü için kolay, etkili ve komplikasyonsuz bir görüntüleme tekniğidir. Bu çalışma VHS ve VLAS için referans aralığı sağlamakta ve bu indekslerin ölçümlerinin tavşanlarda tekrarlanabilir ve güvenilir olduğunu ortaya koymaktadır.

Özet

Türkiye, OECD ülkelerine kıyasla sağlık profesyoneli sayısında oldukça geridedir. Mevcut sağlık profesyonellerine destek verilmesi ve onların sistem içerisinde kalmaları gerekmektedir. Bu çalışmanın amacı, sağlık çalışanlarında örgütsel desteğin duygusal bağlılığa etkisinde iş tatmininin aracılık rolünü incelemektir. Araştırma bir özel hastanede çalışan ve araştırmaya katılmayı kabul eden 250 sağlık profesyoneli üzerinde gerçekleştirilmiştir. Araştırmada kolayda örneklem yöntemi kullanılmış olup, verilerinin analizinde SPSS ve SPSS Macro uzantısı kullanılmıştır. Veriler eğiklik ve basıklık değerine göre normal dağılmaktadır. Ayrıca aracılık analizi yapabilmeyen şartlarını sağlamaktadır (çoklu bağıntı problemi yoktur, bağımsız değişkenlerin bağımlı değişkenler üzerindeki etkiler anlamlıdır). Bu sebeple parametrik testlerden yararlanılmıştır. Araştırma değişkenlerinin ortalama puanları; örgütsel destek için $2,75 \pm 1,05$, duygusal bağlılık $2,65 \pm 1,07$ ve iş tatmini için $2,97 \pm 0,40$ olarak tespit edilmiştir. Elde edilen bulgulara göre örgütsel destek ile iş tatmini ($p < 0,05$; $r = 0,33$) ve duygusal bağlılık ($p < 0,05$; $r = 0,62$) arasındaki ilişki anlamlı ve pozitifdir. İş tatmini ile duygusal bağlılık arasındaki ilişki de benzer şekilde istatistiksel olarak anlamlı ve pozitifdir ($p < 0,05$; $r = 0,36$). Kurulan modelinde örgütsel desteğin iş tatminine ($\beta = ,339$, $p < ,001$) ve duygusal bağlılığa ($\beta = ,567$, $p < ,001$) etkisi anlamlı ve pozitifdir. Ayrıca, iş tatmininin duygusal bağlılığa etkisi de anlamlı ve pozitifdir ($\beta = ,168$, $p < ,001$). Modeldeki doğrudan ve dolaylı etkiler değerlendirildiğinde örgütsel desteğin duygusal bağlılık üzerindeki etkisinde iş tatmininin kısmi aracılık rolü bulunmaktadır. Sağlık çalışanlarında örgütsel desteğin duygusal bağlılığa etkisinde iş tatmininin aracılık rolünün incelendiği bu çalışmada anlamlı ve önemli bulgular elde edilmiştir. Buna göre sağlık çalışanlarının duygusal bağlılık kazanmalarında örgütsel destek önemli bir role sahiptir ve iş tatmini bu etkide kısmi aracılık rolüne sahiptir.

Anahtar Kelimeler: İş tatmini, duygusal bağlılık, örgütsel destek

**MEDIATING ROLE OF JOB SATISFACTION IN THE EFFECT OF
ORGANIZATIONAL SUPPORT ON AFFECTIVE COMMITMENT: AN
APPLICATION IN HEALTHCARE WORKERS**

Abstract

Türkiye is far behind in the number of health professionals compared to OECD countries. Existing health professionals need to be supported and they need to stay within the system. The purpose of this study was to examine the mediating role of job satisfaction in the effect of organizational support on affective commitment in healthcare professionals. The research was conducted on 250 health professionals who worked in a private hospital and agreed to participate in the research. Convenience sampling method was used in the research, and SPSS and SPSS Macro extension were used to analyze the data. The data are normally distributed according to the skewness and kurtosis values. In addition, it meets the conditions for mediation analysis (there is no multicollinearity problem, the effects of the independent variables on the dependent variables are significant). For this reason, parametric tests were used. Mean scores of research variables were determined as 2.75 ± 1.05 for organizational support, 2.65 ± 1.07 for affective commitment and 2.97 ± 0.40 for job satisfaction. According to the findings, the relationship between organizational support and job satisfaction ($p < 0.05$; $r = 0.33$) and affective commitment ($p < 0.05$; $r = 0.62$) is significant and positive. The relationship between job satisfaction and affective commitment is similarly statistically significant and positive ($p < 0.05$; $r = 0.36$). In the established model, the effect of organizational support on job satisfaction ($\beta = .339$, $p < .001$) and affective commitment ($\beta = .567$, $p < .001$) is significant and positive. Additionally, the effect of job satisfaction on affective commitment is significant and positive ($\beta = .168$, $p < .001$). When the direct and indirect effects in the model are evaluated, job satisfaction has a partial mediator role in the effect of organizational support on affective commitment. Significant and important findings were obtained in this study, which examined the mediating role of job satisfaction in the effect of organizational support on affective commitment in healthcare workers. Accordingly, organizational support has an important role in healthcare workers' affective commitment, and job satisfaction has a partial mediator role in this effect.

Keywords: Job satisfaction, affective commitment, organizational support

GİRİŞ

Literatürde yer alan çalışmalar incelendiğinde örgütsel destek duygusal bağlılığın önemli bir belirleyicisi olduğu anlaşılmaktadır (Tamer ve Bozaykut Bük, 2020). Sağlık çalışanları zorlu şartlar altında çalışan ve büyük fedakarlıklar yapan bir grubu temsil etmektedir. Halihazırda sağlık insan gücü yetersizliği sorunu ile karşı karşıya kalmış olan Türkiye için çalışanların bağlılığının önemi her geçen gün artmaktadır. Bu sebeple, gerçekleştirilen çalışma ile sağlık çalışanlarının algılamış oldukları örgütsel destek düzeyleri, duygusal bağlılıkları ve iş tatminleri incelenmiş olup, örgütsel desteğin duygusal bağlılık üzerine etkisinde iş tatmininin aracılık rolü değerlendirilmiştir.

Örgütsel Destek

Bireyin sağlık, mutluluk ve verimliliği açısından belirleyici olan destek algısı, iş yaşamında olduğu gibi özel hayatımızda da önemlidir. İş ortamında desteklenmek ve yanında birilerinin olduğunu bilmek, bireyin duygusal ve profesyonel açıdan güçlenmesine katkı sağlar ancak, değerlendirmeler subjektif olduğu için, bir durum bir birey için olumsuz bir etki yaratırken, başka bir birey için olumlu olarak algılanabilir (Tamer ve Bozaykut Bük, 2020). Sosyal Mübadele Teorisi'ne göre, bir kişi diğerine olumlu davranışlarda bulunduğu anda, karşılıklılık ilkesi gereği, olumlu davranışın karşılığını alması beklenir. Bu teori, örgütlerdeki ilişkilerin karşılıklı değişim temeline dayandığını öne sürer. Değiş-tokuş, sadece maddi kaynakları değil, aynı zamanda sosyal ve duygusal kaynakları da içerebilir. Bir başka ifade ile, örgüt içindeki ilişkiler sadece para, hizmet ve bilgi gibi somut kaynaklarla sınırlı kalmaz; aynı zamanda takdir, saygı ve sevgi gibi sosyal ve duygusal unsurları da kapsar. Bu teori, örgütsel destek algısının oluşumunu ve sürdürülmesini, bireyler arasındaki karşılıklı etkileşim ve değişimlerle açıklamaya çalışır. (Durmuş ve Şahin, 2015). Bu kurama göre, örgütler çalışanlarının mutluluğu için yatırım yaptıkları ve bunun çalışanlar tarafından doğru algılanmasını sağladıkları sürece sosyal değişimi başlatıp devam ettirmektedirler (Taştan, İşçi, ve Arslan, 2014). Altaş (2021)'a göre algılanan örgütsel destek, “Örgütün çalışanlarına bağlı olduğu, onlara değer verdiği, bu da çalışanların örgütlerine ilişkin bağlılığı arttırması” olarak ifade edilmektedir. Bu nedenle, çalışanların algıladığı örgütsel destek, örgütleriyle kurdukları sosyal ve ekonomik değişim ilişkilerinin sağlamlığına, karşılıklı yükümlülük algılarına ve bu yükümlülüklerin karşılıklı olarak yerine getirilmesine dayalıdır. Ayrıca, bu algı, diğer sosyal etkileşim değişkenleriyle de ilgilidir (Altaş, 2021). Eisenberger (1986) örgütsel desteği “Örgüt değerlerinin çalışanların katkıları ve mutluluğunu dikkate alması” olarak ifade etmiştir (Tamer ve Bozaykut Bük, 2020).

Bir başka ifade ile örgütsel destek, örgüt değerlerinin çalışanların esenliğini dikkate alması ve onların mutluluklarını artırıcı nitelik taşıması durumudur (Taştan ve ark., 2014).

Duygusal Bağlılık

1990'lardan bu yana ise, örgütsel bağlılık, birçok araştırmamanın başlıca konusu haline gelmiş; bu süreçte kavramla ilgili çok sayıda tanım yapılmış ve konunun teorik gelişimine büyük önem verilmiştir (Taştan ve ark., 2014). Duygusal bağlılık “Örgütsel amaçları benimseme, onlara bağlanma ve onunla özdeşleşme ile ilgili olumlu duygulara sahip olmaktır” ve örgütsel amaçlara ve kurallara karşı duyulan saygı, yöneticilere duyulan sevgi ve saygı, duygusal yakınlık, örgütsel vizyon ve misyonun paylaşılması ile oluşan bağlılık türüdür (Tutar, 2007). Meyer ve Allen (1991, 1997) tarafından oluşturulan örgütsel bağlılık modeli, günümüzde en yaygın kabul gören ve yapılan çalışmalar açısından en güçlü desteklenen modellerden biridir. Bu model, geçerliliği ve güvenilirliği bakımından öne çıkar, bilimsel araştırmaların ışığında en sağlam temele dayanan örgütsel bağlılık modeli olarak değerlendirilebilir. (Taştan ve ark., 2014). Duygusal bağlılık Meyer ve Allen tarafından geliştirilen modelin bir alt boyutu olarak karşımıza çıkmaktadır ve “bireylerin duygusal olarak kendi tercihleri ile çalıştıkları örgütte kalma arzusu” olarak ifade edilmektedir (Taştan ve ark., 2014). Örgütsel bağlılığın en önemli boyutlarından olduğu ifade edilen duygusal bağlılık, çalışanlarının motive olmasında oldukça önemli olarak görülmektedir (Taşlıyan, Güler, ve Kahveci, 2021).

İş Tatmini

İş tatmini, çalışanların görevlerinden duydukları memnuniyet veya memnuniyetsizlik duygularının, işin özelliğiyle ve çalışanların beklenti ve istekleriyle kesiştiği noktada ortaya çıkar. (Keser ve Bilir, 2019). Literatürde en yaygın kullanılan iş tatmini tanımının Davis'in tanımıdır. Bu tanıma göre iş tatmini; “Kişilerin işlerinden duydukları memnuniyet ya da memnuniyetsizliktir” (Söyük, 2018). Landy (1989)'nin yapmış olduğu tanıma göre ise iş tatmini “Bireyin işine ait kişisel değerlendirmeleri neticesinde oluşan duygusal durumdur” (Keser ve Bilir, 2019). Bir tutum olarak iş tatminin hem bireysel ve hem de örgütsel açıdan sonuçları vardır. Çalışanın yaptığı işten tatmin olması, hem yaşam tatmini ve hem de üretkenliğini önemli derecede etkilemektedir (Özyer, Ersin, ve Serhat, 2015). İş tatmini bireylerin gerek iş yaşamı gerekse iş dışındaki yaşamı açısından önemlidir. İş tatmini yüksek olan kişi özel yaşamında da daha iyimser ve mutlu olmaktadır. İş tatminsizliği ise hem örgütsel hem de bireysel pek çok olumsuz sonuca neden olabilmektedir (Söyük, 2018). Bir örgütte koşulların bozulduğunu gösteren en önemli kanıt iş doyumunun düşük olmasıdır. İş doyumsuzluğu, daha gizli biçimlerde, ani grevler, iş yavaşlatma, düşük verimlilik, disiplin

sorunları ve diğer örgütsel sorunların ardında yer alır (Çalışkan, 2005). Sağlık kurumlarının başarısı, çalışanlarını kurumsal hedeflere motive ederek etkili bir şekilde yönlendirmelerine bağlıdır. Teknolojinin gelişmişliği, ancak insan kaynaklarının bu teknolojiyi etkili bir şekilde kullanmasıyla amacın gerçekleşmesine katkı sağlar. Sağlık hizmetlerinde, personelin performansı doğrudan sunulan hizmetin kalitesini belirleyen temel faktördür. Dolayısıyla, kurumlar çalışan memnuniyetini göz ardı etmeden, personeli istekli ve motive ederek başarılarını sürdürebilirler (Söyük, 2018).

MATERYAL VE YÖNTEM

Katılımcılar ve Prosedür

Araştırma bir özel hastanede çalışan ve araştırmaya katılmayı kabul eden 250 sağlık profesyoneli üzerinde gerçekleştirilmiştir. Araştırma için İstanbul'da yer alan özel hastaneden ilgili izin alınmıştır. Katılımcıların; ortalama yaşı $29,16 \pm 11,96$, %72'si kadın, %55'i evli, %83,6'sı lisans ve lisansüstü eğitim düzeyine sahip ve %58'i hemşirelerden oluşmaktadır. Hemşireler dışında araştırmaya katılan diğer meslek grupları arasında hekimler, ebeler, teknisyen/teknikerler, tıbbi sekreterler, memurlar ve diğer sağlık profesyonelleri bulunmaktadır. Araştırma yüz yüze anket yöntemi ile gerçekleştirilmiştir. Katılımcıların gönüllü onamları alındıktan sonra anket formları dağıtılmış ve yaklaşık 10 dakika tamamlama süresi beklendikten sonra geri toplanmıştır. Verilerin araştırma amacı ile toplandığı ifade edilmiş ve anonimliği garanti altına alınmıştır.

Araştırma kapsamında geliştirilen ve test edilen hipotezler:

H₁: Algılanan örgütsel desteğin duygusal bağlılık üzerine anlamlı bir etkisi vardır.

H₂: Algılanan örgütsel desteğin iş tatmini üzerine anlamlı bir etkisi vardır.

H₃: İş tatminin duygusal bağlılık üzerine anlamlı bir etkisi vardır.

H₄: Algılanan örgütsel desteğin duygusal bağlılık üzerindeki etkisinde iş tatmininin aracılık rolü vardır.

Veri Toplama Araçları

Araştırmada kullanılan veri toplama aracı dört bölümden oluşmaktadır. İlk bölümde sosyodemografik sorular, ikinci bölümde örgütsel destek ölçeği, üçüncü bölümde duygusal bağlılık ölçeği ve son bölümde iş tatmini ölçeği yer almaktadır.

Örgütsel destek ölçeği: Chiang ve Hsieh (2012) tarafından geliştirilmiş olup, Türkçe'ye uyarlaması Gün, Söyük, ve Özsarı (2021) tarafından gerçekleştirilmiştir. Ölçek 5 maddeden oluşmakta olup 5'li Likert tiptedir (1=kesinlikle katılmıyorum, 5=kesinlikle katılıyorum). Ölçek elde edilen ortalama puanın artması örgütsel desteğin arttığını göstermektedir.

Duygusal bağlılık ölçeği: Meyer, Allen, ve Smith (1993) tarafından geliştirilmiş olup, dil geçerliliği, açıklayıcı ve doğrulayıcı faktör analizleri yapılarak yapı geçerliliği (Gün ve ark., 2021) tarafından yapılmıştır. Ölçek 6 maddeden oluşmakta olup 5'li Likert tiptedir (1=kesinlikle katılmıyorum, 5=kesinlikle katılıyorum). Ölçek elde edilen puan arttıkça duygusal bağlılık artmaktadır.

İş tatmini ölçeği: Türkçe geçerlilik ve güvenilirliği Keser ve Bilir (2019) tarafından gerçekleştirilen iş tatmini ölçeği 5 maddeden oluşmakta olup 5'li Likert tiptedir (1=kesinlikle katılmıyorum, 5=kesinlikle katılıyorum). Ölçek elde edilen ortalama puanın artması iş tatmininin arttığını ifade etmektedir.

Verilerin Analizi

Araştırmada kolayda örneklem yöntemi kullanılmış olup, verilerinin analizinde SPSS ve SPSS Macro uzantısı kullanılmıştır. Veriler eğiklik ve basıklık değerine göre normal dağılmaktadır. Ayrıca aracılık analizi yapabilmenin şartlarını sağlamaktadır (çoklu bağıntı problemi yoktur, bağımsız değişkenlerin bağımlı değişkenler üzerindeki etkiler anlamlıdır). Bu sebeple parametrik testlerden yararlanılmıştır. SPSS aracılığı ile frekans, ortalama, standart sapma, eğiklik ve basıklık, korelasyon analizleri yapılmış olup, doğrudan ve dolaylı etkiler (Hayes, 2017) tarafından SPSS için geliştirilen Process v4.3 uzantısı ile gerçekleştirilmiştir.

BULGULAR

Araştırmada kullanılan bağımlı ve bağımsız değişkenlerin normal dağılıma uygun olup olmadığını incelediğimiz eğiklik ve basıklık değerlerine göre elde edilen indisler ± 2 aralığındadır ve George ve Mallery (2010) önerdiğine paralel olarak verilerin normal dağılıma uygun olduğuna karar verilmiştir. Normal dağılım gösteren verilerin analizinde parametrik testlerin gücünden yararlanılmış olup, aracılık analizi yapabilmenin şartları kontrol edilmiştir. Araştırmada bağımlı değişken (X) örgütsel destek, bağımsız değişken duygusal bağlılık (Y) ve aracı değişken de (M) iş tatmini olarak alınmıştır. Her bir değişkenin bir diğeri üzerinde etkisinin anlamlı olup olmadığı basit doğrusal regresyon analizi ile test edilmiş ve araştırma modeli bu testin ardından kurulmuştur. Katılımcıların örgütsel destek ölçeği ortalama puanı $2,75 \pm 1,06$, duygusal bağlılık ölçeği ortalama puanı $2,65 \pm 1,08$ ve iş tatmini ortalama puanı $2,97 \pm 0,41$ olarak tespit edilmiştir. Ayrıca ölçeklerin Cronbach's Alpha değerleri sırası ile 0,84, 0,89 ve 0,79 olarak belirlenmiştir. Değişkenler arasındaki ilişkiler Pearson Korelasyon Analizi ile incelenmiş olup, örgütsel destek ile iş tatmini ($p < 0,05$; $r = 0,33$) ve duygusal bağlılık ($p < 0,05$; $r = 0,62$) arasındaki ilişki anlamlı ve pozitifdir. İş tatmini ile duygusal bağlılık

TARTIŞMA

Sağlık çalışanlarında örgütsel desteğin duygusal bağlılığa etkisinde iş tatmininin aracılık rolünü incelemek amacıyla gerçekleştirilen bu çalışma özellikle sağlık insangücü açısından gelişmiş ülkelerin ardında kalanlar için önemli bulgular ileri sürmektedir. Sağlık kurumları profesyonel sağlık çalışanlarının buldukları emek yoğun kurumlar olmalarından, insan için kritik ve yaşamsal değer olan sağlık ile ilgilenmelerinden dolayı toplumda önemli bir yeri olan hizmet örgütleridir (Durmuş ve Şahin, 2015).

Araştırma sonucunda örgütsel destek ile duygusal bağlılık arasında anlamlı bir ilişki olduğu tespit edilmiş ve örgütsel desteğin örgütsel bağlılık üzerinde anlamlı bir etkisi olduğu sonucuna ulaşılmıştır. İlgili literatür incelendiğinde araştırma bulgularına benzer şekilde örgütsel desteğin örgütsel bağlılığı artırdığı ifade edilmektedir (Altaş, 2021). Algılanan örgütsel destek ve örgütsel bağlılık arasındaki ilişkinin incelendiği bir çalışmada, iki değişken arasında anlamlı, pozitif ve güçlü bir ilişki olduğu sonucuna ulaşılmıştır. Ayrıca örgütsel destek örgütsel bağlılık üzerinde anlamlı ve pozitif bir etkiye de sahiptir (Taştan ve ark., 2014). Duygusal bağlılık, çalışanların algıladıkları örgütsel desteğin önemli bir sonucu olduğu ifade edilmiştir. Adalet, yönetici desteği gibi özellikle sosyoduygusal bileşenlere odaklanan duygusal bağlılık, çalışanların örgütleri tarafından duygusal olarak desteklendiklerini ve katkılarının takdir edildiğini hissettiklerinde artmaktadır (Tamer ve Bozaykut Bük, 2020).

Sökmen ve Ekmekçioğlu (2016)'nın bir kamu kuruluşunda çalışan 1280 kişiye gerçekleştirmiş olduğu çalışmada bizim çalışmamız sonuçlarına paralel şekilde algılanan örgütsel desteğin duygusal bağlılığı anlamlı ve pozitif yönlü olarak etkilediği, algılanan örgütsel desteğin iş tatminini anlamlı ve pozitif yönlü etkilediği ve iş tatmininin duygusal bağlılığı anlamlı ve pozitif olarak etkilediği sonucuna da ulaşılmıştır. Çalışmada ayrıca, algılanan örgütsel destek ile duygusal bağlılık ilişkisinde iş tatminin kısmi aracılık rolü sergilediği tespit edilmiştir. Elde edilen sonuçlar her iki çalışma için de oldukça benzerlik göstermektedir.

SONUÇ VE ÖNERİLER

Araştırma sonucunda örgütsel destek için $2,75 \pm 1,05$, duygusal bağlılık $2,65 \pm 1,07$ ve iş tatmini için ortalama puanlar $2,97 \pm 0,40$ olarak tespit edilmiştir. Elde edilen bulgulara göre örgütsel destek ile iş tatmini ($p < 0,05$; $r = 0,33$) ve duygusal bağlılık ($p < 0,05$; $r = 0,62$) arasındaki ilişki anlamlı ve pozitifdir. İş tatmini ile duygusal bağlılık arasındaki ilişki de benzer şekilde istatistiksel olarak anlamlı ve pozitifdir ($p < 0,05$; $r = 0,36$). Kurulan modelinde örgütsel desteğin iş tatminine ($\beta = ,339$, $p < ,001$) ve duygusal bağlılığa ($\beta = ,567$, $p < ,001$) etkisi anlamlı ve

pozitifdir. Ayrıca, iş tatmininin duygusal bağlılığa etkisi de anlamlı ve pozitiftir ($\beta = ,168, p < .001$). Modeldeki doğrudan ve dolaylı etkiler değerlendirildiğinde örgütsel desteğin duygusal bağlılık üzerindeki etkisinde iş tatmininin kısmi aracılık rolü bulunmaktadır. Sağlık çalışanlarında örgütsel desteğin duygusal bağlılığa etkisinde iş tatmininin aracılık rolünün incelendiği bu çalışmada anlamlı ve önemli bulgular elde edilmiştir. Buna göre sağlık çalışanlarının duygusal bağlılık kazanmalarında örgütsel destek önemli bir role sahiptir ve iş tatmini bu etkide kısmi aracılık rolüne sahiptir. Elde edilen bulgular eşliğinde araştırma kapsamında test edilen hipotezlerin hepsi kabul edilmiştir.

Özet

Bu çalışma ile kentsel stabilize arıtma çamurunun toprak sağlığı ve bitki verimi üzerine etkisi temelinde, diğer bazı ticari organik gübreler ile rekabet yeteneği yanında mineral gübrelemeye alternatif olabilme düzeyi de ortaya koyulmaya çalışılmıştır. Bu amaç doğrultusunda İzmir ili Menderes ilçesindeki Typic Xerorthent zeytin bahçesinde (*Olea europea* var. Ayvalık) 2018-2020 yılları arasında bir deneme yürütülmüştür. Stabilize arıtma çamuru (SAÇ), 50 t ha⁻¹ düzeyinde, ticari ahır ve tavuk gübre kompostları ise üretici firmalarının tavsiye edilen dozları dikkate alınarak 4 t ha⁻¹ olarak uygulanmıştır. Bezelye (B) ve fiğ (F) yeşil gübre bitkileri ise 160 kg ha⁻¹ olarak ekilmiştir. Dört dönemde alınan toprak örneklerinde mikrobiyal parametreler ve iki dönemde alınan toprak örneklerinde ise bazı kimyasal toprak özellikleri analiz edilmiştir. Organik materyal uygulamalarıyla incelenen tüm mikrobiyal parametreler %1-116 arasında artış göstermiştir (P<0.05). Amonifikasyon ve nitrifikasyon sonucu topraklarda oluşan NH₄-N'u ortalama %46 ve NO₃-N'u ortalama %212 düzeylerinde artmıştır. Yeşil gübrelemesiz uygulamalara göre fiğ yeşil gübrelemesi ortalama %10.4 düzeyinde bir artış sağlarken, bu oran bezelye gübrelemesi için %8.6 olarak gerçekleşmiştir. SAÇ uygulaması, incelenen mikrobiyal parametreleri diğer organik gübre uygulamalarından çok daha fazla ve önemli düzeyde arttırmıştır. SAÇ+B uygulamasının SAÇ+F uygulamasına göre daha fazla sayıda mikrobiyal parametre üzerinde etkili olduğu belirtilebilir. Toprakların kimyasal özelliklerinden pH, EC, P ve Fe en fazla ve önemli düzeyde etkilenen parametreler olmuşlardır. Zeytin verimini her iki yılda en fazla arttıran organik madde kaynağı stabilize arıtma çamuru olmuştur. Yapılan PCA analizi sonuçlarına göre varyansı % 46.6 ile en çok açıklayarak ilk faktörde ağırlıklarını gösteren değişkenler toprakların C, N ve P döngüleriyle ilgili biyokimyasal parametreleri olmuştur. İki yıllık çalışma sonuçları dikkate alındığında Akdeniz iklim koşulları altında toprak sağlığını arttırmak ve sürdürülebilir hale getirmek için sofralık/yemlik bezelye bitkili yeşil gübreleme ile birlikte kombinasyon halinde stabilize arıtma çamuru uygulaması (60 kg SAÇ ağaç⁻¹ + 200 g bezelye ağaç⁻¹) önerilmektedir.

Anahtar kelimeler: Stabilize arıtma çamuru, zeytin, hidrolitik toprak enzimleri, azot mineralizasyonu, toprak solunumu, temel bileşen analizi

THE EFFECT OF DIFFERENT ORGANIC SOIL AMENDMENTS AND GREEN MANURE CROPS COMBINATIONS ON SOIL HEALTH AND OLIVE YIELD

Abstract

The aim of the study was to evaluate the potential of being an alternative to mineral fertilization, as well as the ability to compete with some other commercial organic fertilizers based on the effect of municipal stabilized sewage sludge (SSS) on soil health and plant yield. For this purpose, the experiment was conducted between the years of 2018 and 2020 in the Typic Xerorthent olive soil (*Olea europea* var. Ayvalık) in Menderes district of İzmir-Turkey. SSS was applied at the level of 50 t ha⁻¹ while the commercial farmyard and poultry manure composts were applied, taking into account the recommended doses of the companies. Pea (P) and vetch (V) green manure plants were sown at a rate of 160 kg ha⁻¹. Microbial parameters (soil respiration, potential nitrogen mineralization, NH₄-N and NO₃-N, and enzyme activities of dehydrogenase, alkaline phosphatase and β-glucosidase) in soil samples taken in four periods and some chemical soil properties in soil samples taken in two periods were analyzed. All microbial parameters increased between 1-116% (P<0.05) in response to the organic treatments. The concentrations of NH₄-N and NO₃-N increased by an average of 46% and 212%, respectively. Comparing to the treatments without green manuring, vetch manuring provided an average of 10.4% increase, while this rate was 8.6% for pea. SSS enhanced the microbial parameters more and significant than the others. SSS+P was effective on most of the microbial parameters compared to SSS+V. In general, pH, EC, P, and Fe were mostly and significantly affected parameters by the treatments. SSS was the source of organic matter that increased olive yield the most in both years. According to the PCA analysis, the variables that were the biochemical parameters related to the C, N, and P cycles of the soils showed their weights in the first factor and explained 46.6% of the total variances. Finally, it can be recommended to use SSS (60 kg tree⁻¹ + 200 g pea tree⁻¹) in combination with pea to increase soil health in olive soils under Mediterranean climate conditions.

Keywords: stabilized sewage sludge, olive, hydrolytic soil enzymes, nitrogen mineralization, soil respiration, principal component analysis

1. GİRİŞ

Tarımda sürdürülebilir verimliliğin sağlanmasının en önemli bileşeni toprak organik maddesinin devamının sağlanabilmesidir. Bu nedenle, organik madde miktarı düşük olan tarım topraklarımıza kullanılacak organik atıkların döndürülmesi hayati öneme sahiptir. Tarım arazileri için arıtma çamuru uygulamalarının birçok olumlu yönleri vardır ve küresel açıdan bakıldığında özellikle fosfor gibi besin kaynaklarının azaldığı topraklarımızın verimliliğini artırmak için besin elementlerinin geri dönüşümünü sağlamaktadır (Van Vuuren vd., 2010). Atıksu arıtma seviyesi ve tesisleri gelişmekte olan ve de gelişmiş ülkelerde artmaya devam ettikçe, çamur üretiminin de artmaya devam edeceği tahmin edilebilir. Tarım arazilerine ya doğrudan ya da kompostlama sonra arıtma çamuru uygulaması; 27 AB üyesi devletlerin yarısından fazlasında ürettikleri çamurun % 50'den fazlasını tarım topraklarına döndürmeleri ile artık kullanılan ve kabul gören bir uygulama yöntemi olduğunu göstermiştir (European Commission, 2010; Kelessidis ve Stasinakis, 2012). Arıtma çamurları yüksek organik madde ve bitki besin elementi yükü nedeniyle özellikle Akdeniz ikliminin hakim olduğu tarımsal alanlarda kullanılması gelecek vaat eden bir uygulama olması yanında, toprak ya da bitki üzerindeki potansiyel tehlikeli etkileri önlemek için kullanımlarından önce mutlaka stabilize edilmelidir (Kayıkcıoğlu ve Delibacak, 2018; Kayıkcıoğlu vd., 2019). Bu amaç için farklı stabilizasyon yöntemleri bulunmakta, fakat kompostlaştırma gibi bazıları ise çok fizibil ve kolay uygulamalar olmamaktadır. Buna karşılık, termal kurutma gibi son teknolojilerin uygulanması, daha kısa sürede daha özel kullanım koşulları ile bir son ürün elde edilmesine izin verir. Bu modern yöntem, son yıllarda atık su arıtma tesislerinde artan sayıda uygulanmaktadır. Bununla birlikte, termal kurutulmuş arıtma çamurunun toprak biyotası ve bitki verimi üzerine etkileri yaygın olarak bugüne kadar çalışılmamıştır. Bu amaçla yapılan bir çalışmada, kompostlaştırılarak ve termal olarak kurutulmuş stabilize edilen arıtma çamurunun arpa verimi ile toprakların biyolojik kimyasal ve biyokimyasal özellikleri üzerine kümülatif ve bakiye etkilerini araştırmak ve karşılaştırmak amacıyla; farklı dönemlerde (tek veya yıllık uygulamalar) ve iki dozda (20 ve 80 t ha⁻¹) olmak üzere üç yıllık bir deneme gerçekleştirilmiştir. Kümülatif etkilerinin araştırıldığı denemede her iki atık çamurunun yüksek dozu, toprağın toplam organik karbon içeriğinde bir artış meydana getirmiş fakat aynı zamanda ürün veriminde, toprak enzim aktiviteleri ve mikrobiyal biyokütle karbonu içeriğinde belirgin bir azalma oluşturmuştur. Buna karşılık, düşük dozlarda her iki tip arıtma çamurunun kümülatif uygulamaları, özellikle kompostlaştırılmış çamur, genel olarak daha iyi bir arpa verimi sağlamış, bunun yanında istatistiki olarak önemli düzeyde daha yüksek bir mikrobiyal biyokütle

karbonu içeriğini meydana getirmiştir. Arpa verimi için en iyi sonuçlar kompostlaştırılmış arıtma çamurunun yılda bir kez uygulandığı topraklarda elde edilmiştir. Araştırmacılar, termal kurutulmuş arıtma çamuruna oranla çok daha olgun ve stabil bir organik madde sunan kompostlaştırılmış arıtma çamurunun toprağa uygulanması ile elde edilen yararların daha fazla olacağını ve uygulamanın aşırı dozda yapılmasının (80 t ha^{-1}), analiz edilen toprak özellikleri üzerine zararlı etkisinin olduğunu vurgulamaktadırlar (Fernández vd., 2009). Arıtma çamurunun ışınla ve kompostlaştırma ile stabilizasyon yöntemlerinin karşılaştırıldığı bir diğer araştırmada, 80 t ha^{-1} dozunda uygulanan arıtma çamuruyla bir inkübasyon denemesi gerçekleştirilmiştir. Araştırmacılar, ışınla stabilize edilen arıtma çamuru uygulamalarının daha yüksek oranda biyodegradasyona uğradığı ve C-mineralizasyon değeri verdiğini, buna karışık eğer kurak bölge topraklarında toplam C içeriğinin artırılması isteniyorsa kompostlaştırılma yoluyla stabilize edilen arıtma çamurunun kullanılması gerektiğini belirtmişlerdir (Fernández vd., 2007). Bir başka stabilizasyon yöntemi olan ışınla sterilizasyon yöntemidir. Bu yöntem ile (^{60}Co -10 kGy) stabilize edilmiş ve edilmemiş arıtma çamurlarının kullanıldığı bir inkübasyon çalışmasında; 0.023 g g^{-1} toprak dozunda yapılan uygulamalar arasında analiz edilen toprak solunumu (CO_2 -üretimi) ve azot mineralizasyonu yönüyle istatistiksel olarak bir fark bulunamamıştır (Barajas-Aceves vd., 2002).

Arıtma çamuru kompostu (AÇK) ve diğer yöntemlerle stabilize edilmiş arıtma çamuru sahip olduğu ağır metal yüküyle tarımsal veya diğer topraklara uygulanmasıyla; topraklardaki ağır metal içeriği ile bunların bitki tarafından alınma miktarı artış göstermektedir. Topraktaki bu alınabilirlikleri üzerine toprak matriksi ile organik bağlı bulunan metal arasındaki kimyasal ilişkinin yapısı, toprakların pH düzeyleri, topraktaki ve arıtma çamuru içindeki elementlerin konsantrasyonu ile bitkilerin element alımındaki seçiciliklerini düzenlemedeki yetenekleri etkili olur. AÇK uygulamaları bitirildikten sonra topraklardaki organik maddenin ayrıştığı gibi AÇK'nun da ayrışarak artan düzeylerde alınabilir formda ortama metalleri bıraktığı üzerine herhangi bir bulgu yoktur. Buna karşılık, kompostlaştırılmış biyokatıların (AÇK) diğer stabilize edilmiş arıtma çamurları ile kıyaslandığında metallerin biyoyararlılıklarının ve bitki tarafından alınımının azaldığını gösteren güzel araştırma sonuçları bulunmaktadır. Dolayısıyla diğer atık biyostabilizasyon teknikleri ile karşılaştırıldığında, kompostlaştırma sürecinin uygulama yapılmış topraklardaki metallerin alınabilirlikleri düşürdüğü sonucuna varılabilir (Smith, 2009).

Farklı yöntemler ile stabilize edilmiş (anaerobik, kompostlaştırma, termal kurutma) arıtma çamuru uygulamalarının toprakların mikrobiyotası ile mezofaunası üzerine etkilerinin ortaya

koyulduğu çalışma İspanya’da yürütülmüştür. Deneme alanı olarak yanmış Akdeniz ormanı arazisinin kullanıldığı çalışmada, artıma çamurları 6 ton ha⁻¹ organik madde olacak şekilde uygulama yapılmıştır. Beklenildiği şekilde her üç tip stabilize artıma çamuru uygulaması ile toprak organik maddesi ve toplam azot konsantrasyonu artış göstermesine rağmen, termal olarak stabilize edilen arıtma çamuru uygulaması, toprak bozunumunun bir göstergesi olarak kabul edilen toprak mikrobiyal metabolik sabitinde geçici bir yükselmeye sebep olmuştur. Arıtma çamuru uygulamalarından bir yıl sonra, toprak mikrobiyal aktivite üzerindeki etkisi ortadan kalkmıştır. Eklem bacaklıların yoğunluğu ve biyolojik çeşitliliği açısından yapılan incelemede arıtma çamuru uygulamalarının toprakların biyolojik kalitesini arttırmadığı, en zarar verici olanının ise taze çürütülmüş çamur olduğu ortaya koyulmuştur. Arıtma çamuru uygulamalarından 3 yıl sonra bile omurgasız toprak canlılarının üzerindeki etkisinin hala belirgin olması; bu canlıların toprak bozunumuna mikrobiyal çeşitlilikten daha hassas olduklarını göstermektedir (Andrés vd., 2011).

Mikroorganizmalar aracılığıyla toprakta gerçekleşen önemli biyokimyasal olayların başında sembiyotik diazot fiksasyonu gelmektedir. Arıtma çamuru uygulamalarının özellikle içerdiği ağır metal içeriğinin sembiyotik azot fiksasyonu ve bunu gerçekleştiren sembiyotik azot fikse ediciler üzerine olan etkileri konusunda da bazı araştırmalar bulunmaktadır (McGrath vd., 1988; Giller vd., 1989). İngiltere’nin doğusundaki Woburn şehri topraklarında gerçekleştirilen denemelerde; çamur uygulanmış topraklardaki yüksek Cd içeriğinin azot fikse edici toprak mikroorganizmaları üzerinde olumsuz etkilerin ortaya çıkmasındaki önemli bir etken olduğu saptanmıştır (McGrath, 1984; MAFF/DoE, 1993; Gendebien vd., 1999). Bunun karşılık Braunschweig, Almanya’da gerçekleştirilen denemelerde ise aynı etkiyi Zn elementinin yaptığı ortaya koyulmuştur (Chaudri et al.,1993). Uzun dönemde yapılan diğer çalışmalarda ise topraklardaki metal kontaminasyonu ile Rhizobium bakterilerine olan toksisitesi arasında bir ilişki saptanamamıştır (Smith, 1997). Yapılan bu çalışmada, toprak pH’sı ve yetiştirilen bitki gibi diğer faktörlerin topraklardaki serbest yaşamlı bakteriler üzerine topraktaki ağır metal konsantrasyonlarına oranla daha etkili olduğu belirtilmektedir. Çamur uygulanmış topraklardaki mikrobiyal biyokütle içeriği üzerine yapılan araştırmalar; topraktaki en üst kritik toksik Zn konsantrasyonunun 580 mg kg⁻¹ kuru toprak olduğunu ortaya koymaktadır (Smith, 1998). Bunun yanında, 5.4 – 7.0 pH aralığına sahip olan kumlu topraklarda yapılan tarla denemelerinde; 450 mg kg⁻¹ kuru toprak düzeyindeki çinkonun; topraktaki mikrobiyal biyokütle üzerine herhangi bir etkisinin olmadığı saptanmıştır (Smith vd., 1999).

Speir vd. (2004), maksimum doz olarak 200 t ha⁻¹ yıl⁻¹ (kuru çamur) düzeyinde kompostlaştırılmış arıtma çamurunu; iki pH düzeyine sahip (5.0–5.5 and 6.0–6.5) kumlu topraklara uygulamışlar ve son uygulamadan sonra toprakların bazı biyolojik özelliklerini analiz etmişlerdir. Topraklarda bulunan maksimum metal konsantrasyonu 184 mg Zn kg⁻¹, 101 mg Cu kg⁻¹; 19mg Ni kg⁻¹ and 0.63 mg Cd kg⁻¹ kuru toprak olarak saptanmıştır. Uygulama yapılmamış kontrol toprağının ağır metal içeriği ise 45 mg Zn kg⁻¹, 14.5 mg Cu kg⁻¹, 12 mg Ni kg⁻¹, 0.18 mg Cd kg⁻¹ kuru toprak olarak bulunmuştur. Kontrol parselleri ile karşılaştırıldığında arıtma çamuru kompostu uygulanmış parsellerdeki toprak solunumu, mikrobiyal biyokütle karbonu ve anaerobik mineralize olan azot içeriği istatistiksel olarak daha yüksek analiz edilmiştir. İstatistiksel olarak önemli olmamasına rağmen, toprak enzimlerinden sülfataz ve fosfataz enzimlerinin aktivitesi de arıtma çamuru uygulanmış topraklarda artış göstermiştir. Araştırmacılar, arıtma çamuru uygulamalarının N-fikse eden bakteriler, Rhizobium bakterileri, toprakta serbest yaşamlı organizmalar üzerine bir etkisinin olmadığını ortaya koymuşlardır. Toprağı organik madde içeriği bakımından zenginleştirerek fiziksel, kimyasal ve biyolojik özelliklerini iyileştirme, erozyonu engelleme ve toprak nemini korumanın yollarından biri de “yeşil gübreleme”dir. Yeşil gübreleme, toprak erozyonunu ve bitki besin elementlerinin (K, Ca, Mg, NO₃) topraktan yıkanmasını engeller (Soyergin, 2006), toprağın fiziksel özelliklerini iyileştirir (Watson vd., 2002), organik madde miktarını (Sullivan, 2003; Duyar, 2007) ve alınabilir besin madde miktarını artırır (Sullivan, 2003; Dinnes vd., 2002). Ayrıca, yabancı ot kontrolüne yardımcı olur (Sullivan, 2003), toprak mikroorganizmalarına besin kaynağı sağlanması nedeniyle toprakta mikroorganizmaların nicelik ve işlevleri üzerine de olumlu etki yapar (Açıkgöz, 2001; Urzua vd., 2001). Yeşil gübreleme ile özellikle nematod ve köklerdeki fungal patojenler baskılanır ve toprak fumigasyonunda kullanılan toksik kimyasalların miktarı azalır. Yeşil gübrelemede kullanılan bitkiler baklagiller ve baklagil olmayanlar olmak üzere iki grupta incelenmektedir (Açıkgöz, 2001; Soyergin, 2006). Baklagil (*Leguminaceae*) familyasındaki bitkiler, *Rhizobium* sp. bakterileri ile oluşturdukları simbiyotik yaşam sonucunda önemli miktarda atmosfer azotunu doğal olarak toprağa bağlamaktadır (Urzua vd., 2001; Thorup-Kristensen vd., 2003; İnal vd., 2005; Stagnari ve Pisante, 2010; Campiglia vd., 2010; Askegaard vd., 2011). Diğer taraftan, önemli miktarda biyokütle oluşturan buğdaygil familyası (*Graminaceae*) türleri ile bazı *Brassica* türleri de yeşil gübre olarak kullanılmaktadır. *Brassica* türleri yeşil gübre olarak kullanılacaksa bu türlerin toprağa N katkısının fazla olmaması nedeniyle yetiştirme döneminde veya sürümden sonra iyi bir N gübrelemesi yapılmalıdır (Açıkgöz, 2001; Campiglia vd., 2010; Nolan vd., 2011).

Çalışma kapsamında stabilize arıtma çamurunun toprak sağlığı ve bitki verimi üzerine etkisi temelinde, diğer bazı ticari organik gübreler ile rekabet yeteneği yanında mineral gübrelemeye alternatif olabilme düzeyi de ortaya koyulmaya çalışılmıştır. Ülkemizde kısıtlı olarak arıtma çamurları ile ilgili yapılmış olan araştırmalar bulunsa da yapılan bu çalışmalarda arıtma çamurlarının tarımda kullanımını düzenleyen yönetmelik çerçevesinde gerçekleştirilmemiş olup, daha çok toprakların fiziksel ve kimyasal özellikleri üzerine yoğunlaşmış, arıtma çamurlarının esas olarak etkinliğini ortaya çıkaran toprağın biyolojik özellikleri ihmal edilmiştir. Bu çalışma ile arıtma çamurlarının, toprakların biyolojik özellikleri üzerine etkinliği üzerine odaklanılmış olduğundan, bu alandaki düşük düzeyde bulunan bilimsel bilgi düzeyi de arttırılmıştır. Dahası, arıtma çamuru ile yapılan önceki araştırmalarda, herhangi bir yeşil gübre bitkisi ile kombine uygulamalarına rastlanılmamış olmamasının da çalışmanın önemini ve özgün değerini arttırdığı düşünülmektedir.

2. MATERYAL VE YÖNTEM

2.1 Materyal

2.1.1 Deneme Kullanılan Materyaller

Çalışmada kullanılan organik materyallerden stabilize arıtma çamuru (SAÇ), İzmir Büyükşehir Belediyesi Çiğli Atık Su Arıtma Tesisinden çıkan, anaerobik koşullarda stabilize edilmiş ve %90 kuruluğa getirilmiş granül haldeki organik materyaldir. Arıtma çamuru uygulaması için İzmir Büyükşehir Belediyesi Çiğli Atıksu Arıtma Tesisinden çıkan termal stabilize edilmiş ve maksimum %10 nem düzeyinde olan arıtma çamuru kullanılmıştır. Arıtma çamurunun tarım topraklarına uygulanmasında, 03.08.2010 tarih ve 27661 sayılı Resmi Gazete’de yayımlanan “Evsel ve Kentsel Arıtma Çamurlarının Toprakta Kullanılmasına Dair Yönetmelik” hükümleri dikkate alınmıştır. Tavuk gübresi kompostu (TGK) olarak, Ege Bölgesi’nde faaliyet gösteren büyük çaplı bir yumurta tavukçuluğu işletmesinin yaklaşık 8 hafta süren aerobik kompostlaştırma sonucu üretilen ticari ve ruhsatlı pelet gübre ürünü kullanılmıştır. Ahır gübresi kompostu (AGK) ise yine bölgemizde büyük çaplı bir yem ve besicilik alanında faaliyet gösteren bir işletmenin ticari ve ruhsatlı bir ürünü olan fermente edilmiş büyükbaş hayvan gübresi kullanılmıştır. Tavuk ve ahır gübresi kompost ticari ürünleri, 29.03.2014 tarih ve 28956 sayılı Resmi Gazete’de yayımlanan “Tarımda Kullanılan Organik, Organomineral Gübreler ve Toprak Düzenleyiciler ile Mikrobiyal, Enzim İçerikli ve Organik Kaynaklı Diğer Ürünlerin Üretimi, İthalatı, İhracatı ve Piyasaya Arzına Dair Yönetmelik”e uygun olarak lisans almış ürünlerdir. Projede kullanılan organik materyallerin bazı özellikleri Çizelge 1’de verilmiştir.

Çizelge 1. Organik materyallerin bazı fizikokimyasal özellikleri

Parametre	SAÇ	TGK	AGK
Organik Madde (%)	51.2	55	50
Toplam N (%)	2.99	3	2
Toplam P ₂ O ₅ (%)	0.52	3	2
Suda Çözünür K ₂ O (%)	0.41	1.5	2
EC (dS m ⁻¹)	1.95	6.9	9.5
pH	7.18	5.2-7.2	6.8-8.8
Maksimum nem (%)	10	20	20
C/N	9.93	10.63	14.50

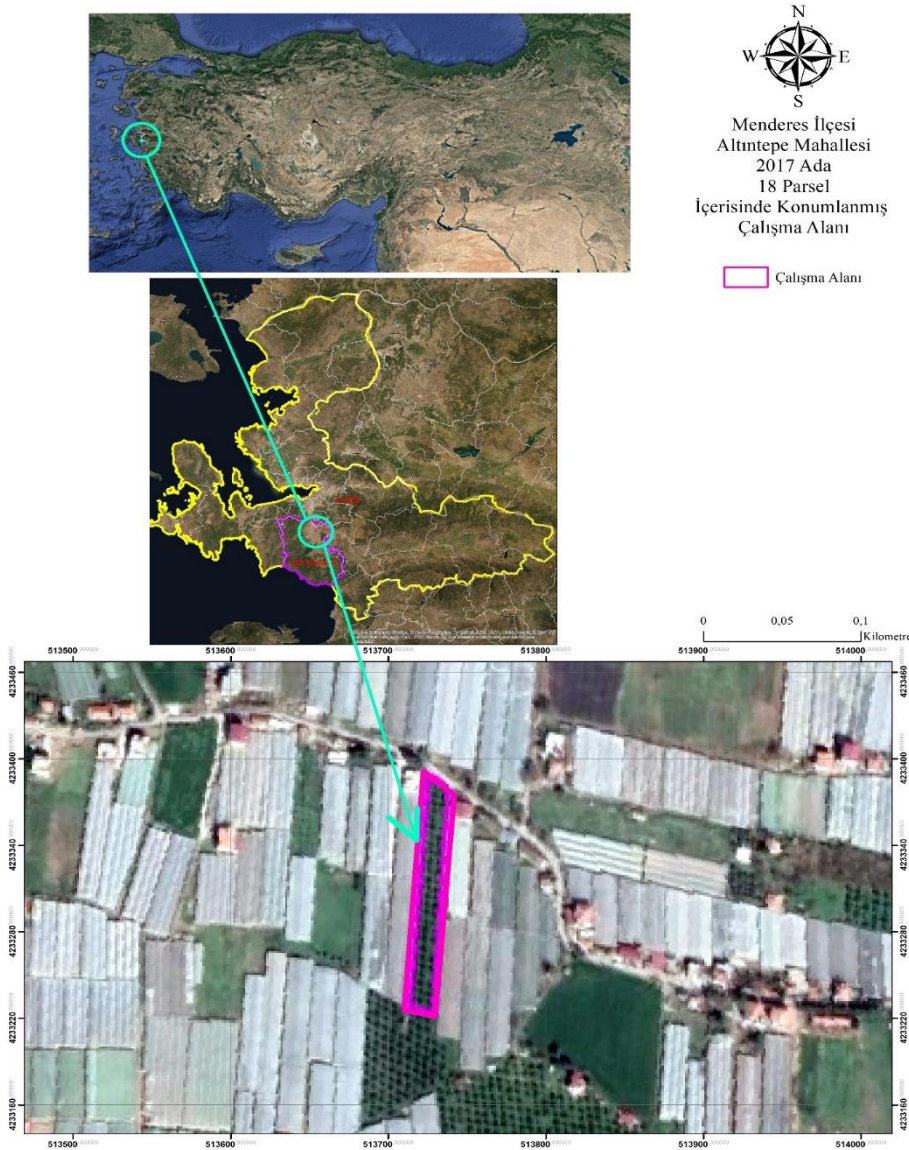

Denemede Ege Bölgesi koşullarına uygun yerli baklagil yem bitkisi çeşidi olarak Ege Tarımsal Araştırma Enstitüsü Müdürlüğü tarafından 21.04.1982 tarihinde tescil edilen ve 31.12.2013 tarihinde ise tescil süresi uzatılan Kubilay-82 çeşidi erkenci özellikle adi fiğ (*Vicia sativa* var. Kubilay 82) kullanılmıştır. Bezelye çeşidi olarak ise Seminis firmasına ait yemlik ve sofralık olarak değerlendirilebilen bezelye (*Pisum sativum* var. Utrillo) baklagil bitkileri seçilmiştir. Biyolojik azot fiksasyonu yapabilme kapasitesine sahip olan baklagil bitkilerinin tohumları bir bayiden tedarik edilmiştir. Denemede pozitif kontrol olarak kullanılacak kimyasal gübre uygulaması (NPK) için 15-15-15 kompoze (%15 NH₄-N, %15 P₂O₅, %15 K₂O), amonyum sülfat (%21 NH₄-N) ve DAP (%18 NH₄-N + %46 P₂O₅) gübreleri uygulanmıştır.

2.1.2 Deneme Alanı

Bahçe denemesi, tipik Akdeniz ikliminin görüldüğü, çok yıllık bitkilerinin % 60'ını zeytin ağaçlarının oluşturduğu, İzmir ili Menderes ilçesi Altın-tepe mahallesindeki 38°14'49.19"N kuzey enlemi, 27°9'25.01"E doğu boylamı koordinatlarında (rakım: 97 m) bulunan bir Typic Xerorthent toprağa ve "İyi Tarım Uygulamaları" (İTU) sertifikasına sahip bir üreticinin zeytin bahçesinde (*Olea europea* var. Ayvalık) iki yıl çakılı deneme şeklinde gerçekleştirilmiştir.

Menderes, İzmir'in güneyinde yer alır. İl merkezine uzaklığı 20 km, yüzölçümü 775 km² dir. Kuzeyinde Gaziemir ve Konak; doğusunda Torbalı; batısında Seferihisar; güneyinde Selçuk ve Ege Denizi ile çevrelidir. Rakımı 115 m'dir. Akarsu yönünden fakir ilçenin; Karakuyu, Görece, Kısık, Tahtalı ve Develi Çayları birleşerek Bulgurca Çayına kavuşmaktadır. Daha önceleri Ege denizine dökülen bu çay, çevrilerek "Tahtalı Barajı"na akıtılmaktadır. Ayrıca, Balaban ve Sandı Göletleri ilçede tarım alanlarının sulanmasında kullanılmaktadır. Zeytin yetiştiriciliği yapılan alan çok yıllık yetiştiricilik yapılan alanın %60'ına, toplam alanın ise %23.4'üne karşılık gelmektedir. İlçede tipik Akdeniz iklimi hâkimdir. Yazları sıcak ve kurak, kışları ılık ve yağışlı

geçmektedir. Yazın sıcaklık ortalaması 27.5°C civarında, kışın ise 9.6°C civarına düşmektedir. Deneme alanının lokasyonu Şekil 1’de gösterilmektedir. Deneme öncesinde, hem uygulama konuları arasında yer alan mineral gübre uygulamasındaki kimyasal gübre dozlarını belirleyebilmek, hem de genel arazi özelliklerini ortaya koyabilmek amacıyla çok yıllık zeytin (0-30 derinlikten) denemesinin kurulacağı alandan deneme başlamadan önce toprak örnekleri alınmıştır. Analiz edilen bu özelliklere ait değerler Çizelge 2’de verilmiştir.

2.2 Yöntem

2.2.1 Bahçe Denemesinin Kurulması ve Yürütülmesi

Bahçe denemesinde Çizelge 3’de gösterildiği gibi üç farklı organik materyal, üç farklı yeşil gübreleme ile kontrol ve mineral gübre uygulaması olmak üzere toplamda 11 uygulama konusu bulunmaktadır. Ahır gübresi kompostu ile tavuk gübresi kompostunun uygulama oranlarının hesaplanmasında ticari ürünlerin üreticileri tarafından zeytin ağacı için önerilen dozları dikkate alınmıştır. Mineral gübre uygulaması için ise İzmir İl Tarım Müdürlüğü tarafından bölge üreticilerine zeytin plantasyonları için önerilen doz göz önüne alınarak hesaplama yapılmıştır. Arıtma çamurunun uygulama dozu hesaplanmasında ise aynı materyali kullanan çalışmalar dikkate alınmıştır. Kayıkcıoğlu ve Delibacak (2018) tek yıllık mısır yetiştiriciliği için verimi desteklemek açısından 20 t ha⁻¹ arıtma çamuru dozunu önerirken, toprak düzenleyicisi olarak düşünülen kullanımlarda ise toprakların mikrobiyolojik aktivitesini en fazla arttıran 30 t ha⁻¹ dozunu tavsiye etmişlerdir. Okur vd. (2005) ise kentsel arıtma çamuru uygulamalarının 60 ton ha⁻¹ dozunun üzerine çıkılmamasını tavsiye etmektedirler. Bu bağlamda önerilen bu projede stabilize arıtma çamurunun dozu, gerek ekosistem sağlığı korunarak sürdürülebilir atık yönetimine destek olabilmek, gerekse de test bitkisi olarak kullanılan çok yıllık bitkinin beslenme ihtiyacı göz önüne alınarak belirlenmiş olup, denemede 50 t ha⁻¹ arıtma çamuru dozunun etkinliğinin saptanması amaçlanmıştır. Doz hesaplamalarında bir zeytin ağacının taç izdüşüm alanı 3.5 m x 3.5 m = 12.25 m² olarak hesaplamaya dâhil edilmiştir.

Çizelge 3. Bahçe denemesi uygulama konuları ve dozları

Sıra No	Kısaltma	Uygulama konusu ve dozu
1	SAÇ	Stabilize arıtma çamuru (60 kg ağaç^{-1})
2	TGK	Tavuk gübresi kompostu (5 kg ağaç^{-1})
3	AGK	Ahır gübresi kompostu (5 kg ağaç^{-1})
4	SAÇ+F	Stabilize arıtma çamuru (60 kg ağaç^{-1}) + Fiğ (200 g ağaç^{-1})
5	TGK+F	Tavuk gübresi kompostu (5 kg ağaç^{-1}) + Fiğ (200 g ağaç^{-1})
6	AGK+F	Ahır gübresi kompostu (5 kg ağaç^{-1}) + Fiğ (200 g ağaç^{-1})
7	SAÇ+B	Stabilize arıtma çamuru (60 kg ağaç^{-1}) + Bezelye (200 g ağaç^{-1})
8	TGK+B	Tavuk gübresi kompostu (5 kg ağaç^{-1}) + Bezelye (200 g ağaç^{-1})
9	AGK+B	Ahır gübresi kompostu (5 kg ağaç^{-1}) + Bezelye (200 g ağaç^{-1})
10	K	Kontrol
11	NPK	Kimyasal gübre uygulaması

Zeytin denemesi, 12 yaşında Ayvalık cinsi zeytin ağaçlarını içeren üretici bahçesinde gerçekleştirilmiştir. Denemesi tesadüf blokları deneme desenine göre, 3 tekrarlı ve her bir tekrar 3 tane zeytin ağacı içerecek şekilde tesis edilmiştir. Denemede, 11 uygulama x 3 tekerrür x 3 ağaç olmak üzere toplamda 99 ağaç kullanılmıştır. Kimyasal gübre uygulamaları için kullanılan dozlar, İzmir İl Tarım Müdürlüğü tarafından bölge üreticilerine zeytin plantasyonları için önerilen dozlar olup 10 kg N da^{-1} , $10 \text{ kg P}_2\text{O}_5 \text{ da}^{-1}$ ve $8 \text{ kg K}_2\text{O da}^{-1}$ düzeyinde besin elementleri için NPK uygulamasında 15-15-15 kompoze, amonyum sülfat (% 21) ve DAP (% 18-46-0; N-P-K) gübrelere kullanılmıştır. Deneme başlangıcında 750 g ağaç^{-1} dozunda uygulanan 15-15-15 gübresi, $900 \text{ g amonyum sülfat ağaç}^{-1}$ ve $350 \text{ g DAP ağaç}^{-1}$ ile desteklenmiştir. Sulama mevsiminde ise damlama sulama ile Mayıs-Ağustos ayları arasında MAP (%12 $\text{NH}_4\text{-N}$ + %61 P_2O_5) ve Üre (% 46 $\text{NH}_4\text{-N}$) gübrelere ile takviye yapılmıştır. Denemede tüm uygulamalar ağaçların taç izdüşümündeki toprak yüzeyine yapıldıktan sonra el ile toprağın yüzeyden 12-15 cm derinliğine karıştırılmıştır.

Bahçe denemesinin ilk yılında, 21 Aralık 2018 tarihinde Çiğli Atıksu Arıtma Tesisinden kurutulmuş arıtma çamuru alınmıştır. Aynı gün yanmış ahır gübresi, fiğ ve bezelye tohumları temin edilmiştir. Fiğ ve bezelye tohumları bölgede yaygın olarak yapılan uygulamalar baz alınarak $16 \text{ kg tohum da}^{-1}$ düzeyinde topraklara el ile serpe şeklinde ekilmiştir. Arazide uygulamalar 22 Aralık 2018 tarihinde başlanmıştır ve aynı gün sona ermiştir. 7 Ocak 2019 tarihinde her bir materyalin uygulandığı ağaçların altından mikrobiyolojik ve fizikokimyasal analizler yapılmak üzere toprak örneği (1. Dönem) alınmıştır. Yeşil gübreleme için bezelye ve

fiğın fenolojisi takip edilmiş, bitkilerde %10 düzeyinde çiçeklenme görüldüğü 22 Nisan 2019 tarihinde toprağa gömülmüştür. 6 Mayıs 2019 tarihine ise yeşil gübrelemenin uygulanmasından 15 gün sonra mikrobiyolojik amaçlı ikinci toprak örnekleme (2. Dönem) yapılmıştır.

Bahçe denemesinin ikinci yılında ise 19 Ocak 2020 tarihinde deneme alanında ağaç üzerindeki zeytinlerin hasadı sona ermiştir. Hasat, kış yağmurlarının geç gelmesi sebebiyle tanelerin şişmemesi ve Kasım ayında yapılan ilk hasatlardan elde edilen zeytinyağının 8:1 oran gibi çok yüksek oranda asitli çıkması sebebiyle normal sezona göre daha geç olarak Aralık ayında başlamıştır. Ağaç altına dökülen ve sabun yapımı için kullanılan zeytinlerin toplanması da 26 Ocak 2020 tarihinde bitmiştir. Deneme alanında arıtma çamuru, tavuk gübresi, çiftlik gübresi, kimyasal gübreleme ve yeşil gübreleme için fiğ ve bezelye tohumlarının ekimi 30 Ocak 2020 tarihinde yapılmıştır. Yağışların durumu ve tarlanın toprak örneği alınması için uygun tava gelmesinin beklenmesi nedeniyle 24 Şubat 2020 tarihinde mikrobiyolojik ve fizikokimyasal parametrelerin analizi için toprak örnekleme (3. Dönem) yapılmıştır. Yeşil gübreleme için bezelye ve fiğın fenolojisi takip edilmiş, bitkilerde %10 düzeyinde çiçeklenme görüldüğü 19 Nisan 2020 tarihinde toprağa gömülmüştür. Nisan-2020 ayının yağışlı geçmesi nedeniyle mikrobiyolojik analizler için 13 Mayıs 2020 tarihinde ikinci dönem toprak örneği (4. Dönem) alınmıştır. Parsellerden mikrobiyolojik analizler için 0-20 cm derinlikten kompoze toprak örnekleme yapılmıştır (Öhlinger, 1995). Her bir uygulama ağacının 4 yönünden olmak üzere toprak örnekleri alınarak, buz kutuları içerisinde laboratuvarlara getirilmiş ve nemli olarak 4 mm'lik elekten elenerek analizler tamamlanana kadar +4°C'de buzdolabında saklanmıştır. Mikrobiyolojik analizler her iki yılda da 30 gün içerisinde tamamlanmıştır. Fizikokimyasal parametreler ise her iki yılda da organik materyal uygulamalarından 15 gün sonra (1. Dönem ve 3. Dönem) 0-30 cm toprak derinliğinden alınan kompoze örneklerde gerçekleştirilmiştir. Fiziksel ve kimyasal parametrelerin analizleri için alınan bu toprak örnekleri, hava kurusu hale getirildikten sonra 2 mm'lik elekten elenerek analize hazır hale getirilmiştir.

2.2.2 Fiziksel, Kimyasal ve Mikrobiyolojik Analiz Yöntemleri

(a) Organik materyallerin kimyasal analizleri:

Birinci ve ikinci yıl gerçekleştirilecek bahçe denemesine uygulanmadan önce organik materyal örneklerinden usulüne uygun şekilde alınarak 65-70°C'deki kurutma dolabında kurutulmuştur. Hava kurusu haline gelen örnekler 2 mm'lik elekten elenerek analizlere hazır hale getirilmiştir.

1. pH ve elektriksel iletkenlik değerlerinin belirlenmesi: Gübreler 1:10 oranında saf su ile sulandırılacak ve 1 saat çalkalandıktan sonra bir saat bekletilen örneklerde direkt pH-metre

(Inolab level1, WTW, Germany) ve EC-metre (İnolab level1, WTW, Germany) kullanılarak gerçekleştirilmiştir (Richards, 1954).

2. Organik madde ve organik karbon içeriğinin belirlenmesi: Potasyum dikromat ($K_2Cr_2O_7$) ile yaş yakılarak organik karbon değeri bulunacak (Rauterberg and Kremkus, 1951) ve bu değer Van Benmelen faktörü olan 1,724 ile çarpılarak hesaplanmıştır (Black, 1965).

3. Toplam azot (N) belirlenmesi: Gübre örneklerinde toplam azot miktarları Bremner ve Schaw'ın modifiye makro Kjeldahl metodu (Bremner, 1965) uygulanarak saptanmıştır.

4. Makro (P, K, Ca, Mg) ve mikro elementlerin (Fe, Cu, Zn, Mn) saptanması: Analize hazırlanan gübre örneklerinden 1 gram tartılarak konsantre nitrik-perklorik asit karışımı ile yaş yakma yapılarak 100 ml'lik balonlara filtre edilmiştir. Yaş yakma ile elde edilen ekstraktan alınan örneklerde fosfor vanadamolibdofosforik sarı renk yöntemi ile kolorimetrik olarak analiz edilmiştir. Gübrelerde potasyum, kalsiyum ve sodyum analizleri alev fotometresinde tayin edilmiştir. Örneklerde magnezyum, demir, çinko, mangan ve bakır miktarları, yaş yakma ile elde edilen süzükte Atomik Absorbsiyon Spektrofotometresinde (AAS) tayin edilmiştir (Kacar ve İnal, 2008).

(b) Deneme toprağının mikrobiyolojik analizleri:

1. CO_2 -oluşumu (BSR): 0.1 N NaOH çözeltisi kullanılarak ve $25^\circ C$ ' de 24 saatlik bir inkübasyon süresi sonunda saptanmıştır (Isermeyer, 1952; Jäggi, 1976).

2. N-mineralizasyonu (N_{min}): Su ile doygun hale getirilen topraklar $40^\circ C$ ' de 7 gün inkübasyonda bırakıldıktan sonra açığa çıkan NH_4-N ' u modifiye edilmiş Bertholet reaksiyonu ile saptanmıştır (Keeney, 1982).

3. Dehidrogenaz aktivitesi (DHG, EC 1.1): Toprak bünyesi ve organik madde miktarına göre farklı konsantrasyonlarda TTC (Trifenil tetrazolium klorür) çözeltisi verilen toprak örneklerinin 16 h $25^\circ C$ ' de inkübasyondan sonra oluşan TPF (trifenil formazan)'ın 546 nm dalga boyunda fotometrik ölçümü ile belirlenmiştir (Thalman, 1968).

4. Alkalın fosfotaz aktivitesi (ALKPA, EC 3.1.3.1): Tamponlanmış p-nitrophenyl fosfat çözeltisinin ilavesinden sonra toprak örnekleri $37^\circ C$ ' de 1 h inkübe edilecek ve fosfomonoesteraz aktivitesi ile ortaya çıkan p-nitrophenol, sodyum hidroksit ile renklendirildikten sonra 400 nm' de fotometrik olarak ölçülmüştür (Tabatabai and Bremner, 1969; Eivazi and Tabatabai, 1977).

5. B-glikozidaz aktivitesi (GLU, EC 3.2.1.21): Toprak örneğinin Salicin ile $37^\circ C$ ' de 3 h inkübe edilmesinden sonra açığa çıkan Saligen'in spektrometrik tayini ile saptanmıştır (Hoffman ve Dedekan, 1965).

(c) Deneme toprağının fizikokimyasal analizleri:

pH ve elektriki iletkenlik (EC) değerlerinin belirlenmesi sature hale getirilmiş ve suda çözünebilir iyon geçişinin tamamlanması için 2 saat bekletilmiş toprak macununda (Richards, 1954); tane irilik dağılımının belirlenmesi Bouyocous silindiri ve hidrometre kullanılarak (Bouyocous, 1951); organik madde ve organik karbon içeriğinin belirlenmesi, potasyum dikromat ($K_2Cr_2O_7$) ile yaş yakılarak (Rauterberg ve Kremkus, 1951) ve Van Benmelen faktörü olan 1.724 ile çarpılarak (Black, 1965); toplam karbonatların belirlenmesi, Scheibler kalsimetresi kullanılarak (Schlichting ve Blume, 1966); toplam azot makro Kjeldahl metodu ile (Bremner, 1965); alınabilir fosfor, Olsen vd. (1954) tarafından bildirildiği şekilde (Kacar, 1995); alınabilir K, Ca, Mg, Na, 1 N Amonyum Asetat (pH: 7) ile ekstrakte edilerek (Carson, 1980); Fe, Cu, Zn ve Mn DTPA (pH: 7.3) ile ekstrakte edilerek (Lindsay ve Norvell, 1978); alınabilir B, 0.01 M Mannitol + 0.01 M Kalsiyum Klorür çözeltisi ile ekstrakte edilerek (Kacar ve Fox, 1966); amonyum azotu (NH_4-N) $CaCl_2 + NaCl$ çözeltisi ile ekstrakte edilerek (Kandeler ve Gerber, 1988); nitrat azotu (NO_3-N) $CaCl_2 + NaCl$ çözeltisi ile ekstrakte edilerek (Scharpf ve Wehrmann, 1976) belirlenmiştir.

(d) Bitki verim parametresi (Verim): Toprak analizlerinin yanı sıra yapılan uygulamalarının zeytin verimi üzerindeki etkisi de ortaya konmuştur. Ayvalık çeşidi zeytin ağaçları meyvelerinin siyah olgunluk döneminde hasadı yapılarak verimleri belirlenmiştir.

2.2.3. İstatistiksel Analiz

Laboratuvar çalışmaları sonucunda elde edilen tüm veriler öncelikle normal dağılıma uygun olup olmadıklarının ortaya koyulabilmesi amacıyla normallik ve dağılım homojenliği testlerine (Shapiro – Wilk) tabi tutulmuşlardır. Farklı organik gübre uygulamalarının (stabilize arıtma çamuru, tavuk gübresi kompostu, ahır gübresi kompostu) ve bunlara eşlik eden çeşitlendirilmiş yeşil gübre uygulamalarının (yeşil gübrelemesiz, fiğ yeşil gübrelemesi, bezelye yeşil gübrelemesi) oluşan uygulamaların (KONU), dönemlerin (2018-2019/1, 2018-2019/2, 2019-2020/1, 2019-2020/2, DÖNEM) ve bunların interaksiyonlarının (KONUxDÖNEM) oluşturduğu faktörlerin; analiz edilen tüm bağımlı mikrobiyal değişkenlerin üzerine etkisini ortaya koyabilmek amacıyla genelleştirilmiş doğrusal model olan MANOVA ile iki yönlü varyans analizi gerçekleştirilmiştir. Deneme topraklarına yapılan 11 farklı uygulama konusunun mikrobiyal parametreler üzerinde sağladığı değişiklikleri belirlemek için toplamda dört dönemde ve 3 tekrarlamalı alınan toprak örneklerine (n=132), fizikokimyasal parametreleri belirlemek için toplamda iki dönemde ve 3 tekrarlamalı alınan toprak örneklerine (n=66) ve

toplamda iki yıl gerçekleştirilen hasada ait zeytin verimine ait (n=66) analiz sonuçlarının istatistiki analizi; IBM SPSS Statistics 20.0 programında tesadüf blokları deneme desenine göre analiz edilmiştir. Ayrıca toprak örneklerine ait elde edilen verilerinin ortalamaya göre yayılmasını gösteren “Standart Sapma” değeri de aynı program aracılığı ile hesaplanmıştır. Ortalama değerlerin karşılaştırılması ise “Duncan” çoklu karşılaştırma testi ile ve $P<0.05$ önem düzeyine göre aynı program ile yapılmıştır.

3. BULGULAR ve TARTIŞMA

3.1 Bağımsız Değişkenlerin Toprakların Mikrobiyolojik ve Biyokimyasal Özellikleri Üzerine Etkisi

Toprak kalitesindeki değişiklikleri tahmin etmek için en yaygın olarak kullanılan genel biyokimyasal parametreler, mikrobiyal biyokütle, dehidrogenaz aktivitesi ve N mineralizasyon kapasitesi olarak sayılabilir. En sık kullanılan spesifik parametreler ise asit veya alkali fosfataz, β -glukozidaz ve üreaz aktivitelerini içerir (Gil-Sotres vd., 2005). Bu çalışmada toprak solunumu (BSR), azot mineralizasyonu (N_{min}), amonifikasyon sonucu oluşan amonyum (NH_4-N) ve nitrifikasyon sonucu oluşan nitrat (NO_3-N) azotu değerleri ile dehidrogenaz (DHG), alkalın fosfataz (ALKPA) ve β -glukozidaz (GLU) enzim aktiviteleri proje kapsamındaki mikrobiyolojik ve biyokimyasal özellikleri karakterize eden bağımlı değişkenleri oluşturmuştur. Bahçe denemesi sonuçlarından elde edilen verilerin istatistiksel analizine göre; %99 güvenle “DÖNEM”, “KONU” ve “DÖNEM x KONU” faktörlerinin bağımlı biyolojik değişkenler üzerinde istatistiksel olarak anlamlı bir etkisi belirlenmiştir. Deneme planında tesis edilen tekerrürlerin ise istatistiksel olarak önemsiz bulunması, çalışmadan elde edilen verilerin daha sağlıklı bir şekilde değerlendirilebileceğinin göstergesi olmaktadır.

İki bağımsız değişkenin bağımlı biyolojik değişkenler üzerindeki iki yönlü etkilerini gördüğümüz varyans analizine göre; DÖNEM ve KONU bağımsız değişkenleri ile bunların interaksiyonunun (DÖNEMxKONU) incelenen mikrobiyal bağımlı değişkenlerin hepsini $P<0.01$ düzeyinde etkilediği belirlenmiştir. Bir diğer ifade ile uygulama konularının, örnek alma dönemlerinin ve bunların interaksiyonunun bağımlı değişkenlerin ortalamaları arasında oluşturduğu fark istatistiksel olarak anlamlı bulunmuştur ($P<0.01$). Dolayısıyla organik gübre uygulamalarının tek başlarına ve çeşitlendirilmiş yeşil gübre ile birlikte uygulanmasının toprakların mikrobiyal aktivitesi üzerinde incelenen parametreler bazında önemli düzeyde etkinliğinin olduğu hipotezi de kabul edilmiş olmaktadır. Bu işlemin ardından ANOVA sonrası belirlenen anlamlı farklılığın hangi uygulamalardan kaynaklandığını belirlemek üzere

tamamlayıcı post-hoc analizi Duncan yöntemi ile her bir bağımlı değişken parametresi (BSR, N_{min} , NH_4-N , NO_3-N , DHG, ALKPA, GLU) için gerçekleştirilmiştir. Bununla birlikte iki farklı dönemde toprağa ilave edilen organik gübreler (1. Dönem ile 3. Dönemden 15 gün önce) ile %10 çiçeklenme dönemlerinde toprağa karıştırılan yeşil gübrelerin (2. Dönem ve 4. Dönemden 15 gün önce) etkinlikleri değerlendirirken toprakların nem düzeyleri de mikrobiyal aktiviteyi etkileyen önemli bir faktör olabilmektedir. İklim koşullarının etkisiyle mikrobiyal aktivite hızlanabilmekte veya yavaşlayabilmektedir. Dört toprak örneği alma döneminin ortalama toprak nem değerleri (%) 1. Dönem için 19.50 ± 3.69 , 2. Dönem için 8.16 ± 1.91 , 3. Dönem için 13.42 ± 2.54 ve 4. Dönem için ise 7.37 ± 2.27 olarak belirlenmiştir.

3.1.1 Toprak solunumu (BSR) üzerine etkileri

Araştırma topraklarında saptanan BSR değeri üzerine toprak örnekleme dönemi (DÖNEM), yeşil gübreleme uygulama konularının (KONU) ve DÖNEM x KONU interaksiyonunun birlikte etkisi $P < 0.01$ düzeyinde önemli bulunmuştur. Çizelge 4'den de görüleceği üzere, araştırma topraklarının BSR değeri $3.69 - 17.34 \mu g CO_2-C g^{-1} h^{-1}$ arasında değişim göstermiştir. Yapılan tüm uygulamalar hem kontrol toprağındakinden hem de mineral gübre uygulamasından daha fazla BSR değeri sağlamışlardır.

Stabilize arıtma çamuru uygulamasıyla birlikte fiğ (SAÇ+F) ve bezelye (SAÇ+B) yeşil gübreleme bitkilerinin yetiştirilmesi, BSR değerini ilk dönem örneklerinde anlamlı bir şekilde yükseltmiştir ($P < 0.05$). Buna karşılık organik materyallerin tek başlarına uygulamaları sonucu ise en yüksek aktiviteyi $8.94 \mu g CO_2-C g^{-1} h^{-1}$ değeri ile TGK göstermiştir. Ancak organik materyallerin uygulanmasını takip eden dört aylık süreçte BSR değerini %115 ile en fazla arttıran uygulama SAÇ olmuştur. Bunu %94 ile AGK uygulaması izlerken, TGK uygulaması ise %86 ile son sırada yer almıştır. Bahar dönemi ile birlikte iklimsel koşulların toprak mikroorganizmalarını teşvik etmesi argümanı kontrol uygulamasında gerçekleşen %104 düzeyindeki artışla doğrulansa da, bu uygulamanın ulaştığı $7.66 \mu g CO_2-C g^{-1} h^{-1}$ düzeyindeki BSR değeri, yine diğer uygulamaların sağladığı BSR değerinin gerisinde kalmıştır.

İkinci dönem toprak örneklerinde bir diğer dikkat çekici yükseliş ise fiğ bitkisi ile desteklenen TGK uygulaması ile bezelye bitkisi ile desteklenen AGK uygulamasının BSR değerini yaklaşık %108 düzeyinde arttırmalarıdır. Ancak aynı uygulamalar diğer yeşil gübre bitkisiyle BSR değerinde benzer bir dikkat çekici yükseliş gösterememişler, artışlar sırasıyla TG+B için %83 ve AGK+F için ise %55 düzeylerinde kalmıştır.

İkinci yıl kış döneminde yapılan ikinci organik materyal uygulamalarını takip eden 3. toprak örnekleme döneminde, havaların soğumasına bağlı olarak NPK ve K parsellerinde trajik BSR değeri düşüşü, organik materyal uygulamalarıyla hafifletilmiştir. Dahası SAÇ ve SAÇ+F uygulama parselleri, BSR değerinde bir önceki döneme göre artış saptanan parseller olarak belirlenmiştir ($P>0.05$). Son dönem örneklerindeki BSR değerlerinde ise genel bir düşüş gözlenmiştir.

Uygulamalardan bağımsız dönem ortalama değerleri dikkate alındığında BSR değerinin en yüksek gerçekleştiği dönem olarak 2. Dönem, $13.9 \mu\text{g CO}_2\text{-C g}^{-1} \text{h}^{-1}$ BSR değeri ile belirlenmiştir ($P<0.05$). Organik materyallerinin tekrarlı uygulanmasına bağlı olarak 1. Dönem BSR değerine göre 3. Dönem BSR değerinin daha yüksek belirlenmiş ve bu farklılığın istatistiksel olarak da önemli olması kayda değer bir sonuç olarak değerlendirilmiştir. Tüm dönemlere ait uygulamaların BSR değerlerinin ortalamaları dikkate alındığında ise iki yılın sonunda BSR değerini istatistiki olarak en fazla arttıran uygulamalar olarak SAÇ, SAÇ+F ve SAÇ+B uygulamaları belirlenmiştir ($P<0.05$). NPK uygulamasına göre %104-110, kontrol uygulamasına göre ise %85-91 düzeyinde sağlanan artışlar önemlidir. Bununla birlikte TGK ve AGK organik materyalleri ile karıştırıldığında, topraktaki heterotrof mikroorganizmaların faaliyetini daha fazla teşvik eden SAÇ uygulamasının bu etkinliği daha önce yapılan çalışmalarla da ortaya koyulmuştur (Kayıkcıoğlu ve Delibacak, 2018; Kayıkcıoğlu vd., 2019). BSR analizinde toprağın orijinal neminden bağımsız olarak her örnek için optimum nem düzeyleri sağlandığından dolayı elde edilen sonuçlar direkt olarak topraktaki mikrobiyal aktivite fazlalığı ve kolay değerlendirilebilir organik materyal miktarı ile ilişkili olacaktır. Çalışmamızda kullanılan SAÇ, daha dar C:N oranı ile (9.93:1) topraklarda TGK ve AGK'ya göre daha hızlı ayrışabilmektedir. Ayrıca SAÇ'ın bu etkinliğinin sahip olduğu karbon bileşiklerinin kimyasal yapısının kolay ayrışabilir olmasından da kaynaklandığı düşünülmektedir.

Topraktaki heterotrof mikrobiyal aktivitenin (BSR) artmasıyla birlikte GLU ($r=0.855$), ALKPA ($r=0.669$), $\text{NH}_4\text{-N}$ ($r=0.496$), $\text{NO}_3\text{-N}$ ($r=0.423$), N_{min} ($r=0.371$) ve DHG ($r=0.359$) değerlerinin de bundan % 1 önemli düzeyde ve olumlu yönde etkilendikleri belirlenmiştir (Çizelge 10). Topraktaki nem miktarı ile BSR değeri arasında aynı yönde ve güçlü bir ilişki ortaya çıkmıştır ($P<0.01$).

3.1.2 Azot mineralizasyonu (N_{min}) üzerine etkileri

Organik azot miktarına ve kalitesine göre toprakta saptanan N_{min} değerleri değişiklik göstermektedir. Potansiyel olarak mineralize olabilecek N-ürünlerinin belirlenmesi, bitki gelişmesi için ortamdaki N-yarayışlılığının güvenilir bir göstergesi olarak kabul edilebilir (Keeney, 1982). Proje kapsamında N_{min} belirlenmesi amacıyla kullanılan yöntemde, suyla doymuş ortamda gerçekleştirilen inkübasyonda nitrifikasyon engellenmekte ve sadece NH_4^+ miktarları ölçülmektedir. Yüksek sıcaklıklarda ve nitrifikasyonun herhangi bir etkinliğinin olmadığı koşullarda gerçekleştiğinden, aerobik koşullarla kıyaslandığında daha fazla organik bağlı azotun mineralize olabileceği söylenebilir. Yüksek miktarda NH_4^+ 'ün doymuş ortam koşullarındaki salınmasında, ayrıca, düşük N-immobilizasyonunun da etkili olacağı düşünülmektedir. Projede belirlenen N_{min} değeri, arazide potansiyel olarak mineralize olabilecek organik azotlu bileşiklerin niceliğini gösterdiğinden, yapılacak uygulamalar ile bu parametrenin artırılması önem taşımaktadır.

Araştırma topraklarında saptanan N_{min} değeri üzerine toprak örnekleme dönemi (DÖNEM), yeşil gübreleme uygulama konularının (KONU) ve DÖNEM x KONU interaksyonunun birlikte etkisi $P<0.01$ düzeyinde önemli bulunmuştur. Çizelge 5'den de görüleceği üzere, araştırma topraklarının azot mineralizasyonu (N_{min}) değeri $0.29 - 1.15 \mu g NH_4-N g^{-1} h^{-1}$ arasında değişim göstermiştir. SAÇ, SAÇ+F, TGK+F, SAÇ+B, TGK+B ve AGK+B uygulamaları NPK ve K uygulamalarından daha fazla N_{min} değeri sağlamışlardır ($P>0.05$). BSR değerine benzer şekilde stabilize arıtma çamuru uygulamaları N_{min} değerlerini de diğer uygulamalara göre önemli düzeyde arttırmıştır. 1. Dönem, 2. Dönem ve 3. Dönemde SAÇ+B uygulaması istatistiki olarak en yüksek N_{min} aktivitesi sağlarken, 4. Dönemde ise SAÇ+B ile birlikte SAÇ+F ve SAÇ uygulamaları da en yüksek N_{min} aktivitesi göstermişlerdir.

Dönemler bazında incelendiğinde yeşil gübre uygulamalarının yapılmasını takiben Mayıs aylarında alınan toprak örnekleme istatistiki açıdan önemli düzeyde yüksek N_{min} değerleri belirlenmiştir. En yüksek N_{min} değerine sahip dönem ise $0.65 \mu g NH_4-N g^{-1} h^{-1}$ ile 4. Dönem olarak belirlenmiştir ($P<0.05$). İkinci yıl yapılan yeşil gübreleme ile ilk yıla göre daha yüksek N_{min} değerlerine ulaşılması, toprakların biyolojik aktivitesini de destekleyen yeşil gübrelemenin tekrarlayan uygulamalarının sürdürülebilir toprak verimliliğine olumlu bir katkı yaptığı şeklinde yorumlanabilir. İki yıllık veriler sonucunda, SAÇ+B uygulamasının $0.90 \mu g NH_4-N g^{-1} h^{-1}$ ile en yüksek N_{min} değeri sağladığı belirlenmiştir ($P<0.05$).

Küçük harfler aynı dönem içindeki farklı UYGULAMALARIN, büyük harfler ise aynı

1. ve 3. Dönem topraklarına göre toprak nemi parametresinde 2. Dönem toprak örneklerinde % 58.2 ve 4. Dönem topraklarında ise % 45.1 düzeyinde bir azalma meydana gelerek toprak nemi % 7-8'ler düzeyine gerilemiştir. Bu nedenle azot mineralizasyonu aktivitesi toprakta azalmış, bir diğer deyişle potansiyel olarak mineralize olabilecek organik-N miktarında bir artış sağlanmıştır. Bunun ise laboratuvar sonuçlarında daha yüksek N_{\min} değerlerinin belirlenmesine yol açtığı düşünülmektedir.

Azot mineralizasyonu da aynı BSR gibi analiz edilen tüm mikrobiyal parametreler ile pozitif ilişkiye sahip parametre olmuştur (Çizelge 10). N_{\min} , güçlü pozitif korelasyonu ALKPA ($r=0.668$), DHG ($r=0.675$) ve $\text{NO}_3\text{-N}$ ($r=0.760$) parametreleriyle göstermiştir ($P<0.01$). $\text{NH}_4\text{-N}$ ile arasında ise pozitif ama orta düzeyde bir ilişki belirlenmiştir ($P<0.01$). Çalışmamızda N_{\min} ile BSR ve GLU arasında ise zayıf düzeyde bir ilişki saptanmıştır ($P<0.01$).

3.1.3. Dehidrogenaz aktivitesi (DHG) üzerine etkileri

İntraselüler bir enzim olan DHG aktivitesinin, toprağın mikroflorasının toplam oksidatif aktivite aralığını yansıttığı düşünülmektedir ve mikrobiyal aktivitenin iyi bir göstergesi olarak kabul edilmektedir (Nannipieri vd., 1990). Araştırma topraklarında saptanan DHG değeri üzerine toprak örnekleme dönemi (DÖNEM), organik gübreleme uygulama konularının (KONU) ve DÖNEM x KONU interaksiyonunun birlikte etkisi % 1 düzeyinde önemli bulunmuştur.

Proje kapsamında topraklara organik materyallerle yapılan ilk uygulamanın ardından, materyalin özelliğine bağlı olarak mikrobiyal gelişimi en çok arttıran uygulamalar olarak TGK+F, SAÇ+B, SAÇ ve TGK+B ön plana çıkmıştır ($P<0.05$). Bu uygulamalar ile NPK ve K parsellerine göre topraklardaki mikrobiyal popülasyon %27-60 arasında arttırılabilmektedir. Buna karşın, 1. Dönem örneklerinde belirlenen bu artışın diğer örnekleme dönemleri ile karşılaştırıldığında en düşük seviyede kalması, iki yıl boyunca uygulanan organik materyallerin toprakların mikrobiyal popülasyonu üzerine herhangi bir olumsuz etkinliğinin olmadığını bir göstergesi olarak kabul edilebilir. Gerçekten de aynı dönem içindeki yapılan tüm uygulamaların ortalamaları dikkate alındığında en düşük DHG aktivitesinin $85 \mu\text{g TPF g}^{-1}$ 1. Dönemde olduğu görülmektedir. İkinci yıl aynı zamana denk gelen toprak örnekleme dönemi ifade eden 3. Dönem örneklerinde ortalama DHG aktivitesi %89.4 düzeyinde bir artış göstererek $161 \mu\text{g TPF g}^{-1}$ düzeyine yükselmesi dikkate değer bir durumdur ($P<0.05$).

BSR parametresindeki eğilime benzer şekilde, yeşil gübreleme sonrasında toprağa karıştırılan bitkisel materyallerin de teşvikiyle ortalama DHG aktivitesi, 2. Dönem örneklerinde $179 \mu\text{g TPF g}^{-1}$ düzeyine ulaşmıştır ki bu dönemler arasındaki en yüksek değer olarak belirlenmiştir ($P<0.05$). Son dönem örneklerinin yağışlardan sonraki periyoda rastlaması bu dönem örneklerinin ortalama DHG aktivitesinde, her ne kadar ilk dönem ortalama DHG aktivitesine göre %71.8'lik düzeyde bir artış sağlamış olsa da $146 \mu\text{g TPF g}^{-1}$ değeri ile aynı kültürel işlemin ilk yıldaki karşılığı olan 2. Dönem örneklerinin sağladığı aktivitenin gerisinde kalmıştır (Çizelge 6). Hücre içi aktivite gösteren DHG, mikrobiyal popülasyonun büyüklüğü ile direkt ilişkili olup, yapılan uygulamalarının mikrobiyal popülasyon büyüklüğü üzerindeki etkiyi de net bir şekilde yansıtabilmektedir (Kayıkcıoğlu vd., 2020).

Çizelge 6'dan görülebileceği üzere, 2. Dönem örneklerinde, yine ilk dönemde yüksek DHG aktivitesi sağlayan uygulamalardan olan TGK+F, SAÇ ve TGK+B uygulamaları ön plana çıkmış ve hatta bunlara $221.26 \mu\text{g TPF g}^{-1}$ düzeyindeki bir aktivite değeri sağlayan AGK+B uygulaması da dâhil olmuştur ($P<0.05$). Bir taraftan yeşil gübre uygulaması bu dönem DHG aktivitesinin artmasında önemli bir etken konumunda bulunurken, diğer taraftan bahar ayı nedeniyle atmosfer sıcaklığının yükselmesinin topraklardaki DHG aktivitesinin önemli düzeyde yükselmesine neden olduğu söylenebilir. Bu iki faktörün interaksyonu ile 2. Dönem örneklerinde en yüksek ortalama DHG aktivitesi belirlenmiştir.

Uygulamalar bazında dört dönemin ortalama değerleri dikkate alındığında, deneme sonucunda DHG aktivitesini kontrole göre en çok arttıran uygulamanın %79 ile SAÇ olduğu ve bunu %68 ile SAÇ+B ve %61 ile TGK+B uygulamalarının izlediği görülmektedir. Bu üç uygulamanın

DHG üzerinde sağladığı etki, diğer uygulamalardan da %95 güven aralığında anlamlı düzeyde farklı bulunmuştur. Mikrobiyal aktivite üzerinde önemli bir etki yaratamayan NPK uygulaması ise, kontrol parsellerinin sağladığı aktiviteden bile düşük düzeyde bir etki ortaya çıkarmıştır.

Yapılan bu çalışmada DHG ile ilişki göstermeyen tek parametre olarak NH₄-N konsantrasyonu belirlenmiştir (Çizelge 10). Bunun yanında DHG ile ve NO₃-N arasında zayıf negatif bir korelasyon (r=-0.255) belirlenmiştir (P<0.01). Benzer bir sonuç 1. Dönem örneklerinde ortaya çıkmış, istatistiksel olarak en yüksek NO₃-N konsantrasyonunun belirlenmesine karşılık, yine istatistiksel olarak en düşük DHG aktivitesi saptanmıştır. Organik materyal uygulamalarının ilerleyen mineralizasyon düzeylerine karşı düşük DHG aktivite cevabı, alternatif bir elektron alıcısı olarak işlev gören nitratların girişiminden kaynaklanabilir (Casida vd., 1964, Mastro vd., 2006).

3.1.4. Alkalin fosfataz aktivitesi (ALKPA) üzerine etkileri

Çalışma kapsamında aktivitesi analiz edilen iki hidrolitik enzimden birisi ALKPA olmuştur. Araştırma topraklarında saptanan ALKPA değeri üzerine toprak örnekleme dönemi (DÖNEM), organik gübreleme uygulama konularının (KONU) ve DÖNEM x KONU interaksiyonunun birlikte etkisi P<0.01 düzeyinde önemli bulunmuştur. Çoğu toprakta, organik olarak bağlı P-fraksiyonu inorganik olan fraksiyondan daha yüksektir. Organik fosforik asit esterleri arasında, topraktaki en büyük fraksiyon fitik asit veya fitindir (Speir ve Ross, 1978). Bitkiler tarafından fosfor alımı, organik P bileşeninin fosfatlarla ortofosfata mineralizasyonu sonucu gerçekleşir (Speir ve Ross, 1978; Malcolm, 1983). Fosfatazlar, ağırlıklı olarak düşük fosfor mevcudiyeti koşulları altında üretilen indüklenebilen (tetiklenebilen) enzimlerdir. Fosfatazlar bitki kökleri ve mikroorganizmalar tarafından salgılanır ancak topraklarda mikrobiyal fosfatazlar daha fazla düzeydedir. “Fosfataz” adı, esterleri ve fosforik asidin anhidritlerini hidrolize eden bir grup enzimi açıklamaktadır. Fosfomonoesterazlar (fosfatazlar olarak adlandırılır) substrat seçicilikleri ve optimum pH'larında farklılık gösterir. Böylece topraktaki asit ve alkalin fosfatazlar arasında ayırım yapılabilir. Asit fosfomonoesterazın aksine, alkalin fosfomonoesteraz bitki dokuları tarafından salgılanmaz (Juma ve Tabatabai, 1988). ALKPA aktivitesi, bu nedenle, toprak mikroorganizmaları (Eivazi ve Tabatabai, 1977) ve toprak faunası (Pang ve Kolenko, 1986) aktiviteleri ile sınırlıdır ve topraktaki P-döngüsü içinde yer alan flora ve faunal canlıların popülasyon büyüklükleri ve aktiviteleri hakkında net bilgiler

sağlar (Hoffmann, 1968). Asit topraklarında ALKPA aktivitesi çok düşüktür. Bu enzim aktivitesi bu nedenle sadece alkalın ve nötr topraklarda araştırılmalıdır. Bu çalışmamızdaki deneme toprağının pH değeri 7.77 (hafif alkalın) olduğu için ALKPA aktivitesinin düzeyiyle ilgili bilgi edinmek istenmiştir (Çizelge 2).

İlk dönem toprak örneklerinde, proje kapsamında analiz edilen bağımlı mikrobiyal değişkenler üzerinde topraklara uygulanan organik gübrelerin fizikokimyasal özelliklerinin etkili olduğu söylenebilir. Bu bağlamda 1. Dönem örneklerinde ALKPA aktivitesi, kullanılan organik materyallerden en yüksek fosfor içeriğine sahip TGK tarafından en çok arttırılmıştır. TGK+F uygulaması ile sağlanan $556.53 \mu\text{g p-NP g}^{-1} \text{h}^{-1}$ düzeyindeki ALKPA aktivitesi, diğer uygulamaların sağladığı değişikliklerle kıyaslandığında istatistiksel olarak da önemli düzeyde bulunmuştur (Çizelge 7).

1. Dönem toprak örneklemeinden 2. Dönem toprak örneklemesine kadar geçen 120 günlük sürede, organik materyallerin kolay ayrıştırılabilir kısımlarının öncelikli olmak üzere ayrışabilirliklerini gerçekleştirmeleri, yeşil gübrelemenin yapılması ve havaların ısınması ile ALKPA aktivitesi açısından uygulamalar aralarında anlamlı bir fark oluşmamasına neden olmuş olabilir. Ancak yine de kontrol ve NPK uygulamalarıyla kıyaslandığında organik materyal uygulamalarının ALKPA aktivitesi üzerinde oluşturduğu değişiklikler istatistiksel olarak da önemli bulunmuştur. 2. yıl organik gübreleme sonucu SAÇ uygulamasının ALKPA aktivitesini önemli düzeyde en çok arttıran uygulama olduğu görülmektedir. Genel olarak 3. Dönem örnekleri, 1. Dönem ortalama ALKPA aktivitesinin gerisinde kalmıştır. Hava sıcaklığı düşüklüğünün hidrolitik enzimlerin aktivitesi üzerindeki baskılayıcı etkisi bilinmektedir (Kayıkcioglu vd., 2019).

Bir hidrolitik enzim olan ALKPA aktivitesinde ortaya çıkan en göze çarpan sonuçlardan birisi de son dönem örneklerinde şimdiye kadar incelenen mikrobiyal parametrelerin aktivitelerinde bir azalma gözlenirken, ALKPA aktivitesinde artışın gözlenmesidir. Ekstraselüler enzim olarak hücre dışında fonksiyon gören ALKPA, diğer mikrobiyal parametrelere göre mikrobiyal hücrelerden salgılandıktan sonra popülasyondan bağımsız olarak topraklarda fonksiyon göstermeye devam edebilmektedir. Toprak enzim analizleri, topraklardaki biyokimyasal süreçleri araştırmak ve toprakların biyolojik durumunu yansıtmak için toprak kalitesinin olası bütüncül bir ölçüsü olarak kullanılmıştır (Bandick ve Dick, 1999, Ndiaye vd., 2000, Vepsäläinen vd., 2001). Enzim analizleri, aktif mikroorganizmalara ve toprak matrisinde stabilize edilmiş enzimlere bağlı bir toprak örneğinin toplam aktivitesini ölçer. Bu durum özellikle topraktaki bozulmamış enzimleri bulunduğu ortamdan ekstrakte etmek zor

olduğundan kütle yerine aktivite ölçülme yolu tercih edilmektedir (Knight ve Dick, 2004). Küçük miktarlarda hücre dışı enzimler toprak kolloidleri üzerinde stabilize edilir ve aktivitelerini uzun süre koruyabilir (Burns, 1982, Nannipieri vd., 1996). Bu, bir mikrobiyal hücre tarafından alınamayacak kadar büyük veya çözünmeyen substratları ayrıştırmak ve/veya bu enzimleri sentezlemek zorunda kalmadan yarar sağlayabilecek bazı toprak organizmalarına ekolojik bir avantaj sağlayabilir. Ek olarak, bu stabilize edilmiş enzimlerin hem proteolitik enzimler hem de ısı ile denatürasyona karşı korunduğu görülmektedir (Nannipieri vd, 1996, Rao vd., 2000). Dolayısıyla, 4. Dönem toprak örneklerinin ALKPA aktivitesi ve diğer mikrobiyal parametrelerinin aynı dönemde göstermiş olduğu aktivite büyüklüğü birlikte incelendiğinde, ortam koşullarının canlı mikrobiyal popülasyon aktivitesini sınırladığı durumlarda kolloidal fraksiyon tarafından adsorbe edilmiş hidrolitik bir enzim olan ALKPA'nın etkinliğine devam edebildiği anlaşılmaktadır.

Tüm uygulamaların dönem ortalamaları incelendiğinde, ALKPA aktivitesinin istatistiki olarak önemli düzeyde en yüksek olduğu dönemlerin 4. ve 2. Dönem olarak saptanması, hem yeşil gübrelemenin hem de hava sıcaklığının ayrı ayrı veya ortaklaşa etkisiyle açıklanabilmektedir. Uygulamalara göre dört dönemde gerçekleşen ALKPA aktivitesinin ortama değerleri incelendiğinde ise, en etkili uygulamanın kontrole göre sağladığı %98 artışla SAÇ uygulaması olduğu görülmektedir ($P<0.05$). En düşük ALKPA aktivitesi ise kontrol ve NPK uygulamasında gerçekleşmiştir.

Çizelge 10'deki korelasyon çizelgesi incelendiğinde, ALKPA ile incelenen diğer tüm mikrobiyal parametrelerin pozitif bir ilişki gösterdiği görülmektedir. Organik ve yeşil gübreleme ile topraktaki mineral azot formlarının artışı aynı zamanda ALKPA aktivitesini de stimüle ettiği belirlenmiştir. ALKPA, N_{min} ile güçlü pozitif bir ilişki gösterirken ($r=0.668$, $P<0.01$), NO_3-N ile orta düzeyde ($r=0.515$, $P<0.01$) ve NH_4-N ile zayıf düzeyde ($r=0.250$, $P<0.05$) ilişki göstermiştir. ALKPA özellikle mikroorganizmalar tarafından topraklara salınabildiği için, hem BSR değeriyle ve hem de DHG parametresiyle güçlü pozitif korelasyonu ($r=0.185$) gösterdiği düşünülmektedir ($P<0.01$). BSR gibi topraktaki C-döngüsüyle ilişkili bir diğer parametre olan GLU değişkeni ile ALKPA arasında benzer şekilde güçlü bir ilişki ($r=0.649$) ortaya çıkmıştır ($P<0.01$). Alkali bir çözelti tarafından tamponlanarak belirlenen ALKPA aktivitesi ile toprak pH'sı arasında beklenebilecek negatif korelasyonun zayıf kuvvette de olsa saptanmış olması ($r=-0.257$) ayrıca güzel bir sonuç olarak değerlendirilmiştir. Elbette ki bu ilişki üzerinde toprakların tamponlama kapasitesinin de bir etkisinin olduğu söylenebilir.

3.1.5 B-Glukozidaz aktivitesi (GLU) üzerine etkileri

Proje kapsamında incelenen ikinci hidrolitik enzim olan GLU, aynı zamanda son mikrobiyal parametredir. B-Glukozidazlar, karbonhidratları, β -D-glikozu ayırarak bir β -D-glikozit bağı ile hidrolize eder. B-Glukozidazlar, selülozun glikoza toplam bozulmasında önemli bir rol oynar. Endo- ve ekzo- β , 4-glukazlar selülozu, bu işlemi rekabetçi bir şekilde inhibe eden selobiyozu hidrolize eder. B-glukozidaz ise selobiyoz ve diğer suda çözünür selodekstrinler gibi indirgeyici olmayan şekerleri hidrolize eder ve böylece glikoz oluşturulur (Deng ve Popova, 2011). Böylece selülozun bozulması teşvik edilir ve organizmalar aynı anda önemli bir enerji kaynağı ile beslenir. Daha sonra glikoz, glikoliz ve sitrik asit döngüsü (Nannipieri vd., 2012) vasıtasıyla CO₂'ye oksitlenir ve aktivitesi C'nin yanı sıra NH₄⁺ substratı tarafından uyarılabilir (Geisseler ve Horwath, 2009). Doğada, β -glukozidazlar bakteri, mayalar (Barnett vd., 1956), funguslar (Jermyn, 1958), bitkiler ve hayvanlarda yaygındır ve topraklarda sıklıkla bulunmaktadır (Skujins, 1976). Ancak GLU ağırlıklı olarak toprak mikrobiyal heterotroflarından, özellikle de Actinomucor veya Mortierella gibi Zygomycetes fungal üyelerinden salgılanmaktadır (Hayano ve Tubaki, 1985).

Küçük harfler aynı dönem içindeki farklı UYGULAMALARIN, büyük harfler ise aynı uygulamanın farklı DÖNEMLER içerisindeki karşılaştırmasını vermektedir. SATIR ORTALAMASI, aynı uygulamaya ait dönemler ortalamasını; SÜTÜN ORTALAMASI, ise aynı döneme ait uygulamaların ortalamasını vermektedir.

Araştırma topraklarında saptanan GLU değeri üzerine toprak örnekleme dönemi (DÖNEM), yeşil gübreleme uygulama konularının (KONU) ve DÖNEM x KONU interaksiyonunun birlikte etkisi $P<0.01$ düzeyinde önemli bulunmuştur. Çizelge 8'den de görüleceği üzere, araştırma topraklarının GLU aktivitesi $114.12-239.87 \mu\text{g Saligenin g}^{-1} 3\text{h}^{-1}$ arasında değişim göstermiştir.

Topraklara ilave edilen organik materyaller, toprakların fiziksel, kimyasal ve biyolojik özelliklerine farklı düzeyde etki ederlerken, GLU aktivitesi ile bu etki düzeyleri ortaya koyulabilmektedir. Uygulamalara bağlı olarak 1. Dönem örneklerinde GLU aktivitesi kontrole göre %29-82 arasında değişen düzeylerde daha yüksek olarak belirlenmiştir ($P<0.05$) (Çizelge 8). B-Glukozidaz aktivitesinin toprak yönetimine duyarlı olduğu bulunmuş (Bandick ve Dick, 1999, Madejón vd., 2001) ve toprak kalitesinin bir göstergesi olarak önerilmiştir (Ndiaye vd., 2000). Diğer toprak analizleriyle birlikte kullanılacak potansiyel bir toprak kalitesi göstergesi olarak çeşitli nedenlerden dolayı caziptir. İlk olarak, selüloz bileşiklerinin biyodegradasyonundaki son adımı ve daha sonra glikozun mikroorganizmalara salınmasını katalize eder (Esen, 1993). Bu nedenle, büyük ölçekte C-döngüsünün yanı sıra mikroorganizmalar için kolay ayrıştırılabilir bir C-enerji kaynağının serbest bırakılması nedeniyle küçük ölçekli süreçlerde de hayati bir rol oynar. İkinci olarak abiyotik form (adsorbe), toplam aktivitenin önemli bir miktarına katkıda bulunur (Hayano ve Tubaki, 1985, Hope ve Burns, 1987). Bu durum, hem geçmiş biyolojik aktivitenin hem de toprağın enzimleri stabilize etme ve koruma kabiliyetinin bütünleyici bir yansıması olarak toprak kalitesi göstergesi için yararlı bir özellik olarak değerlendirilebilir. Bu da, toprağın toprak organik maddesini stabilize etme kabiliyeti ile ilişkili olabilir. Ayrıca, daha önceki araştırmalar, bu enzimin hava ile kurutulmuş topraklar üzerindeki toprak yönetim etkilerini tespit edebildiğini ve toprak kalitesini test etmek için rutin ticari benimseme için bu analizi büyük ölçüde kolaylaştırdığını göstermiştir (Bandick ve Dick, 1999).

1. Dönem örneklerinde organik uygulamalar birbirlerine yakın GLU aktivitesi sergilemişlerdir. Bu anlamda ahır gübresi kompostunun düşük GLU aktivitesi gösterdiği belirtilebilir ($P<0.05$). SAÇ ve TGK temelli organik uygulamaları ise GLU aktivitesini en fazla arttıran uygulamalar olarak belirlenmiştir. Yeşil gübreleme ile birlikte uygulamaların sağladığı GLU aktivitesinde bir artış belirlense de bu fark istatistiksel olarak önemli bulunmamıştır. Ancak uygulamaların ortalama değerleriyle ortaya çıkan dönem ortalama GLU değeri $208 \mu\text{g Saligenin g}^{-1} 3\text{h}^{-1}$ olarak belirlenmiş olup, bu değer dönem ortalamaları arasındaki en yüksek değerdir ($P<0.05$). Bu dönemde de uygulamalar arasında belirgin bir farklılığın oluşmamasına rağmen, kontrol ve

NPK uygulamasına göre tüm uygulamalar istatistiksel olarak yüksek düzeyde GLU aktivitesi göstermişlerdir.

B-Glukozidaz aktivitesi, toprak yönetimindeki değişiklikleri nispeten kısa sürelerde (1-3 yıl) tespit edebilir ve mevsimlere göre nispeten karardır (Bandick ve Dick, 1999, Ndiaye vd., 2000). Bu özelliğinin bir sonucu olarak, kısa dönemlerde büyük ölçüde değişebilen, kalibrasyon ve yorumlamayı zorlaştıran çoğu diğer biyolojik ölçümler kıyaslandığında bir toprak kalitesi göstergesi olarak avantajlıdır. Bununla birlikte, toprak kalitesini tam olarak değerlendirmek için diğer biyolojik, kimyasal veya fiziksel özelliklerin ölçülmesi gerektiği unutulmamalıdır.

İkinci yıl organik materyal uygulamalarıyla ilk yıla göre GLU aktivitesinde bir azalışın görülmesi ilgi çekicidir ($P<0.05$). Burada kullanılan organik materyallerin özellikleriyle ilişkili ileri analizlerin yapılması önerilmektedir. Ancak ALKPA dışındaki diğer mikrobiyal parametrelerin aktivitesinin düştüğü 4. Dönem örneklerinde aynı ALKPA aktivitesinde olduğu gibi GLU aktivitesinin de yükseliş göstermesi ($P<0.05$), hidrolitik enzimlerin koloidal fraksiyon tarafından stabilizasyonunun sağlandığının bir diğer göstergesi olabilmektedir.

Dört örnekleme döneminin ortalama sonuçları dikkate alındığında kontrole göre GLU aktivitesini %58 düzeyinde artıran SAÇ uygulamasının ön plana çıktığı ve bu uygulamayı SAÇ+F, SAÇ+B ve TGK+F uygulamalarının takip ettiği görülmektedir ($P<0.05$).

BSR değeri gibi korelasyon analizine tabi tutulan tüm değişkenlerle ilişki gösteren bir diğer parametre ise GLU aktivitesidir (Çizelge 10). Topraktaki C-döngüsünde görev alan β -glukozidaz, özellikle topraklara organik materyal ilavelerinde dikkate alınması gerekli bir hidrolitik enzimdir. GLU ile BSR arasında çok güçlü olumlu bir ilişkinin ($r=0.855$, $P<0.01$) belirlenmesi güzel bir sonuçtur. Bununla birlikte GLU ile N_{min} ($r=0.374$) ve DHG ($r=0.381$) arasında zayıf düzeyde pozitif ilişki belirlenirken ($P<0.01$), NH_4-N ($r=0.521$) ve NO_3-N ($r=0.456$) ile arasında orta, ALKPA ($r=0.649$) ile arasında ise güçlü ve olumlu bir ilişki belirlenmiştir ($P<0.01$). Topraktaki nem düzeyi ile GLU aktivitesi arasında aynı yönde ve orta düzeyde kuvvete sahip bir ilişki ortaya çıkmıştır ($P<0.01$).

3.2. Bağımsız Değişkenlerin Zeytin Verimi Üzerine Etkisi

Denemede organik gübre uygulamalarının 2019 ve 2020 yıllarında yapılan hasat ile belirlenen zeytin bitkisinin verimi üzerine olan etkisi Çizelge 9'de gösterilmiştir. Varyans analizine göre verim parametresi üzerine konuların etkinliği %1 düzeyinde önemli bulunmuştur.

Çizelge 4. Bağımsız değişkenlerin zeytin bitkisi verimi üzerine etkileri (kg zeytin ağaç⁻¹)

Uygulama Konuları	2018-2019 üretim yılı	2019-2020 üretim yılı	Ort.
SAÇ ^c	18.33 ^a b (± 0.94) ^b	23.83 a (± 2.72)	21.08 AB

NKP ^m	11.28 e (± 1.18)	12.83 d (± 0.24)	12.06 E

^a: Tüm değerler üç tekrerrün ortalaması olarak kuru madde bazında verilmiştir; ^b: Standart sapma; ^c: SAÇ, stabilize arıtma çamuru uygulaması; ^d: TGK, tavuk gübresi kompostu uygulaması; ^e: AGK, ahır gübresi kompostu uygulaması; ^f: SAÇ+F, stabilize arıtma çamuru + fiğ uygulaması; ^g: TGK+F, tavuk gübresi kompostu + fiğ uygulaması; ^h: AGK+F, ahır gübresi kompostu + fiğ uygulaması; ⁱ: SAÇ+B, stabilize arıtma çamuru + bezelye uygulaması; ^j: TGK+B, tavuk gübresi kompostu + bezelye uygulaması; ^k: AGK+B, ahır gübresi kompostu + bezelye uygulaması; ^l: K, kontrol uygulaması; ^m: NPK, kimyasal gübre uygulaması.

* Aynı harfle gösterilen ortalamalar Duncan testine göre birbirinden istatistiksel olarak farklı değildir (P<0.05). Küçük harfler aynı dönem içindeki farklı UYGULAMALARIN karşılaştırmasını vermektedir. SATIR ORTALAMASI, aynı uygulamaya ait yılların ortalamasını vermektedir.

İlk yıl verim değerleri incelendiğinde, yapılan tüm uygulamaların kontrole göre zeytin verimini %49-165 arasında ortalama olarak %102 düzeyinde artırdığı görülmektedir. Zeytin verimini en çok artıran uygulama %165 ile SAÇ+B uygulaması olmuştur (P<0.05). İkinci yılda ise uygulamaların verim üzerindeki etkisi daha belirgin olmuştur. Uygulamaların zeytin verimini %121-255 arasında ortalama olarak ise %169 düzeyinde arttırdığı saptanmıştır. Yine ilk yıl eğilimine benzer şekilde bu dönemde de SAÇ+B uygulaması istatistiki olarak en yüksek verimi 25.67 kg ağaç⁻¹ değeri ile sağlamıştır (P<0.05). SAÇ uygulaması ise 23.83 kg ağaç⁻¹ verim değeri ile SAÇ+B ile aynı istatistiki gruplandırma içinde yer almıştır. Her ne kadar da çok yıllık ağaçlarda yapılan uygulamaların olası olumsuz etkinliği kısa süreli incelemeler ile ortaya çıkamayabilse de, iki yıllık organik gübre uygulamalarının zeytin ağaçlarında herhangi bir fitotoksite göstermemesi ve bunun yanında verim değerlerini bir önceki yıla arttırmış olması kayda değer bir gelişme olarak değerlendirilmiştir. İki yıllık ortalama değerleri dikkate alındığında, SAÇ+B uygulamasının 23.00 kg ağaç⁻¹ ve SAÇ uygulamasının 21.08 kg ağaç⁻¹ değerleri ile kontrole göre ortalama %196 ve kimyasal gübre uygulamasına göre ise %83

düzeyinde artış sağlayarak diğer uygulamalardan önemli düzeyde farklılık gösterdikleri söylenebilir ($P>0.05$).

Çizelge 10. Farklı organik materyaller ile çeşitlendirilmiş yeşil gübreleme kombinasyonlarının uygulamalarının sonucu topraktaki mikrobiyal ve kimyasal parametreler ile verim arasında ortaya çıkan Pearson korelasyon katsayıları

4. SONUÇ ve ÖNERİLER

Sürdürülebilir toprak verimliliğinin tesisinde en önemli parametreler arasında yer alan toprağın organik maddesi, Akdeniz biyodegradasyonu koşulları altındaki tarım topraklarımızda %1 in altında olduğu görülmektedir. Bununla birlikte gün geçtikçe verimsizleşen topraklarımızda daha fazla kimyasal gübre kullanımıyla birlikte üretim yapılmaya çalışılmaktadır. Organik ve yeşil gübreleme, özellikle nadasa bırakılan tarım arazilerinde ve organik tarım yapılan topraklarda başta olmak üzere, konvansiyonel tarım alanlarında da sürdürülebilir toprak verimliliğinin sağlanması bakımından önde gelen kültürel işlemlerden birisidir. Yapılan bu çalışma ile iyi bir toprak düzenleyicisi ve bitki besin elementi kaynağı olan ahır gübresi, tavuk gübresi ve arıtma çamurunun, yeşil gübreleme kombinasyonu ile toprağa ilave edilmesiyle biyolojik ve kimyasal toprak özelliklerinde meydana gelecek değişikliklerin saptanması, uygulanacak kimyasal gübre ile kıyaslanmanın yapılması ve Ayvalık çeşidi zeytinin verimine etkilerinin belirlenmesi gerçekleştirilmiştir. Ayrıca yapılan bu çalışma ile özellikle monokültür tarım sistemlerinde toprak yorgunluğunu önleyebilmek ve toprak sağlığını tesis edebilmek amacıyla meyve ağaçlarının altına örtücü/kapatici bitki olarak yeşil gübre bitkilerinin yetiştiriciliğinin etkileri de belirlenmeye çalışılmıştır.

Organik gübreleme incelenen tüm mikrobiyal parametreleri istatistiksel olarak önemli düzeyde arttırdığı belirlenmiştir. Ortalama olarak mikrobiyal parametreler kontrole göre ortalama %1-

116 arasında deęişen düzeylerde artış göstermiştir. Bu durumun kullanılan organik materyallerin sahip oldukları fiziksel ve kimyasal özellikleri nedeniyle topraklardaki mikrobiyal aktiviteyi teşvik ettiği ve bu etkinin materyalin özelliklerine baęlı olarak deęişken düzeylerde olduğu belirtilebilir. Baęımsız deęişkenlere baęlı olarak BSR, %52-90 arasında ortalama %72, N_{min} %1-116 arasında ortalama %37, DHG %12-79 arasında ortalama %45, ALKPA %35-98 arasında ortalama %60 ve GLU %30-57 arasında ortalama %46 düzeyinde artış göstermiştir. Amonifikasyon ve nitrifikasyon sonucu topraklarda oluşan NH_4-N , %7-126 arasında ortalama %46 ve NO_3-N 'u %23-546 arasında ortalama %212 düzeylerinde artmıştır. İlâveten, organik gübre uygulamaları NPK, mineral gübre uygulamasına göre de incelenen bu parametreleri %43-125 arasında deęişen oranlarda artırmıştır.

Dört dönem halinde gerçekleştirilen örnek alma periyotları incelenen baęımlı mikrobiyal deęişkenler açısından da farklı etkilere sahip olmuştur. Nitrifikasyon süreci ile oluşan NO_3-N konsantrasyonu 1. Dönem örneklerinde en yüksek konsantrasyonda analiz edilirken, N_{min} deęerinin de aynı dönemde en düşük belirlenmesi birbirini doğrulayan iki önemli sonuç olarak ifade edilebilir. Organik atıkların ilk yıl uygulanmasıyla birlikte topraktaki N-mineralizasyon süreçleri hızlanmış ancak ilerleyen dönemlerde aynı hıza ulaşamamıştır. Yine benzer şekilde potansiyel mineralize olabilecek azot miktarının (N_{min}) istatistiksel olarak önemli düzeyde yüksek belirlendięi 4. Dönemde, istatistiksel olarak anlamlı en düşük NO_3-N konsantrasyonunun belirlenmesi de benzer şekilde birbirlerini konfirme eden sonuçlardır. 4. Dönemde belirlenen bu düşüklüğün nedeni olarak örnek alma dönemlerinden önce gerçekleşen yoğun yağışlardan sonra canlı mikrobiyal aktivitenin rehabilitasyon sürecini tamamlayamaması olarak düşünülmektedir. Dięer mikrobiyal parametreler olan BSR, DHG, GLU, ALKPA ve amonifikasyon sonucu oluşan NH_4-N konsantrasyonu parametreleri 2. Dönem örneklerinde istatistiksel olarak anlamlı bir farklılık oluşturarak en yüksek düzeyde saptanmışlardır. Yeşil gübreleme uygulamalarının özellikle bu hususta etkili olduęu düşünülmektedir. İki yıl üst üste SAÇ, TGK ve AGK uygulamaların baęlı olarak 3. Dönemde belirlenen DHG ve BSR ile NH_4-N parametrelerinde önemli düzeyde bir artışın olması, organik materyal kaynaklarının iki yıl üst üste kullanılması sonucu toprakların toplam canlı mikrobiyal popülasyon büyüklüğü ile C- ve N-mineralizasyon süreçlerinin olumlu etkilendięi şeklinde yorumlanabilir.

Uygulamalara yeşil gübrelemenin ilave edilmesiyle incelenen mikrobiyal parametrelerde anlamlı farklılıklarının olduğu belirlenmiştir. ALKPA dışındaki tüm mikrobiyal parametreler yeşil gübre uygulamalarına baęlı olarak artış göstermiştir. GLU aktivitesi ile inorganik azot konsantrasyonları fiğ yeşil gübrelemesi ile daha çok teşvik edilirken, potansiyel mineralize

olabilir azot miktarı, BSR ve DHG parametreleri ise bezelye yeşil gübrelemesine çok olumlu yanıtlar vermiştir. Genel çerçevede bezelye yeşil gübrelemesinin daha fazla sayıda parametreyi olumlu teşvik ettiği, buna karşılık fiğ yeşil gübrelemesinin ise olumlu etkilediği mikrobiyal parametrelerin miktarını daha fazla yükselttiği saptanmıştır. Yeşil gübrelemesiz uygulamalara göre fiğ yeşil gübrelemesi ortalama %10.4 düzeyinde bir artış sağlarken, bu oran bezelye yeşil gübrelemesi için %8.6 olarak gerçekleşmiştir. Stabilize arıtma çamuru uygulaması, proje kapsamında incelenen mikrobiyal parametreleri diğer organik gübre uygulamalarından çok daha fazla ve önemli düzeyde arttırmıştır. SAÇ uygulamasının fiğ ve bezelye ile yeşil gübre kombinasyonlu uygulama konuları da en etkili gübreleme yöntemi olarak ortaya çıkmıştır. Bu bağlamda SAÇ+B uygulamasının SAÇ+F uygulamasına göre daha fazla sayıda mikrobiyal parametre üzerinde etkili olduğu belirtilebilir. Çalışma kapsamında elde edilen önemli bir sonuç ise kolloidal fraksiyon tarafından stabilize edilmiş hidrolitik enzimler ile ilgilidir. İncelenen mikrobiyal parametreler (N-mineralizasyonu, toprak solunumu, dehidrogenaz aktivitesi, amonifikasyon ve nitrifikasyon süreçleri sonunda oluşan NH_4 ve NO_3 konsantrasyonu) toprak örneği alma dönemleri öncesi gerçekleşen yoğun yağışlardan etkilenirken, topraklarda adsorbe edilmiş GLU ve ALKPA hidrolitik enzimlerinin ise aktivitelerine devam edebildikleri belirlenmiştir.

Çalışmadan elde edilen bir başka sonuç ise nitrifikasyonun toprağın nem durumuyla yakından ilişkili olduğu düşünülmektedir. Toprak nemi % 8'ler düzeylerinde olduğunda ortamda substratı olsa bile NO_3 oluşumu gerçekleşmezken, toprak nemi % 16 düzeylerine çıktığında nitrat oluşumunun arttığı belirlenmiştir. Toprakların proje kapsamında incelenen tüm kimyasal özellikler üzerinde organik madde kaynaklarının ve yeşil gübre kombinasyonlarının belirgin bir etkisi saptanamamıştır. Bunların arasından pH, EC, P ve Fe ön plana çıkan parametreler olmuştur. SAÇ uygulamalarına bağlı olarak toprak pH değeri %6-7 arasında değişen düzeylerde azalış göstermiştir ($P<0.05$). SAÇ+B uygulaması ile EC değerinde kontrole göre %81 düzeyinde bir artış sağlanırken, SAÇ ve SAÇ+F uygulamalarıyla %125 düzeyinde toprak tuzluluğunda artış belirlenmiştir ($P<0.05$). Ancak bu pH düşmesinin ve tuzluluk artışının, bitkisel üretimi ve topraklardaki mikrobiyal aktiviteyi sekteye uğratabilecek seviyelerde olmadığı belirtilebilir. Alınabilir fosfor konsantrasyonunu kontrole göre en fazla arttıran uygulama SAÇ olmuştur. %83 düzeyindeki artış istatistiksel olarak da %5 düzeyinde önemli bulunmuştur. Bunun dışında %53 düzeyindeki artış ile SAÇ+F uygulaması ve %56 düzeyindeki artışla SAÇ+B uygulaması kontrole göre alınabilir fosforu önemli düzeyde arttıran diğer uygulamalar olmuşturlardır. Miktarında oluşturduğu farklılığın önemli olarak belirlendiği bir diğer parametre

ise alınabilir Fe olmuştur. Alınabilir Fe miktarını istatistiki olarak %40 düzeyinde en çok arttıran uygulama yine SAÇ+B uygulaması olmuştur ($P<0.05$). Zeytin verimini her iki yılda en fazla arttıran organik madde kaynağı stabilize arıtma çamuru olurken, en fazla arttıran uygulamalar olarak SAÇ+B 23.00 kg ağaç⁻¹ ve SAÇ 21.08 kg ağaç⁻¹ değerleri ile kontrole göre ortalama %196 ve kimyasal gübre uygulamasına göre ise ortalama %83 düzeyinde artış sağlayarak diğer uygulamalardan önemli düzeyde farklılık göstermişlerdir ($P>0.05$).

İki yıllık çalışma sonuçları dikkate alındığında Akdeniz iklim koşulları altında toprak sağlığını arttırabilmek ve sürdürülebilir hale getirmek için sofralık/yemlik bezelye bitkili yeşil gübreleme ile birlikte kombinasyon halinde stabilize arıtma çamuru uygulaması (60 kg SAÇ ağaç⁻¹ + 200 g bezelye ağaç⁻¹) önerilmektedir. Bu sayede hem atık vasfındaki organik madde kaynağının toprakların özelliklerini iyileştirmek için kullanılması sağlanacak hem de ürün veriminde de artışlar sağlanabilecektir.

Özet

Bu çalışmada tohum ekim ortamına eklenen *Trichoderma harzianum* (*Th*) mantarı ile birlikte fide aşamasında yaprak gübresi uygulamasının hıyar fidelerinde fide gelişimi ve kalitesine olan etkilerini belirlemek amaçlanmıştır. Sera domatesi rizosferinden izole edilen *Th* suşu, 20:20:20 yaprak gübresi ile birlikte test edilmiştir. Deneme *Th* suşu ilaveli ve ilavesiz tohum ekim ortamları ve fideler çıktıktan sonra yaprak gübresi uygulamalı ve uygulamaz konulardan oluşmuştur. *Th* suşu ilgili konu için sıvılaştırılarak yetiştirme ortamına (torf) uygulanmış ve bulaşık torf viyollere doldurulup, Opal F₁ hıyar çeşidine ait tohumlar ekilmiştir. Kontrol uygulamasında *Th* ilavesiz torf kullanılmıştır. Viyoller çimlendirme odasında 3 gün tutulduktan sonra, fideler dikim büyüklüğüne gelene kadar fide serasında tutulmuştur. Bu süre içerisinde *Th*+gübreli ve kontrol uygulamasındaki fidelere su rampası ile üstten günde 1 kez yaprak gübresi; *Th*+gübresiz uygulamasına ise sadece su verilmiştir. Deneme sonuçları, fide kalite indeksinin *Th*+gübreli ve kontrol uygulamasında yüksek çıktığını; *Th*+gübreli uygulamasının özellikle fide biyokütlesini, yaprak klorofil ve yeşil renk değerlerini arttırdığını göstermiştir. *Th* uygulaması yaprak gübresi ile birlikte kullanıldığında yaprak gübresinin etkinliğini arttırdığı, yaprak gübresi uygulanmadan *Th* uygulamasının neredeyse ölçülen tüm parametrelerde kontrol uygulamasının altında kaldığı belirlenmiştir. Elde edilen veriler birlikte değerlendirildiğinde, fide biyokütlesi ve kalite indeksine olan olumlu etkileri nedeni ile *Th*'un hıyar fidesi kalitesini arttırmada tohum ekim ortamına uygulanabileceği ve fide aşamasında yaprak gübresi ile kombine edildiğinde fide kalitesi üzerine daha da olumlu etkiler yaptığı ortaya konmuştur.

EFFECTS OF LEAF FERTILIZER and *Trichoderma harzianum* APPLICATION ON CUCUMBER SEEDLING QUALITY

Abstract

This study aimed to determine the effects of leaf fertilizer application during the seedling stage, in conjunction with the addition of *Trichoderma harzianum* (*Th*) fungus to the seed sowing medium, on the seedling development and quality of cucumber seedlings. The *Th* strain isolated from the rhizosphere of greenhouse tomatoes was tested in combination with a 20:20:20 leaf fertilizer. The treatment consisted of seed sowing mediums with and without the addition of the *Th* strain, and after the seedlings emerged, treatments included applications of with and without leaf fertilizer. *Th* strain was liquefied and applied to the growing medium (peat) and the contaminated peat was filled into seedling trays and the seeds of the cucumber cv. Opal F₁ were sown. Trays were kept in the germination room for 3 days and then in the seedling greenhouse until the seedlings reached planting size. During this period, foliar fertilizer was applied once a day from the top with a boom system for *Th*+with fertilizer and control seedlings; *Th*+without fertilizer treatment was irrigated only water. The results of the experiment showed that the seedling quality index was higher in the *Th*+fertilizer and control, and the *Th*+fertilizer application especially increased the seedling biomass, leaf chlorophyll, and green color (a) values. It was determined that *Th* application increased the effectiveness of foliar fertilizer when used together with *Th*, and *Th*+without fertilizer treatment was generally inferior to the control treatment in almost all measured parameters. When the obtained data were collectively evaluated, it was revealed that *Th* could be applied to the seed sowing medium to enhance cucumber seedling quality, and when combined with leaf fertilizer during the seedling stage, it had even more positive effects on seedling quality.

Keywords: *Cucumis sativus*, fungus, strain, foliar fertilizer, biomass, quality index

Giriş

Çevreye duyarlı üretim sistemlerinde gübreleme ve ilaçlama programlarında kullanılan alternatif uygulamalardan birisi de “faydalı mikroorganizmalar”ın kullanımudur. Rizosferde çok sayıda faydalı mikroorganizma (bakteri, fungus, alg ve protozoa) bulunmaktadır. Ancak bu gruplar içerisinde bakteriler büyük çoğunluğu oluşturmaktadır (İmriz ve ark., 2014). Bu faydalı bakteriler Kloepper et al. (1980) tarafından “Bitki Gelişimini Teşvik Eden Rizobakteriler (Plant Growth Promoting Rhizobacteria: PGPR)” olarak adlandırılmıştır. *Pseudomonas*, *Azospirillum*, *Azotobacter*, *Klebsiella*, *Enterobacter*, *Alcaligenes*, *Arthrobacter*, *Burkholderia*, *Bacillus* ve *Serratia* türleri PGPR olarak sayılmaktadır (Saharan and Nehra, 2011). PGPR'lar ile yapılan çalışmalar, bu bakterilerin tarımsal üretimi sınırlayan biyotik (Şevik, 2010; Yıldız et al., 2012) ve abiyotik (Mayak et al., 2004; Çakmakçı, 2009; Ram et al., 2013) faktörlere karşı toleransı arttırdığını; atmosferdeki serbest azotu bağladığını, fosforun çözünürlüğünü ve organik artıkların ayrışmasını arttırdığını, enzim ve fitohormon üretimini arttırdığını, tüm bunlara bağlı olarak da toprak yapısı ve verimliliğini iyileştirdiğini, bitkinin kök gelişimini ve besin elementi alınımını arttırdığını, yer-besin yarışı ve ürettiği bazı sekonder metabolitler ile patojen gelişimini baskıladığını, sonuçta bitki gelişimi ve verimini arttırdığını (Glick, 1995; Çakmakçı, 2005 & 2009; Saharan and Nehra, 2011; Ram et al., 2013; İmriz ve ark., 2014) ortaya koymuştur.

Bitki gelişimini teşvik eden bakteriler gibi *Trichoderma* mantarların da sera ve tarla koşullarında PGPRlar gibi etkiler sergilediği görülmüştür (Inbar et al., 1994; Küçük ve Kıvanç, 2001; Harman, 2006). Bakterilerin de işin içerisine dahil olması ile birlikte bu tür mikroorganizmaları tanımlamak için genel bir ifade ile “faydalı/yararlı mikroorganizmalar” terimi kullanılmaya başlanmıştır. Faydalı mikroorganizmalar, etki özelliklerine göre biyofertilizer (besin elementlerinin bitki kullanımına hazır hale getirenler), bitki stimülatörü (bitki gelişimini teşvik edenler), biyopestisit (bitki koruyucular) ve rizoremediator (organik kirleticileri parçalayarak indirgeyenler) olarak ruhsatlandırılabilir (Somers et al., 2004).

Köklerde serbest yaşayan bir toprak mantarı cinsi olarak kabul edilen *Trichoderma* (Samuels, 2006) yeşile yakın renklerde gözlenmekte ve hızlı çoğalma kabiliyetindedirler (Aydın, 2015). *Trichoderma* genusun tarım açısından önemi sera ve tarla koşullarında toprak kaynaklı hastalıkları kontrol etmede biyolojik mücadele ajanı olma potansiyellerinden kaynaklanmaktadır (Singh et al., 2007; Jangir et al., 2017). Bu amaçla çoğunlukla *T. harzianum* ve *T. viride* türleri kullanılmaktadır (Harman, 2006). Bitki patojenlerine karşı iyi bir antagonistik yeteneğe sahip olan bu mantar türleri, antifungal metabolitlerin üretimi, besin ve

yer için yarışma ve mikoparazitlik gibi farklı mekanizmalar ile etkilerini göstermektedirler (Cook and Baker, 1983; Kredics et al., 2003). Ayrıca *Trichoderma spp.*'nin sürgün ve kök gelişimini teşvik ettiği; fotosentezi, verimi ve abiyotik stres koşullarına dayanıklılığı arttırdığı, besin kullanımını teşvik ettiği bilinmektedir (Inbar et al., 1994; Yedidia et al., 2001; Harman, 2006). Bilinen bir diğer özellikleri de toprakta bulunan fosfor, mangan, bakır, demir gibi elementlerin çözünürlüğünü arttırarak bitkinin element alımı ve dolayısıyla büyüme hızı artmaktadır (Harman and Kubicek, 1998).

Fide bitkisel üretimin başlangıç materyali olduğu için, üretime sağlıklı ve kaliteli bir fide ile başlamak oldukça önemlidir. Kaliteli fide eldesi için koruma amaçlı ve bulaşma durumunda aşırı pestisit uygulaması, fide pişkinleştirmede ve kalite düzenlemesinde fide gelişimini arttırıcı/durdurucu kimyasalların uygulaması pratikte fazlaca yapılan uygulamalardandır. Ancak söz konusu bu uygulamalardaki aşırıya kaçmalar fide kalitesinde olumsuzluklara (bodurlaşma, sararma, aşırı uzama, cılız kalma vs) yol açabilmektedir. Uygulanacak *Trichoderma spp.* gibi faydalı mikroorganizmaların kullanımı ile ekolojik denge korunarak da kaliteli fide elde etmek mümkündür. Nitekim farklı fide türlerinde yapılan çalışmalar *T. harzianum* uygulamasının kontrole göre tohumlarının çıkış ve çimlenme oranını (Yedidia et al., 2001; Pöldma et al., 2008), fidelerde kök ve sürgün yaş ve kuru ağırlığını (Inbar et al., 1994, Yedidia et al., 2001; Ozbay and Newman, 2004; Bal ve Altıntaş, 2006; İkiz ve ark., 2022), fide boyu ve yaprak alanı (Inbar et al., 1994; Yedidia et al., 2001), yaprak sayısı (Pöldma et al., 2008), kök uzunluğunu (Yedidia et al., 2001), kök ve yeşil aksamda bazı makro ve mikro element içeriğini (Yedidia et al., 2001) arttırdığını, hastalık kontrolü sağladığını (Inbar et al., 1994) ortaya koymuştur. Yürütülen bu araştırmada, tohum ekim ortamına ilave edilen *Trichoderma harzianum*'un hıyarda fide kalitesine etkisinin belirlenmesi ve *T.harzianum*'un mevcut etkisini arttırmada yapraktan yapılan gübrelemenin bir etkisinin olup olmayacağı fide gelişimi, kalitesi ve besin elementi içeriği değerleri ile test edilmeye çalışılmıştır.

MATERYAL ve METHOD

Bu çalışma, 2018 yılının ilkbahar yetiştirme döneminde Ege Üniversitesi Ziraat Fakültesi Bahçe Bitkileri Bölümü'nde yürütülmüştür. Denemede bitkisel materyal olarak "Opal F1" hıyar çeşidi (Smyrna Tohumculuk, İzmir) kullanılmıştır. Test edilen *T. harzianum* suşu "Organik Bitkisel Üretimde Değerlendirilmek Üzere Girdi Üretim Yöntemlerinin Geliştirilmesi" isimli TÜBİTAK 111G055 numaralı proje kapsamında geliştirilmiş formülasyonlar olup, yapılan denemelerde en umutvar olan suş (İkiz ve ark., 2022) bu

çalışmada kullanılmıştır. Söz konusu suş, Adana Biyolojik Araştırma İstasyonu'nda (Ceyhan/Adana) sera domates bitkisi rizosferinden izole edilmiştir. 1×10^6 cfu/bitki mikroorganizma sayısına sahip olan suş, sıvı halde kullanılmıştır. Yaprak gübresi olarak ise ticari fide firmalarında en çok kullanılan 20-20-20+TE kompoze gübre (Agroleaf Power, 300 g/da) denemeye alınmıştır.

Deneme (1) tohum ekim ortamına *Th* uygulaması (*Th*+gübresiz), (2) tohum ekim ortamına *Th* uygulamadan fidelere yaprak gübresi uygulaması (kontrol-gübreli) ve (3) tohum ekim ortamına *Th* uygulaması ve fidelere yaprak gübresi uygulaması (*Th*+gübreli) konularından oluşmuştur.

Konusuna göre bitki sayıları üzerinden hesaplanmış *Th* suşu ithal torf (Klassman TS1, Almanya) ortamına karıştırılmış, torf iyice harmanlanmış ve nemlendirilmiş, 72'lik viyollere (66.5 x 33.5 x 4.9 cm) doldurulmuş ve her göze 1 tohum gelecek şekilde 07.05.2018 tarihinde tohum ekimi yapılmıştır. Denemede her konu için 2 viyol hazırlanmış; her viyol (n:36/tekerrür) bir tekerrür olarak kabul edilmiştir. Tohum ekiminden sonra ortamlar tekrar nemlendirilip viyoller streç film ile kaplanmış ve çimlendirme odasına konulmuştur. Viyoller çimlendirme odasında (karanlık, gece/gündüz 24°C, %80 nem) 3 gün tutulduktan sonra; fide adaptasyon serasına alınıp, dikim büyüklüğüne gelene kadar burada tutulmuştur. Bu süre içerisinde yetiştirme ortamına *Th* uygulanan fideler gübreli ve gübresiz olarak yetiştirilmiş; *Th*+gübreli ve kontrol uygulamasındaki fidelere su rampası ile üstten günde 1 kez yaprak gübresi; *Th*+gübresiz uygulamasına ise sadece su verilmiştir. Fideler tohum ekiminden 24 gün sonra dikim büyüklüğüne gelmiş; ölçüm ve analizler yapılmıştır. Uygulamaların çıkış üzerine etkilerini ortaya koymak amacıyla, tohum ekiminden itibaren %50'sinin çimlenmesine kadar geçen süre çıkış süresi (gün), ekimi yapılan tohum miktarı ile elde edilen fide sayısının oranı çıkış oranı (%) olarak belirlenmiştir. Dikim büyüklüğüne gelen fidelere hasat günü sabah erken saatlerde her tekerrürden 20 adet fide seçilerek yaprak uç bölgesinden mikrometre (Mitutoyo, Japonya) yardımı ile yaprak kalınlığı (mm) ve klorofil metre (SPAD-502 Plus, Konica Minolta, Japonya) yardımı ile klorofil indeksi (SPAD) ölçülmüştür. Fidelerin yaprak rengi (L, a*, b*) renk ölçer (CR-300 Chroma Meter, Konica Minolta, Japonya) ile laboratuvarında ölçülmüştür. Renk okuması her tekerrürde tam açmış 3. veya 4. gerçek yaprakta 10 adet yapılmıştır. Seçilen 10 adet fide viyollerden sökülerek kök başlangıcından büyüme ucuna kadar olan uzunluk şerit metre ile ölçülerek fide boyu (cm), kök boğazından kök uç noktasına kadar olan kısım şerit metre ile ölçülerek kök boyu/kök derinliği (cm) ve hipokotilin orta kısmından dijital kumpas (Mitutoyo, Japonya) ile gövde çapı (mm) ölçülmüştür. Fidelerin kök ve vejetatif

aksamı (yaprak+gövde) ayrılarak temizlenmiş ve hassas terazide kök ve vejetatif aksam yaş ağırlıkları (g) tartılmıştır. Etüvde 65°C’de sabit ağırlığa gelinceye kadar bekletilen bitki kısımları hassas terazide tartılıp kuru ağırlıkları (g) ve kuru madde içerikleri (%) belirlemiştir. Fidelerin Dickson kalite indeksi (DQI) kuru ağırlık, boy ve çap üzerinden Dickson ve ark. (1960)’nın kullandığı formüle göre belirlenmiştir. Denemelere ait kurutulmuş üst aksam (yaprak ve gövde) örnekleri, öğütücü yardımı ile toz haline getirilmiş ve yaş yakma yöntemi ile yakılarak makro (N, P, K, Ca, Mg, Na) ve mikro (Fe, Zn, Mn, Cu) besin elementleri belirlenmiştir. Yaş yakılan örneklerde P Vanadomolibdofosforik sarı renk yöntemi ile kolorimetrik olarak; K ve Ca alev fotometresinde; Mg, Na ve Fe atomik absorpsiyon spektrofotometresinde; Zn, Mn ve Cu spektrofotometrede okunmuştur. Toplam N ise modifiye Kjeldahl yöntemiyle tespit edilmiştir. Sonuçlar kuru maddede % ve mg/kg olarak hesaplanmıştır.

Tesadüf parselleri deneme desenine göre tek faktörlü ve 3 tekrarlı olarak kurulan her iki denemeden elde edilen verilere, bilgisayarda JMP (sürüm 5.0) istatistik paket programı uygulanmıştır ve ortalamalar arasındaki fark TUKEY testine göre belirlenmiştir.

BULGULAR

Çimlenme Performansı

Hıyar tohumları *Th* uygulanmış ve uygulanmamış torfta 4 günde çimlenmiş, uygulama konularının çimlenme süresi üzerine etkisi istatistiksel anlamda önemsiz bulunmuştur. Çimlenme oranı ise %98.6 ile 100.0 arasında değişmiş, uygulamaların çimlenme oranı üzerine de etkisi önemsiz bulunmuştur (Çizelge 1).

Çizelge 1. Uygulamaların tohum çimlenme süresi ve oranına etkileri

Kontrol (Gübreli)	4	100.0
<i>P</i>	0.9496	0.6495

Fide Morfolojisi ve Biyokütle

Uygulamaların fide boyu, kök boyu ve yaprak kalınlığı üzerine etkisi istatistiki açıdan önemli bulunmuştur. Hıyar fidelerinde 11.8 cm boy ile *Th*+gübreli ve kontrol grubu aynı istatistiksel grupta yer almış, *Th* suşu uygulanmış ancak gübre verilmemiş fideler 9.93 cm ile en kısa boya sahip olmuştur. Gübre uygulamasının fide boyunu arttırdığı görülmüştür. En uzun kök boyu 13.41 cm ile *Th*+gübresiz fidelerden elde edilirken, gübreli ve kontrol grubu fidelerinin kök boyları arasında fark görülmemiş ve sırası ile kök boyları 11.12 ve 11.52 cm olmuştur. Gövde kalınlığı 4.60 mm ile 3.97 mm arasında değişmiş, gübresiz uygulamada en düşük olmuştur. En kalın yapraklar *Th* uygulanmış ancak yaprak gübresi verilmemiş (*Th*+gübresiz) fidelerden elde edilirken, *Th* uygulanmış ve gübre verilmiş (*Th*+gübreli) fidelerde yaprak kalınlığı azalmıştır (Çizelge 2).

Çizelge 2. Uygulamaların fide morfolojisine etkisi

Uygulamalar	Fide Boyu (cm)	Kök Boyu (cm)	Gövde Kalınlığı (mm)	Yaprak Kalınlığı (mm)

<i>P</i>	0.0409	0.0006	0.2294	0.0275

Vejetatif aksam (yaprak+gövde) yaş ağırlıkları üzerine uygulamaların etkisi önemli bulunmuştur. *Th*+gübreli uygulamasındaki fideler 4.39 g/bitki ile en yüksek vejetatif aksam ağırlığına sahip olmuşlardır. Söz konusu uygulamayı kontrol grubu fideler izlemiştir. *Th*+gübresiz uygulamadaki fideler en düşük vejetatif aksam yaş ağırlığına sahip olmuşlardır. Fidelerinin vejetatif aksam kuru ağırlıkları ve kuru madde içeriği uygulamalardan etkilenmemiştir. Ancak en yüksek vejetatif aksam kuru ağırlık değerlerinin *Th*+gübreli uygulamalardan elde edildiği, en yüksek kuru madde içeriğinin ise *Th*+gübresiz uygulamadan elde edildiği görülmüştür. Bunu uygulamaları kontrol grubu fideler izlemiştir. Fide kök yaş ve kuru ağırlıkları ile kuru madde içeriği üzerine uygulamaların etkisi önemsiz bulunmuştur (Çizelge3).

Çizelge 3. Uygulamaların fide vejetatif aksam (yaprak+gövde) ve kök yaş ve kuru ağırlıkları ile kuru madde içeriğine etkisi

Uygulamalar	Vejetatif Aksam			Kök

YA: yaş ağırlık, KA: kuru ağırlık, KM: kuru madde

Uygulamaların fide toplam yaş ağırlığı üzerine etkisi istatistiksel olarak önemli bulunurken, kuru ağırlık uygulamalardan etkilenmemiştir. Toplam yaş ağırlık 5.17-6.35 g arasında, toplam kuru ağırlık 0.41 – 0.47 g arasında değişmiştir. En yüksek toplam yaş ve kuru ağırlık *Th*+gübreli uygulamasından elde edilirken, en düşük *Th*+gübresiz uygulamasından elde

edilmiştir (Şekil 1). Toplam kuru madde miktarı da uygulamalardan önemli düzeyde etkilenmemiş ve %7.22-7.96 arasında değişim göstermiştir. Kuru ağırlığın aksine Th+gübreli uygulamada kuru madde oranı daha yüksek bulunmuştur (Şekil 2).

Şekil 1. Uygulamaların toplam fide yaş ve kuru ağırlıkları üzerine etkileri

Şekil 2. Uygulamaların toplam kuru madde üzerine etkileri

Dickson Kalite İndeksi (DQI)

Dickson kalite indeksi (DQI) üzerine uygulamaların etkisi önemli bulunmuş ve 3.78-4.40 arasında değişmiştir. En kaliteli fideler Th+gübreli uygulamasından elde edilmiştir. Kontrol grubu ile Th+gübreli uygulaması aynı istatistiksel grupta yer almıştır. En düşük kalite indeksi gübre uygulanmayan ancak Th uygulanmış fidelerden elde edilmiştir (Şekil 3).

Şekil 3. Uygulamaların fide kalite indeksi üzerine etkisi

Klorofil İndeksi ve Renk Değerleri

Klorofil indeksi üzerine uygulamaların etkisi önemli bulunmuştur. Klorofil indeks değeri 30.67 (*Th*+gübresiz) ile 35.11 (kontrol) arasında değişmiştir. Gübre uygulanmayan *Th* uygulaması en düşük klorofil indeks değerini vermiştir. Yaprak a^* renk değeri uygulamalardan etkilenmiş ve en yüksek a^* değeri *Th*+gübreli fidelerde (-14.88), en düşük *Th*+gübresiz fidelerden (-18.22) elde edilmiştir. Rengin açıklık ve koyuluğunu gösteren L değeri ile yeşil renk oranını belirleyen a^*/b^* oranı üzerine uygulamaların etkisi önemsiz bulunmuştur (Çizelge 4).

Çizelge 0. Uygulamaların klorofil indeksi (SPAD)ve yaprak renk değerleri üzerimne etkisi

Uygulamalar	Klorofil İndeksi (SPAD)		Renk Değerleri		
		L	a^*	b^*	a^*/b^*
<i>Th</i> + Gübreli	34.68 ab	47.85	-14.88 a	30.18 b	-0.49
<i>Th</i> +Gübresiz	30.67 b	50.52	-18.22 b	36.23 a	-0.51
Kontrol (Gübreli)	35.11 a	47.69	-16.39 ab	32.51 a	-0.50
<i>P</i>	0.0801	0.3703	0.0320	0.0011	0.9266

Yaprak Element İçerikleri

Hıyar fidesi yapraklarında N %3.82-4.07, P % 0.26-0.39, K % 1.10-1.98, Ca %2.99-3.39, Mg %0.65-0.68 ve Na 2642.8-3459.6 mg/kg olarak değişmiştir. P, K, Ca ve Na element içeriğinin uygulamalardan istatistiksel olarak etkilendiği görülmüştür. En yüksek P içeriği kontrol uygulamasından elde edilirken, K ve Na içeriğinde kontrol ve *Th*+gübresiz uygulamasının aynı istatistiksel grupta yer alarak en yüksek içeriğe sahip olmuştur. *Th*+gübreli uygulaması en yüksek Ca içeriğini vermiştir (Çizelge 5).

Hıyarfidesi yapraklarında Fe 46.61-78.44 mg/kg, Mn 26.46-30.98 mg/kg, Cu 1.83-1.88 mg/kg ve Zn 67.08-77.57 mg/kg arasında değişim göstermiştir. Uygulamaların hıyarda yaprak Fe ve Zn içeriği üzerine etkisi istatistiksel olarak önemli bulunmuş; *Th*+gübreli uygulamasının hıyarda yaprak Fe ve Zn içeriğini azalttığı saptanmıştır (Çizelge 5).

Çizelge 5. Uygulamaların hıyar fidelerinde yaprak makro ve mikro element içeriği üzerine etkileri

Uygulamalar	Makro Elementler						Mikro Elementler			
	N (%)	P (%)	K (%)	Ca (%)	Mg (%)	Na (mg/kg)	Fe (mg/kg)	Mn (mg/kg)	Cu (mg/kg)	Zn (mg/kg)

TARTIŞMA ve SONUÇ

Yürütülen bu araştırmada, tohum çimlenme ve çıkışının tohum ekim ortamına ilave edilen *T. harzianum* bakterisinden etkilenmediği görülmüştür. *Trichoderma* uygulanan tohumların çimlenme ve çıkış performansları bitki türlerine göre değişebilmekte; erkencilik sağlanabildiği

gibi Mastouri et al., 2010; Özbay ve ark., 2015) herhangi bir etkilenme de olmayabilmektedir (Uslu, 2009; Azarmi et al., 2011). Nitekim Bayyurt (2009) tohumlarının çimlenmesi üzerine yaptığı çalışmasında *T. harzianum* uygulaması ile domates, biber ve börülce tohumların çimlenme güçlerini kontrollerine oranla yüksek bulunurken, araştırma sonucumuzla uyumlu şekilde hıyarda fark olmadığını saptamıştır.

Fide morfolojisinin tohum ekim ortamına ilave edilen *T. harzianum* uygulaması ile beraber fidelere uygulana yaprak gübresi uygulamasından genellikle olumlu etkilendiği görülmüştür. Fide morfolojisinde özellikle fide vejetatif aksam ve kök biyokütlesinin *Th*+gübreli uygulamada kontrole göre sırası ile %15.2 ve %7.1 oranında artış gösterdiği saptanmıştır. Yürürülen önceki çalışmalarda da *T. harzianum* uygulaması ile fidelerde kök ve sürgün yaş ve kuru ağırlığında (Inbar et al., 1994, Yedidia et al., 2001; Ozbay and Newman, 2004; İkiz ve ark., 2022) artış rapor edilmiştir. *Th*+gübreli uygulaması ile fide boyu ve gövde kalınlığı artış göstermiş, kök boyu ve yaprak kalınlığı azalış göstermiştir. Bu sonuçlar önceki çalışmalarla uyumlu görülmüştür. Çünkü literatürde *T. harzianum* uygulamasının fide morfolojisini etkilemediğine dair de çalışma sonuçları bulunmaktadır. Mastouri et al., (2010) *T. harzianum* suş T22'nin fide performansı üzerinde önemli bir etkiye sahip olmadığını saptanmıştır. Aksi olarak, Yedidia et al. (2001), *T. harzianum* uygulanmış toprakta hıyar fidelerinin kontrol bitkilerine kıyasla kök alanında, kümülatif kök uzunluğunda, kuru ağırlığında, sürgün uzunluğunda, yaprak alanında, kök kuru ağırlığında ve sürgün kuru ağırlığında önemli artışlar meydana geldiğini belirtmiştir. Azarmi et al. (2011) *T. harzianum* izolat T969, *T. harzianum* izolat T447'nin domates fidelerinde fide boyunu arttırdığını tespit etmiştir. Bu noktada fide morfolojisi ve kalitesini üzerine kullanılan *T. harzianum* suşlarının etkilerinin farklılık gösterebileceği unutulmamalıdır (İkiz ve Öztekin, 2022). Nitekim, Azarmi et al. (2011) tarafından domates fidelerinde fide kalitesi üzerine farklı *T. harzianum* izolatlarının ve uygulama yerinin etkilerinin araştırıldığı bir çalışmada fide kalitesi üzerine izolatların etkilerinin farklı olduğu belirtilmiştir.

Fide kalitesini belirlemede önemli bir kriter olan kalite indeksi *Th*+gübreli uygulamasında en yüksek değerde olmuştur. Fide kalitesi fidelerin fizyolojik ve morfolojik özelliklerine göre değişebilmektedir. En doğru ölçüm ikisinin birlikte değerlendirmesi olsa da morfolojik ölçümler fide fizyolojisinden daha kolay ölçülebilir ve pratik olması nedeni ile tercih edilmektedir. Fide kalitesini belirlemede morfolojik özelliklere dayalı ölçümlerde fide boyu, gövde çapı, kök uzunluğu, yaş ve kuru ağırlık, sürgün-kök oranı ve yaprak sayısı vs parametreleri kullanılmaktadır. Morfolojik derecelendirmeleri iyi olan fideler, daha sonra asıl

yerlerine dikildiklerinde tutunma ve hayatta kalmada olumlu bir tavır sergilemektedirler. Dickson et al. (1960) tarafından fidanlar için geliştirilen kalite indeksi (DQI), fide kalitesi bazı morfolojik özelliklere dayandırılan entegre bir indekstir. Bu nedenle fidelerde de kullanılmıştır. Hesaplamasında toplam kuru ağırlık, fide boyu, gövde çapı, üst aksam kuru ağırlığı ile kök kuru ağırlığı kullanılmıştır. Yürütülen çalışmada elde edilen tüm fidelerin kalitesi DOI sınıflarına göre iyi sınıfta yer almış; ancak en kaliteli fideler Th+gübreli uygulamasından elde edilmiş, bunu gübreli kontrol uygulaması izlemiştir. Th+gübresiz fideleri en düşük kalitede kalmıştır. Bu durum fide kalitesini arttırmada bakteri uygulamasından çok, yaprak gübresi uygulamasının etkili olduğu düşündürmüştür.

Klorofil indeksi (SPAD) ve yeşil rengi nitelendiren a değeri *T. harzianum* kontrol uygulaması ile aralarında istatistiksel bir fark olmamakla beraber kısmen azalmıştır. *T. harzianum* uygulanmış fideler kontrol gurubu fidelere göre biraz daha açık renkli olmuştur. Ancak gözle görülebilir bir renk açılması olmamıştır. Renk indeksi olan a^*/b^* değeri uygulamalara göre önemi bir farklılık göstermemiştir. Elde ettiğimiz bu sonuç *T. harzianum* uygulaması ile klorofil içeriğinin arttığını belirten önceki çalışmalardan (Inbar et al.,1994; Azarmi et al., 2011; Mei et al., 2018; Zhang et al., 2019) farklı olmuştur. Ancak çalışmamızı destekler nitelikte Çubuklu (2011) aşılı domateslerde ve Öztekin ve İkiz (2022) marulda yürüttükleri çalışmalarında *T.harzianum* uygulamasının yaprak toplam klorofil içeriğine etkisini önemli bulmamışlardır.

Yararlı mikroorganizmaların bitkide element içeriğini arttırdığı belirtilmiştir (Yedidia et al., 2001; Türkmen ve ark., 2004; Azarmi et al., 2011; İkiz ve ark., 2022). Bu etki *Trichoderma*'nın toprakta elementleri çözünen bir forma dönüştürmesi ve dolaylı olarak bitki tarafından alınımını arttırmasından kaynaklanmaktadır (Harman and Kubicek, 1998). Ancak yetiştirme koşulları, bitki türü, bakteri suşuna göre bu etkiler değişebilmektedir (İkiz ve ark., 2022). Yürütülen çalışmada uygulamalardan etkilenen element bazında farklılık göstermiştir. Yaprak P, K,Ca, Na, Fe ve Zn element içeriği element içerikleri uygulamalardan etkilenmiştir. *T. harzianum* ve yaprak gübresi uygulaması ile kontrole göre N, Mg ve Mn (istatistiksel anlamda önemsiz) ve Ca (istatistiksel anlamda önemli) içeriği artış; yaprak P, K, Na, Fe ve Zn içeriği ise istatistiksel anlamda azalış göstermiştir.

Çalışmada elde edilen fidelerin tamamı kaliteli fide görünümüne sahip olmuştur. Th+gübresiz uygulaması ölçülen parametrelerin neredeyse tamamında en düşük değerlere sahip olsa da kalitesiz fide oluşturdu anlamına gelmemelidir. Th+gübresiz uygulamasındaki fideler

yapraktan gübrelili uygulamalara göre daha düşük kalitede ve biyokütlerde kalmıştır. Bu durum yapraktan gübrelemenin fide kalitesini arttırmada önemini ortaya koymuştur. 20:20:20+TE gübresi bir kimyasal olduğu için, kimyasal kullanılmadan yapılan yetiştiricilikte *T. harzianum* uygulaması tercih edilebilir bir uygulamadır. Ayrıca *T. harzianum* uygulamasının fide kalitesini önemli derecede arttırdığı önceki çalışmalarda, kontrol uygulaması olarak hiçbir uygulamanın yapılmadığı fidelerle *T. harzianum* uygulanmış bitkilerin kıyaslandığı, yürütülen çalışmada *T. harzianum*'un 20:20:20+TE gübresi ile karşılaştırıldığı göz ardı edilmemelidir.

Yürütülen bu çalışma sonucunda hıyar fidesi üretiminde fide biyokütlesi ve özellikle kalite indeksine olan olumlu etkileri nedeni ile tohum ekim ortamına ilave edilen *T. harzianum* mantarı yanında fidelerin yapraktan gübrenmesi (*Th*+gübreli uygulaması) önerilmektedir. *Th*+gübresiz uygulaması ölçülen parametrelerin neredeyse tamamında en düşük değerlere sahip olmuş, fide kalitesi yapraktan gübreleme uygulamalarına göre düşük olmuştur. Kimyasal bir uygulama olan 20:20:20+TE içerikli yaprak gübresi uygulaması fide gelişimi ve kalitesini arttırmıştır. 20:20:20+TE yaprak gübrenmesi tohum ekim ortamına eklenen *T. harzianum*'un fide kalitesindeki etkinliğini de arttırmıştır. Ancak sonuçların farklı üretim şekillerine, çevre koşullarına, farklı türlere, farklı *T. harzianum* suşlarına/izolatlarına göre değişebileceği unutulmamalıdır.

Özet

Bu çalışmada kamu araştırma kurumlarında ve üniversitelerde bahçe bitkileri alanında çalışan araştırmacıların inovasyon süreçlerinin değerlendirilmesi hedeflenmiştir. On araştırma enstitüsü ve dört üniversitenin ziraat fakültelerinde görev yapmakta olan, bahçe bitkileri bölümünden mezun olmuş 108 kişiden anket yoluyla toplanan veriler araştırmanın ana materyalini oluşturmuştur. Çalışmada araştırmacıların bazı kişisel özellikleri, inovasyon süreçleri, inovasyon sisteminde karşılaştıkları sorunlar ve inovasyonu engelleyen faktörler gibi konularda sorulan anket sorularına verdikleri cevaplara yer verilmiştir. Elde edilen bulgulara göre, çalışmaya katılan araştırmacıların yaş ortalaması 39.4 olup, %42.1'i kadınlardan oluşmuştur. Ortalama 14.3 yıllık deneyime sahip araştırmacıların %73.1'i kamu kurumlarında, %26.9'u üniversitelerde çalışmaktadır. Araştırmacılar mesailerinin %47.4'ünü araştırma etkinliklerine ayırmaktadır. İnovasyon süreci kapsamında araştırmacılara fikirden çiftçi tarlasına uzanan sürecin aşamaları sorulmuştur. İnovasyon sürecinin ortalama 9.7 yılda tamamlandığı, tarımsal inovasyonu engelleyen en önemli faktörlerin sırası ile finansman yetersizliği, inovasyonun yüksek maliyeti, girdi yetersizliği ve nitelikli eleman yokluğu olduğu belirtilmiştir.

Anahtar Kelimeler: Tarımsal inovasyon, AR-GE, inovasyonu engelleyen faktörler, anket

EVALUATION OF THE INNOVATION PROCESS IN THE FIELD OF HORTICULTURE

Abstract

The purpose of this study was to assess the innovation processes of horticultural specialists working in universities and public research organizations. The primary source of data for the study was information gathered via questionnaires from 108 individuals who have completed postgraduate studies or graduated from horticulture departments and are employed by four universities' agricultural faculties and ten research institutes. The responses of researchers to survey questions regarding some personal characteristics, innovation processes, challenges faced in the innovation system, and factors hindering innovation are presented in the study. According to the obtained data, the average age of the researchers who took part in the study was 39.4 years, and 42.1% of them were female. With an average of 14.3 years of experience, 73.1% of them work in public institutions and 26.9% in universities. 47.4% of the time they spend at work are dedicated to research activities. In the scope of the innovation process, researchers were asked about the stages of the process, extending from ideation to the farmer's field. The innovation process is reported to be completed in an average of 9.7 years, with the most significant factors hindering agricultural innovation listed as insufficient financing, the high cost of innovation, input scarcity, and a lack of qualified personnel in order.

Keywords: Agricultural innovation, R&D, factors hindering innovation, questionnaire

Giriş

Ülke kalkınmasında ve uluslararası rekabette araştırma-geliştirme (AR-GE) ve inovasyon önemli bir unsurdur. Kalkınmada lokomotif işlev gören inovasyon sosyal değişim için de vazgeçilmez faktördür (Spielman, 1999; Ramaswamy ve Özcan, 2015). AR-GE çalışmaları bilgi ve teknoloji üretilmesinde önemli olup, ekonomik ve sosyal faydası bulgularının uygulamaya aktarılması ile mümkündür. Diğer bir ifade ile firmalar/ülkeler AR-GE için para harcarken, inovasyonla para kazanmaktadır. İnovasyonda AR-GE sürecinin piyasalarla bütünleşmesi söz konusudur. AR-GE gündeminin oluşturulmasından bulgularının kırsal kesime aktarılmasına kadar geçen süreçte farklı aktörlerle iş birlikleri ve/veya ağ yapılar yer almaktadır (Markard and Truffer, 2006; Grayand Malla, 2007). Sürecin hızlı işletilmesi ülkenin veya firmanın rekabet yanında sorun çözme becerilerini de geliştirmektedir. Dünya ticaretinde ve tarımında lider olan ülkeler incelendiğinde inovasyon sistemlerinin güçlü olduğu görülmektedir. Bilgi ve inovasyon ülkelerde zenginliğin yaygınlaşmasına da yardımcı olmaktadır.

Bu çalışma ile Türkiye tarımında sosyo-ekonomik açıdan önemli yere sahip bahçe bitkileri alanındaki AR-GE ve inovasyon sürecinin incelenmesi amaçlanmıştır. Bilindiği üzere bahçe bitkileri tarımın önemli bir kolunu oluşturmaktadır. 2021 yılı itibari ile Türkiye’de bahçe bitkileri ürünlerinin yetiştirme alanı toplam tarım alanlarının (238.639.481,1 ha) %18.4’ü(43.947.616,1 ha) kaplamaktadır. Önemli bir bitkisel üretim bölgesi olan Ege Bölgesi ise 28.786.378,4 ha ile ülke tarım alanlarının %12.1’ine; 9.763.139,4 ha ile ülke bahçe bitkileri alanının %22.2’sine sahiptir (TÜİK, 2023a). Bahçe bitkileri ürünleri ihracatı ise 235.3 milyar ABD doları ile toplam ülke ihracatının yaklaşık %2’sini oluşturmaktadır. Bahçe bitkilerinin üretim değeri 2021 yılı itibariyle 172.560.825.756 TL ile toplam bitkisel üretim değerinin yaklaşık %56’sını oluşturmaktadır (TÜİK, 2023b). Bu denli önemli bir tarım kolunda AR-GE ve inovasyon süreci de önem arza etmektedir.

Yürütülen araştırmada Türkiye’de Ege Bölgesi’ndeki ve bölgeye yönelik faaliyetleri olan Tarım ve Orman Bakanlığı bünyesindeki araştırma enstitüleri ve ziraat fakültelerinin bahçe bitkileri bölümlerindeki AR-GE çalışmaları, işleyiş, iş birlikleri ve inovasyon süreçleri incelenmiştir. Çalışmada ayrıca, kamu ve üniversitedeki araştırmacıların etkinlikleri de karşılaştırılmıştır. Çalışmada pilot bölge olarak Türkiye tarımında üretim ve ekonomi açısından oldukça önemli bir yere sahip Ege Bölgesi incelenmiş olup, sonuçların ülke geneline rehberlik etmesi de beklenmektedir.

MATERYAL VE YÖNTEM

Bu çalışma TÜBİTAK tarafından desteklenen 112O208 nolu ve “*Tarımsal İnovasyon Sisteminin Geliştirilmesi Üzerine Bir Araştırma: Ege Bölgesi Örneği*” başlıklı projenin (Boyacı, 2016) verilerinden yararlanılarak hazırlanmıştır. Belirtilen projede Ege Bölgesi’nde bulunan ve/veya bölge tarımına katkı yapan farklı araştırma kurumlarında faaliyet gösteren 512 araştırmacıdan veriler derlenmiştir. Anılan projede bilgileri derlenen bahçe bitkileri mezunu ve uzmanı 108 araştırmacıya (popülasyonun %21’i) ait veriler bu çalışmada kullanılmıştır. Çalışmadaki araştırmacıların %73.1’i Tarım ve Orman Bakanlığı bünyesindeki 10 farklı araştırma enstitülerinde (kamu olarak anılacaktır); %26.9’u da 4 farklı üniversitenin bahçe bitkileri bölümleri ve meslek yüksekokullarında ilgili alanda görev yapmaktadır. Çizelge 1’de çalışmada verileri değerlendirilen kamu kurumları ve üniversiteler ile araştırmacı sayıları verilmiştir.

Çalışmada araştırmacıların bazı kişisel özellikleri, çalışma konuları, mesai harcadıkları etkinlikler, öncelikli hedefler, araştırma tipleri, AR-GE ve inovasyon süreci aşamaları ve süreleri, bazı inovatif kurumsal değerler, olanaklar, iş birliklerini engelleyen faktörler gibi konular anket soruları ile toplanmış ve incelenmiştir.

Verilerin yorumlanması ve karşılaştırılmasında yüzdeler, ortalamalar, t-testi ve lojistik regresyon analizi kullanılmıştır. İfadelerin yorumlanmasında beşli Likert ölçeğinden (1:hiç, 2:nadir, 3:kısmen, 4: genellikle, 5: daima) yararlanılmıştır (Malhotra, 2010).

Çizelge 1. Çalışmaya katılan araştırmacıların sayısı ve kurumlara göre dağılımları

BULGULAR

Bazı Kişisel Özellikler

Araştırmacılar ortalama olarak 39.4 yaşında ve 14.3 yıllık mesleki deneyime sahiptirler. Kurumların mevcut insan kaynağı deneyim ve beceri açısından oldukça iyi durumdadır. Araştırmacıların %42.1'i kadındır. Beşli Likert ölçeğine göre araştırmacılar işlerinden ekonomik yönden orta (3.23) düzeyde, mesleki yönden ise nispeten daha çok (3.69) memnundurlar (Çizelge 2). Araştırmacılardan alınan ekstra bilgilere göre %45.2'si çiftçilik deneyimine sahiptirler. Araştırmacıların %86.1'i yüksek lisans, %74.1'i de doktora yapmış/yapmaktadır. Yüksek lisans yapanların %3.9'u yurtdışı eğitimlidir. Üniversitedeki araştırmacıların yaş ve deneyim ortalaması daha yüksektir. Kamuda ise araştırmacıların ekonomik memnuniyet düzeyleri daha yüksektir.

Çizelge 2. Kuruluşlara göre araştırmacıların bazı kişisel özelliklerinin karşılaştırılması (T testi)

Kişisel özellikler	Kurum	Sayı	Ortalama	T değeri	Serbestlik derecesi	P değeri

Araştırmacıların Çalıştıkları Konular

Araştırmacılar ağırlıklı olarak meyve ve sebze üretimi ile ilgilenirken, süs bitkileri yetiştiriciliği ile de ilgilenmektedirler. Çalışma konuları daha çok tohum ve ıslah üzerinde yoğunlaşmıştır. Çevre, doğal kaynaklar ve hasat sonrası konuları araştırma gündeminde daha az yer almaktadır (Çizelge 3).

Kamu araştırmacıları tohum/ıslah çalışmalarına daha fazla yer vermektedir. Üniversitede ise araştırmacıların sebze, genel yetiştiricilik, çevre ve doğal kaynakların korunması ile ilgili konulara daha fazla odaklandığı görülmektedir (Çizelge 4).

Çizelge 3. Çalışılan ürün grupları ve genel çalışma konuları*

Mesai Harcanan Konular

Araştırmacılar zamanlarının %47.4'ünü araştırmalara, %15.0'ini kendilerini geliştirmeye, %10.4'ünü seminer/bilimsel etkinliklere, %10.0'ünü da bürokratik işlere ayırmaktadır. AR-GE gündeminin belirlenmesi ve sonuçlarının uygulamaya aktarılmasında yayım ve çiftçilerle iletişimin payı düşüktür (Çizelge 5). Akademisyenlerin öğrenci eğitimi etkinlikleri kapsam dışında tutulmuştur. Kamu araştırma kuruluşlarındaki araştırmacıların mesailerinde araştırma etkinliklerine ve yeni ürün/uygulama geliştirme hedefine ayırdıkları zaman üniversitelerdeki araştırmacılara göre daha fazla olmuştur (Çizelge 6).

Çizelge 5. Araştırmacıların mesailerini harcadıkları konular ve payları (%)

Mesaideki payları	Sayı	Ortalama	Std sapma
Araştırma etkinlikleri	105	47.4	19.838

Yürütülen Araştırma Tipleri ve Yürütüldükleri Yerler

Bahçe bitkileri alanında en çok uygulamalı araştırmalar (yeni teknoloji üretmek ve bilginin uygulanması) daha sonra sırasıyla stratejik (özel bir problemi çözmek amacıyla yürütülen araştırmalar), temel araştırma (yeni bilgi üretmek sözgelimi; fotosentezin bitki gelişimine etkisi gibi) ve adaptasyon çalışmaları (bir yeniliği belli koşullara uyarlamak)

yürütülmektedir. Araştırmalar ağırlıklı olarak araştırma kurumlarının arazileri ve laboratuvarlarında yürütülmektedir. Araştırmacılar çalışmalarının %18.7'si çiftçi tarlasında ve/veya kırsal kesimde yürütmektedirler (Çizelge 7).

Çizelge 7. Araştırma tipleri ve yürütüldükleri yerler

Yürüttüğünüz araştırmaların tipi ve payları (%)	Sayı	Ortalama	Std sapma
Uygulamalı araştırma	105	32.0	20.762
Stratejik araştırma	105	26.0	22.621

Laboratuvar	108	26.5	21.222
Çiftçi tarlası, kırsal kesim	108	18.7	27.158

Araştırmalarda ve İnovasyon Sürecinde Öncelikli Hedefler

Araştırmacıların AR-GE çalışmalarında öncelikli olarak ürün kalitesini iyileştirmek ve verimlilik artışına odaklandığı görülmektedir. Takiben, yeni ürün ve uygulamalar ile uyarlama çalışmaları da öncelikli ele alınan konulardandır. Bölgede çiftçilerle yapılan karşılıklı görüşmelerde işgücü, girdi, enerji gibi maliyetler birincil öncelikli konular olarak belirlenirken, araştırmacılar da bu konu önemli olmakla birlikte öncelik düzeyinin son sırada olduğu görülmüştür (Çizelge 8).

Çizelge 8. İnovasyon sürecindeki öncelikli hedef konular*

İnovasyon içeriği ve hedefi	Sayı	Ortalama	Std sapma
Ürün kalitesini iyileştirmek	107	4.16	0.881
Verimlilik artışı	106	4.11	0.865
Yeni ürün/uygulama geliştirmek	108	3.98	0.917
Mevcut ürünü/uygulamayı iyileştirmek	106	3.88	0.813
Mevcut ürün/uygulamayı yeni koşullara uyarlamak	104	3.84	0.849
İşçi ve tüketici sağlığı güvenilir gıda öncelikli hedefi	102	3.60	1.180
Tarımsal uygulamaların çevre zararını azaltmak	102	3.54	1.132
Girdi işgücü enerji maliyetlerini düşürmek öncelikli hedefi	102	3.41	0.999

* Beşli Likert ölçeği: 1:hiç öncelikli değil, 2: düşük öncelikli, 3: kısmen öncelikli, 4: öncelikli,5: kesinlikle öncelikli

İnovasyon Sürecinde Aşamalar ve Harcanan Süre

Bahçe bitkileri alanında inovasyon sürecinde bir fikrin oluşumundan çiftçi tarlasına/bahçesine ulaşıncaya kadar geçen süre ortalama 9.7 yıl olarak belirlenmiştir (Çizelge9). Buna çiftçilerin kullanımına aktarılması ve çiftçilerin %20 kadarının benimsemiş olması da eklenirse süre 15 yıla ulaşmaktadır. Araştırma çalışmaları ortalama 3.5 yıl sürmekte ancak, fikir geliştirme ve bulguların uygulamaya aktarılması dadikkate alındığında süreç araştırma süresinin üç katı zamanakadar uzamaktadır (Çizelge 9). Araştırmacılara göre AR-GE bulguların çiftçiler tarafından benimsenme oranı %41.7'dir. Elde edilen bulguların/yeniliklerin %41 kadarı kırsal kesimde benimsenmektedir.

Çizelge 9. Bahçe bitkileri alanında inovasyon sürecinde aşamalar ve süresi (yıl)

İnovasyon sürecinin aşamaları ve geçen süre (yıl)	Sayı	Ortalama	Std sapma
Fikrin oluşumu ve projelendirme	98	1.39	1.090
Destek bulma (fon)	94	1.32	0.675
Araştırmanın yürütülmesi (proje)	98	3.53	1.922
Sonuçların denenmesi / uyarlanması	96	1.95	1.605
Yayım önerisine dönüşmesi	91	1.54	1.448

Araştırma ve İnovasyonla İlgili Bazı Faktörlerin Yeterlilikleri

AR-GE ve inovasyon süreçlerinde önemli olan yayım, kırsal kesim, politika yapıcılar, uluslararası gibi farklı kesimlerle ilişkiler, araştırma süreçlerinin yönetilmesi, insan kaynağı, altyapı ve ekonomik olanakları gibi faktörlerin yeterlilik düzeyleri Çizelge 10'da görülmektedir. Buna göre faktörlerin yeterlilik düzeylerinin genelde düşük olduğu (2.33-3.15 arasında) söylenebilir. Diğer yandan kamu ve üniversiteler karşılaştırıldığında olanakların yeterlilik düzeylerinin farklılık gösterdiği, kamu kuruluşlarının olanaklarının üniversitelere göre daha yeterli olduğu görülmektedir (Çizelge 11).

Çizelge 10. Araştırma ve inovasyonla ilgili bazı faktörlerin yeterlilik düzeyleri*

Araştırma ve inovasyonla ilgili faktörler	Sayı	Ortalama	Std sapma

Araştırmacıların Farklı Kesimlerle İş Birliği Yapmama Nedenleri

Araştırmacıların AR-GE ve inovasyon sürecinde farklı aktörlerle iş birlikleri yapmalarının nedenleri aşağıda verilmiştir (Çizelge 12). İş birliğini engelleyen unsurların kısmen (3) ve etkili (4) aralığında olup, sosyo-psikolojik nitelikte olduğu belirlenmiştir. Araştırmacılar iş birliği yapmama nedenlerini; ekip ruhunun yeterince gelişmemesi, birbirinden öğrenme isteğinin düşüklüğü, aktörlerin önceliklerinin farklılığı, birbirinin görüşlerine kapalılık ve güvensizlik olarak sıralamışlardır.

Çizelge 12. İş birliği yapmama nedenleri*

İşbirliği yapılamamasındaki nedenler	Sayı	Ortalama	Std sapma
Ekip ruhunun yeterince gelişmemiş olması	106	3.92	1.066
Birbirinden öğrenme isteğinin zayıf olması	106	3.85	1.049
Aktörlerin önceliklerinin farklı oluşu	106	3.81	0.917
Birbirlerinin görüşlerine kapalı olmak	106	3.65	1.024
Karşılıklı güvensizlik	105	3.64	0.992
Kurumlar ve disiplinler arasındaki hiyerarşi	105	3.62	0.965
Başarısızlıkları gizleme isteği	104	3.51	1.033
Birbirlerinin bilgi ve becerilerine yeterince inanmamak	105	3.46	0.961
Katı bir bürokratik yapının varlığı	105	3.39	1.079
Sınırlı çalışma alanı	104	3.20	0.896

* Beşli Likert ölçeği: 1:hiç etkili değil, 2: etkisi düşük, 3: kısmen etkili, 4: etkili, 5: oldukça etkili

İnovasyonu Engelleyen Faktörler

Araştırmacılar inovasyonu engelleyen faktörlerin başına ekonomik yetersizlikleri koymuştur. Takiben sırasıyla eleman eksikliği ve teknolojik yetersizlikler yanında çiftçilerin ilgisizliği, kurumdaki katı bürokrasi ve piyasa bilgisinin yokluğunu belirtmişlerdir (Çizelge 13).

Çizelge 13. İnovasyonu engelleyen faktörler*

İnovasyonu engelleyen faktörler	Sayı	Ortalama	Std.sapma
Ekonomik yetersizlikler	106	3.42	0.826
Yeterli sayı ve nitelikteki elemanın yokluğu	105	3.31	1.050
Teknolojik yetersizlikler	106	3.24	1.010
Çiftçilerin tepkisizliği/ilgisizliği	106	3.09	0.981
Kurumsal katılık/bürokrasi	104	2.94	1.022
Piyasa bilgisinin yokluğu	105	2.93	0.891

* Beşli Likert ölçeği: 1:hiç etkili değil, 2: etkisi düşük, 3: kısmen etkili, 4: etkili, 5: oldukça etkili

Kuruluşlarda Bazı Değerlerin Varlık Düzeyi

Kurum kültüründe ele alınan değerler Çizelge 15’de belirtildiği gibi olmuştur. Genel olarak bu değerlerin kurumlarda içselleştirilmesinin yeterli olmadığı; özellikle proje değerlendirme sürecinin yavaşlığı (2.94) ve ekip kültürünün yeterince gelişmediği (2.94) görülmektedir (Çizelge 14).

Çizelge 14. Kuruluşlarda bazı değerlerin varlık düzeyi *

Bazı kurumsal değerler	Sayı	Ortalama	Std.sapma
Kurumun politika, süreç, değer ve hedeflerin net tanımlanması	108	3.17	1.072
Kurumda düşüncelerin tartışılması ve paylaşılması teşvik edilir	108	3.14	1.139
Çalışmaların sonuçları düzenli izlenir ve değerlendirilir	105	3.10	1.091
Projelerin başarı göstergeleri net tanımlanır	103	3.00	0.907
Proje destekleri hızlı sonuçlandırılır	108	2.94	1.070
Kurumda ekip kültürü için ortam uygundur	107	2.94	1.148

* Beşli Likertölçeği: 1:hiç yeterli değil, 2: oldukça sınırlı, 3: kısmen yeterli, 4: yeterli, 5: kesinlikle yeterli

Araştırma projelerinin yürütülmesi ile ilgili beceriler ve düzenlemelerin varlığı kurumlara göre farklıdır. Bu becerilerin kamu araştırma kuruluşlarında üniversitelere göre daha yüksek olduğu görülmektedir (Çizelge 15). Düşüncelerin paylaşılması, politikaların net tanımlanması, projelerin hızlı desteklenmesi, proje hedeflerinin net tanımlanması, izleme ve değerlendirme süreçleri, ekip kültürü gibi değerlerin varlık düzeyleri kamu araştırma kuruluşlarında üniversitelere göre daha yüksek çıkmıştır (Çizelge 16).

Çizelge 15. Kurumlara göre araştırma yönetim becerileri düzeyi (T Testi)

Araştırmacılar memnuniyet düzeylerine göre yüksek ve düşük düzeyde memnun olanlar şeklinde iki gruba ayrılmışlar ve bağımlı değişkeni oluşturmuşlardır. Lojistik Regresyon analizine göre araştırma çalışmalarında eleman varlığı ve niteliği arttıkça araştırmacılarda mesleki memnuniyet eğilimleri de artmaktadır. Buna karşın, AR-GE’de altyapı olanaklarındaki yetersizlikler ile bürokratik iş yüklerindeki artışlar araştırmacıların mesleki memnuniyetlerini azaltmaktadır (Çizelge 17).

TARTIŞMA VE SONUÇ

İnovasyon süreci; fikrin doğuşundan inovasyonun geliştirilip, kullanımına kadarki aşamaları belirtmektedir. Bir başka deyişle AR-GE çalışmalarının planlanmasından, hedef grupların bulguları/inovasyonu kullanmalarına kadar olan işlemleri kapsamaktadır. AR-GE bulguları uygulamaya aktarılmadığı sürece inovasyona (yeniliğe) dönüşemez. İnovasyonun ortaya çıkması için de bulguların mutlaka sosyal ve/veya ekonomik fayda sağlaması gerekmektedir. Yürütülen çalışmadan elde edilen sonuçlar, sistemde inovasyon sürecini yaklaşık 10 yıl, bir AR-GE çalışmasının çiftçinin kullanımına aktarım süresini (toplumsal ve ekonomik faydaya dönüşüm süresi) 15 yıl olarak ortaya koymuştur. Neredeyse bir araştırmacının meslek yaşamını kapsayabilecek uzunluktaki bu süre araştırmacıları inovasyon sürecinden soğutmakta; AR-GE bulguların çiftçiler tarafından benimsenme oranının istenen düzeyin altında tutmaktadır.

Yeniliklerin benimsenmesi sistemin başarısının göstergesidir (Rogers, 1983). Ancak araştırma bulguları yeniliklerin/araştırma bulgularının uygulamaya aktarılamadığını ve/veya çiftçiler tarafından yeterince benimsenmediği göstermektedir. AR-GE bulguların çiftçiler tarafından benimsenme oranı %41.7 olarak belirlenmiştir. Bu durum araştırmacının kendisi, kurumu ve ülkesi açısından da oldukça büyük bir kayıptır. Mevcut durumda Ege bölgesinde yapılan bahçe bitkileri araştırmalarının toplumsal faydası sınırlı kalmaktadır. İnovasyon sistemleri gelişmiş ülkelerde (Hollanda, İsrail vb.) araştırmaların toplumsal faydası %100'dür (Boyacı, 1996; 2001). Araştırma bulgularının çiftçiler tarafından benimsenme oranının az %80 olması (Saidin and Idris, 1995) durumunda ülkede tarımsal AR-GE'nin ve yayım çalışmalarının ekonomik ve toplumsal faydalarında tatmin edici artış sağlamaktadır.

Memnuniyet, çalışanların motivasyonunu ve üretkenliğini etkileyerek olumlu katkılar yapmaktadır (Yılmaz ve Dilmaç, 2011). Anket sonucu araştırmacıların işlerinden orta düzeyde memnun olduğunu gösterse de AR-GE ve inovasyon sisteminde memnuniyetin artırılması gerekmektedir. İnovasyon sürecinde memnuniyet düzeyleri yükseldikçe performans ve

toplumsal katkı artacaktır. Memnuniyetsizliklerin kurum altyapı olanakları ile de ilgili olduğu görülmektedir. Yürütülen çalışmada kamu olanaklarının üniversitelerden daha iyi olduğu, üniversitelerin teknolojik yetersizlikler ile teknik ve yardımcı personel yetersizliklerinin kamu kurumlarından daha fazla olduğu ve bu durumda çalışanlarda memnuniyetsizlik yarattığı ve AR-GE çalışmalarına engel teşkil ettiği görülmüştür.

İnovasyon süreci ağ yapılara gerek duymaktadır ve bu nedenle de farklı aktörlerle iş birlikleri temel yaklaşımdır. Yürütülen çalışmada süreç içerisinde sistemdeki aktörler arasındaki uyumun nispeten düşük olduğu görülmektedir. Çalışmalarda kırsal kesim ve çiftçi temsilcileri dâhil farklı aktörlerle iş birliği yapılması etkinliği arttıracaktır.

Kamu ve üniversitelerde AR-GE çalışmalarında öncelikli hedefin bölgede özellikle ihracat nedeniyle “kalite” konusunda olduğu, geleneksel araştırma ve yayım yaklaşımlarındaki üretim ve verimlilik artışları arayışının AR-GE gündemini etkilediği; buna karşın, çiftçilerin öncelikli beklentilerinin geri plana attığı görülmüştür.

Bilimsel araştırmaların yaklaşık %19’u çiftçi tarlasında yürütülmektedir. Araştırmaların çiftçi koşullarında yürütülebilmesi hem yerel koşullara uygun çalışma sonuçlarının üretilmesine hem de araştırmaların kırsal kesimde görünürlüğüne katkı sağlamaktadır. Çiftçi koşullarında yapılan çalışmaların artırılması yeniliklerin benimsenmesini de kolaylaştıracaktır.

Araştırmacılara göre ekonomik yetersizlikler inovasyonun önündeki en önemli engeldir. Ayrıca, araştırma projelerinin yürütülmesi ile ilgili kapasite ve becerilerin kamu araştırma kuruluşlarında üniversitelere göre daha yüksek olması dikkati çekmektedir. Özellikle üniversitelerde ekonomik sınırlılıklara dışında eğitim ve araştırma etkinlikleri için idari ve yardımcı personelin yeterli sayı ve nitelikte olmaması ile bürokratik iş yükünün fazlalığı sonuçta etkilidir. AR-GE ve inovasyon süreçlerinin kullanıcı ve piyasa beklentilerini dikkate alan talep yönlendirmeli, etkileşimli, güçlü ağ yapılar ve işbirlikleri içermesi sistemin etkinliğini, ekonomik ve sosyal faydasını arttıracaktır.

Abstract

In this research, temperature and relative humidity were investigated during one-month cold storage of Aronia melanocarpa Nero fruits in a cold store with an evaporative cooling system. Ambient temperature and relative humidity were measured by sensors at 36 points from top, medium and base levels. The research was carried out in accordance with the randomized plot design at +3°C for 1 month. The results were evaluated by using variance analyses. In addition, spatial variability maps were created. Variation of the temperature was determined between 3.40°C and 5.32°C for the top level, 3.80°C and 5.49°C for the middle level and 3.92°C and 5.51°C for the base level at 3°C storage temperature. Coefficient of variations was determined as 11.47% for top level, 11.48% for middle level and 7.10% for bottom level for temperature. The relative humidity values were changed between 74.00% and 88.09%. Mean coefficient of variation of the relative humidity varied between 3.22% and 4.43%. According to the results; distributions of the temperature and relative humidity for different levels were not uniform. The reason of high variability between measurement of the temperature and the relative humidity for different levels in the cold store was the distribution of the cold air. The cold air was ventilated by an evaporator and distributed according to the design of the cold store and placement of fruit cases. Different storage conditions were determined at different levels in the cold store during storage. In addition, there is generally one temperature/relative humidity sensor located back of the door inside the cold store used to control the cooling system. Measurement of the temperature and relative humidity from one point in a cold store is not enough to give an idea about the ambient conditions of the cold store. When storing agricultural products, the use of more temperature/relative humidity sensors in the cold store will enable the actual situation of the temperature and relative humidity values to be considered to control the operation of the cooling system. Additional cold air distribution systems such as ventilators, air curtains and placement of fruit cases may help to improve air distribution and decrease the spatial variability of the storage conditions in the cold store.

Keywords: Aronia, Cold storage, Evaporative cooling, Ambient factors, Spatial distribution

Introduction

Cold storage conditions affect directly quality and quantity of stored products. There are different cooling systems such as evaporative cooling systems and chiller cooling system. The cooling system determines distribution of the temperature and relative humidity in the cold stores. Type, size and placement of the storage cases determine distribution of the ambient factors such as air velocity, temperature and relative humidity in a cold store. Another factor is cold stored product for creating effect on the distribution of the storage factors in a cold store. The design of the cold store, type of the cooling system, cold storage boxes/cases and stored products have effect on storage conditions. Because of all these factors is important for cold storage. In this research, ambient temperature and relative humidity of a cold store were investigated during the cold storage of *Aronia melanocarpa* Nero variety fruits.

Black chokeberry (*Aronia melanocarpa* (Michx.) Elliott) belongs to the Rosaceae family, subfamily Maloideae, and is a deciduous shrub originating from the eastern part of North America (Persson et al., 2004; Ochmian et al., 2012). *Aronia* is a berry species. It consists of with its high antioxidant capacity and anthocyanin content (Karadal et al., 2019). *Aronia melanocarpa* is a source of bioactive compounds. Fresh chokeberry fruits are generally used for juices, nectars, syrups, jams, preserves, wines, tinctures, fruit desserts, jellies, fruit teas and dietary supplements (Sidor and Gramza-Michałowska, 2019). The composition and properties of aronia berries also depend on their cultivar. “Nero,” “Galicjanka,” “Viking,” “Fertodi,” “Hugin,” and “Aron” are popular varieties in Europe (Borowska and Brzoska, 2016). *Aronia* berries and leaves are rich in total polyphenol and flavonoid content that enables the plant to register higher antioxidant activity in comparison to many other culinary herbs and medicinal plants in use (Shahin et al., 2019). Berries can be processed into many values added products giving a boost to the local economy. Possible usage of black chokeberry for protection against unfavourable health effects of substances was evaluated. According to the evaluations; fruit and the leaves of *Aronia melanocarpa* and their products may be effective for prevention and treatment of the effects of toxic action of some xenobiotics in humans (Borowska and Brzoska, 2016). The influence of storage temperature and period on the phytochemical content and antioxidant activity of aronia was investigated in a research. The total polyphenol and flavonoid contents of aronia extract were found to be 308.48 µg gallic acid equivalent/g dry weight and 5.33 µg quercetin equivalent/g dry weight, respectively. Long-term storage of *Aronia* at 4°C reduced the levels of health promoting compounds (Hwang and Yeom, 2019). *Aronia* fruits can both be processed and consumed freshly, and sold at quite good prices, the interest for *Aronia*

production keeps growing. It shows high resistance to frost, mechanized harvesting, damage during transportation and cold storage. Due to these advantages, popularity of chokeberry has increased recently (Wawer, 2006).

Aronia industry is considered to grow with the increase of its production in Turkey (Engin et al., 2016; Engin and Boz, 2019). Aronia berry (*Aronia melanocarpa*) is native to North America. Aronia is being cultivated commercially in Europe. First studies began in Atatürk Horticultural Central Research Institute in 2012 in Turkey. Commercial cultivation began in 2017 with the establishment of larger orchards particularly in Marmara and Black Sea Regions in Turkey. The optimum harvest dates were determined for 'Nero' and 'Viking' Aronia cultivars. The second week of September was determined as optimum harvest time for 'Nero' and 'Viking' Aronia cultivars (Engin and Mert, 2020).

Temperature variation in cold store can be minimized with adequate air circulation. Most stores are designed to provide an airflow of $0.3\text{m}^3\text{min}^{-1}$ per ton of stored product. This is needed to cool product to storage temperature and also may be needed if the product has a high respiration rate (Arkema et al., 1999). Air velocity should be 0.2ms^{-1} . Its mean is equivalent velocity to change empty volume of cold store for 25-30 times per hour (Cemeroğlu et al., 2001). An improved internal structure was proposed to improve the distribution of cooling capacity in refrigerated container in a research. The velocity and temperature of the previous refrigerated container and the improved refrigerated container were obtained and compared. The cold airflow distribution in the improved refrigerated container was more uniform. The cooling performance of the two refrigerated containers were also obtained. The variation of temperature distribution was within $\pm 1^\circ\text{C}$ and the cooling time was also reduced by at least 22.9% in the improved refrigerated container (Jiang et al., 2020). A Computational fluid dynamics (CFD) model was developed, validated and used to analyse cooling characteristics of two different package designs used for postharvest handling of pomegranate fruit. The model incorporated geometries of fruits, packaging box, tray and plastic liner. The accuracy of the model to predict airflow and temperature distributions were validated against experimental data. The model predicted airflow through the stacks and cooling rates within experimental error. Stack design markedly affected the airflow profile, rate and uniformity of cooling. Profile of high and low temperature regions depended considerably on packaging box design (Ambaw et al., 2017). Temperature and relative humidity distribution in an experimental cold store fully loaded with apples were investigated with experimental and numerical methods. An unsteady three-dimensional computational fluid dynamics model was developed to assess the distribution of

temperature and relative humidity in a cold store fully loaded with apples. Relative error of the model was calculated 13% for temperature and 1.43% for relative humidity (Akdemir and Bartzanas, 2015). Computational Fluid Dynamic (CFD) method was also used to estimate ambient conditions of tractor cabin. (Akdemir et al., 2016). Spatial variability of ambient temperature, relative humidity and air velocity in an empty cold store were determined by using management zone analysis methods. The measured data were analysed by MZA software which performed fuzzy clustering to delineate the full cold storage, half full cold storage and empty cold storage. In addition, Surfer mapping software was utilized to create the maps of the measured parameters. The results indicated that there was significant spatial variation of the basic storage parameters such as ambient temperature, relative humidity and air velocity in the cold storage, which denotes the significance of management zones delineation in these facilities so as to maximize the storage (Akdemir and Tagarakis, 2014).

In this research; Aronia melanocarpa Nero variety fruits were stored in a cold store has an evaporative cooling system. Temperature and relative humidity in the cold store were measured for different levels during storage. Temperature and relative humidity were measured by Testo 177H1 sensor. Measurements were realized for top, medium and base level of the cold store. The spatial variability maps of the temperature and relative humidity were created for when Aronia fruits stored. In addition, statistical analyses were applied to compare spatial distribution of different levels.

2. MATERIALS AND METHODS

2.1. Cold store

The cold store has an evaporative cold store. The evaporative cooling system consists of compressor, condenser and evaporator. Cold air was ventilated in the cold store by evaporator. Its volume was 392 m³ (11.85 x 7.75 x 4.27 m) (Figure 1).

Figure 1. General view and dimensions of the cold store

2.2. Aronia

Chokeberry (black chokeberry) is a species with lower cultivation requirements within Rosaceae family. It is cultivated also in East European countries and Germany (Kulling and Rawel, 2008). In this research; Aronia melanocarpa Nero variety chokeberry was cold stored (Figure 2).

Figure 2. Aronia melanocarpa (Anonymous, 2021)

2.3. Sensors

The temperature and relative humidity were measured during cold storage of the Aronia melanocarpa. Testo 177 H1 data loggers were used to measure temperature and relative humidity. Measurement limits of sensors were -20°C and $+100^{\circ}\text{C}$ for temperature, 0 - 100% RH for relative humidity.

2.4. Experimental design

Aronia Melanocarpa Nero variety was stored for 5 weeks (14th September 2021 and 17th October 2021). Temperature was set as 4°C for cold storage. Humidification was not applied during cold storage. Aronia melanocarpa fruits were cold stored in plastic cases and carton boxes. Total

amount of the cold stored Aronia melanocarpa was 21000 kg.

2.5. Ambient temperature and relative humidity measurements

Temperature and relative humidity were measured from cold store and in the plastic cases for 3 different levels (bottom, middle and top level). Measurements were realized from 12 points (4 in length and 3 points in width of the cold store) for each level and for 3 levels as top, middle and base level. Temperature and relative humidity were measured from 36 points (Figure 3) (Akdemir and Bal., 2014). The distances between measurements were 2m in width, 2.5 m in length and 0.5 m in height of the cold storage boxes.

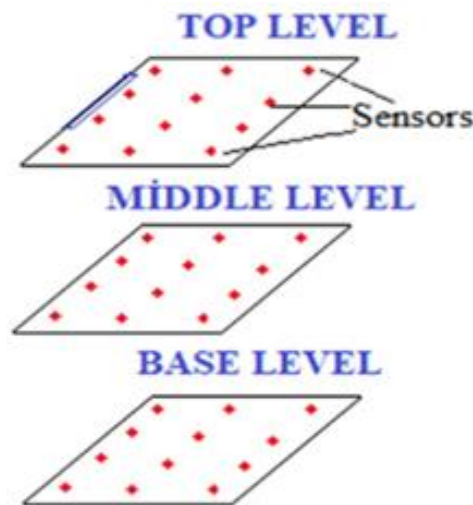

Figure 3. Measurements points and sensors in the cold store

The measured data of the ambient temperature and relative humidity were evaluated by using descriptive statistics such as mean, minimum, maximum, standard deviation (SD) and coefficient of variation (CV%). In addition, the results were compared by statistically. The experiment was designed as 3 factor factorial design in 4 replications and variance analysis and F test were used to compare differences between factors and their interactions. According to the F test, Duncan grouping test was used for grouping of the significant factors and interactions. SPSS statistical software was used for variance analysis and MSTAT software for grouping of the significant factors and interactions. If the effect of the main and interactions of ambient temperature and relative humidity were found statistically significant, the Duncan grouping test was used. Standard error of means for main factor and their interactions were also given for Duncan grouping tests (Soysal, 2000, Soysal and Gurcan, 2012).

2.6. Producing of Spatial Variability Maps

Spatial variability maps of the temperature and relative humidity for storage of the Aronia melanocarpa Nero fruits in the cold store with the evaporative cooling system. Surfer Graphic Programme was used to create maps. Measured data is arranged in a file to use by the Surfer

Programme. Surfer Programme created grid data files. The grid data files were used to create contour maps. The maps were investigated to determine changing of the temperature, air velocity and relative humidity in the cold store (Akdemir and Blackmore, 2004).

3. RESULTS AND DISCUSSION

3.1. Ambient temperature

Measured temperatures values for different levels and descriptive statistics were given in Table 1.

Table 1. Descriptive Statistics of Measured Temperatures For Different Levels (°C)

	Top Level				Medium Level				Base Level			
	Width			Mean	Width			Mean	Width			Mean
Length	1	2	3		1	2	3		1	2	3	
Mean	4.32	4.37	4.55	4.41	4.58	4.30	4.10	4.33	4.89	4.89	5.14	4.97
Min.	3.60	3.86	3.40	-	3.80	3.92	3.92	-	4.10	3.92	5.03	-
Max.	5.32	5.28	5.27	-	5.49	5.23	5.23	-	5.51	5.23	5.23	-
SD	0.50	0.43	0.59	0.51	0.66	0.53	0.31	0.50	0.46	0.51	0.08	0.35
CV(%)	11.60	9.91	12.89	11.47	14.48	12.44	7.52	11.48	9.49	10.32	1.50	7.10

Variation of the temperature of the cold store at 3°C storage temperature changed between 3.40°C and 5.32°C for top level, 3.80°C and 5.49°C for middle level and 3.92°C and 5.51°C for base level. Mean Coefficient of variations of top, middle and bottom level at the cold store were determined as 11.47%, 11.48 % and 7.10%, respectively.

Spatial distribution maps of the ambient temperature were given in Figure 5 for top, middle and base level of the cold storage boxes.

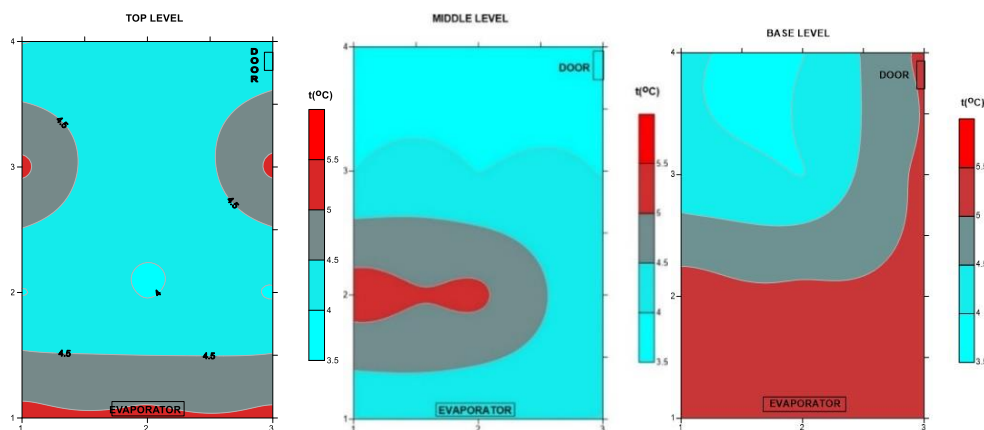

Figure 4. Spatial distribution maps of the ambient temperatures

Variation of the ambient temperature of the cold store at 3°C storage temperature changed between 3.5°C and 5.0°C for top level, 3.5°C and 5.5°C for middle level and base level. There were 3 or 4 different cold zone for the stored fruits. There were important heterogeneities of the spatial distribution of ambient temperature for different levels. There were different storage conditions

for cold-stored Aronia fruits located at different levels of cold storage. The spatial variability was also an indicator of the unevenness of cold air distribution affected by the cooling system, cold store construction (size, geometry, materials), storage boxes and cold stored product.

3.2. Relative humidity

Measured relative humidity values for different levels and descriptive statistics were given in Table 2. Variation of the relative humidity changed between 75.73% and 88.09% for the top level, 74.00% and 86.70% for the middle level and 74.13% and 85.64% for the base level. The mean Coefficient of variations of top, middle and bottom levels at the cold store was determined at 4.43%, 4.02 % and 3.22%, respectively. The ambient relative humidity of the cold store was not controlled by the cooling system, automatically or manually because of the cold stored Aronia *Melanocarpa Nero* fruits requirement.

Table 2. Descriptive Statistics of Measured Relative Humidity For Different Levels (%)

	Top Level				Medium Level				Base Level			
	X Axis				X Axis				X Axis			
Y Axis	1	2	3	Mean	1	2	3	Mean	1	2	3	Mean
Mean	82.93	84.13	80.73	82.59	80.01	81.84	83.39	81.74	77.93	78.73	77.17	77.94
Min.	76.10	76.76	75.73	-	74.00	75.73	75.73	-	74.13	75.73	75.73	-
Max.	88.09	87.62	87.20	-	86.70	85.64	85.64	-	84.29	85.64	79.00	-
SD	4.37	3.21	3.40	3.66	3.95	3.35	2.51	3.27	3.09	3.09	1.37	2.52
CV(%)	5.27	3.81	4.21	4.43	4.93	4.09	3.03	4.02	3.96	3.94	1.77	3.22

Spatial distribution maps of the relative humidity were given in Figure 5 for top, middle and base level of the cold storage boxes.

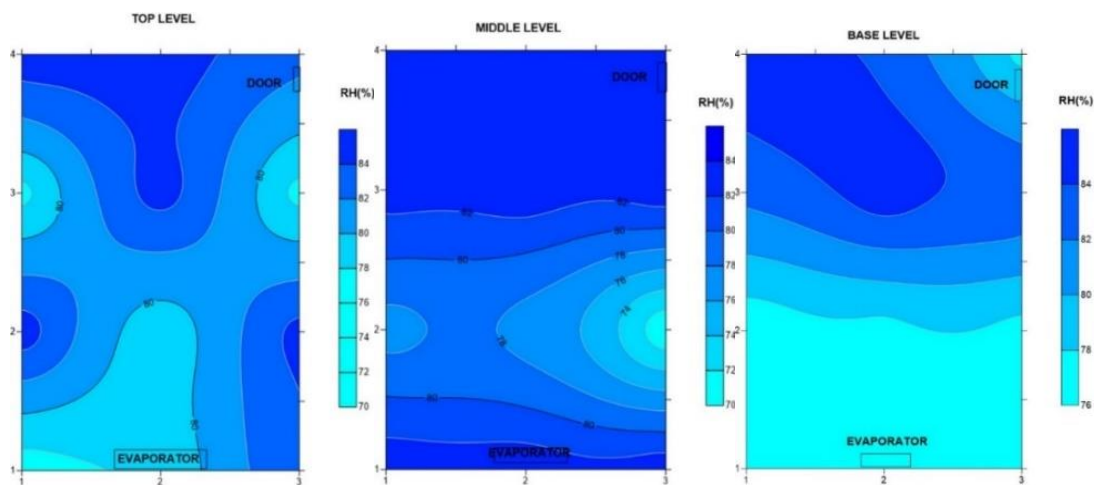

Figure 5. Spatial distribution maps of the relative humidity (RH %)

Variation of the relative humidity of the cold store was changed between 70% and 84% for top level, middle level and base level. There were 3 or 4 different cold zone for the stored fruits. There were important heterogeneities of the spatial distribution of relative humidity for different levels.

4. Conclusions

Homogeneity of the ambient temperature and relative humidity is important to protect agricultural product in a cold store. There are different cooling systems that used in cold stores. In this research a cold store with evaporative cooling system was used to determine spatial distribution of ambient temperature and relative humidity for Aronia melanocarpa Nero variety. Temperature and relative humidity sensors used in this cooling system located at one point of the cold store. The ambient temperatures and relative humidity were determined at top, middle and floor level in the cold store for storage temperatures as 3°C. Mapping software and descriptive statistics (mean, maximum, minimum, standard deviation and coefficient of variation) were used to evaluate data. Ambient temperature varied between 3.40°C and 5.32°C for top level, 3.80°C and 5.49°C for middle level and 3.92 °C and 5.51 °C for base level at 3°C storage temperature. Relative humidity changed between 74.00% and 88.09%.

The results showed that distribution of the ambient temperature and the relative humidity was not uniform for this system. Maximum differences were observed near the walls of the cold store. A more homogeneous distribution was achieved in the middle of the cold store both for air temperature and relative humidity. Reason of bad spatial distribution of ambient temperature was bad spatial distribution of air velocity generated by evaporator fan. There were different storage conditions for cold stored Aronia fruits located at different levels of cold store. The spatial variability is also an indicator of unevenness of cold air distribution affected by cooling system, cold store construction (size, geometry, materials), storage boxes and cold stored product. In addition, there is generally one temperature and relative humidity sensor to measure the ambient temperature and the relative humidity in the cold store to control cooling system. These sensors measure from one point of cold store. Using more sensor to get data from different levels of the cold store will help to decrease spatial variability in the cold store.

Özet

Bu çalışma, 2016 yılında Şanlıurfa koşullarında ikinci ürün olarak yetiştirilen bazı mısır çeşitlerinin verim özelliklerini belirlemek amacıyla yürütülmüştür. Çalışma tesadüf blokları deneme desenine göre üç tekrarlamalı olarak kurulmuştur. Çalışmada 5 çeşit (32T83, Dkc 6101, Agm 1644, Agm 1690 ve Dkc 6120) kullanılmıştır. Çeşitler arasındaki farklılıklar tüm özellikler için önemli bulunmuştur. Çalışmada bitki sayısı, nem içeriği, hektolitre ağırlığı ve verim özellikleri analiz edilmiştir. Çalışmada incelenen özelliklerden elde edilen ortalama sonuçlara göre, bitki sayısı 8200 (bitki/da) ile 8800 (bitki/da) arasında, nem içeriği %22,1 ile %25 arasında, hektolitre ağırlığı 65 kg/hl ile 68 kg/hl arasında ve tane verimi 1044 kg/da ile 1412 kg/da arasında değişmiştir. Tane verimi açısından Agm1690 önde gelen çeşit olmuştur.

Anahtar Kelimeler: Mısır, Çeşit, Verim, Kalite

**COMPARISON OF YIELD CHARACTERISTICS OF SOME MAIZE VARIETIES
UNDER ŞANLIURFA CONDITIONS**

Abstract

This study was conducted to determine the yield characteristics of some maize varieties as second crop in Sanliurfa conditions in 2016. The study was established according to the randomized block design with three replications. In the study, 5 varieties (32T83, Dkc 6101, Agm 1644, Agm 1690 and Dkc 6120) were used. Differences between varieties were found to be significant for all traits. In the study, plant number, moisture content, hectoliter weight and yield characteristics were analyzed. According to the average results obtained from the traits examined in the study, the number of plants varied between 8200 (plants/da) and 8800 (plants/da), grain moisture content between 22,1% and 25%, hectoliter weight between 65 kg/hl and 68 kg/hl and grain yield between 1044 kg/da and 1412 kg/da. Agm1690 was the leading variety in terms of grain yield.

Keywords: Maize, Genotype, yield, quality

Giriş

Dünyada tarımına yaklaşık olarak 4000 yıl önce başlanan (Bisognin, 2002) mısır (*Zea mays* L.) bitkisi; buğdaygiller (*Poaceae*) familyasından olup, dünya nüfusunun beslenmesinde buğday ve çeltikten sonra üretimi en çok yapılan sıcak iklim kültür bitkisidir (Babaoğlu ve ark., 2001).

Mısır, içinde bulundurduğu zengin besin maddesi nedeniyle insan ve hayvan beslenmesinde büyük değer taşımaktadır. Dünyada üretilen mısırın yaklaşık %27'si insan beslenmesinde, %73'ü ise hayvan yemi olarak tüketilmektedir. Gelişmekte olan ülkelerde üretilen mısırın %45.9'u hayvan, %54.1'i insan beslenmesinde kullanılırken mısırın hayvan yemindeki payı %88.9'a ulaşmaktadır (Anonim, 2003). Dünyada silaj yapımı amacıyla yetiştirilen ve hayvan beslemesinde kullanılan bitkilerin basında mısır gelmektedir. Mısırı sorgum, sudan otu ve sorgum-sudan otu melezleri izlemektedir (Kuşaksız ve Kuşaksız, 2005). Ülkemizde mısır daha çok tane üretim amacıyla yetiştirilmekle birlikte son yıllarda, özellikle süt hayvancılığının gelişmekte olduğu bölgelerde silaj bitkisi olarak önemi giderek artmaktadır (Orak ve İptaş, 1999).

Son yıllarda özellikle ülkemizin Güneydoğu Anadolu Bölgesinde ve Araştırmanın yürütüldüğü Şanlıurfa ilinde mısır üretim miktarları yıldan yıla tırmanışta olduğu görülmektedir. Mısır tarımının her aşamasında teknolojik mekanizasyonun kullanılması, ürünün alım garantisinin olması ve bölgenin bazı bölgelerinin sulamaya açılması üretimde ki artışın en önemli nedenlerindedir. Her ne kadar bölgede yoğun mısır tarımı yapılsa da bölge iklim koşulları açısından mısır yetiştirme sezonunda yüksek sıcaklıkların ve düşük nisbi nem oranlarının hakim olduğu bir bölgedir. Mısır bitkisinin dünyada yetişme sınırlarını belirleyen en önemli faktörler sıcaklık ile yetişme periyodudur (Turgut, 2001).

Bu çalışma; bazı mısır çeşitlerinin karşılaştırılması amacıyla yürütülmüştür. Özellikle bölge üreticileri için uygun çeşitlerin tespiti amacıyla yürütülecek çalışmalara katkı sağlanması da bu çalışmanın amaçları arasında yer almaktadır.

MATERYAL VE METOD

Bu çalışma 2016 yılında Karpuzlu Köy/Haliye/ Şanlıurfa'da çiftçi arazisinde yürütülmüştür. Denemede materyal olarak 5 adet mısır çeşidi kullanılmıştır.

Arratia Tesadüf Blokları Deneme Deseni'ne göre üç tekerrürlü olarak yürütülmüştür.

Tablo 1. Şanlıurfa 2016-2017 uzun yıllar meteorolojik durumu

Aylar	Ort. Sıcaklık . (°C)			Yağış (kg m ²)		Bağıl Nem (%)			
	2016	2017	Uzun Yıllar	2016	2017	Uzun Yıllar	2016	2017	Uzun Yıllar
Ocak	4.7	5.4	5.7	95.6	9.0	85.7	70.3	61.9	70.3
Şubat	11.6	7.7	7.0	17.1	1.8	71.4	61.8	45.3	66.9
Mart	13.6	12.7	11.0	13.0	55.2	64.1	50.3	57.1	60.4
Nisan	20.6	16.6	16.2	27.1	79.2	46.8	36.1	50.2	56.2
Mayıs	23.2	22.9	22.3	12.3	7.2	28.1	38.3	39.0	44.9
Haziran	29.8	29.7	28.2	0.6	0.0	3.6	28.0	27.0	32.8

Ağustos	33.2	32.2	31.2	0.0	0.0	0.8	30.6	35.7	33.1
Eylül	26.4	29.6	26.8	0.0	0.0	3.3	32.1	28.8	35.8
Ekim	22.1	20.5	20.2	22.0	17.1	27.4	35.9	36.9	46.4
Kasım	12.6	13.4	12.7	23.3	17.4	46.0	42.9	56.0	59.9
Aralık	5.4	10.3	7.5	101.1	9.5	77.4	70.1	60.2	69.9
Mean	19.7	19.6	18.4	26.0	16.4	37.9	43.5	43.4	50.6

Araştırmanın yürütüldüğü yıllara ait iklim verilerine bakıldığında, en yüksek sıcaklık Temmuz ve Ağustos aylarında ortalama 33-33.2 °C olarak görülmüştür (Tablo 1).

Denemede parseller 2.8 m x 5.0 m= 14 m²'dir. Her parselde 2 sırası parsel kenar tesiri (1 sıra sağda, bir sıra solda) olmak üzere 6 sıra olacak şekilde tertiplenmiştir. Bir deneme çeşitlerin dane verimi belirlemek sıra arası 70 cm, sıra üzeri 18 cm olarak düzenlenmiştir. Ekim tarihihi 07.07.2016. Dekara 40 kg olarak 20.20.0 gübre ve 40 kg Üre gübresi verilmiştir.

Ekimden sonra deneme alanları yağmurlama sistemiyle sulanmış devamında ilki boğaz doldurmadan sonra olmak üzere ihtiyaca göre karıklara salma sulama ile toplamda 10 adet sulama yapılmıştır. Mısır bitkileri toprak üzerine çıktıktan on beş gün sonra beş-altı yapraklı iken birinci çapa ile teklenmiş, bitkiler 30-40 cm olduğunda ikinci çapa ile birlikte boğaz doldurma işlemi yapılmıştır.

Hasat her parselde, hasat zamanında parsel ortasındaki iki sırada elle yapılmıştır. Ölçümler ise 10 adet bitkide yapılmıştır. Hasat 27.10.2016 tarihinde yapılmıştır. olup analiz numuneleri ise ölçümü yapılan bitkilerden seçilerek hazırlanmıştır.

Araştırma sonucunda elde edilen veriler, tesadüf parselleri deneme deseninde faktöriyel düzene göre 3 tekerrürlü olarak JUMP istatistiki paket programıyla analiz edilmiştir.

BULGULAR ve TARTIŞMA

Şanlıurfa koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bulgular Çizelge 1’de belirtilmiştir.

Çizelge 1. Araştırma sonucunda elde edilen bulgular

Çeşitler	Bitki Sayısı (adet/da)	Tane Nemi (%)	Hektolitire Ağırlığı (kg/hl)	Tane Verimi (kg/da)
32T83	8200 d	24 c	68 b	1320 b
Dkc 6101	8800 a	20 e	66 c	1044 e
Agm 1644	8700 b	24,4 b	69 a	1313 d
Agm 1690	8500 c	25 a	66 c	1412 a
Dkc 6120	8200 d	22,1 d	65 d	1316 c
lsd	180	0,65	1,4	98

Bitki Sayısı (adet/da)

Şanlıurfa koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bitki sayısına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında bitki sayısı bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek bitki sayısı Dkc 6101 çeşidinde 8800 (adet/da) olarak belirlenirken, en düşük bitki sayısı ise 32T83 ve Dkc 6120 çeşitlerinde belirlenmiştir (8200 adet/da). Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir.

Tane Nemi (%)

Şanlıurfa koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen tane nem oranına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında tane nem oranı bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek nem oranı Agm 1690 çeşidinde %25 olarak belirlenirken, en düşük tane nem oranı ise Dkc 6101 çeşidinde %20 olarak belirlenmiştir.

Hektolitre Ağırlığı (kg/hl)

Şanlıurfa koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen hektolitre ağırlıklarına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında hektolitre ağırlığı bakımından istatistiksel olarak önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek hektolitre ağırlığı Agm 1644 çeşidinde 69 kg/hl olarak belirlenirken, en düşük hektolitre ise Dkc 6120 çeşidinde 65 kg/hl olarak belirlenmiştir. Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir. Sıcaklıklarla beraber mısır çeşitlerinin su stresine karşı toleranslarında etkili olduğu düşünülmektedir. Tepe püskülü çiçeklenme döneminde yaşanan yüksek sıcaklıklardan dolayı polen canlılık oranlarını azaltmış buna paralel olarak hektolitre ağırlıklarında farklılıklar görülmesine neden olmuştur.

Tane Verimi (kg/da)

Şanlıurfa koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen verim miktarına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında verim bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek verim Agm 1690 çeşidinde 1422 kg/da olarak belirlenirken, en düşük verim ise Dkc 6101 çeşidinde 1044 kg/da olarak belirlenmiştir. Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir. Keskin ve ark. (2011), Han (2016),

Kalkan (2008), Sakin ve ark. (2016) araştırmalarından daha yüksek verimler elde edilirken, Vartanlı ve Emeklier (2007) ile Howell ve ark. (1996), yapmış olduğu çalışmalara benzer sonuçlar elde edilmiştir.

Farklılıkların en büyük sebebi çalışmalarda kullanılan çeşitlerin genetiksel farklılıklarından kaynaklı olduğu düşünülmektedir.. Bunun yanında yapılan gübreleme, çapalama, ilaçlama gibi kültürel işlemlerdeki farklılık mısır gibi C4 bitkisinde verim ve diğer unsurları yüksek oranda etkilemektedir.

SONUÇ

Şanlıurfa koşullarında farklı mısır çeşitlerinin verim ve kalite özelliklerinin karşılaştırılması sonucunda, çeşitler arasında incelenen tüm özellikler bakımından istatistiksel olarak önemli farklılıklar belirlenmiştir. Bunun sonucunda en yüksek tane verimi Agm 1690 çeşidinde 1422 kg/da olarak ve en yüksek hektolitre ağırlığı ise Agm 1644 çeşidinde 69 kg/hl olarak belirlenmiştir.

**DETERMINATION OF YIELD CHARACTERISTICS OF SOME MAIZE
VARIETIES UNDER KIZILTEPE CONDITIONS**

Abstract

This study was conducted to determine the yield characteristics of some maize varieties as second crop in Kiziltepe conditions in 2015. The study was established according to the randomized block design with three replications. In the study, 3 varieties (As 66, Agn 720, and 32T83) were used. Differences between varieties were found to be significant for all traits. In the study, plant number, moisture content, hectoliter weight and yield characteristics were analyzed. According to the average results obtained from the traits examined in the study, the number of plants varied between 7800 (plants/da) and 8000 (plants/da), grain moisture content between 25% and 27%, hectoliter weight between 63 kg/hl and 68 kg/hl and grain yield between 1244 kg/da and 1408 kg/da. 32T83 was the leading variety in terms of grain yield.

Giriş

Mısır dünyanın ılıman ve tropik bölgelerinde yetiştirilen ve tarla bitkileri içerisinde geliştirilen en mükemmel bir bitkidir. Buğdaygiller (Gramineae) familyasının *Maydea* oymağından olan mısır bitkisi; tahıl türü bitkiler içinde en yüksek tane ve kuru madde tane verimii sağlayabilen, güneş ışığından optimum faydalanabilen (C4 bitkisi) tek yıllık bir bitkidir (Kırtok, 1998). Çok geniş koşullara adapte olmuş üretimi yapılan pek çok mısır tipleri vardır. Mısır bitkisi normal şartlar altında ilk iki ay içerisinde 2.5-3 m boyunda bir bitki meydana gelir. Bundan sonraki iki ay içinde de 600–1000 arasında tohum barındıran koçanı oluşturur. Bu yüksek tane verimi özelliği nedeniyle, insan ve hayvan beslenmesindeki ötene nemii ve makineli tarımı en fazla yapılan bitkilerden biridir. Diğer birçok yemlere göre daha fazla hazmolabilir enerji ihtiva etmekte ve bu nedenle dünyanın bir çok yerinde sığırların ve koyunların beslenmesinde, özellikle süt sığırlarında yaygın bir şekilde kullanılmaktadır (Akdemir ve ark., 1997).

Türkiye’de mısır bitkisi, buğday ve arpadan sonra en fazla tarımı yapılan tahıl türüdür. TÜİK verilerine göre Türkiye’de 2021 yılında 758 bin hektar alanda ekilen mısırdan 6 milyon 750 bin ton mısır üretimi gerçekleştirilmiştir, ortalama mısır tane verimii ise 890 kg/da olduğu hesaplanmıştır (TÜİK, 2021).

Bitki besin elementlerinden azot; bitkinin yeşil aksamlarının gelişmesini teşvik eden, bitkinin fotosentez gibi ötene nemili fizyolojik işlevlerini sağlıklı bir şekilde sürdürebilmesini sağlayan ötene nemii yüksek bir besin elementidir.

Mısır, içinde bulundurduğu zengin besin maddesi nedeniyle insan ve hayvan beslenmesinde büyük değer taşımaktadır. Dünyada üretilen mısırın yaklaşık %27’si insan beslenmesinde, %73’ü ise hayvan yemi olarak tüketilmektedir. Gelişmekte olan ülkelerde üretilen mısırın %45.9’u hayvan, %54.1’i insan beslenmesinde kullanılırken mısırın hayvan yemindeki payı %88.9’a ulaşmaktadır (Anonim, 2003).

Bu çalışma; bazı mısır çeşitlerinin karşılaştırılması amacıyla yürütülmüştür. Özellikle bölge üreticileri için daha uygun çeşitlerin tespiti amacıyla yapılmış olup, daha sonra yürütülecek diğer çalışmalara katkı sağlanması amacıyla taşımaktadır.

MATERYAL VE METOD

Bu çalışma 2015 yılında Akça köyü/Kızıltepe/Mardin’de çiftçi arazisinde yürütülmüştür. Denemede materyal olarak 3 adet mısır çeşidi kullanılmıştır.

Araştırma Tesadüf Blokları Deneme Deseni’ne göre üç tekerrürlü olarak yürütülmüştür.

Çizelge 1. Mardin ilinde uzun yıllar yağış ortalaması (1960-2016), çalışma yıllarına ait sıcaklık, yağış ve tane nemi değerleri.

Aylar	2015	2016	UY O	2015	2016	UY O	2015	2016	UYO
Haziran	25.9	26.2	25.6	2.9	1.0	4.7	29.0	28.2	32.3
Temmuz	31.8	30.6	29.9	0,2	0.1	1.3	19.6	22.4	27.7
Ağustos	30.5	32.2	29.5	0.4	1.4	0.2	25.8	21.7	28.4
Eylül	28.4	24.3	25	9.9	-	1.8	23.0	28.7	32.6
Ekim	19.5	20.5	18.4	58.2	16.5	32.9	49.6	33.3	45.1
Toplam				71.6	18.0	40.9			
Ortalama	27.2	26.8	25.7				29.4	26.9	32.4

Araştırmanın yürütüldüğü yıllara ait iklim verilerine bakıldığında, en yüksek sıcaklık Temmuz ve Ağustos aylarında ortalama 31.8-30.5 °C olarak görülmüştür (Tablo 1).

Denemede parseller 2.8 m x 5.0 m= 14 m²,dir. Her parselde 2 sırası parsel kenar tesiri (1 sıra sağda, bir sıra solda) olmak üzere 6 sıra olacak şekilde tertiplenmiştir. Bir detane nemie çeşitlerin dane tane verimii belirlemek sıra arası 70 cm, sıra üzeri 18 cm olarak düzenlenmiştir. Ekim 01.07.2015 tarihinde yapılmıştır. Dekara 45 kg olarak 20.20.0 gübre ve 28 kg Üre gübresi verilmiştir.

Ekimden sonra detane nemie alanları yağmurlama sistemiyle sulanmış devamında ilki boğaz doldurmadan sonra olmak üzere ihtiyaca göre karıklara salma sulama ile toplamda 10 adet sulama yapılmıştır. Mısır bitkileri toprak üzerine çıktıktan on beş gün sonra beş-altı yapraklı iken birinci çapa ile teklenmiş, bitkiler 30-40 cm olduğunda ikinci çapa ile birlikte boğaz doldurma işlemi yapılmıştır.

Hasat her parselde, hasat zamanında parsel ortasındaki iki sırada elle yapılmıştır. Ölçümler ise 10 adet bitkide yapılmıştır. Hasat 27.11.2015 tarihinde yapılmıştır.

Araştırma sonucunda elde edilen veriler, tesadüf parselleri detane nemie deseninde faktöriyel düzene göre 3 tekerrürlü olarak JUMP istatistiki paket programıyla analiz edilmiştir.

BULGULAR ve TARTIŞMA

Kızıltepe koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bulgular Çizelge 1’de belirtilmiştir.

Çizelge 1. Araştırma sonucunda elde edilen bulgular

Çeşitler	Bitki Sayısı (adet/da)	Tane Tane nemi (%)	Hektolitire (kg/hl)	Tane verimi (kg/da)
32T83	8000 a	25 b	63 b	1408 a
Agn 720	7800 b	27 a	68 a	1316 b
As 66	8000 a	25 b	65 b	1244 b
LSD	554	2,44	3,1	98

Bitki Sayısı (adet/da)

Kızıltepe koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bitki sayısına ait bulgular Çizelge 1’de belirtilmiştir.

Araştırma sonucunda çeşitler arasında bitki sayısı bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek bitki sayısı 32T83 ve As66 çeşitlerinde 8000 (adet/da) olarak belirlenirken, en düşük bitki sayısı ise Agn 720 çeşidinde 7800 adet/da olarak belirlenmiştir. Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir.

Tane nemi (%)

Kızıltepe koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen tane nemi oranına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında tane nemi oranı bakımından ötene nemili farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek tane nemi oranı Agn 720 çeşidinde %27 olarak belirlenirken, en düşük tane nemi oranı ise 32T83 ve As66 çeşitlerinde %25 olarak belirlenmiştir. Özmen (2008) hasatta tane tane nemi yönünden genotip x çevre interaksiyonunun önemli olduğunu bildirmiştir.

Hektolitire Ağırlığı (kg/hl)

Şanlıurfa koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen hektolitire ağırlığına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında hektolitire bakımından istatistiksel olarak önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek hektolitire ağırlığı Agn 720 çeşidinde 68 kg/hl olarak belirlenirken, en düşük hektolitire ağırlığı ise 32T83 ve As 66 çeşitlerinde 63 – 65 kg/hl olarak belirlenmiştir. Hektolitire ağırlığı önemli bir kalite parametresidir. Koç (2020), çalışmasında hektolitire ağırlığını ortalama 75 kg/hl ve mısır çeşidi yönünden

istatistiksel olarak önemli bularak çalışmamızla yakın düzeyde veriler elde etmiştir. Babaoğlu (2003), Tekkanat ve Soylu (2005), Özmen (2008), çalışmasında 74,7- 78,7 kg/hl değerleri ile bulgularımıza yakın değerler elde edip ve hektolitre ağırlığında genotip x çevre interaksyonunun otane nemili olduğunu bildirmiştir. Elmalı ve Soylu (2008) ve Özel (2019) çalışmalarında bulgularımızın altında değerler belirterek hektolitre ağırlığını çalışmamızın aksine istatistiksel olarak otane nemisiz olduğunu bildirmişlerdir.

Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir. Sıcaklıklarla beraber mısır çeşitlerinin su stresine karşı toleranslarında etkili olduğu düşünülmektedir. Tepe püskülü çiçeklenme döneminde yaşanan yüksek sıcaklıklardan dolayı polen canlılık oranlarını azaltmış buna paralel olarak hektolitre ağırlıklarında farklılıklar görülmesine neden olmuştur.

Tane verimi (kg/da)

Şanlıurfa koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen tane verimi miktarına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında tane verimi bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek tane verimi 32T83 çeşidinde 1408 kg/da olarak belirlenirken, en düşük tane verimi ise Agn 720 ve As 66 çeşitlerinde çeşidinde 1316-1244 kg/da olarak belirlenmiştir. Tane veriminde, bitkinin dışarıdan verilebilen ihtiyaç duyduğu besin maddelerinin sağlanmasının yanında sulama ve bakım işlemlerinin zamanında ve doğru yapılmasının önemli etkileri olmaktadır. Bunun yanında bitkinin yetiştirildiği çevre koşulları, uygun hava sıcaklığı ve tane nemii tane tane verimiine etki etmektedir. Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir. Keskin ve ark. (2011), Han (2016), Sakin ve ark. (2016) araştırmalarından daha yüksek tane verimleri elde edilirken, Vartanlı ve Emeklier (2007), Sarikurt (2005), Atakul ve ark. (2014), Kılınç ve ark. (2014), Kahraman (2016) ile Howell ve ark. (1996), yapmış olduğu çalışmalara benzer sonuçlar elde edilmiştir. Farklılıkların en büyük sebebi çalışmalarda kullanılan çeşitlerin genetiksel farklılıklarından kaynaklı olduğu düşünülmektedir.. Bunun yanında yapılan gübreleme, çapalama, ilaçlama gibi kültürel işlemlerdeki farklılık mısır gibi C4 bitkisinde tane verimi ve diğer unsurları yüksek oranda etkilemektedir.

SONUÇ

Kızıltepe koşullarında farklı mısır çeşitlerinin verim ve kalite özelliklerinin karşılaştırılması sonucunda, çeşitler arasında incelenen tüm özellikler bakımından istatistiksel olarak önemli farklılıklar belirlenmiştir. Bunun sonucunda en yüksek tane verimi 32T83 çeşidinde 1408 kg/da olarak ve en yüksek hektolitre ağırlığı ise Agn 720 çeşidinde 68 kg/hl olarak belirlenmiştir.

Özet

Bu çalışma, 2015 yılında Derik koşullarında ikinci ürün olarak yetiştirilen bazı mısır çeşitlerinin verim özelliklerini belirlemek amacıyla yürütülmüştür. Çalışma tesadüf blokları deneme desenine göre üç tekrarlamalı olarak kurulmuştur. Çalışmada 4 çeşit (As 66, Agn 720, Dkc 6101 ve 32T83) kullanılmıştır. Çeşitler arasındaki farklılıklar tüm özellikler için önemli bulunmuştur. Çalışmada bitki sayısı, nem içeriği, hektolitre ağırlığı ve verim özellikleri analiz edilmiştir. Çalışmada incelenen özelliklerden elde edilen ortalama sonuçlara göre, bitki sayısı 7000 (bitki/da) ile 8800 (bitki/da) arasında, tane nem içeriği %21 ile %27 arasında, hektolitre ağırlığı 66 kg/hl ile 69 kg/hl arasında ve tane verimi 629 kg/da ile 1123 kg/da arasında değişmiştir. Dkc 6101 tane verimi açısından lider çeşit olmuştur.

Anahtar Kelimeler: Mısır, Çeşit, Tane verimi, Kalite

**EVALUATION OF YIELD CHARACTERISTICS OF DIFFERENT MAIZE
VARIETIES UNDER DERİK CONDITIONS**

Abstract

This study was conducted to determine the yield characteristics of some maize varieties as second crop in Derik conditions in 2015. The study was established according to the randomized block design with three replications. In the study, 4 varieties (As 66, Agn 720, Dkc 6101 and 32T83) were used. Differences between varieties were found to be significant for all traits. In the study, plant number, moisture content, hectoliter weight and yield characteristics were analyzed. According to the average results obtained from the traits examined in the study, the number of plants varied between 7000 (plants/da) and 8800 (plants/da), grain moisture content between 21% and 27%, hectoliter weight between 66 kg/hl and 69 kg/hl and grain yield between 629 kg/da and 1123 kg/da. Dkc 6101 was the leading variety in terms of grain yield.

Keywords: Maize, Genotype, yield, quality

Giriş

Mısırın kullanım alanlarının başında insan gıdası ve endüstri hammaddesi gelmektedir. Mısırın sap ve yaprakları özellikle silaj şeklinde hayvan yemi olarak değerlendirilmekte, yine sap ve yaprakları sanayide kâğıt yapımı ve küçük çapta hasır el işleri yapımında da değerlendirilmektedir. Mısırın özel kullanım alanları içerisinde yağ ve tatlandırıcı sektörü ile biyoyakıt-biyoetanol üretimi de bulunmaktadır (Öztürk *ve ark.*, 2019). 2019 yılı verilerine göre dünyada 1.109 milyon ton mısır üretimi yapılmış olup, ihracatçı ülke olarak birinci sırada yer alan ABD, mısır tüketiminde %27'lik bir paya sahiptir (FAO, 2020).

Ülkemizde mısır üretim açığının bulunması, mısır kullanım alanlarının genişliği, mısıra dayalı sanayinin gelişen bir sanayi olması ve bu sanayi ürünlerinin diğer sektörler için ara hammadde olması nedeniyle mısır tarımının önemi her geçen gün artmaktadır.

Mısır üretimini artırmak için yapılması gereken çalışmaların başında bölgenin ekolojik koşullarına uygun, çevresel faktörlere dayanıklı çeşitlerin seçimi, kaliteli tohumluk kullanımı ve üretimde melez çeşitlerin yaygınlaştırılması gelmektedir.

Dünyada tahıl üretimi için ayrılan ekim alanından, mısır bitkisi ekim alanı dünyada üçüncü sıradadır. Tahıl türü bitkiler arasında verim olarak dünyada birinci sıradadır. FAO verilerine göre 2020-2021 yıllarında dünyada 186 milyon ton mısır üretilmiştir (FAO, 2021).

Türkiye'de mısır bitkisi, buğday ve arpaadan sonra en fazla tarımı yapılan tahıl türüdür. TÜİK verilerine göre Türkiye'de 2021 yılında 758 bin hektar alanda ekilen mısırdan 6 milyon 750 bin ton mısır üretimi gerçekleştirilmiştir, ortalama mısır tane verimi ise 890 kg/da olduğu hesaplanmıştır (TÜİK, 2021). Arpa ve mısırdan ise verim daha da yüksek olup gübrelenen alan açısından tahıllar içerisinde en fazla mısır ekim alanı (%95.6) gelmektedir (Şahin 2016).

Bitki besin elementlerinden azot; bitkinin yeşil aksamalarının gelişmesini teşvik eden, bitkinin fotosentez gibi ötane nemli fizyolojik işlevlerini sağlıklı bir şekilde sürdürebilmesini sağlayan ötane nemli yüksek bir besin elementidir.

Mısır yetiştiriciliği bakımından bölge bazında Ege, Akdeniz ve Güneydoğu Anadolu bölgelerinde yaygın olarak ana ürün ya da ikinci ürün olarak yetiştiricilik yapılmaktadır. Bölgelere uygun melez mısır çeşitlerinin yetiştirilmeye başlanmasıyla, son yıllarda mısır üretiminde önemli artışlar elde edilmiştir.

Bu çalışma; Türkiye'de tarımsal sanayinin ihtiyacını karşılamak için mısırın yeterli miktarda ve uygun kalitede üretilmesi gerekmektedir.

Bu nedenle bazı mısır çeşitlerinin karşılaştırılması ve özellikle bölge üreticileri için daha

uygun çeşitleri belirlemek amacıyla yapılmıştır.

MATERYAL VE METOD

Bu çalışma 2015 yılında Derik/Mardin’de çiftçi arazisinde yürütülmüştür. Araştırmada deneme materyali olarak 4 adet mısır çeşidi kullanılmıştır.

Araştırma Tesadüf Blokları Deneme Deseni’ne göre üç tekerrürlü olarak yürütülmüştür.

Çizelge 1. Mardin ilinde uzun yıllar yağış ortalaması (1960-2016), çalışma yıllarına ait sıcaklık, yağış ve tane nemi değerleri.

Aylar	2015	2016	UY O	2015	2016	UY O	2015	2016	UYO
Haziran	25.9	26.2	25.6	2.9	1.0	4.7	29.0	28.2	32.3
Temmuz	31.8	30.6	29.9	0,2	0.1	1.3	19.6	22.4	27.7
Ağustos	30.5	32.2	29.5	0.4	1.4	0.2	25.8	21.7	28.4
Eylül	28.4	24.3	25	9.9	-	1.8	23.0	28.7	32.6
Ekim	19.5	20.5	18.4	58.2	16.5	32.9	49.6	33.3	45.1
Toplam				71.6	18.0	40.9			
Ortalama	27.2	26.8	25.7				29.4	26.9	32.4

Araştırmanın yürütüldüğü yıllara ait iklim verilerine bakıldığında, en yüksek sıcaklık Temmuz ve Ağustos aylarında ortalama 31.8-30.5 °C olarak görülmüştür (Tablo 1).

Denemede parseller 2.8 m x 5.0 m= 14 m², dir. Her parselde 2 sırası parsel kenar tesiri (1 sıra sağda, bir sıra solda) olmak üzere 6 sıra olacak şekilde tertiplenmiştir. Bir detane nemie çeşitlerin dane tane verimii belirlemek sıra arası 70 cm, sıra üzeri 18 cm olarak düzenlenmiştir. Ekim 03.07.2015 tarihinde yapılmıştır. Dekara 45 kg olarak 20.20.0 gübre ve 50 kg Üre gübresi verilmiştir.

Ekimden sonra detane nemie alanları yağmurlama sistemiyle sulanmış devamında ilki boğaz doldurmadan sonra olmak üzere ihtiyaca göre karıklara salma sulama ile toplamda 9 adet sulama yapılmıştır. Mısır bitkileri toprak üzerine çıktıktan on beş gün sonra beş-altı yapraklı iken birinci çapa ile teklenmiş, bitkiler 30-40 cm olduğunda ikinci çapa ile birlikte boğaz doldurma işlemi yapılmıştır.

Hasat her parselde, hasat zamanında parsel ortasındaki iki sırada elle yapılmıştır. Ölçümler ise 10 adet bitkide yapılmıştır. Hasat 21.11.2015 tarihinde yapılmıştır.

Araştırmada, bitki sayısı, tane nemi, hektolitre ve tane verimi araştırılmıştır. Araştırma sonucunda elde edilen veriler, tesadüf parselleri detane nemie deseninde faktöriyel düzene

göre 3 tekerrürlü olarak JUMP istatistiki paket programıyla analiz edilmiştir.

BULGULAR ve TARTIŞMA

Derik koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bulgular Çizelge 1’de belirtilmiştir.

Çizelge 1. Araştırma sonucunda elde edilen bulgular

Bitki Sayısı (adet/da)

Çeşitler	Bitki Sayısı (adet/da)	Tane Nemi (%)	Hektolitre ağırlığı(kg/hl)	Tane Verimi (kg/da)
As 66	8800 a	24 b	66 c	629 c
Agn 720	7000 d	27 a	69 a	998 b
Dkc 6101	8600 b	21 c	68 b	1123 a
32T83	7900 c	21 c	69 a	982 b
LSD	14,36	2,3	2,3	118

Derik koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bitki sayısına ait bulgular Çizelge 1’de belirtilmiştir.

Araştırma sonucunda çeşitler arasında bitki sayısı bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek bitki sayısı As66 çeşidinde 8800 (adet/da) olarak belirlenirken, en düşük bitki sayısı ise Agn 720 çeşidinde 7000 adet/da olarak belirlenmiştir. Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir.

Tane nemi (%)

Derik koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen tane nemi oranına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında tane nemi oranı bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek tane nemi oranı Agn 720 çeşidinde %27 olarak belirlenirken, en düşük tane nemi oranı ise Dkc 6101 ve 32T83 çeşitlerinde %21 olarak belirlenmiştir. Özmen (2008) hasatta tane tane nemi yönünden genotip x çevre interaksiyonunun önemli olduğunu bildirmiştir.

Hektolitre Ağırlığı (kg/hl)

Derik koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen hektolitre ağırlığına ait bulgular Çizelge 1’de belirtilmiştir.

Araştırma sonucunda çeşitler arasında hektolitre ağırlığı bakımından istatistiksel olarak önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek hektolitre ağırlığı Agn 720 ve 32T83 çeşitlerinde 69 kg/hl olarak belirlenirken, en düşük hektolitre ağırlığı ise As 66 çeşidinde 66 kg/hl olarak belirlenmiştir. Hektolitre önemli bir kalite unsurudur. Koç (2020), çalışmasında hektolitre ağırlığını ortalama 75 kg/hl ve mısır çeşidi yönünden istatistiksel olarak önemli bularak çalışmamızla yakın düzeyde veriler elde etmiştir. Akan, (2017), farklı mısır çeşitlerinde yaptıkları çalışmada hektolitre özelliğinin çeşitler üzerinde etkisinin önemsiz olduğunu belirtmiştir. Babaoğlu (2003), Tekkanat ve Soylu (2005), Özmen (2008), çalışmasında 74,7- 78,7 kg/hl değerleri ile bulgularımıza yakın değerler elde edip ve hektolitre ağırlığında genotip x çevre interaksiyonunun önemli olduğunu bildirmiştir.

Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir. Sıcaklıklarla beraber mısır çeşitlerinin su stresine karşı toleransları da etkili olduğu düşünülmektedir. Tepe püskülü çiçeklenme döneminde yaşanan yüksek sıcaklıklardan dolayı polen canlılık oranlarını azaltmış buna paralel olarak hektolitre ağırlıklarında farklılıklar görülmesine neden olmaktadır.

Tane verimi (kg/da)

Derik koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen tane verimi miktarına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında tane verimi bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek tane verimi Dkc 6101 çeşidinde 1123 kg/da olarak belirlenirken, en düşük tane verimi ise As 66 çeşidinde 629 kg/da olarak belirlenmiştir. Tane tane veriminde, bitkinin dışarıdan verilebilen ihtiyaç duyduğu besin maddelerinin sağlanmasının yanında sulama ve bakım işlemlerinin zamanında ve doğru yapılmasının etkisi oldukça önemlidir. Bunun yanısıra bitkinin yetiştirildiği çevre koşulları, uygun hava sıcaklığı ve tane nemi tane verimine etki etmektedir. Tane verimi ile ilgili olarak elde edilen sonuçların birbirinden farklı olması çalışmalarda kullanılan çeşidin genetik yapısından kaynaklı olduğu düşünülmektedir.

Çakır 1996, tane verimini 925.5-1502 kg da⁻¹, Konoşkan ve ark. (2015), 1378-1218 kg da⁻¹ arasında tespit etmiştir. Keskin ve ark. (2011), Han (2016), Sakin ve ark. (2016) araştırmalarından daha düşük tane verimi elde edilmiştir.

Farklılıkların en büyük sebebi çalışmalarda kullanılan çeşitlerin genetiksel farklılıklarından kaynaklı olduğu düşünülmektedir. Bunun yanında yapılan gübreleme, çapalama, ilaçlama gibi kültürel işlemlerdeki farklılık mısır gibi C4 bitkisinde tane verimi ve diğer unsurları yüksek oranda etkilemektedir.

SONUÇ

Derik kořullarında farklı mısır çeřitlerinin verim ve kalite özelliklerinin karşılaştırılması sonucunda, çeřitler arasında incelenen tüm özellikler bakımından istatistiksel olarak önemli farklılıklar belirlenmiştir. Bunun sonucunda en yüksek tane verimi Dkc 6101 çeřidinde 1123 kg/da olarak ve en yüksek hektolitre ağırlığı ise Agn 720 ve 32T83 çeřitlerinde 69 kg/hl olarak belirlenmiştir.

Özet

Bu çalışma, 2016 yılında Mardin koşullarında ikinci ürün olarak yetiştirilen bazı mısır çeşitlerinin verim özelliklerini belirlemek amacıyla yürütülmüştür. Çalışma tesadüf blokları deneme desenine göre üç tekrarlamalı olarak kurulmuştur. Çalışmada 4 çeşit (Agm 1506, Agm 1644, Dkc 6120 ve Dkc 6101) kullanılmıştır. Çeşitler arasındaki farklılıklar tüm özellikler için önemli bulunmuştur. Çalışmada bitki sayısı, nem içeriği, hektolitre ağırlığı ve verim özellikleri analiz edilmiştir. Çalışmada incelenen özelliklerden elde edilen ortalama sonuçlara göre, bitki sayısı 8600 (bitki/da) ile 8900 (bitki/da) arasında, tane nem içeriği %16,2 ile %19,5 arasında, hektolitre ağırlığı 66 kg/hl ile 68 kg/hl arasında ve tane verimi 1043 kg/da ile 1223 kg/da arasında değişmiştir. Tane verimi açısından Agm1506 önde gelen çeşit olmuştur.

Anahtar Kelimeler: Mısır, Çeşit, Tane verimi, Kalite

EVALUATION OF YIELD FACTORS OF DIFFERENT CORN VARIETIES UNDER MARDIN CONDITIONS

Abstract

This study was conducted to determine the yield characteristics of some maize varieties as second crop in Mardin conditions in 2016. The study was established according to the randomized block design with three replications. In the study, 4 varieties (Agm 1506, Agm 1644, Dkc 6120 and Dkc 6101) were used. Differences between varieties were found to be significant for all traits. In the study, plant number, moisture content, hectoliter weight and yield characteristics were analyzed. According to the average results obtained from the traits examined in the study, the number of plants varied between 8600 (plants/da) and 8900 (plants/da), grain moisture content between 16,2% and 19,5%, hectoliter weight between 66 kg/hl and 68 kg/hl and grain yield between 1043 kg/da and 1223 kg/da. Agm1506 was the leading variety in terms of grain yield.

Keywords: Maize, Genotype, yield, quality

Giriş

Mısır dünyada tahıl ekiliş alanı itibari ile buğday ve çeltikten sonra üçüncü, üretim bakımından ise ikinci sırada yer alan önemli bir tahıl bitkisidir. Güneydoğu Anadolu Bölgesinde mısır ekim alanları ve üretim miktarı önemli düzeyde artış göstermiş, mısırın ekim nöbeti sistemleri içerisindeki payı her geçen gün artmaktadır.

Ülkemizde mısırın kullanım alanları gün geçtikçe artmaktadır. Mısır bitkisinin tanesinde %70–75 nişasta, %8–10 protein ve %4–5 yağ bulunmaktadır (Earle et al. 1946). Mısır taneleri içerdiği zengin besin maddeleri nedeniyle hem insan hem de hayvan beslenmesinde kullanılabilir. Hayvan beslenmesinde yem hammaddesi olarak kullanılan mısır, insan beslenmesinde ise doğrudan kullanımı ile birlikte birçok gıda maddesinin üretiminde hammadde olarak kullanılmaktadır. Gıda sanayisinde mısır; nişasta, protein, nişasta bazlı şeker ve yağ kaynağı olarak kullanılmaktadır. Ayrıca bioetanol yakıt olarak kullanımı ile dikkat çekmektedir.

Diğer birçok yemlere göre daha fazla hazmolanabilir enerji ihtiva etmekte ve bu nedenle dünyanın bir çok yerinde sığırların ve koyunların beslenmesinde, özellikle süt sığırlarında yaygın bir şekilde kullanılmaktadır (Akdemir ve ark., 1997).

Türkiye’de mısır bitkisi, buğday ve arpadan sonra en fazla tarımı yapılan tahıl türüdür. TÜİK verilerine göre Türkiye’de 2021 yılında 758 bin hektar alanda ekilen mısırdan 6 milyon 750 bin ton mısır üretimi gerçekleştirilmiştir, ortalama mısır tane verimii ise 890 kg/da olduğu hesaplanmıştır (TÜİK, 2021).

Mısır yetiştiriciliği bakımından bölge bazında Ege, Akdeniz ve Güneydoğu Anadolu bölgelerinde yaygın olarak ana ürün ya da ikinci ürün olarak yetiştiricilik yapılmaktadır. Bölgelere uygun melez mısır çeşitlerinin yetiştirilmeye başlanmasıyla, son yıllarda mısır üretiminde önemli artışlar elde edilmiştir. Türkiye’de 639.000 ha ekim alanı, üretim 6.000.000 ton ve elde edilen verim ise 1062 kg da⁻¹ olarak gerçekleşmiş olup dünya ortalamasının (580 kg da⁻¹) yaklaşık olarak 2 katıdır (FAO, 2020). Ülkemizde mısır üretim alanı olarak 1.345.064 ton ile Konya, 717.802 ton Adana ve 421.130 ton ile Mardin ili gelmektedir (TÜİK, 2020).

Bitki besin elementlerinden azot; bitkinin yeşil aksamalarının gelişmesini teşvik eden, bitkinin fotosentez gibi önemli fizyolojik işlevlerini sağlıklı bir şekilde sürdürebilmesini sağlayan önemli yüksek bir besin elementidir.

Mısır yetiştiriciliğinde çeşit, ekim zamanı, ekim sıklığı, sulama, gübreleme gibi kültürel uygulamalar verimi önemli ölçüde etkilemektedir.

Bu çalışma; bazı mısır çeşitlerinin karşılaştırılması amacıyla yürütülmüştür. Özellikle bölge üreticileri için daha uygun çeşitlerin tespiti amacıyla yapılmış olup, daha sonra yürütülecek diğer çalışmalara katkı sağlanması amacıyla taşımaktadır.

MATERYAL VE METOD

Bu çalışma 2016 yılında Ersoylu köyü/ Kızıltepe/Mardin'de çiftçi arazisinde yürütülmüştür. Denemede materyal olarak 4 adet mısır çeşidi kullanılmıştır.

Araştırma Tesadüf Blokları Deneme Deseni'ne göre üç tekerrürlü olarak yürütülmüştür.

Çizelge 1. Mardin ilinde uzun yıllar yağış ortalaması (1960-2016), çalışma yıllarına ait sıcaklık, yağış ve tane nemi değerleri.

Aylar	2015	2016	UY O	2015	2016	UY O	2015	2016	UYO
Haziran	25.9	26.2	25.6	2.9	1.0	4.7	29.0	28.2	32.3
Temmuz	31.8	30.6	29.9	0,2	0.1	1.3	19.6	22.4	27.7
Ağustos	30.5	32.2	29.5	0.4	1.4	0.2	25.8	21.7	28.4
Eylül	28.4	24.3	25	9.9	-	1.8	23.0	28.7	32.6
Ekim	19.5	20.5	18.4	58.2	16.5	32.9	49.6	33.3	45.1
Toplam				71.6	18.0	40.9			
Ortalama	27.2	26.8	25.7				29.4	26.9	32.4

Araştırmanın yürütüldüğü yıllara ait iklim verilerine bakıldığında, en yüksek sıcaklık Temmuz ve Ağustos aylarında ortalama 31.8-30.5 °C olarak görülmüştür (Tablo 1).

Denemede parseller 2.8 m x 5.0 m= 14 m²'dir. Her parselde 2 sırası parsel kenar tesiri (1 sıra sağda, bir sıra solda) olmak üzere 6 sıra olacak şekilde tertiplenmiştir. Bir detane nemie çeşitlerin dane tane verimii belirlemek sıra arası 70 cm, sıra üzeri 18 cm olarak düzenlenmiştir. Ekim 25.06.2016 tarihinde yapılmıştır. Dekara 45 kg olarak DAP gübresi ve 45 kg %46 Üre gübresi verilmiştir.

Ekimden sonra deneme alanları yağmurlama sistemiyle sulanmış devamında ilki boğaz doldurmadan sonra olmak üzere ihtiyaca göre karıklara salma sulama ile toplamda 10 adet sulama yapılmıştır. Mısır bitkileri toprak üzerine çıktıktan on beş gün sonra beş-altı yapraklı iken birinci çapa ile teklenmiş, bitkiler 30-40 cm olduğunda ikinci çapa ile birlikte boğaz doldurma işlemi yapılmıştır.

Hasat her parselde, hasat zamanında parsel ortasındaki iki sırada elle yapılmıştır. Ölçümler ise 10 adet bitkide yapılmıştır. Hasat 29.11.2016 tarihinde yapılmıştır.

Araştırma sonucunda elde edilen veriler, tesadüf parselleri detane nemi deseninde faktöriyel düzene göre 3 tekerrürlü olarak JUMP istatistiki paket programıyla analiz edilmiştir.

BULGULAR ve TARTIŞMA

Mardin koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bulgular Çizelge 1’de belirtilmiştir.

Çizelge 1. Araştırma sonucunda elde edilen bulgular

Çeşitler	Bitki Sayısı (bit/da)	Tane Nemi (%)	Hektolitre Ağırlığı (kg/hl)	Tane Verimi (kg/da)
Agm 1506	8600 c	19,5 a	68 a	1223 a
Agm 1644	8800 b	16,2 c	66 c	1180 b
Dkc 6120	8900 a	17,7 b	66 c	1086 c
Dkc 6101	8600 c	17,9 b	67 b	1043 d
Lsd	170	1,5	0,9	39

Bitki Sayısı (Adet/da)

Mardin koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen bitki sayısına ait bulgular Çizelge 1’de belirtilmiştir.

Araştırma sonucunda çeşitler arasında bitki sayısı bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek bitki sayısı Dkc 6120 çeşidinde 8900 (adet/da) olarak belirlenirken, en düşük bitki sayısı ise Agm 1506 ve Dkc 6101 çeşitlerinde 8600 adet/da olarak belirlenmiştir. Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir.

Tane nemi (%)

Mardin koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen tane nemi oranına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında tane nemi oranı bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek tane nemi oranı Agm 1506 çeşidinde %19,5 olarak belirlenirken, en düşük tane nemi oranı ise Agm 1644 çeşidinde %16,2 olarak belirlenmiştir. Özmen (2008) hasatta tane tane nemi yönünden genotip x çevre etkisinin önemli olduğunu bildirmiştir.

Hektolitre Ağırlığı (kg/hl)

Mardin koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen hektolitre ağırlığına ait bulgular Çizelge 1’de belirtilmiştir. Araştırma sonucunda çeşitler arasında hektolitre ağırlığı bakımından istatistiksel

olarak önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek hektolitreye ağırlığı Agm 1506 çeşidinde 68 kg/hl olarak belirlenirken, en düşük hektolitreye ise Agm 1644 ve Dkc 6120 çeşitlerinde 66 kg/hl olarak belirlenmiştir. Hektolitreye önemli bir kalite parametresidir. Koç (2020), çalışmasında hektolitreye ağırlığını ortalama 75 kg/hl ve mısır çeşidi yönünden istatistiksel olarak önemli bularak çalışmamızla yakın düzeyde veriler elde etmiştir. Babaoğlu (2003), Tekkanat ve Soylu (2005), Özmen (2008), çalışmalarında bulgularımıza yakın değerler elde edip ve hektolitreye ağırlığında genotip x çevre etkileşiminin önemli olduğunu bildirmiştir. Elmalı ve Soylu (2008) ve Özel (2019) çalışmalarında bulgularımızın altında değerler belirterek hektolitreye ağırlığını çalışmamızın aksine istatistiksel olarak önemli olmadığını bildirmişlerdir.

Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir. Sıcaklıklarla beraber mısır çeşitlerinin su stresine karşı toleranslarında etkili olduğu düşünülmektedir. Tepe püskülü çiçeklenme döneminde yaşanan yüksek sıcaklıklardan dolayı polen canlılık oranlarını azaltmış buna paralel olarak hektolitreye ağırlıklarında farklılıklar görülmesine neden olmuştur.

Tane verimi (kg/da)

Mardin koşullarında bazı mısır çeşitlerinin verim özelliklerinin karşılaştırılması amacıyla yapılan araştırma sonucunda elde edilen tane verimi miktarına ait bulgular Çizelge 1'de belirtilmiştir. Araştırma sonucunda çeşitler arasında tane verimi bakımından önemli farklılıklar belirlenmiştir. Araştırma sonucunda en yüksek tane verimi Agm 1506 çeşidinde 1223 kg/da olarak belirlenirken, en düşük tane verimi ise Dkc 6101 çeşidinde 1043 kg/da olarak belirlenmiştir. Tane veriminde, bitkinin dışarıdan verilebilen ihtiyaç duyduğu besin maddelerinin sağlanmasının yanında sulama ve bakım işlemlerinin zamanında ve doğru yapılmasının önemli etkileri bulunmaktadır. Bunun yanında bitkinin yetiştirildiği çevre koşulları, uygun hava sıcaklığı ve tane nemi tane verimine etki etmektedir. Bu farklılığın çeşitlerin genetiksel farklılıklarından kaynaklandığı düşünülmektedir. Bunun yanında yapılan gübreleme, çapalama, ilaçlama gibi kültürel işlemlerdeki farklılık mısır gibi C4 bitkisinde tane verimi ve diğer unsurları yüksek oranda etkilemektedir.

Keskin ve ark. (2011), Han (2016), Sakin ve ark. (2016) araştırmalarından daha yüksek tane verimleri elde edilirken, Vartanlı ve Emeklier (2007), Sarikurt (2005), Atakul ve ark. (2014), Kılınç ve ark. (2014), Kahraman (2016) ile Howell ve ark. (1996), yapmış olduğu çalışmalara benzer sonuçlar elde edilmiştir.

SONUÇ

Mardin koşullarında farklı mısır çeşitlerinin verim ve kalite özelliklerinin karşılaştırılması sonucunda, çeşitler arasında incelenen tüm özellikler bakımından istatistiksel olarak önemli farklılıklar belirlenmiştir. Bunun sonucunda en yüksek tane verimi Agm 1506 çeşidinde 1223 kg/da olarak ve en yüksek hektolitre ağırlığı ise Agm 1506 çeşidinde 68 kg/hl olarak belirlenmiştir.

Abstract

Conservation biologists study the factors that cause species extinction/loss and which species can be protected to ensure the continuation of biodiversity. However, with the development of genetic science and its use as an important tool for restoring and maintaining population viability, another scientific field has emerged called conservation genetics. The applications of genetics in conservation biology are wide-ranging. We need to understand the fact that biodiversity depends on genetic diversity, and if genetic diversity is lost, long-term continuation of biodiversity will be impossible. Population size has a significant impact on the survival of a species. Some species, especially those adapted to unusually rare habitats, have never been abundant. Biologists call these types of species natural rare species. On the other hand, the species we call new rare species are species whose numbers are decreasing due to pressures such as habitat loss. Genetic influence is greater in small and isolated populations. Genetic erosion reduces genetic diversity. The loss of genetic diversity that previously existed in a species is called genetic erosion. This can lead to the loss of potentially useful genes (alleles). Heterozygosity decreases as alleles disappear from the gene pool. Species survival is necessary to maintain genetic diversity. Ex situ conservation refers to the protection of plants and animals outside their natural habitat in artificial environments such as botanical gardens and zoos. This collection of creatures forms the basis of a captive breeding program. In situ conservation is an effort to maintain the population diversity and size of a species in its native habitat. Using species inventories to identify diversity hotspots and protect plants and animals from hunter-gatherers is an important tool in establishing parks and nature reserves to protect habitats. Thus, the habitats of these species are protected, and the issue of establishing farms for domestic species is also of particular interest.

Keywords: genetic erosion, conservation genetics, Ex situ conservation, In situ conservation

Introduction

The amount of genetic variation between individuals of a species or different populations of a species is measured as a result of DNA recombination through mutations, genetic drift, and gene flow between populations (Brown, 1983). These three mechanisms of action cause changes/differences in the DNA sequence, protein or phenotypic characteristics. Genetic diversity within a population in plants and animals is determined by the hereditary material of its members that can achieve reproductive success. The main force that ensures selection pressure and evolution in the population is genetic diversity. This selection pressure can be natural or artificial, depending on the variations present (Nevo et al., 1984).

To calculate genetic diversity, alleles and their effects or distribution frequencies are generally calculated. If we want to learn what genetic diversity is and calculate the genetic diversity of a species, we actually need to know the subjects of three different fields of study. These are special fields of study that we call population genetics, evolutionary genetics/speciation mechanisms and conservation genetics.

The genetic heritage of a species is important in fighting against pests in the natural environment and protecting against diseases. It allows the species to adapt and survive when environmental conditions change in ways that may cause stress. If the gene pool is low in diversity, sensitivity to this type of environmental stress develops for that species. In addition, genetic diversity is essential to preserve hybrid varieties of cultivated species and to grow products with high yield quality (Salgotra & Chauhan, 2023).

The subject of genetic diversity, which evolutionary biologists first started researching, is still an area that has been researched with interest for 100 years (Wright, 1920). In the following years (1970s), it became the subject of study mostly by population geneticists and was revolutionized especially with allele studies. With the realization that genetic diversity should be protected (1980s), a new field was formed and studies turned to the field of biodiversity conservation and conservation genetics. And here too the issue of genetic erosion has been remarkable. Because in order to preserve genetic diversity, situations that reduce or endanger this diversity must be combated.

FACTORS CAUSING LOSS OF GENETIC DIVERSITY AND EROSION

The genetic diversity of the population may decrease due to various factors. The main reasons for these changes are mutation over time, selection pressure, drift mechanism and gene flow. Genotypes that exhibit superior characteristics may become dominant through natural or

artificial selection, and in this case, the frequency of the gene pool changes (Salgotra & Chauhan, 2023).

The loss of genetic diversity is called genetic erosion, and this has mostly increased as a result of human activities. For example, using productive varieties in agriculture and constantly breeding certain types causes allele loss in the gene pool of that species after a while. Especially after the industrial revolution, the cultivation of only abundant yielding species and the loss of ecosystems of natural species have accelerated erosion.

The result of this situation is a decrease in the number of alleles and distribution frequency. Phenotypic and genomic markers are used to quantify the loss caused by genetic erosion. To measure the decrease in genetic diversity of the population, genetic erosion must first be measured at the species level (such as reduction in population size and distribution area). Genetic erosion at the agricultural level occurs in the form of an increase in the monoculture system and a decrease in variants and the loss of ancestral seeds (the use of imported species instead of local species) (Rogers & McGuire, 2015).

Another mechanism that negatively affects genetic diversity is genetic drift. Genetic drift changes the frequency with which alleles in the gene pool are passed on to future generations when the number of individuals in the population with reproductive capacity is very small. Because the fewer individuals left, the less genetic diversity there is. This effect occurs in the form of two phenomena we call the "bottleneck effect" and the "founder effect" (Rogers, 2004). The drift mechanism may occur due to random reasons and change the allele frequency over time. For example, each pollen has its own unique allele diversity and is carried to other flowers by human influence, winds or pollinator organisms. Therefore, the genetic diversity of the plant may decrease with each reproduction (Parsons, 1963).

CONSERVATION GENETICS

In order to understand biodiversity and ensure its continuation, conservation biologists study the factors that cause species to decline and which of these species can be protected and how. However, with the development of genetic science and its use as an important tool to restore and maintain the viability of populations, a separate field of science called conservation genetics has emerged. Small populations are more susceptible to genetic processes and are at greater risk of extinction (Salgotra & Chauhan, 2023).

The survival of species is necessary to preserve genetic diversity. Scientists trying to maintain biodiversity face a variety of dilemmas: should the focus be on protecting individual populations, or should a broader approach be taken to protect all individual plants and animals

in the ecosystem, not just one species? There are three conservation methods that can be used to ensure the survival of the species. These are ex situ conservation, in situ conservation and increasing the population size by external intervention.

If the population is preserved and protected in its natural environment, this is called *in situ* conservation. For example, plants are protected in their original environment. In this form of protection, people are prevented from interfering with the environment. Especially forest ecosystems are protected in this way. It also supports the genetic diversity of plant species. It is protected by two methods: protecting farms and cultivation lands and protecting the genetic reserve. Areas where genetic diversity is very active and need to be protected as heritage for a very long time are mostly forest reserve areas. Protection of farm and planting lands is to ensure the use of seeds of domestic products. However, this protection may sometimes be insufficient, especially when there are natural disasters or climate problems. In this case, *ex-situ* protection should come into play (Hammer & Teklu, 2008; Ogwu et al., 2014; Pandotra & Gupta, 2015). Different approaches can be applied, especially in the field of plant protection (in situ and ex situ) (Fig 1). Increasing the population is another protection method. In this type of protection, seed and pollen diversity can be increased for plants with external intervention.

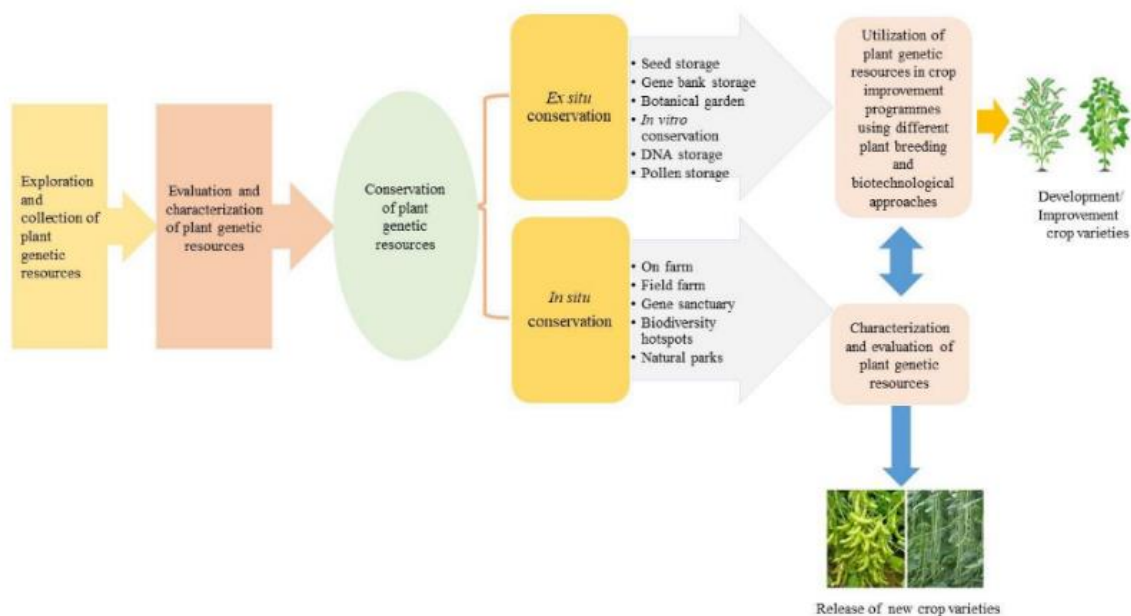

Fig. 1 Different approaches for in situ and ex situ (Salgotra & Chauhan, 2023)

BIOTECHNOLOGICAL APPROACHES IN CONSERVATION GENETICS

The fact that genetic markers can now be examined more easily has benefited the field of conservation genetics. Further discovery/screening of neutral loci has increased the chances of estimating and validating various parameters important in conservation genetics, such as inbreeding and kinship. However, the most important contribution of genomic research to conservation is that it will enable the prediction and handling of new problems that may arise in many different species. An example of this is the effect size of loci along the genome sequence and it is possible to examine whether there is overlap between different populations of the species (Allendorf et al., 2010; Ellegren & Sheldon, 2008; Slate et al., 2009).

Especially in protecting plant diversity, genetic resources have been protected by using in vitro culture techniques (tissue culture and other micropropagation methods) and seed banks.

- **In Vitro Spreading**

In vitro gene banks are where seeds and pollen are stored in an artificial nutrient medium. With this technique, it is possible to prevent genetic erosion by making large productions without diseases and pests. It also allows growing quality products that last all year round (Paunescu, 2009; Rajasekharan & Sahijram, 2015; Salgotra & Chauhan, 2023).

- **Cryopreservation**

This technique is a method of storing plant tissue in liquid nitrogen tanks at -196 °C to preserve it. Thus, the plant tissues to be preserved can be stored for many years as there is no metabolic activity at this temperature. It is cost effective. It also provides the opportunity to get rid of plant pathogens. The method of application of the technique is to remove all water content in case of freezing and apply the ultra-fast freezing method. Thus, crystal ice formation is prevented (Fahy et al., 1984; Kaviani, 2011; Martin et al., 1998; Salgotra et al., 2015; Scowcroft, 1984).

- **DNA Banks**

Preservation of genetic resources through DNA is a cost-effective process. DNA storage has become an important issue, especially in terms of food safety. Genetic reserve can be stored in three types (DNA, RNA and cDNA). Thus, these data banks can be used globally. It is also an alternative method, especially for species in danger of extinction. However, this conservation method does not mean preserving the entire genetic diversity of the organism because it is difficult to preserve all original genotypes (Dulloo et al., 2006).

CONCLUSION

Many plant and animal species are at risk of extinction, and biodiversity is being lost. Conservation genetics applies the principles of population genetics to the conservation and

recovery of endangered species. Genetic diversity decreases when the population of a species decreases excessively. Populations facing bottlenecks have decreasing genetic diversity even as their numbers increase. Loss of genetic diversity reduces a population's ability to adapt to changing environmental and climatic conditions because it leads to the loss of useful alleles from the gene pool. Introducing individuals from large populations of the same species elsewhere into a declining population can be used to increase recruitment and genetic diversity, but it can also lead to the collapse of outbreeding and genetic extinction.

Özet

Biyoeçeşitlilik terimi tropik yağmur ormanları gibi doğal ortamların hızlı bir biçimde yok olması konusunda kaygılı olan ve korunması için toplumun önlem almasını isteyen naturalistler tarafından ortaya atılmıştır. Bir çevre sorunu olarak biyoeçeşitlilik kavramı 80'li yılların başlarında ortaya atılmıştır. 92'de rio'daki sürdürülebilir kalkınma konferansında biyolojik çeşitlilik sözleşmesi imzalanması ile de işlerlik kazanmıştır. Biyoeçeşitliliğin ele alınışı, yönetimi ve korunması ile ilgili ilişkili sorunların tam olarak fark edildiği nokta da burası olmuştur. Çünkü biyolojik çeşitlilik aynı zamanda farmasötik ve gıda endüstrileri için de bir ekonomik kaynaktır. En başında doğayı korumak ile sınırlanan bu terim sonrasında etik ve sosyal kaygıların yanında ekonomik boyutta da derinlik kazanmıştır ve bugün gelinen noktada biyoeçeşitlilik ile ilgilenmemizin sebebi: bilimsel anlamda türleri tanımak adlandırmak sınıflandırmak, tehlike altındaki popülasyonları korumak, küresel çevre sorunları ile mücadele etmek, sağlık ve eczacılık alanındaki çeşitli bilimsel araştırmalarda kullanmak, gıda ve gelişmişlikle orantılı olarak sosyo-ekonomik sebepler, ticarileşme, canlıların patentlenmesi ve etik kaygılar gibi sebeplerdir. Yiyeceklerimizin tümü biyoeçeşitlilik kaynaklıdır. İnsanoğlunun avcılık ve toplayıcılıkla geçindiği zamandan günümüze denizlerin canlı kaynakları halen kullanılmaktadır. Toplayıcılığın günümüzdeki en büyük biçimi olan balıkçılık günümüzde aşırı avlanmanın tehdidi altındadır. Fakat insanlık dehasının bütün boyutunu ortaya koyduğu alan bitki ve hayvanların evcilleştirilmesi alanıdır. Tarım ve su ürünleri yetiştiriciliği biyolojik çeşitlilik tahribinin en önemli sebebi arasındadır. Tarımın erken dönemlerinde başlayan bu küreselleşme tüm kıtaların yarar sağlamasını ve birçok diğer faydayı kapsamıştır. Doğal olarak bu tanıştırılan türlerden yerel koşullara uyum sağlayan birçok ırk ve varyete üretilmiştir. İnsanoğlunun ürettiği bu yüzlerce hatta binlerce varyete de tehlike altındadır. Çünkü İkinci Dünya Savaşı sonrası ortaya çıkan modern tarım yani yeşil devrim sonrası sadece yüksek verimli birkaç varyette kullanılmakta ve böylelikle yerel ırklar görmezden gelinmektedir. Birçok yerel ırk tohum kaybolmuştur. Endüstri de biyoeçeşitliliğin belli öğelerine daha yakın ilgi duyar: mikroorganizmalar moleküller genler gibi. İster kültür bitkilerinin çeşitliliğini içeren gıda ve tarım sektörleri olsun isterse de yabancı türlerle ilgilenen farmasötik sektörün olsun biyoteknolojinin endüstriyel alanda uygulanması önemli stratejik çıkarlar oluşturmaktadır.

Anahtar Kelime: biyolojik çeşitlilik, genetik çeşitlilik, tarım, kültür bitkileri

BIODIVERSITY PROBLEM AND GENETIC DIVERSITY OF AGRICULTURAL PRODUCTS

Abstract

The term biodiversity was coined by naturalists who were concerned about the rapid extinction of natural environments such as tropical rainforests and wanted society to take measures to protect them. The concept of biodiversity as an environmental problem was introduced in the early 80s. It became operational with the signing of the Convention on Biological Diversity at the sustainable development conference in Rio in 1992. This was the point where the associated problems with the treatment, management and conservation of biodiversity were fully realized. Because biodiversity is also an economic resource for the pharmaceutical and food industries. This concept, which was initially limited to the protection of nature, has gradually gained depth in social, economic and ethical dimensions, and the reason why we are interested in biodiversity at this point today is: to recognize species in a scientific sense, to name and classify them, to protect endangered populations, to combat global environmental problems, to combat various scientific studies in the field of health and pharmacy. Reasons such as use in research, socio-economic reasons in proportion to food and development, commercialization, patenting of living things and ethical concerns. All of our food comes from biodiversity. Living resources of the seas are still used from the time when human beings made their living by hunting and gathering. Fishing, the largest form of gathering today, is now threatened by overfishing. But the field where human genius reveals its full extent is the field of domestication of plants and animals. Agriculture and aquaculture are among the most important causes of biodiversity destruction. This globalization, which started in the early ages of agriculture, has benefited all continents and many other benefits. Naturally, many breeds and varieties adapted to local conditions have been produced from these introduced species. Hundreds or even thousands of these assets produced by human beings are also in danger. Because after the modern agriculture that emerged after the Second World War, that is, the green revolution, only a few high-yielding varieties are used and thus local breeds are ignored. Many landrace seeds have been lost. Industry is also paying closer attention to certain elements of biodiversity: microorganisms, molecules, genes, etc. The application of biotechnology in the industrial field creates important strategic interests, whether in the food and agricultural sectors, which include the diversity of cultivated plants, or in the pharmaceutical sector, which deals with wild species.

Keywords: biodiversity, genetic diversity, agriculture, cultivated plants

Giriş

Biyoeçitlilik ekolojik sistemlerin hayati bir özelliğidir. Genel olarak kara, deniz ve diğer su ekosistemlerindeki tüm yaşam formlarının çeşitliliği olarak açıklanmaktadır (Kazemi ve ark., 2018; Overmars ve ark., 2014). Bu nedenle araştırmalar genetik, tür veya ekosistem düzeyindeki farklı biyolojik çeşitlilik düzeylerini kapsamalıdır. Bu, temel gözlem hedeflerine, ekosistem özelliklerine ve ekosistemdeki öğelerin genel zenginliğine bağlıdır (Moonen & Bärberi, 2008). Bir ekosistem içinde yaşayan her tür, süreçler başlatır ve enerji, madde ve malzeme akışı yaratır. Dolayısıyla tek bir türün yok olması, geri dönüşü olmayan değişikliklere yol açarak ekosistem özelliklerinin istenmeyen yönlere değişmesine neden olabilir. Yaşam çeşitliliği ekolojik işlevi stabilize eder ve biyojeokimyasal sistemlerin (örneğin su döngüsü, sera gazlarının akışı ve karbon tutulması) dengeli bir şekilde çalışmasına olanak tanır. Biyoeçitlilik aynı zamanda gıda üretimi, ilaçlara yönelik maddelerin sağlanması ve enerji kaynaklarının dağıtımıyla da doğrudan bağlantılıdır. Sonuç olarak biyoeçitlilik toplum için yeri doldurulamaz bir iyiliktir (Dirzo & Raven, 2003).

Biyoeçitlilik üzerine araştırmaların gündemi; biyolojik çeşitliliğin modern tarımsal ekosistemler, kentsel tarım ve sürdürülebilir tarım ekosistemi gibi ekosistemleri destekleme yeteneği; gıda güvenliği, haşere kontrolü ve ekolojik restorasyon gibi ekosistem hizmetlerinin sağlanmasında biyoeçitliliğin rolü ve bunun iklim değişikliği, arazi kullanımı, genetik erozyon ve karbon tutumu üzerindeki etkisine yöneliktir. Tarımsal faaliyetlerde 10.000 yıllık bir hazine olan biyoeçitlilik, tarımın ve insan refahının sürdürülmesi için gerekli olan ekosistem hizmetlerinin temelidir. Binlerce yıllık insan müdahalesi mevcut mahsul ve hayvancılık biyoeçitliliğine etki göstermiştir. Biyoeçitlilik ve tarım birbiriyle güçlü bir şekilde ilişkilidir. Biyoeçitlilik tarım için kritik öneme sahip olmakla birlikte, biyoeçitliliğin sürdürülebilir kullanımı tarımsal yapı ve işleve karşılık gelir ve dolayısıyla tarım uygulamaları için bir göstergedir. Gerçekten de biyolojik çeşitlilik, gıda güvenliği, beslenme ve geçim kaynakları açısından sürdürülebilir tarımın hayati bir bileşeni olarak değerlendirilmektedir. Ek olarak, değişen yetiştirme sistemlerinin dinamikleri ve dayanıklılığının daha iyi anlaşılması için biyoeçitlilik kullanılabilir (Kazemi ve ark., 2018).

TARIM SİSTEMLERİNDE SON TEKNOLOJİ BİYOÇEŞİTLİLİK

Biyolojik çeşitliliğin tarımdaki rolünü ve etkisini anlamak için, tarım sistemlerindeki veya tarımsal biyolojik çeşitlilikteki biyoeçitlilik araştırmalarının durumunu incelemek gerekir. Biyoeçitlilik, sürdürülebilir tarımın, gıda güvenliğinin ve sağlığın temel ilkelerinden biridir ve

sürdürülebilir bir tarımsal ekosisteme yönelik sistemleri yönetmenin en önemli unsurlarından biridir. Biyoçeşitlilik, kentsel tarım gibi yeni tarım sistemlerinde farklı hizmetler sunmaktadır. Günümüzde modern tarımın en önemli zorlukları arasında haşere kontrolü, CO2 emisyonları ve genetik erozyon yer almaktadır. Tarımsal ekosistemlerdeki çeşitliliği ve çeşitli zaman ölçeklerini artıran tüm uygulamalar, tarımsal ekosistemlerin haşere kontrolü ve karbonu tutma kapasitesini geliştirebilir. Tarımsal ekosistemlerin ekolojik restorasyonu, bu ekosistemlerdeki biyolojik çeşitliliği iyileştirmenin etkili bir yolu olarak önerilebilir. Buna karşılık, çoğu arazi örtüsü/arazi kullanımı değişikliği biyolojik çeşitliliği etkileyebilir ve ilgili ekosistem hizmetlerini azaltabilir. Ayrıca biyolojik çeşitlilik, farklı arazi kullanım türleriyle karşılaştırıldığında doğal bir referans durumu tür zenginliği açısından küresel ölçekte entegre edilebilir (Kazemi ve ark., 2018).

TARIMSAL BİYOLOJİK ÇEŞİTLİLİK

'Tarımsal biyolojik çeşitlilik' terimi 1980'lerde ortaya çıkmıştır. Tarımsal biyoçeşitlilik, doğrudan insanlar tarafından geliştirilen ve yönetilen genel biyolojik çeşitliliğin alt kümesidir. Biyoçeşitlilik terimine benzer şekilde, tarımsal biyolojik çeşitlilik de farklı seviyeleri kapsar. Tarımsal ekosistemlerin biyoçeşitliliğinin yanı sıra mahsul ve çiftlik hayvanlarının türlerini ve popülasyonlar, çeşitler ve ırklar içindeki genetik çeşitliliği ifade eder. Toprak organizmaları, böcekler, mantarlar ve tarım dışı doğal yaşam alanlarındaki yabancı türlerin yanı sıra biyolojik çeşitliliğe ilişkin kültürel ve yerel bilgiler, biyolojik çeşitlilikten yararlanmanın temelini oluşturur (Baudron & Giller, 2014; Kazemi ve ark., 2018). Tarımsal biyolojik çeşitliliğin dört temel bileşeni mevcuttur:

1. gıda ve tarıma yönelik genetik kaynaklar;
2. tarımın ekosistem hizmetlerini destekleyen biyolojik çeşitlilik;
3. abiyotik faktörler,
4. sosyoekonomik ve kültürel boyutlar (Zimmerer, 2014).

Gıda ve Tarım Örgütü (Food and Agriculture Organization,FAO), tarımsal biyoçeşitliliği, gıda ve tarım için hayati öneme sahip olan ve çevre, genetik kaynaklar, yönetim sistemleri ve bu uygulamalar arasındaki etkileşimden kaynaklanan hayvan, bitki ve mikroorganizmaların çeşitliliği ve değişkenliği olarak açıklamaktadır (Kazemi ve ark., 2018). Özellikle iki kategori içerir:

- evcilleştirilmiş türlerin yabancı akrabaları (örneğin, mahsul türlerinin yabancı akrabaları veya genetik olarak kullanılabilir üreme materyali olan türler);

- bitkilerin ve evcil hayvanların (mahsuller söz konusu olduğunda yerel türler olarak anılır) bireylerinin yetiştirilmesi (Amend, 2008).

Sürdürülebilir Tarımın Gerekliliği Olarak Biyoçeşitlilik

Modern tarım sistemlerinin üretimin çevresel boyutları ve ekosistem sağlığı üzerinde olumsuz etkileri vardır. Monokültür nedeniyle biyolojik çeşitliliğin kaybı bu olumsuz sonuçlardan biridir. Tarım işletmelerinde sınırlı sayıda bitki ve hayvan türünün verimini maksimuma çıkarmak, kaçınılmaz olarak istenmeyen türlerle rekabet gücünü zayıflatmakta ve azaltmaktadır (Parris, 2002). Biyoçeşitlilik ve tarımın birbiriyle ilişkili olduğu ve fayda sağlayabileceği inkar edilemez. Modern tarım sistemlerinin aksine sürdürülebilir tarım, gelecek nesillerin gıda üretme kabiliyetini kısıtlamadan gıda üretmemizi sağlar. Biyoçeşitlilik, sistemlerin doğa çerçevesinde yönetilmesini sağlayan en önemli unsurlardan biridir (Pretty, 2008). Ekolojik açıdan bakıldığında biyolojik çeşitlilik sistemin hayatta kalmasının temelidir ve sürdürülebilir tarım sistemlerinin hayati bir bileşeni olarak kabul edilebilir (Kazemi ve ark., 2018).

Kentsel Tarım Sistemlerinde Biyolojik Çeşitlilik

Kentsel arazi kullanımında düşük düzeyde doğal biyolojik çeşitliliğe sahip basitleştirilmiş yeşil alanlar ve yoğun şekilde geliştirilmiş ekosistemler, biyolojik çeşitliliği artırabilir ve sonuç olarak parçalanmış habitatlarda işlevler ve hizmetler sağlayabilir (Lin & Fuller, 2013).

Bu işlevler ve hizmetler; tarımsal ormancılık, su ürünleri yetiştiriciliği, arıcılık ve bahçecilik kapsamında bir köy, kasaba veya şehir içinde veya çevresinde gıdanın yetiştirilmesi, işlenmesi ve dağıtılması işlevlerini içerir. Şehirlerde belirli biyolojik çeşitlilik hizmetleri, yağmur suyu akışı, hava kirliliğinin azaltılması, karbon depolama ve tutulmasına katkı ve iyileştirilmiş su kalitesinin sağlanması için hizmetler sağlayabilir (Lin ve ark., 2015; McLain ve ark., 2012).

Tarımsal Ekosistemlerde Biyolojik Çeşitlilik Yoluyla Haşere Kontrolü

Tarımsal yoğunlaşma, birim girdi başına tarımsal üretimin artması olarak tanımlanabilir. Yoğunlaştırma, uzay-zamansal çevre koşullarına uyarlanmış özel mahsullerin ve mahsul çeşitlerinin seçimine dayanmaktadır. Dolayısıyla biyolojik çeşitliliğin kaybı, tarımsal ekosistemlerdeki haşere kontrolü zorluklarını daha da artırmıştır (Hill, 1987). Zararlılarla mücadelede kültürel, mekanik, kimyasal ve biyolojik kontroller en çok uygulanan seçeneklerdir. Tarımın yoğunlaşmasıyla zararlı biyo-kontrol yöntemlerinin kullanımı azaldı. Bunun yerine, zararlıları kontrol etmek veya yönetmek için kimyasal tedaviler ve genetiği değiştirilmiş organizmaların kullanımı benimsenmiştir. Böylece doğal sistem kontrolü, insan

kaynaklı kontrol mekanizmalarına kaydırılmıştır. Bu değişiklikler çevresel maliyetleri, su ve yeraltı suyu kirliliğini ve tarımsal ekosistemlerdeki biyolojik çeşitlilik kayıplarını artırmıştır (Benbrook, 2001; Bengtsson ve ark., 2005; Kazemi ve ark., 2018; Philpott, 2013)

Doğal düşmanlar, zararlıları baskılayan veya onların verdiği zararı azaltan unsurlar olarak kabul edilir. MS 300 civarındaki kayıtlar, Çinli çiftçilerin akar popülasyonlarını kontrol altına almak için portakal bahçelerindeki karıncaları ve doğal düşmanları kullandıklarını göstermektedir (Huang & Yang, 1987). Zararlıları, verim düşüşlerini, ekonomik kayıpları ve dolayısıyla insani felaketleri azaltmak için geleneksel biyolojik mücadele mekanizmaları uygulanmıştır. 1980'lerde ABD'de haşere kontrolü amacıyla 160 yırtıcı eklembacaklı türü ve 16 böcek öldürücü kuş türü serbest bırakılması buna örnektir (Letourneau ve ark., 2009). Şu ana kadar dünya çapında 2000'den fazla tür doğal mücadele için çevreye salınmıştır (Philpott, 2013).

Gıda Güvenliği Ve Sağlık İçin Biyolojik Çeşitlilik

Gıda güvenliği genel olarak gıdanın toplum için bulunabilirliği ve erişilebilirliği anlamına gelmektedir. Dünya Bankası bu ifadeyi, tüm insanların her zaman aktif ve sağlıklı bir yaşam için gıdaya erişimi olarak tanımlamaktadır (Maxwell & Wiebe, 1999; Reutlinger, 1986). Bunun en yaygın kabul gören ve kullanılan tanımı Dünya Gıda Zirvesi'nde ortaya atılmıştır; Gıda güvenliği, tüm insanların her zaman sağlıklı ve aktif bir yaşam için beslenme ihtiyaçlarını ve gıda tercihlerini karşılamak üzere fiziksel ve ekonomik erişime sahip olduğu zaman var olur (Pinstrip-Andersen, 2009; Sunderland, 2011).

SONUÇ

Bazı çalışmalar, biyoçeşitliliğin aslında genetik çeşitlilik kaybını (genetik erozyon) nasıl etkileyebileceğini göstermiştir. Genetik çeşitliliğin boyutu, bir popülasyonun veya türün yeni mahsul zararlıları, hastalıklar ve kuraklık gibi çevresel zorluklara adaptasyon durumunu belirler. Biyoçeşitlilik, çiftçilerin evdeki gıda gereksinimlerini karşılamak ve onları zararlılara karşı korumak için mahsul sistemlerini yerel ekolojik mikro nişlerle eşleştirmesine yardımcı olur. Genetik erozyonun tarımsal ekosistemlerin önemli sorunlarından biri olduğu göz önüne alındığında, tarımsal ekosistemlerde biyolojik kontrol stratejilerinin genişletilmesi için, tarımsal ekosistemlerin yoğunlaştırılması, biyolojik çeşitlilik ve zararlı kontrolü arasındaki ilişkinin desteklenmesi gerektiğini ortaya koymaktadır. Tarımsal ekosistemlerde doğal düşman çeşitliliğinin azalmasının su ve yeraltı suyu kirliliğini ve çevresel maliyetleri artırdığı dikkate

alınmalıdır. Bu konuda yapılmış en kapsamlı literatür çalışması Karezmi ve arkadaşlarının (Kazemi ve ark., 2018) derleme çalışmasıdır. Bu sunumda da bu çalışmadan yararlanılmıştır.

ÖZET

Bu çalışma doğal sayıların alt konusu olan “En çok dört basamaklı doğal sayıları 100’ün katlarıyla zihinden toplar.” kazanımını simülasyon destekli teknolojik materyalleri kullanarak matematik dersinin başarısına etkisi araştırılmıştır. Araştırmanın modeli ön test-son test kontrol gruplu yarı deneysel araştırma modelidir. Araştırmanın örnekleme Mersin ili Yenişehir İlçesi ve Şanlıurfa ili Eyyübiye ilçelerinde bulunan 2 farklı ilkokulun 4. sınıfta okuyan öğrencilerden toplam 4 şube seçilmiştir. Her gruba da araştırma öncesinde Millî Eğitim Bakanlığı’nın uygulaması olan EBA platformunda bulunan geçerliliği ve güvenilirliği test edilmiş çoktan seçmeli 10 adet sorudan oluşturulan bir ölçek (Zihinden Toplama Başarı Testi), ön test olarak uygulanmıştır. Ön test sonucunda aritmetik puan ortalaması diğer gruba göre daha düşük olan Mersin ili Yenişehir ilçesinde seçilen sınıfların bir şubesi ve Şanlıurfa’nın Eyyübiye ilçesinde seçilen sınıfların bir şubesi toplam 2 şubedeney grubu olarak belirlenmiştir. Aritmetik puan ortalaması daha yüksek olan diğer iki şube ise kontrol grubu olarak belirlenmiştir. Doğal sayılar konusunun “En çok dört basamaklı doğal sayıları 100’ün katlarıyla zihinden toplar” kazanımını bu çalışmada çalışılmıştır. Deney grubunda, ilgili kazanım 2 gün süreyle simülasyon teknolojileri kullanarak anlatılmıştır. Kontrol grubunda da ilgili kazanım müfredatın önerdiği anlatım yöntemi kullanarak 2 gün süreyle yürütülmüştür. Öğretimlerin sonunda deney ve kontrol grubuna “Zihinden Toplama Başarı Testi” son test olarak uygulanmıştır. Araştırma sonucunda kontrol gruplarına göre, deney gruplarının başarısında bir artış olduğu görülmüştür. Bu sonuca göre simülasyon destekli teknolojik materyaller kullanılarak yapılan öğretimin öğrencilerin matematik dersi akademik başarılarına olumlu katkıda bulunduğu söylenebilir.

Anahtar kelimeler: Teknolojik materyal, simülasyon, zihinden toplama, matematik başarısı.

THE EFFECT OF SIMULATION SUPPORTED TECHNOLOGY ON MENTAL COLLECTION IN PRIMARY SCHOOL

Abstract

This study covers the sub-topic of natural numbers: "Mentally adds four-digit natural numbers with multiples of 100." The effect of using simulation-supported technological materials on the success of the mathematics course was investigated. The model of the research is a quasi-experimental research model with a pretest-posttest control group. A total of 4 branches were selected as the sample of the research from the 4th-grade students of 2 different primary schools in Mersin province Yenişehir District and Şanlıurfa province Eyyübiye districts. Before the research, a scale consisting of 10 multiple-choice questions (Mental Collection Achievement Test), whose validity and reliability were tested on the EBA platform, an application of the Ministry of National Education, was applied to each group as a pre-test. As a result of the pre-test, one branch of the classes selected in the Yenişehir district of Mersin province, whose arithmetic score average was lower than the other group, and one branch of the classes selected in the Eyyübiye district of Şanlıurfa, were determined as the experimental group for a total of 2 branches. The other two branches with higher arithmetic score averages were determined as the control group. The objective of the subject of natural numbers, "Mentally adds four-digit natural numbers with multiples of 100", was studied in this research. In the experimental group, the relevant objective was explained using simulation technologies for 2 days. In the control group, the relevant acquisition was carried out for 2 days using the narrative method recommended by the curriculum. At the end of the training, the "Mental Collection Achievement Test" was applied to the experimental and control groups as a posttest. As a result of the research, it was seen that there was an increase in the success of the experimental groups compared to the control groups. According to this result, it can be said that teaching using simulation-supported technological materials contributes positively to students' academic success in mathematics.

Keywords: Technological material, simulation, mental addition, mathematics achievement.

Giriş

Bireylerin doğumdan başlayarak hayatı boyunca eğitim alırken pek çok farklı seçenekler ile karşılaşır. Kimi zaman ailesinden kimi zaman sınıf öğretmeninden eğitim ve öğretim görmektedir (Arı, 2019: 1.). Öğrenme insanın yaşadığı sürece bitmeyen bir süreçtir (Köse, 2021: 32). Eğitim ve öğretim toplumun gereksinimlerini karşılamalı birey de buna ayak uydurmalıdır. Günümüzde bilgiye ulaşmak, kullanmak ve yönetmek önemli hale gelmiştir (Erbaş ve Ağmaz, 2020: 1). Dolayısıyla bu dönemde teknolojinin gelişimi ile birlikte öğrenme daha hızlı ve kolay olmaktadır (Arı, 2019: 1). Bilgi ve teknolojinin hızla bir şekilde ilerlediği ve geliştiği bu yüzyılda öğrenin artık teknoloji ile sağlanması kaçınılmazdır (Köse, 2021: 32). Alkış Küçükaydın ve Sarıtepeci (2021)'ye göre öğrenmede teknoloji kullanımının bir seçenektan çıkıp zorunluluk olduğunu söylemektedir. Ülkemizde teknolojiye yatırım her geçen gün artmaktadır. Okulun en önemli katkısı gençlere yönelik süreçlerin amacı, öğrenme ortamlarının gelişmiş teknolojik donanımlarla donatılmasıdır (Yeşilyurt, 2021: 26). Öğretim yapılan okul ve sınıflarda öğrenciler yeni teknolojik araç ve gereçlerle tanışıyor ve sınıflar bu şekilde donatılmaktadır. 2004 yılından bu yana ülkemizde güncellenen eğitim programında eğitim ve öğretimde teknolojiye yer verilmiş olup daha etkin bir şekilde kullanılmasına özen gösterilmiştir. MEB tarafından açıklanan eğitim sistemimizin bilişim teknoloji vizyonu olarak “yenilikleri desteklemek, değerlendirip geliştirmek, öğrenci merkezli teknolojileri kullanmak, eğitim sistemini ileriye taşımak, proje tabanlı eğitim sistemi oluşturmak” olarak açıklamıştır (MEB, 2013, akt. Önal, 2022). Ülkemiz BİT vizyonuna baktığımızda bu süreçte öğretmenler önemli bir rol düşmektedir. Özellikle teknolojiyi kullanmakta öğretmenler öğrencilere rol model olmalı sınıf içi uygulamalarda teknolojiyi etkin bir şekilde kullanmalıdır. Yeni nesil öğrenciler daha okul öncesi dönemden itibaren teknolojiyi kullanmakta ve teknolojik gelişmelere bir hayli hevesli olduğu görülmektedir. Dolayısıyla öğretmen ve öğretmen adaylarının eğitim ve öğretim sürecinde güncel teknolojik uygulamaları bilmesi, bu uygulamaları kullanabilmesi ve teknolojiye ait olan temel özelliklere sahip olması gerekmektedir (Önal, 2022: 2, 6).

Günümüzde teknolojinin sağladığı birçok uygulama alanları vardır. Bilgisayar yazılımlarını eğitim amaçlı kullanımı vardır. Örneğin okula yeni başlayan çocuk eğitsel yazılımlarla sesleri öğrenebilir. Eğitsel yazılımların öğrencilere etkinlik ve uygulama yazılımlarıyla hedefe ulaştırmayı sağlar. Bunun yanında elektronik kitaplar da eğitim amaçlı kullanılmaktadır. Elektronik kitaplar ses efektleri, müzik, sesli okuma gibi çoklu medya özellikleri içerdiğinden çocukların dikkatleri çekebilme ve öğrenmeyi anlamlı kılmaktadır. Teknolojinin bizlere

sunduğu bir başka özellik dijital oyunlardır. Dijital oyunlar çocukların ilgisini içerikleriyle çekebilmektedir. Dolayısıyla öğrenmeyi ve motivasyonu geliştirmektedir (Erbaş ve Ağmaz, 2020: 37, 45).

Alkış Küçükaydın ve Sarıtepeci (2021: 110)'ye göre teknoloji, yaşamımızın her alanında karşımıza çıktığını, ev ortamından iş hayatına kadar sürekli teknoloji ile bir ilişkimiz olduğunu söylemektedir. Dolayısıyla teknoloji ile öğretmenler, öğrenciler ve eğitimin diğer paydaşları teknoloji ile tanışmaları gerektiğine vurgu yapmaktadır. Ayrıca Alkış Küçükaydın ve Sarıtepeci (2021: 110)'ye göre eğitimde teknolojinin kullanılacağı gibi özellikle matematik eğitimi ve öğretiminde teknoloji kaçınılmaz bir seçenektir. Teknoloji matematik derslerine entegre edilmelidir. Matematik derslerinde somut etkinliklerden ziyade teknolojik etkinlikler öğretimi kolaylaştıracaktır. İlköğretim döneminde öğrenciler henüz somut işlemler döneminde olduğu için matematik konularında soyut işlemleri teknoloji kullanarak soyut hale getirebiliriz. Sınıf öğretmenlerinin teknolojiye karşı algılarının olumlu olması matematik öğretiminde kolaylık sağlayacaktır (Alkış Küçükaydın ve Sarıtepeci, 2021: 110, 112). Bu bağlamda eğitim ve öğretim faaliyetlerinde teknolojik destekli ders anlatımının öğrenci derslerine başarıları artırılması gerekmektedir.

1.1.Araştırmanın Amacı

4.sınıf matematik dersindeki doğal sayılar ünitesinden seçilen “En çok dört basamaklı doğal sayıları 100’ün katlarıyla zihinden toplar.” konusunun simülasyon destekli teknolojik materyallerle yapılan öğretimin öğrencilerin akademik başarıları üzerindeki etkisini belirlemektir.

1.2.Araştırmanın Problemi

Araştırmanın problemi ilkokul 4. Sınıf öğrencilerinin simülasyon destekli teknolojik materyallerle yapılan öğretim programının matematik dersine etkisi incelenmek istenmiştir. Bununla beraber araştırmanın alt problem cümlesi; Simülasyon destekli teknolojik materyallerle yapılan bir öğretim yönteminin uygulandığı deney grubu öğrencileri ile müfredatın önerdiği anlatım yönteminin uygulandığı kontrol grubu öğrencilerinin matematik dersinde zihinden toplamaya konusuna ilişkin akademik başarıları açısından farklılık var mıdır? Bu araştırma; ilkokul 4.sınıf Matematik dersi “Doğal Sayılar” ünitesi, “En çok dört basamaklı doğal sayıları 100’ün katlarıyla zihinden toplar.” konusu deney grubunda kullanılmak üzere teknolojik öğretim materyali ve 2023-2024 öğretim yılı, Şanlıurfa ili Eyyübiye ilçesi, Mersin ili Yenişehir ilçesinde bulunan birer ilkokulun rastgele seçilen iki şubesi ile sınırlıdır.

YÖNTEM

Bu bölümde araştırmanın modeli, evreni, örnekleme, veri toplama aracı ve verilerin analizi bulunmaktadır.

Araştırmanın Modeli

Yapılan çalışmada nicel araştırma yöntemlerinden, Ön Test-Son Test kullanılarak kontrol ve deney grubu belirlenerek, yarı deneysel araştırma yöntemi kullanılmıştır. Yarı deneysel araştırma modeli, çalışmada deney ve kontrol grubunu yansız bir şekilde seçilen ve bir değişkenin sebep-sonuç ilişkisini belirlemek için kullanılan bir modeldir (Özmen ve Karamustafaoğlu, 2019: 210.). Araştırmacılar tarafından yapılan seçkisiz atama yöntemi ile belirlenen şubelerden yapılan ön test sonucunun ortalamasının daha düşük olduğu şube, deney grubu; ön test sonucunun daha yüksek olduğu şube kontrol grubu olarak belirlenmiştir (Tablo 1). Kontrol grubunda yapılan öğretim Milli Eğitim Bakanlığı Talim Terbiye Kurulunun müfredatına uygun olarak gerçekleştirilmiştir. Deney grubunda yapılan öğretim, öğrencilerin aktif bir şekilde katılması gözetilerek etkileşimli tahtadan Wordwall desteği ile gerçekleştirilmiştir. Araştırma için izlenen yol Tablo 2’de belirtilmiştir.

Tablo 1. Ön Test Ortalamaları

Okul	Gruplar	Ön Test	N	X
Piri Reis İlkokulu (Mersin)	4-D	Başarı Testi	15	35,33
	4-A		15	37,33
Yenice Merkez İlkokulu (Şanlıurfa)	4-E	Başarı Testi	15	45,33
	4-J		15	49,33

Tablo 2. Araştırma İçin İzlenen Yol

Okul	Gruplar	Öğretim Öncesi	Öğretim Yöntemi	Öğretim Sonrası
Piri Reis İlkokulu (Mersin)	Deney Grubu N=15	Zihinden Toplama Başarı Testi (Ön Test)	Wordwall Öğretim	Destekli Zihinden Toplama Başarı Testi (Son Test)
	Kontrol Grubu N=15		Müfredata Öğretim	Uygun
Yenice Merkez İlkokulu (Şanlıurfa)	Deney Grubu N=15	Zihinden Toplama Başarı Testi (Ön Test)	Wordwall Öğretim	Destekli Zihinden Toplama Başarı Testi (Son Test)
	Kontrol Grubu N=15		Müfredata Öğretim	Uygun

Araştırmanın Örneklemi

Araştırmada çalışma grubu, 2023-2024 Eğitim Öğretim yılı içerisinde Mersin ili Yenişehir ilçesinde bulunan ve devlet okuluna öğrenim gören 30 4. Sınıf öğrencisi ve Şanlıurfa ili Eyyübiye ilçesinde bulunan ve devlet okulunda öğrenim gören 30 4. Sınıf öğrencisinden oluşmaktadır. Örneklem, araştırmaya hız ve kolaylık sağlaması için kolay ulaşılabilir örnekleme yöntemi olarak belirlenmiştir.

Veri Toplama Aracı

Araştırmada belirlenen veri toplama aracı 2023-2024 Eğitim Öğretim yılında kullanılan MEB'in öğrencilere uygun görmüş olduğu EBA sisteminde bulunan tarama testlerinden ve matematik ders kitaplarında bulunan "En çok dört basamaklı doğal sayıları 100'ün katlarıyla zihinden toplar" kazanımına uygun olarak görülen sorulardan, 10 soru olacak şekilde "Zihinden Toplama Başarı Testi" olarak hazırlanmıştır. Araştırmada uygulanan ön test ve son testler aynı sorulardan oluşmaktadır. Testler belirlenen kontrol ve deney gruplarına araştırmacılar tarafınca uygulanmıştır.

2.4.Verilerin Analizi

Araştırmada elde edilen veriler SPSS20.0 programı ile analiz edilmiştir. Ön test ve son test uygulanarak, deney ve kontrol gruplarından elde edilen verilerin arasındaki farkın bağımsız olarak analiz edilmesi için veriler Bağımsız Örneklem T testi uygulanarak analiz edilmiştir. Çoklu gruplar arasındaki farkın analiz edilmesi için de Anova testi kullanılmıştır. Anlamlılık

düzeıı 0.05 olarak belirlenmiř, deney ve kontrol gruplarından elde edilen verilerin arasında anlamlı bir fark olup olmadığı P değeri ile belirlenmiřtir.

3.BULGULAR

Arařtırma dođrultusunda elde edilen bulgular tablo halinde belirtilmiř ve tablolardaki verilere göre yorumlanmıřtır.

Piri Reis İlkokulu ve Yenice Merkez İlkokulu, deney ve kontrol grubu öğrencilerinin ön test deđiřkenli t testi sonuçları Tablo 3’de verilmiřtir.

Tablo 3. Ön Test T Testi Sonuçları

Okullar	Deđiřken	Gruplar	N	X	SS	t	df	P
Piri Reis İlkokulu (Mersin)	Ön test	Deney	15	35,33	3,362	-,454	27,238	,377
		Kontrol	15	37,33	2,840			
Yenice Merkez İlkokulu (řanlıurfa)	Ön test	Deney	15	45,33	4,866	-,584	27,998	,564
		Kontrol	15	49,33	4,827			

Tablo 3. incelendiđinde, deney ve kontrol grupları ortalamaları arasında çok da büyük bir fark olmadığını, yani düzeylerinin benzer olduğunu görüyoruz. P değerinin 0,05’den büyük olması da deney ve kontrol grupları arasında anlamlı bir fark bulunmadığı tespit edilmiřtir($p=,377$, $p=,564$). Bu durum öğrencilerin ön bilgileri açısından farklılık göstermediğini belirtmiřtir.

Piri Reis İlkokulu ve Yenice Merkez İlkokulu, deney ve kontrol grubu öğrencilerinin son test deđiřkenli t testi sonuçları Tablo 4’te verilmiřtir.

Tablo 4. Son Test T testi Sonuçları

Okullar	Değişken	Gruplar	N	X	SS	t	df	P
Piri Reis İlkokulu (Mersin)	Son test	Deney	15	71,33	4,008	4,365	27,999	,000
		Kontrol	15	46,67	3,984			
Yenice Merkez İlkokulu (Şanlıurfa)	Son test	Deney	15	76,67	4,102	2,856	26,790	,008
		Kontrol	15	58,00	5,090			

Tablo 4. incelendiğinde, deney ve kontrol grupları son test puanları arasında anlamlı bir fark olduğu görülmektedir ($p=,000$, $p=,008$). Bu durum Tablo 3 ile karşılaştırıldığında yapılan deneysel çalışmanın deney grubunda zihinden toplama kazanımında akademik başarı gösterildiğini belirtmektedir.

Piri Reis İlkokulu ve Yenice Merkez İlkokulu, deney ve kontrol grubu öğrencilerinin ön test değişkenli Anova testi sonuçları Tablo 5’de verilmiştir.

Tablo 5. Ön Test Değişkenli Anova Testi Sonuçları

Değişken	Varyansın Kaynağı	Kareler Toplamı	sd	Kareler Ortalaması	F	p	η^2	Anlamlı Fark
Ön Test	Gruplar Arası	1965,000	3	655,000	2,633	,059	0,12	4>3>2>1
	Gruplar İçi	13933,333	56	248,810				
	Toplam	15898,333	59					

1=kontrol grubu1, 2=deney grubu1, 3=kontrol grubu2, 4=deney grubu2

Tablo 5 incelendiğinde, deney ve kontrol gruplarındaki öğrencilerin ön bilgilerine göre ön testten aldıkları puanlar arasında anlamlı bir fark bulunmadığı görülmektedir. Post hoc karşılaştırmalarına göre gruplar arasında bir başarı karşılaştırılması yapıldığında gruplar arasında anlamlı fark 4>3>2>1 şeklinde tespit edilmiştir.

Piri Reis İlkokulu ve Yenice Merkez İlkokulu, deney ve kontrol grubu öğrencilerinin son test değişkenli Anova testi sonuçları Tablo 6’da verilmiştir.

Tablo 6. Son Test Değişkenli Anova Testi Sonuçları

Değişken	Varyansın Kaynağı	Kareler Toplamı	sd	Kareler Ortalaması	F	p	η^2	Anlamlı Fark
Son Test	Gruplar Arası	8218,333	3	2739,444	9,784	,000	0,34	4>2>3>1
	Gruplar İçi	15680,000	56	280,000				
	Toplam	23898,333	59					

1=kontrol grubu1, 2=deney grubu1, 3=kontrol grubu2, 4=deney grubu2

Tablo 6 incelendiğinde, deney ve kontrol gruplarındaki öğrencilerin son testten aldıkları puanlar arasında anlamlı bir fark bulunmuştur. Bu durum teknolojik materyal kullanmanın öğrencilerin zihinden toplama kazanımı konusunda akademik başarıları üzerinde orta düzeye yakın bir fark görüldüğünün göstergesidir ($\eta^2=0,34$). Bu fark gruplar arasında 4>2>3>1 şeklinde tespit edilmiştir.

Tartışma, Sonuç ve Öneriler

Bu araştırmada ilkokul 4. Sınıf Matematik dersi zihinden toplama konusunun öğretiminde Wordwall Web.2.0 aracının öğrencilerin akademik başarılarına etkisi incelenmiştir. 4 sınıf arasından belirlenen deney ve kontrol grupları arasında yapılan ön test puanları arasında anlamlı fark bulunmamıştır. Bu durum öğrencilerin düzeylerinin birbirine yakın olduğunu ifade etmektedir. Deney ve kontrol grupları arasında yapılan son test puanları arasında anlamlı bir fark bulunmuştur. Bu durum ise Web2.0 araçlarından olan Wordwall'un zihinden toplama kazanımı adına akademik başarı kazandırdığını göstermektedir. Wordwall'un öğrencilerin akademik başarısına olumlu etkisi olduğunu belirten bulgular alanyazında bulunmaktadır (Taş, Coşkun, Ayverdi ve Bolat, 2023), (Hamalı ve Hamalı, 2021: 14.). Matematik dersi teknolojik materyallerle desteklendiğinde, çoklu zekaya uygun öğrenmeler sunar. Örnek olarak, matematik kavramlarını somutlaştırmak ve görsel olarak sunmak için animasyonlar, simülasyonlar, karikatürler ve videolar kullanılabilir. Bu materyallerin öğrenciye katkısı, kavramlar arası bağlantıları daha kolay kurmalarını ve bir bütün olarak görmelerini sağlar. Derslerin teknolojik materyal ile desteklendiğinde öğrencilerin akademik başarılarına olumlu etkide bulunduğunu belirten çalışmalar alanyazında bulunmaktadır (Duran, Özden ve Yeşilyurt, 2023), (Akyıldız, Uçan ve Yeşilyurt, 2023), (Çelikçi, Karabacak, ve Yeşilyurt, 2023).

Araştırmada elde edilen sonuçtan yola çıkarak; sınıf öğretmenlerinin öğrencilerine ders sırasında müfredatın önerdiği yöntem ile ders anlatmasının yanı sıra simülasyon destekli teknolojik materyal kullanarak ders anlatması öğrencilerin akademik başarılarını olumlu

etkilemekle birlikte öğrencilerin derse aktif katılmalarına ve güdülenmelerine yol açabilir. Öğrenciler için ise teknolojik materyal kullanarak ders çalışmak kendi kendilerine öğrenme düzeylerinde olumlu etki sağlayabilir.

Özet

Fen bilgisi dersinde eğitsel oyunlar öğretimi için önemli olarak görülmektedir. Fen eğitiminde kullanılan eğitsel oyunlar, öğrencileri akademik anlamda birçok alanda etkilemektedir. Bu alanların başında ise başarı gelmektedir. Fen bilgisi dersinde eğitsel oyunların başarıya etkisi çalışmalarına sıkça yer verilmektedir. Bu araştırma; fen bilimleri dersinde eğitsel oyunların başarıya etkisini belirlemek amacıyla gerçekleştirilmiştir. Araştırma örneklemini 2012-2022 yılları arasında Türkiye’de yayınlanmış ve ölçütleri karşılayan bilimsel çalışmalar oluşturmuştur. Araştırmaya dahil edilen çalışmalara Google Akademik, TR Dizin, YÖKTEZ ve DergiPark veri tabanlarından ulaşılmıştır. Taramalar yapılırken "fen bilgisi dersinde eğitsel oyunlar", "fen eğitiminde eğitsel oyunlar" ve "eğitsel oyunların başarıya etkisi" anahtar kelimeleri kullanılmıştır. Araştırmaya dahil edilen çalışmaların uygun gruplanması ve istenilen verilere ulaşılabilmesi için kodlama formu kullanılmıştır. Araştırmada 14 adet deneysel yöntemle yapılmış bilimsel çalışma dahil edilerek veri edilmiştir. Araştırmada bir meta analiz yazılımı olan CMA programı ile çalışmaların heterojenlik testleri, yayın yanlılığı, Hedges’s, Cohens’g’ye göre bireysel ve genel etki büyüklüğü katsayıları hesaplanmıştır. Yapılan analiz sonuçlarına göre fen bilimleri dersinde eğitsel oyunların başarıya etkisinin pozitif yönde ve yüksek düzeyde olduğu sonucuna ulaşılmıştır. Elde edilen sonuçlar alan yazın ışığında tartışılarak yorumlanmış ve önerilerde bulunulmuştur.

Anahtar kelimeler: Fen bilimleri, eğitsel oyunlar, meta-analiz, CMA

THE EFFECT OF EDUCATIONAL GAMES ON SUCCESS IN SCIENCE: A META-ANALYSIS STUDY

Abstract

It is seen as important for teaching educational games in science. Educational games used in science education affect students academically in many fields. Success comes first among these fields. Studies on the effect of educational games on success in science is frequently included. This research; this study was conducted to determine the effect of educational games on success in science. The research sample consisted of scientific studies that were published in Turkey between 2012 and 2022 and met the criteria. The studies included in the research were accessed from Google Scholar, TR Index, YÖKTEZ and DergiPark databases. While scanning, the keywords "educational games in science", "educational games in science education" and "the effect of educational games on success" were used. A coding form was used to group the studies included in the research appropriately and access the desired data. In the research, 14 scientific studies conducted with experimental methods were included and provided data. In the study, heterogeneity tests, publication bias, individual and overall effect size coefficients according to Hedges's and Cohens'g were calculated with the CMA program, which is a meta-analysis software. According to the results of the analysis, it was concluded that the effect of educational games on success in science was positive and at a high level. The results obtained were discussed and interpreted in the light of the literature and suggestions were made.

Keywords: Science, educational games, meta-analysis, CMA

Giriş

Eğitsel oyunlar, eğitimde sıkça kullanılan ve öğrencilerin ilgili dersin kazanımlarına başarıyla ulaşabilmesini sağlamak için başvurulan bir yöntemdir. Eğitsel oyunlar, öğrencilerin aktif katılımıyla gerçekleşen, eğlenceli olduğu kadar öğrenilen bilginin tekrar ve pekiştirilmesini sağlayan öğretim yöntemi olarak tanımlanmaktadır. (Güler, 2011). Bir diğer deyişle, eğitsel oyunlar öğrencilerin algılama düzeylerine, pratik olarak düşünme becerilerine ve karar verme becerine katkı sağlamaktadır (Yiğit, 2007). Eğitsel oyunların içermesi gereken önemli özellikleri vardır. Buna göre eğitsel oyunlar; uygulanacak sınıfta bulunan tüm öğrencilerin seviyelerine uygun sadelikte, oyuna aktif katılımın mümkün olduğu düzeyde ve hem basit hem de ilgi çekici olmalıdır (Karamustafaoğlu ve Kılıç, 2020). Eğitsel oyunu yöneten öğretmen oyunu daima kontrol altında tutabilmeli ve öğrencilere oyun sırasında rehber olmalıdır (Demirel, 2012). Eğitsel oyun, rekabet ortamı yaratırsa öğrencilerin oyuna aktif katılımını sağlayabilir (Karamustafaoğlu ve Kılıç, 2020). Kısaca eğitsel oyunlar, ders kazanımlarının etkili bir şekilde sağlanması ve öğrenci başarısının artması noktasında önemli rol oynamaktadır.

Eğitsel oyunlar, fen bilgisi dersinde de kullanılır ve öğrencilerin başarıya ulaşması için önemli görülmektedir. Fen bilimleri dersi öğrenciler için her ne kadar okullarda öğretilen bir ders olarak görülse de etkilerini günlük yaşamın her alanında görmek mümkündür. Özellikle yeni dünya düzeninde fen bilimleri eğitimi toplumların geleceğe ilişkin gelişimlerinde önemli bir rol oynamaktadır. Fen bilimleri eğitimine en çok gelişmiş toplumlar tarafından önemsenmekte bunun yanı sıra tüm toplumlar fen bilimleri eğitiminde kaliteyi ve verimi artırmak için çalışmalar yürütmektedir (Çepni, 2014.) Fen bilimleri dersi kendi içinde soyut olan kavram ve kazanımlar barındırmaktadır. Öğrencilerin anlayabilecekleri seviye üzerinde olan bazı soyut fen bilimleri hedeflerinin anlaşılır hale getirilmesi, bunun için farklı yol ve yöntemlerin denenmesi, öğrencilerin bu sayede kendi bilgilerini değerlendirerek gereken bilgiye ulaşması hedeflenmektedir (Uzuntiryaki, Çakır ve Geban, 2001). Diğer bir deyişle, fen bilimleri dersinde öğrenciyi başarıya ulaştırmak için bu soyut kavramların gerekirse somutlaştırarak aktarılması gerekmektedir. Bu somutlaştırmanın sağlanması ve başarıya ulaşma için karşıma çıkan önemli yöntemlerin başında eğitsel oyun gelmektedir.

Eğitsel oyun, anlamlı bir öğrenme ortamının sağlanmasına ve çeşitli aktif öğrenmeler sunarak somutlaştırmaya imkan sağlar (Açıkgöz-Ün, 2003). Somutlaştırabilmek için gerekli olan aktif öğrenmelerle öğrenciler kendi kendine öğrenmeyi sağlar ve konunun dikkat çekici olması, keyif alınması, etkin katılmayı sağlayarak öğrenmelere pozitif yönde katkı sunar (Gürbüz, Gülburnu

ve Şahin, 2017). Öğrenmeye pozitif yönde katkı sunarak aktif öğrenmeyi sağlayacak olan eğitsel oyunların kullanım zamanı oldukça geniş alanı kapsamaktadır yalnızca ders sırasında, konu tekrarında değil ders dışı zamanlar da kullanımı mümkündür (Kavşut, Çavuş ve Akpınarlı, 2011). Fen bilimleri dersi öğrencilerin öğrenmede güçlük çektiği, üniteleri kavramada zorlandıkları bir ders olarak görülmektedir (Önen, 2005). Bunun sebebi ise, fen bilimleri dersi içinde öğrenciler için anlaşılması zor olan soyut kavramların bulunması ve bilgiler arasındaki ilişkilendirmenin de kurulamamasından kaynaklanmaktadır (Azar, 2001). Fen bilimleri dersinde sıkça rastlanan soyut kavramlar öğrencilerin derse ilişkin akademik başarısını da olumsuz etkilemektedir. Öğrencilerin başarıya ulaşabilmesi için soyut kavramları kavrayabilmesi önemlidir. Buradaki önemli olan soyut kavramlar aktarılırken mümkün olduğunca somutlaştırılmasıdır. Bu somutlaştırmalar için çeşitli materyallerden destek alınabilir ya da aktif katılımı sağlayan, öğrenmeyi eğlenceli hale getiren eğitsel oyun yöntemine başvurulabilir. Fen bilimleri dersinde kullanılan eğitsel oyunlar sayesinde öğrencilerin derse ilişkin olumlu tutum sergiledikleri, fen bilimleri dersine ait temel bilgi ve becerileri kazandıkları ifade edilmektedir (Demir, 2012). Eğlenceli yöntemlere başvurmak ve hem aktif katılımı sağlayacak hem de anlama düzeyini pozitif yönde etkileyerek fen bilimleri dersindeki öğrenci başarısına katkı sağlayacaktır.

Alan yazın incelendiğinde, fen bilimleri dersinde eğitsel oyunların başarıya etkisini inceleyen çalışmalara rastlanmıştır. Fen bilimleri öğretiminde oyun ve model kullanımını başarıya olan etkisine bakılmış ve oyun kullanımının fen bilimleri dersinde başarıyı pozitif yönde etkilediği bulunmuştur (Ercanlı, 1997). Bir başka çalışmada ise, ilkökul düzeyinde işlenen derslerde eğitsel oyunlarla işlenen ünitelerin geleneksel metodlarla öğretilen ünitelere göre daha kalıcı olduğu tespit edilmiştir (Beyazitoğlu, 1996). Şaşmaz- Ören ve Erduran Avcı (2004) tarafından gerçekleştirilen bir başka fen bilimleri dersi ile başarıyı inceleyen çalışmada da benzer sonuca ulaşılmıştır. Deneysel yöntemle gerçekleştirilen çalışmada eğitsel oyunlarla ders işleyen deney grubu öğrencilerin başarı puanlarının kontrol grubundaki öğrencilerden daha yüksek olduğu görülmüştür. Benzer yöntemle gerçekleştirilmiş bir başka araştırmada fen bilimleri dersinde eğitsel oyunların akademik başarıya olan etkisine bakılmış ve anlamlı farklılık bulunmuştur. Buna göre, elde edilen bulgularda eğitsel oyunlarla kazandırılan fen bilimleri dersindeki öğretim başarısının pozitif yönde etkilendiği bulunmuştur (Bayat, Kılıçaslan ve Şentürk, 2014).

Tüm bu bilgiler ışığında eğitsel oyunlarla yapılmış ve öğrencilerin başarılarına etkisini inceleyen meta analiz çalışmalarının bulunmasına karşın fen bilimleri dersinde eğitsel

oyunların başarıya etkisini inceleyen çalışmaların alan yazında yetersiz olduğu görülmüştür. Bu sebepten fen bilimleri dersinde eğitsel oyunların başarıya etkisine ilişkin bir meta-analiz çalışmasının alan yazına katkı sağlayacağı düşünülmüştür. Ayrıca oyunu seven ve oyun yoluyla temel ihtiyaçlarını giderebilen öğrencilerin derslerdeki kazanımları sağlama süreci daha başarılı geçeceği düşünülmektedir. Bu sebepten fen bilimleri eğitiminde de eğitsel oyunların öğrencileri başarıya götürmede etkili olacağı düşünülmektedir. Fen bilimleri dersindeki başarı için kullanılan yöntemlerin ön plana çıktığı ve bu yöntemlerden en etkili olan eğitsel oyunların incelenmesi önem arz etmektedir. Bu sebepten fen bilimleri dersinde eğitsel oyunları ele alan ve başarıya etkisini inceleyen bir araştırmaya ihtiyaç olduğu görülmektedir. Sonuç olarak, araştırmanın amacı fen bilimleri dersinde eğitsel oyunların başarıya etkisini belirlemektir.

YÖNTEM

Araştırmanın Modeli

Araştırma ortaya konulurken literatür tarama yöntemlerinden biri olan meta-analiz yöntemi kullanılmıştır. Meta-analiz kavramı, alan yazında ilk defa Glass (1976) tarafından kullanılmıştır. Meta-analiz kavramı, bir araştırma probleminde birçok çalışmanın sonuçlarının bir araya gelmesi olarak tanımlanmaktadır (Akgöz, Ercan ve Kan, 2004). Bir başka ifade ise meta-analiz, bir konu üzerinde birbirine benzer araştırmaların belirlenen ölçütlerle bir araya getirilip çalışmalara ait olan nicel veriler ışığında yorumlanması olarak açıklanmıştır (Dinçer, 2014).

Meta-analizle yapılan çalışmalarda, ortaya konmuş olan deneysel çalışma verilerini dikkate alınır ve nicel veriler sağlandıktan sonra konuyla ilgili yapılmış tüm çalışmalarla genel bir sonuca ulaşılır (Bakioğlu ve Göktaş, 2019). Deneysel olmayan çalışmalar için de meta-analiz ile çalışma yapmak mümkündür. Bununla ilgili olarak Greenland (1987) tarafından deneysel olmayan çalışmaların meta-analizi için istatistiksel yöntemler ayrıca tanımlanmıştır.

Alan Yazın Tarama İşlemi

Bu çalışma ortaya konmadan önce araştırmacı tarafından alan yazın taranmıştır. Alan yazın taraması sonucunda çalışmanın konusuna karar verilmiştir. Bir sonraki aşamada yapılan çalışmaya dahil edilecek bilimsel araştırmalara ait ölçütlere karar verilmiştir. Bu ölçütler ifade edilmiştir. Buna göre; araştırma örneklemini 2013-2023 yılları arasında Türkiye’de yayınlanmış ve ölçütleri karşılayan makaleler oluşturmuştur. Araştırmaya dahil edilecek çalışmalara Google Akademik, TR Dizin, YÖKTEZ ve DergiPark veri tabanlarından ulaşılmıştır. Taramalar yapılırken "fen bilgisi dersinde eğitsel oyunlar", "fen eğitiminde eğitsel

oyunlar" ve "eğitsel oyunların başarıya etkisi" anahtar kelimeleri kullanılmıştır. Araştırmaya dâhil edilecek çalışmaların gruplanması ve istenilen verilere ulaşılabilmesi için kodlama formu kullanılmıştır. Araştırmacı tarafından 17 bilimsel çalışma ilgili konu kapsamında belirlenmiştir. 17 bilimsel çalışmanın 3 tanesi deney ve kontrol grubu oluşturmadığı tespit edildiğinden ölçütlere uymadığı gerekçesiyle elenmiştir. Araştırmaya kalan 14 bilimsel çalışmayla devam edilmiştir. Araştırmaya dahil edilen bilimsel araştırmaların listesi Ek-1’de verilmiştir.

Geçerlilik ve Güvenirlik Çalışmaları

Meta-analiz yöntemi kullanılırken araştırmaya dahil edilen çalışmalar seçilip analiz edilirken bulgulara ait veriler ortaya konurken dikkatli ve ayrıntılı bir süreç yürütülmesi önemlidir. Bu çalışmaya dahil edilen bilimsel araştırmaların geçerliliği ve güvenirliliği kontrol edilmiştir. Bunun için bilimsel araştırmalara ait bir kodlama formu kullanılmıştır. Kodlama formu, çalışmalara ait numara, isim, yazar, yılı, konusu, örnekleme ait kademesi ve çalışmanın örneklem büyüklüğü başlıklarını ele almaktadır. Hazırlana kontrol listesine göre kodlanan bilimsel çalışmalar bir başka alan uzmanı tarafından da kontrol edilmiştir. İki kodlayıcı arasında tutarlılığın sağlanması için kodlamalar önce bağımsız olarak yapılmıştır. Daha sonrasında iki kodlama karşılaştırılıp tutarlılığı sağlanmıştır.

Verilerin Analizi

Araştırma konuları aynı olan örneklem, yer ve zaman açısından farklılık gösteren çalışmaların sonuçlarını bir arada gösterebilmek amacıyla yöntem ve bulgular için farklı istatistik birleştirme yöntemleri bulunmaktadır. Araştırmanın istatistiksel veri analizi için etki büyüklüğü katsayısı hesabı yapılmıştır. Deney grubundaki ortalama değerden küçük olanın oranı kontrol grubundaki değerlere olan oranı etki büyüklüğü olarak tanımlanmaktadır (Hedges ve Olkin, 1985). Diğer bir deyişle, etki büyüklüğüne uygulanmış olan deney sonucu, deney grubuna ait olan ortalama değerden ve kontrol grubuna ait ortalama değer farkıyla alınıp standart sapma değerine bölerek ulaşılır. Elde edilen sonuç, deney grubuna ait olan yöntemin ne yönde ne kadar etkili olduğunu ifade etmektedir (Thalheimer ve Cook, 2002). Sonuç olarak elde edilmiş olan etki büyüklükleri Hedges’e ait istatistiksel yöntemle göre bulunmuştur. Meta-analiz işlemleri yapılırken sonuçta elde edilen etki büyüklük değerlerinin yorumu sırasında birçok sınıflandırma yönteminden faydalanılmaktadır. Etki büyüklüklerine ait büyüklük dereceleri Cohen ve vd., (2007) tarafından açıklanmıştır. Buna göre; $0 \leq$ Etki büyüklüğü $\leq 0,30$ zayıf seviyede, $0,31 \leq$ Etki büyüklüğü $\leq 0,50$ küçük seviyede, $0,51 \leq$ Etki büyüklüğü $\leq 1,00$ orta seviyede, $1,01 \leq$ Etki büyüklüğü güçlü seviyede etkili olduğu anlamına gelmektedir. Bu çalışmaya ait istatistik

hesaplama ve grafiklerinin oluşturulmasında Comprehensive Meta Analysis (CMA) hesaplama programından yararlanılmıştır. Ayrıca çalışmaya ait heterojenlik testleri, yayın yanlılığı, Hedges's g'ye göre bireysel ve genel etki büyüklüğü katsayıları hesaplanmıştır.

BULGULAR

Fen bilimleri dersinde eğitsel oyunların başarıya etkisinin belirlenmesine yönelik bu meta-analiz çalışması gerçekleştirilmiştir. Bu meta-analiz çalışmasına 2012- 2022 yılları arasında fen bilimleri dersinde eğitsel oyunların başarıya etkisini konu alan 14 adet deneysel yöntemle oluşturulmuş bilimsel çalışma dahil edilerek veri elde edilmiştir. Yapılan analizlerde Hedges's g meta analiz uygulaması gerçekleştirilmiş ve kullanılacak olan modelin belirlenmesi için heterojenlik testi yapılmıştır. Heterojenlik testinin analizine ilişkin istatistik verileri Tablo 1'de verilmiştir.

Tablo 1. Heterojenlik Testi Sonuçları

Etki Türü	Ort. Etki İfadesi	df	Q	p
Sabit Etki	1.165	13	72,84	0,00
Rastgele Etki	1,312			

Tablo 1'de yer alan heterojenlik testi sonuçlarına göre p değeri ($p=0,000$) $0,05$ 'ten küçük olması sebebiyle çalışmalar arasında anlamlı bir fark olduğuna karar verilmiştir. Ayrıca X^2 tablosunda $df=13$ 'tür. Analiz sonucu elde edilen Q değeri ise 72,84 olarak bulunmuştur. Bu değer X^2 tablosundaki değerden büyük olması sebebiyle çalışmaların heterojen bir yapıda olduğuna karar verilmiştir. Bu u analizlerin Rastgele Etkiler Modeli altında yapılmasına karar verilmiştir. Rastgele Etkiler Modeli altında yapılan analiz sonuçları Tablo 2'de sunulmuştur.

Tablo 2. Fen Bilimleri Dersinde Eğitsel Oyunların Başarıya İlişkin Etki Büyüklük Değerleri

Araştırma Adı	Hedge's g	Std. Hata	Varyans	Alt Sınır	Üst Sınır	Z	P
Arslan, 2021	1,544	0,379	0,144	0,801	2,288	4,070	0,00
Bayat, Kılıçarslan ve Şentürk, 2014	1,836	0,265	0,070	1,317	2,355	6,834	0,00
Coşkun, Akarsu ve Kariper, 2012	2,566	0,486	0,236	1,614	3,518	5,282	0,00
Ağırçöl, Kara ve Dönel-Akgül, 2022	1,169	0,279	0,078	0,622	1,716	4,192	0,00
Dadaylı ve Pekbay, 2021	0,653	0,276	0,076	0,112	1,193	2,368	0,018
Demircioğlu ve Akdemir, 2019	3,171	0,460	0,212	2,269	4,072	6,893	0,00
Evmez, 2018	0,885	0,322	0,103	0,255	1,516	2,753	0,006
Gürbüz, 2019	0,999	0,249	0,062	0,510	1,488	4,007	0,00
Gürbüz, Çeker ve Töman, 2017	2,044	0,398	0,158	1,264	2,825	5,138	0,00
Nur, 2019	0,771	0,365	0,133	0,056	1,486	2,113	0,035
Kaya ve Elgün, 2014							
Yıldırım ve Can, 2017	1,465	0,205	0,042	1,064	1,866	7,163	0,00
Yıldız, Şimşek ve Araz, 2016	0,631	0,311	0,097	0,022	1,240	2,030	0,042
Yıldız ve Şimşek, 2020	0,143	0,218	0,047	0,284	2,285	5,138	0,00
Genel Etki	1,312	0,190	0,036	0,940	1,684	6,909	0,00

Tablo 2’de yer alan analizler incelendiğinde Rastgele Etkiler Modeline göre genel etki 1,312 olarak hesaplanmıştır. Genel etkinin yüksek düzeyde olduğu görülmektedir. Bireysel etki büyüklüklerine göre etki büyüklüğü en yüksek olan üç çalışma: Demircioğlu ve Akdemir, 2019 (EB: 3,171); Coşkun, Akarsu ve Kariper, (EB: 2,566); Gürbüz, Çeker ve Töman, 2017 (EB: 2,044) şeklinde sıralanmaktadır. Etki büyüklüğü en düşük çalışma ise; Yıldız ve Şimşek, 2020 (EB: 0,143). Analizlerde bütün sonuçların deney grubu lehinde olduğu görülmektedir.

Analize dahil edilen çalışmaların yayın yanlılığı olup olmadığını belirlemek amacıyla huni grafiği saçılımına bakılmıştır. Huni grafik saçılımında yayın yanlılığı olmadığı gözlenmiştir.

TARTIŞMA, SONUÇ VE ÖNERİLER

Yapılan çalışmada fen bilimleri dersinde eğitsel oyunların başarıya etkisini ortaya koymak için ilgili konuda yapılmış olan bilimsel araştırmalar incelenmiş ve elde edilen istatistiki veriler bir araya getirilmiştir. Fen bilimleri dersinde eğitsel oyun kullanımının genel olarak öğrencilerin başarılarını anlamlı seviyede arttırdığı sonucuna ulaşılmıştır. Alan yazın incelendiğinde, fen bilimleri dersinde eğitsel oyun kullanımının başarı yönünden, pozitif bir etki oluşturduğu birçok

çalışmaya rastlanmaktadır. Ayan ve DüNDAR (2009) tarafından ortaya konan bir çalışmada eğitsel oyunların öğrencilerdeki başarının arttırdığı bulunmuştur. Diğer bir çalışmada da fen bilimleri dersinde kullanılan eğitsel oyunlarla geleneksel öğretim yöntemiyle karşılaştırılmıştır. Yapılan araştırma sonucunda fen bilimleri dersinde eğitsel oyun kullanımının başarıda daha etkili olduğu gözlenmiştir (Ören ve Avcı, 2004). Alan yazındaki diğer çalışmalara bakıldığında, yapılmış olan çalışmaların çoğunda fen bilimleri dersinde eğitsel oyunların başarıya etkisinin olumlu etkisi görülmektedir. Yapılan meta-analiz çalışmasına eklenen araştırmalar da bu bulguyu desteklemektedir.

Koca (2019) tarafından gerçekleştirilen bir başka çalışmada da fen bilimleri dersindeki oyun temelli uygulamalar üzerine bir meta-analiz çalışması gerçekleştirilmiş ve bu çalışmada fen bilimleri dersinde oyun temelli uygulamalardan yararlanmanın akademik başarı açısından pozitif yönde olumlu bir etkisinin olduğu sonucuna ulaşılmıştır. Elde edilmiş bu çalışmalar sonucunda bakılırsa, fen bilimleri dersinde eğitsel oyun kullanımı öğrencilerin başarısı üzerinde olumlu bir etki oluşturduğu bulgusu desteklenmektedir. Yapılan çalışması sırasında alan yazında taranırken fen bilimleri eğitiminde eğitsel oyunlardan yararlanmanın son yıllarda önemli görülmüş ve sağladığı avantajlardan bahsedilmiştir. Eğitsel oyunlarla öğretim hem başarıyı hem de kalıcılığı artıracaktır. Bireysel öğrenmeye destek vermesi de fen bilimleri dersinde eğitsel oyun kullanımının en önemli avantajlarındadır (Gürbüz, Gülburnu ve Şahin, 2017). Bu açıdan bakıldığında gerçekleştirilen meta-analiz çalışmasında elde edilen, fen bilimleri dersinde eğitseloyun kullanımının başarıyı olumlu yönden etkilemesi bulgusunu kanıtlar niteliktedir. Bir başka araştırma da eğitsel oyunlardan fen bilimleri dersinde yararlanmanın yapay zekâ uygulamalarından eğitimde yararlanmanın önemi isimli araştırmasında, yapay zekâ destekli uygulamaların birçok alanda kullanıldığı ve bu uygulamaların öğrencilerin, akademik başarılarını yükselttiğini vurgulamıştır (Bayat, Kılıçarslan ve Şentürk, 2014) Fen bilimleri eğitimi alanında eğitsel oyunların kullanımı uygulamalarının süreç ile bütünleştirilmesi, gelecekte bu konuda yapılacak çalışmalar için önemli olarak görülmektedir. Yapılmış olan bu çalışmada fen bilimleri eğitiminde eğitsel oyunlar sayesinde, öğrenen ve öğretmen bilgilerinin saklanması, elde edilen bulguların değerlendirilip yorumlanmasının yapılması ve konuyla ilgili önerilerin ifade edilmesi şeklinde olan katkıları olacağı düşünülebilir. Özetle, alan yazında ilgili konuda yapılmış olan bilimsel çalışmalara bakıldığında fen bilimleri dersinde eğitsel oyunların başarı açısından etki büyüklüğü yüksek olarak bulunmuştur. Bu durumun sebebi olarak yapılmış olan bilimsel çalışmaların örneklem büyüklüklerinin olduğu söylenebilir. Ayrıca 21. yüzyıldaki yeni eğitim

anlayışında geleneksel yöntemlerin yerini aktif öğrenmelerin alması sebebiyle eğitsel oyunlarla ilgili bilimsel çalışmaların sayılarının artması ile açıklanabilir.

Bununla birlikte fen bilimleri dersinde eğitsel oyunlardan yararlanmanın daha çok ilkökul ve ortaokul düzeyinde olduğu görülmüştür. Bunun nedeni olarak, ilgili yaş grubundaki öğrencilerinin oyun çağında olmaları, buldukları gelişim dönemi sebebiyle birçok alandaki ihtiyaçlarını oyun yoluyla ifade etmeleri ve oyunların öğrenme sürecine aktif katılım sağlaması gibi durumlar gösterilebilir. Belirtilen bu yararlar eğitsel oyun yoluyla öğrencilere sunulabilmektedir. Meta-analize dahil edilen çalışmalara bakıldığında, 2012 yılından sonra, fen bilimleri eğitimde eğitsel oyunların kullanımına ilişkin ortaya konuşmuş bilimsel araştırmalara bakılarak ilgili konuda yapılan çalışmalarsa belirli bir artış olduğu gözlenebilir. Bu açıdan bakıldığında eğitsel oyunların fen bilimleri dersini eğlenceli kılması, soyut kavramları rahatça somutlaştırması, öğrenciler için ilgi çekici olması ve dersin yalnızca ders içi faaliyetle değil ders dışı faaliyetlerle de öğrenilmesinin son yıllarda oldukça önemli görülmesinden dolayı olduğu ifade edilebilir. Eğitsel oyunlar için benzer olan oyun temelli öğrenmelere bakıldığında da benzer sonuçların olduğu görülmektedir. Alan yazında yurt içi ve yurtdışı kaynakların oldukça yetersiz olduğu söylenebilir. Oyun temelli öğrenmeler sayesinde öğrencilerin akademik başarılarının arttığı yönünde çalışmalar bulunmaktadır (Alıcı, 2016; Babaandaç, 2013; Charlton, Williams, ve Mc Laughlin, 2005; Chuang ve Chen, 2007).

Özetlenecek olursa, fen bilimleri dersinde eğitsel oyunlardan yararlanmanın öğrencilerin akademik başarısına etkisini belirlemek amacıyla gerçekleştirilen meta-analiz çalışması sonucunda fen bilimleri dersinde eğitsel oyunların kullanımının öğrencilerin başarılarında güçlü seviyede pozitif yönde etkisinin olduğu bulunmuştur. Bu sonuçtan hareketle fen bilimleri dersinde eğitsel oyun kullanımının ders dışında fen öğrenmeye ve bireysel öğrenmeye katkı sunacağı düşünülebilir. Yapılmış olan meta-analiz çalışması sayesinde fen bilimleri dersindeki başarıda eğitsel oyunlardan yararlanmanın pozitif etkili olduğu görülmüştür. Bu sebepten fen bilimleri dersi okutan öğretmenlerin bu yöntemi sıkça kullanması öğrenme üzerindeki verimi artıracığı ve başarıyı yükselteceği söylenebilir. Fen bilimleri alanında lisans öğrenimi gören öğretmen adaylarının bu konuda gelişim göstermesi için alan derslerine eğitsel oyun dersinin eklenmesi düşünülebilir.

Bunların yanı sıra etki büyüklükleri farklı olan diğer araştırmalar da analiz edilerek farklılık yönüne ve farklılık kaynağına bakılması önerilebilir. Yüksek lisans ve doktora tez çalışmalarında meta-analize yer vermek isteyen araştırmacılar için yabancı kaynakların

taranması teşvik edilebilir. Konuyla ilgili yabancı alan yazındaki meta-analiz çalışmalarının Türkçe'ye çevirisi yapılabilir. Fen bilimleri dersinde eğitsel oyunların başarıya etkisini ele alan yabancı kaynaklar da dahil edilerek kıyaslama yapılabilir. Fen bilimleri dersinde eğitsel oyunların başarıya etkisine ilişkin yapılmış olan araştırmaların çoğunluğunun nicel yöntemle yapılmış olduğu görülmektedir. Gelecekte yapılacak olan çalışmalarda nitel ve karma yöntemlere daha çok yer verilebilir. Farklı yöntem ve farklı örneklem gruplarıyla farklı sonuçlar elde edilebilir. Bu sayede alan yazına katkı sunulabilir. Fen bilimleri dersi için eğitsel oyunların başarı yönünden etkisine bakılmıştır. Bu alan kapsamı genişletilerek tutum, ilgi, yaratıcılık vb. konularda meta-analiz çalışmaları ortaya konabilir. Fen bilimleri dersinde eğitsel oyunların başarıya etkisinin gelecekte de başka araştırmacılar tarafından incelenmeye devam edeceği düşünülmektedir. Bu çalışmanın tekrarı yeniden sağlanabilir. Eğitsel oyunlarla ilgili yapılan çalışmalar, yalnızca fen bilimleri dersindeki başarı için değil diğer derslerdeki başarı için de yürütülmelidir.

Abstract

Background: Recently, global warming has been the most concern issue due to dramatically increasing the carbon dioxide (CO_2) emission all over the world. It is considered that CO_2 is the principal source for global warming. Bangladesh has experienced a rapidly growing population, expanding economy, increasing industrialization, and migration of rural people to urban areas to improve their livelihood. At the same time, carbon emission has been rising due to an increase in anthropogenic sources or human activities. Objective: In this study, we attempted to examine the factors responsible for the impact of carbon emissions on the environment of Bangladesh. It is also investigated to determine the nature and direction of the relationship among the variables under study. Methodology: The study applied the STIRPAT model with time series data available from 1972 to 2014 while the study was conducted. These data are collected from the World Bank Database. Findings: The study's findings showed that in the long run, working-age population, GDP per capita, and industrialization significantly affect carbon emissions. The short-run results suggest that only industrialization significantly affects carbon emissions. The findings also show that urbanization has no impact on carbon emissions both in the long run and in the short run. Policy implication: Considering the environmental impact, the authority should take proper steps to control the carbon emissions on the environment of Bangladesh.

Keywords: Anthropogenic Sources, Environment, Carbon Emission, STIRPAT Model, Bangladesh.

Introduction

In recent years, alarmingly increasing global warming due to climate change is the most important concerning issue in the world. Climate change has the evidence for increasing sea levels, rising temperature in the world, and the degradation of ecological systems (IPCC Report 2014a, b; Azizalrahman & Hasyimi, 2018; Solomon, Qin, Manning, Averyt, & Marquis, 2007). According to the world database, we know that human activities have a significant contribution to climate change. It is considered that carbon dioxide (CO_2) is the principal source for global warming, emissions of which have grown rapidly in the last century. Due to human activities, mainly by the use of fossil fuels consumption such as oil, gas, coal, etc. as the main sources of power for electricity generation, manufacturing activities, transport, and consumption of goods and services caused a significant increase in the level of (CO_2) in the atmosphere. However, such activities are directly connected with economic growth of a nation (Fischer-kowalski, 2016).

As Bangladesh is the developing country, economic activities are rapidly growing in the whole country. It also has a dense population in which maximum people want to migrate from rural to urban areas for searching work and economics and social development or educational purpose. As a result, it creates high pressure on the urban areas which impact on the environment. Since Bangladesh is a growing economy, manufacturing industry and service sectors are increasing day by day and growing income of people which increased demand for consumer goods and services.

The purpose of the study is to examine the increasing of carbon-dioxide gas in Bangladesh as a result of the intervention of the population, affluence, and technology within industry and urbanization. The carbon dioxide is a measure of environmental impact. It estimates environmental degradation from the consumption of goods and services, migration of people from rural areas to urban areas for economic development and social development, increasing technology used in industrial sectors. That's why there is a systematic relationship among the variables which are influenced each other. In this study, we used an extended STIRPAT model as a measurement of environmental impact and applied time series data which are secondary collected from World Data Bank (2018). The time duration is from 1972 to 2014 and country for Bangladesh.

Methodology

To measure the environmental impact we have approved is the carbon-dioxide gas (Cramer 1998; Dietz & Rosa 1997; Shi 2003; and York et al. 2003a,b). Using this estimation to organize

our analysis, we adopted IPAT means the impact, population, affluence and technology, this framework was first suggested in the early 1970s Ehrlich & Holdren (1971) as part of an ongoing controversy on the driven factors of environmental impact. This measurement of environmental impact has also previously been adopted by (Shi 2003; York et al. 2003; Fan 2006). It is found that it still widely used as an orienting proposed. The framework includes the key feature of human intervention of environmental change into a model is as follows:

$$I=P*A*T------(1)$$

Where (I) is the environmental impact, (P) is population, (A) is Affluence or consumption per capita, and (T) is Technology or impact per unit of economic activity which is determined by the technology utilized for the production of goods and services and by the culture and social organization that estimates how the technology is integrated, (*) presents the multiplied the independence variables.

Dietz & Rosa (1994) proposed the STIRPAT model as a reformulation of the IPAT model to overcome this limitation. STIRPAT states that Stochastic Impact by Regression on Population, Affluence and Technology (Shi 2003; York et al. 2003; Fan 2006; Martínez-Zarzoso 2007; Martínez-Zarzoso & Maruotti 2011; Tian & Da Costa 2014; Li & Lin 2015; and Lin 2016). In this study we used variables of the STIRPAT model which are carbon-dioxide (CO₂) as an environmental impact, the structural working-age population for population variable, gross domestic product (GDP) for affluence, and industry added value and urbanization as a proxy of technology.

Thomas Dietz & Rosa (1994) York (2007); Lin (2017) suggested the STIRPAT model (stochastic impact by Regression on Population, Affluence, and Technology) to overcome this major limitation. That is the stochastic or random form of IPAT model which is known as STIRPAT. This model is expressed as follows;

$$I = \beta_0 P_t^{\beta_1} A_t^{\beta_2} T_t^{\beta_3} e_t \quad (2)$$

By taking logarithms;

$$\ln I_t = \beta_0 + \beta_1(\ln P_t) + \beta_2(\ln A_t) + \beta_3(\ln T_t) + e_t \quad (3)$$

Where t is the year; β_0 is the constant; β_1 , β_2 & β_3 are the coefficients of P, A, & T respectively, e is the error term. The study conducted the various test and chose the best model under the time series data to estimate the impact of the carbon emission due to effect of population, Affluence and Technology factors.

The STIRPAT model restructured from the extended IPAT model as the stochastic form, which is known the extended STIRPAT model (Dietz & Rosa 1997). This STIRPAT model is as following:

Adoptive equation with log used in this study under time series data:

$$\ln CO_{2t} = \beta_0 + \beta_1(\ln POSG_t) + \beta_2(\ln GDP_t) + \beta_3(\ln IND_t) + \beta_4(\ln URB_t) + e_t$$

(4)

Where $\ln CO_2$ is the log of carbon emission per ton; $\ln POSG$ is the log of population of working age structure; $\ln GDP$ is the log of GDP per capita; $\ln IND$ is the log of industry (value added to GDP); $\ln URB$ is the log of urban people percentage of total population; and e is the log of residual which are not included in these variables.

Findings

The OLS results

The results of OLS regression model, long-run equation, show a positive relationship between Carbon-dioxide (CO_2) emission and working-age population, per capita GDP, industry value added to GDP but the result of urbanization shows statistically insignificant to impact on the Carbon-dioxide (CO_2) emission. According to result, in long-run, a 10 percent increase in population size will lead to 10.17 percent increase CO_2 emission on average in the environment of Bangladesh, and it is the highest impact on the CO_2 emission. These results are found statistical significance at 1% level. A 6.67% increase in the CO_2 emission concentration in the environment due to a 10% increase in GDP per capita in the economy of Bangladesh. Its impact on the environment is also great, and the result is statistically significant at 1% level of significance. Besides, a 10% rise in industry value added to GDP leads to a 1.95% increase carbon-dioxide (CO_2) emission, on average in the long run in the environment of Bangladesh. This model is the best fit as the adjusted R^2 value is very high (0.993668), as well as the explanatory variables, can be explained dependent variable by 99.37%. F-statistic value is also high, and the corresponding probability value is much low.

Table 1: OLS estimation

Method: Least Squares Regression				
Sample: 1972 2014, Included observations: 43				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
LPOSG	1.016987	0.127260	7.991405	0.0000
LGDP	0.666566	0.074193	8.984241	0.0000
LIND	0.195476	0.075436	2.591283	0.0135
LURB	0.041506	0.127660	0.325127	0.7469
C	-24.86916	1.824707	-13.62912	0.0000
R-squared	0.994271	Adjusted R-squared		0.993668
Log-likelihood	71.97466	Std.Error of regression		0.048269
F-statistic	1648.688	Durbin-Watson stat		1.355276
Prob(F-statistic)	0.000000	Dependent Variable		Log of CO ₂
Sum squared resid	0.088537			

The Error Correction Model (ECM)

the results of the ECM model, a short run equation model, clearly states that the ECT coefficient (E (-1)) is negative and it is found statistical significance. Thus, the deviations in short-run are significant. It is indicated that both in long-run and short-run relationships are stable. A 10% increase in Industry value added to GDP leads to a 2.27% increase in Carbon-dioxide (CO₂) emission concentration, on average in short-run. It appears from the above results that the industry value added to GDP variable and Carbon-dioxide (CO₂) are positively correlated from 1972 to 2014 and has a statistically significant at 5% level. All other variables are statistically insignificant without error term. Since all short-run coefficients are statistically insignificant except industry, this indicates that there is a short-run causality between the variables. It implies that disequilibrium adjustment rate in a year is 64.62% that also known as the speed of error correction.

Table 2: ECM outputs

Method: Least Squares Regression Sample (adjusted): 1973 2014 Included observations: 42 after adjustments

Dependent Variable	D(LCO ₂)			

Conclusion

Carbon-dioxide is the dominant fact to increase global warming in the world. It creates various hamper in the environment such as growing disasters, rising water level of the sea, damaging ecological system and increasing temperature in the world, etc. In recent year, the temperature of the weather also remarkably has increased in Bangladesh. The population growth rate of Bangladesh is at 1.37% and GDP per capita is at USD 1677, and the GDP growth rate is at 7.65% in 2018 according to BBS. The industrial sector contribution to GDP is at 33.71% which is the growth rate at 11.99%. It indicates that industrial sectors are increasing and production is also increasing which ultimately raising the income level of the population of Bangladesh.

The study is used time series data duration 1972 to 2014 which collected from World Data Bank (2018) to analyze the environmental impact of Bangladesh based on the extended IPAT model or the STIRPAT model. Here we included five variables Carbon-dioxide (CO_2) emission, working-age population, GDP per capita, industry value added to GDP and urban population (percentage of total population) to measure the impact of the variables on Bangladesh's environment.

This study adopts the ADF unit root test and the Johansen approach which is widely used to co-integration along with OLS model and ECM model to reveal both the long run and the short-run relation between the variables. From the empirical result of this study, we found that the

working-age population share has a tremendous positive relationship to the carbon-dioxide emission, which is the responsible for the environmental impact of Bangladesh, on average, in the long run. The working-age population has the most significant effect due to this part of the population being the largest income group. An increase in income may lead to rising consumption. It is related to GDP per capita with great effect of increasing carbon dioxide (CO_2) emission on the environment. The GDP per capita and the industry both have a significant impact on increasing carbon dioxide (CO_2) emission on the environment. Increasing GDP per capita means increasing the number of production and increasing production ultimately increases industry in our country. And thereby, an increase in the use of fuel, gas and other fossil resources in industry sectors produces the increasing demand for consumption of product, which has the contributes to emitting carbon dioxide into the environment. But the, urbanization does not statistically significantly to impact carbon dioxide which means that urbanization has no contribution to the environment of Bangladesh, on average, in both the long run and short run.

ECM model suggests that all explanatory variables respond to correct long-run disequilibrium if the system is shocked. This study finds a high value (-0.6462) of the error correction term. Various diagnostic tests are performed regarding the OLS regression model and the ECM model. The analysis of the study suggests that the results are more robust and the models are the best fitted. On the contrary, the industry has contributed to generating carbon dioxide in Bangladesh's environment, on average, in both the long run and short run. This is because industry can initially cause carbon dioxide gas, which instantly impacts the environment. But on average, other variables have no significant impact on the environment in the short run because the population, income level, and urbanization initially cannot generate carbon dioxide so much, which may instantly impact the environment. Finally, the result indicated that industry would increase, and income level and consumption would increase by the working-age population, which would raise the emission of carbon dioxide into Bangladesh's environment in the future. In this study, we did not include all variables that may impact Bangladesh's environment. So, there is an option for more research in the future.

Abstract

The third sector economy comprises non-profit, voluntary, and social organizations of an economy that mostly remain out of mainstream economics research. The present study is the first-ever attempt to review the literature using a quantitative bibliometric approach. Along with the brief content analysis, the study used historical analysis, illustration of keywords co-occurrence network, thematic map and three-field plot sketching and importantly, analyses of most contributing sources, countries, and authors. The results of the analyses reveal that the mainstream studies on third sector economy come from various social sciences other than economics. The micro and macroeconomic aspects of the third sector economy are yet to be explored, although both keyword and thematic analyses indicate that some studies incorporated 'social economy' as a sub-stream. Based on the findings of the study, the third sector economy could be further accentuated by mainstream studies in economics.

Keywords: Non-profit Sector, Third Sector Economy, Third Sector Organizations, Social Economy, Voluntary Sector

JEL Codes: A12, A13, A31, B55, C02.

Introduction

The voluntary sector (e.g. Non-government organizations) of an economy is categorized as the third sector (Jasinska-Biliczak, 2019). Besides private and public sectors, the voluntary sector contributes significantly to every economy (Amendola, Garofalo, & Nese, 2011). When both market and government fail, the voluntary sector could prove to be pivotal to meet the market demand (Lacerda & Vieira, 2011). However, the mainstream economic analysis does not incorporate this sector into the macroeconomic performance of an economy (Hasan, 2008).

According to the economics concerning human welfare maximization, identification of the nature of ongoing research in the field of third sector economy is crucial. Over the past two decades, multiple researchers (Arvidson, 2009; Garkisch, Heidingsfelder, & Beckmann, 2017; McCabe, Phillimore, & Mayblin, 2010; Moxham, 2014) attempted to review the literature on third sector economy. Among them, Arvidson (2009) studied the literature on third sector organization (TSOs), academics, and funding agencies to outline the way evaluation is experienced, discussed, and practised. The paper addresses the difficulties involved in negotiating structures of evaluation and its impact.

On the other hand, Garkisch et al. (2017) conducted a systematic literature review (SLR) that records only the academic disputes on TSOs and migration issues. Importantly, McCabe et al. (2010) present the literature review results which elucidate the term 'below the radar' and its effectiveness of activities in community-based organisations. The study further reviews the literature to discover the role, nature, and focus of insignificant organisations and activities, and the difficulties they encounter. Moxham (2014) applied SLR of 55 papers on third sector organizations. The analysis of the selected papers provides a prospective methodological discrepancy between the prevalent measurement approaches including the justification for measuring the activities of TSOs.

Although informative, the above reviews failed to encompass comprehensive analysis, historical trend, and quantitative analysis of the literature. Given the limitations of existing review articles, the present study intends to analyze academic literature on third sector economy using a bibliometric approach to determine future research agenda.

This paper reviewed 118 documents published under various indexes of Web of Science (WOS) that include SSCI, A&HCI, CPCI-S, SCI-EXPANDED, BKCI-S, BKCI-SSH, CPCI-SSH, ESCI since 2000. Using bibliometric software and analytical tools, the current study reports historical analysis, the impact of multiple authors and sources in the field, topics and themes

already studied and recognizes gaps in the existing literature. The paper includes five subsections. The section underneath renders a detailed description of data exploration and the methodology used followed by the findings of bibliometric analysis. The subsequent section identifies the gaps in existing literature using the content analysis approach. Finally, the paper ends with a conclusion.

DATA AND METHODOLOGY

The study comprises every article on third sector economy published in the Web of Science (WOS) database from 2000 to 2020 retrieved on 05 February, 2021. The reason behind the selection of WOS database for this study is basically, the number of journals published in social sciences from developed countries are more available in WOS database than SCOPUS database (Mongeon & Paul-Hus, 2016). For an unbiased data analysis, the study used the SALSA technique for data collection (Papaioannou, Sutton, Carroll, Booth, & Wong, 2010). SALSA is an acronym that stands for Search, Appraisal, Synthesis, and Analysis

At the third stage- synthesis stage, we restricted the search to “Articles” and the languages to “English” only. We prepared a list of articles on third sector economy from the titles and abstracts excluding any irrelevant article previously selected due to the presence of searched words in it. Finally, the filtered data set stood at 118 documents.

The fourth stage- analysis stage included both bibliometric and content analyses of the 118 documents. Bibliometric analysis of the study relied on Microsoft excel, VOS viewer software, and bibliometrix package of R programming for visualization and presentation. Lastly, content analysis was used to recognize the gaps in the existing literature.

The initial search (data collection) included all the possible documents published under the entire database of Web of Science in the field of the third sector. For this, we used "Third sector" OR "voluntary sector" OR the "Non-profit sector" as the title of the document. It generated a total of 1496 documents. We boiled down from the extended search of the third sector to the third sector economy. To narrow down the search and to avoid missing any relevant

document, we used the key terms “Economy” OR “Economic” OR “Social” in the titles, abstracts, and keywords of the entire WOS database which led to 569 documents.

The second stage-appraisal stage further corrected the searched data of the first stage. Our search output displayed a wide variety of publications in different subject areas and years. Before 2000, the annual number of publications was only 1 or 2. For this, we obtained data for the years 2000 to 2020 in the fields of “Economics”, “Public Administration”, “Social Issues” OR “Social Sciences Interdisciplinary”. Consequently, the number of documents reduced to 228.

At the third stage- synthesis stage, we restricted the search to “Articles” and the languages to “English” only. We prepared a list of articles on third sector economy from the titles and abstracts excluding any irrelevant article previously selected due to the presence of searched words in it. Finally, the filtered data set stood at 118 documents.

The fourth stage- analysis stage included both bibliometric and content analyses of the 118 documents. Bibliometric analysis of the study relied on Microsoft excel, VOS viewer software,

and bibliometrix package of R programming for visualization and presentation. Lastly, content analysis was used to recognize the gaps in the existing literature.

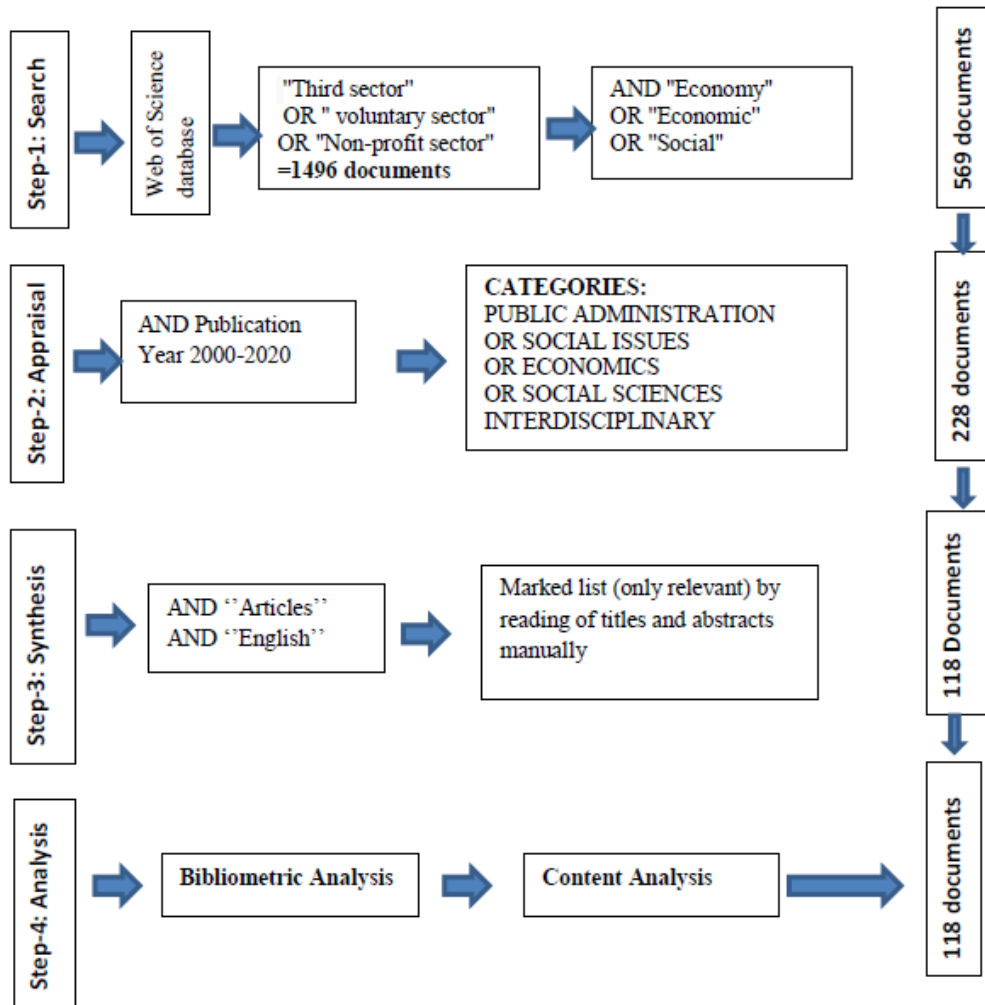

Figure 1: SALSA Steps of Data Selection and Analysis

BIBLIOMETRIC FINDINGS AND DISCUSSION

Historical Series Analysis

Research on the third sector economy has risen over the past two decades. **Hata! Başvuru kaynağı bulunamadı.** illustrates the trends in scientific production in Web of Science (WOS) since 2000 with the highest peak in 2016. The graph depicts the peaks and troughs in the number of scientific productions over the years between 2009 and 2012, the production only kept increasing. With a sharp decline in 2013, the number of publications continued a rising trend until 2016 eventually reaching a peak of 14.

Figure 2: Annual scientific production

Figure 3 illustrates the trends in citations. Here N shows the number of articles published each year. The mean total citation (TC) per article dramatically increased in 2005 and reached a peak of 100 citations in 2007.

Figure 3: Citations Trend

Later on, the mean TC per article maintained fluctuations over the years with a sharp decline in the recent years. The mean total citation per year declined in the contemporary years. Moreover, the Number of citable years followed a continuous declining trend over the years.

Authors and Their Productivity

A total of 211 authors contributed to the publication of 118 documents considered in this review. However, only a small percentage of the authors have more than one publication as

reported by Lotka Law (Lotka, 1926). In any given field, it labels the frequency of publication by authors. Figure -4 illustrates the findings of this law. The publications in this field are widely diversified and lack specialization since more than 94% of the authors possess only a single publication. Nearly 5% of the authors issued 2 publications while only one author out of 211 has 3 publications (Valentinov, 2008, 2009, 2012).

Hata! Başvuru kaynağı bulunamadı., the top authors' production over the years, represents only 11 authors with more than one publication. The Intensity of the blue colour is proportional to the number of citations of each article. McCall C. contributed to two articles (McCall & Itcaina, 2017; McCall & Williamson, 2000) with an interval of 17 years between the two publications. However, other top authors have relatively two consecutive publications in recent years (Halford, Leonard, & Bruce, 2015; Itcaina, 2019; Leonard, Halford, & Bruce, 2016; McCall & Itcaina, 2017). Such sequential publications indicate a more concentration by some authors in this field.

Figure 5: Top-authors' Production over Time

Figure 4: The Frequency Distribution of Scientific Productivity (Lotka Law)

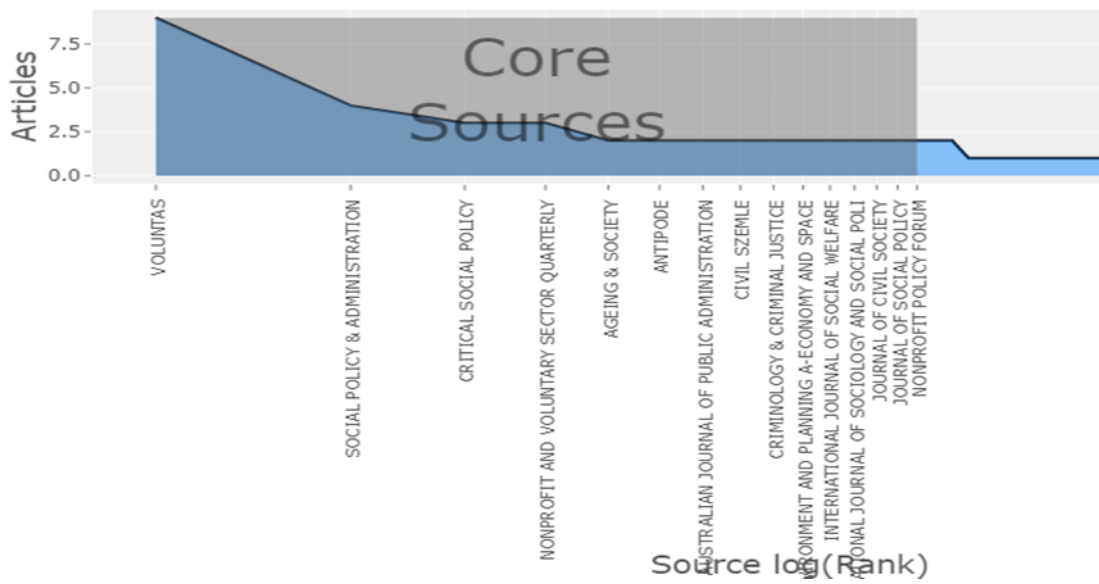

Figure 4: Source Clustering through Bradford's Law

Most Impactful Sources

According to the findings of Bradford's law (Bradford, 1934), this field consists of 15 core journals that publish one-third of the total collection as indicated by the shaded area in

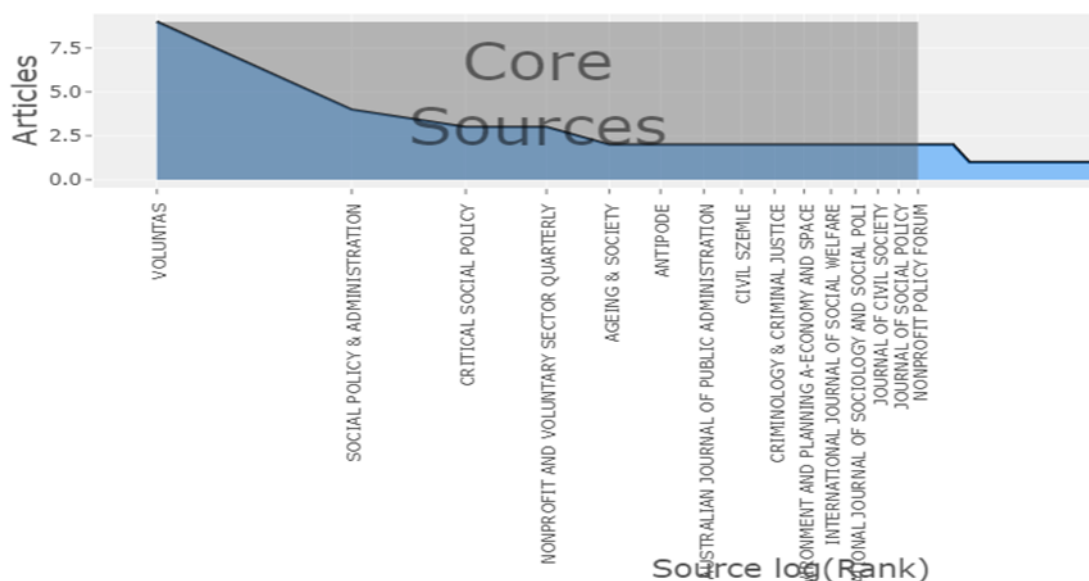

Figure 4. Of which, 9 articles (22%) come from Voluntas followed by Social Policy and Administration (9%) and Critical Social Policy (7%) respectively. The rest of the two-third comes from 91 different sources.

From the perspective of citation and h-index, Voluntas is also at the top with 132 total global citations (TGC) with h-index 5 (Table 3). That is 5 articles of the journal have been cited at least 5 times. The second source in this field is the journal of Social Policy & Administration, a relatively older journal that started publication in the year 2002. With 4 articles, it has 56 citations and an h-index of 3. However, the third journal, Critical Social Policy, with 80 total citations possesses h-index 3 and 3 publications. More importantly, none of these journals belongs to the field of economics.

Table 3: Sources Impact

Sl. No.	Source	h_index	TGC	NP	PY_start
1	VOLUNTAS	5	132	9	2010
2	SOCIAL POLICY & ADMINISTRATION	3	56	4	2002
3	CRITICAL SOCIAL POLICY	3	80	3	2005
4	NONPROFIT AND VOLUNTARY SECTOR QUARTERLY	2	32	3	2003
5	AGEING & SOCIETY	2	4	2	2015
6	ANTIPODE	2	145	2	2005
7	AUSTRALIAN JOURNAL OF PUBLIC ADMINISTRATION	2	43	2	2006
8	CIVIL SZEMLE	0	0	2	2017

9	CRIMINOLOGY & CRIMINAL JUSTICE	2	24	2	2013
10	ENVIRONMENT AND PLANNING A-ECONOMY AND SPACE	2	36	2	2015

Although Antipode has 145 citations, it has h-index 2 based on the collected sample. So, from the global citation's perspective, Antipode, Voluntas, Critical Social Policy, Social Policy & Administration journals are among the top journals with published articles on third sector economy. However, regarding local citations, Voluntas remains at the top journal with 112 local citations in the field of the third sector (

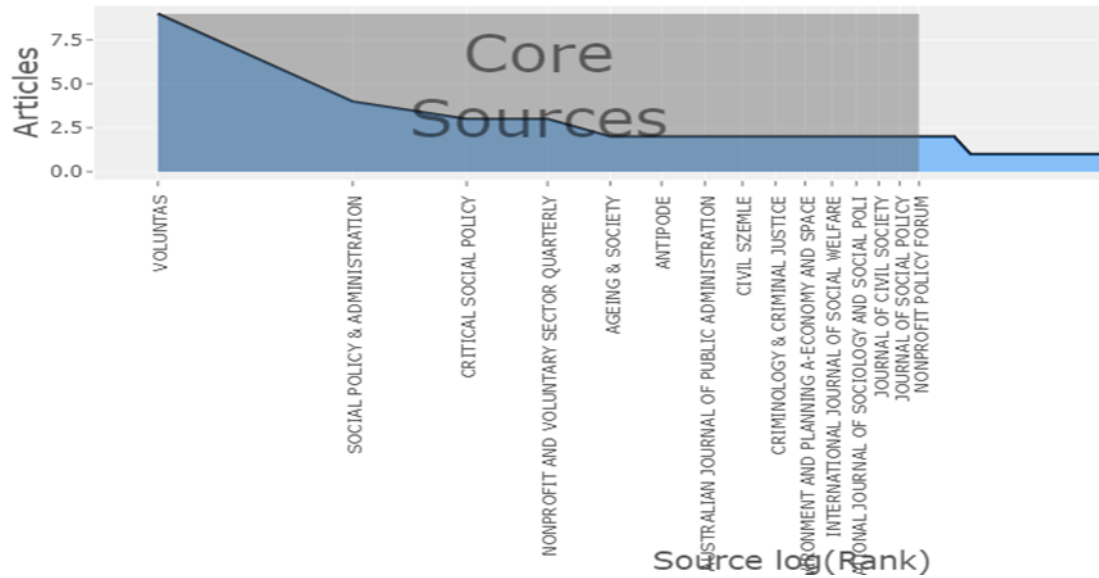

Figure 4 and **Hata! Başvuru kaynağı bulunamadı.**) Nonprofit Sector Research journal is at the 2nd position with 74 local citations.

Authorship Analysis Based on Countries

The country-specific scientific production analysis shows that the majority of the publications come from UK followed by the USA and Portugal. A total of 32 countries contribute to the publication of 118 documents out of which 66 come from the UK, 14 from the USA and 11 from Portugal. Australia and Spain have 9 publications each. Six countries have got one publication only.

Figure 7: Local citations of sources

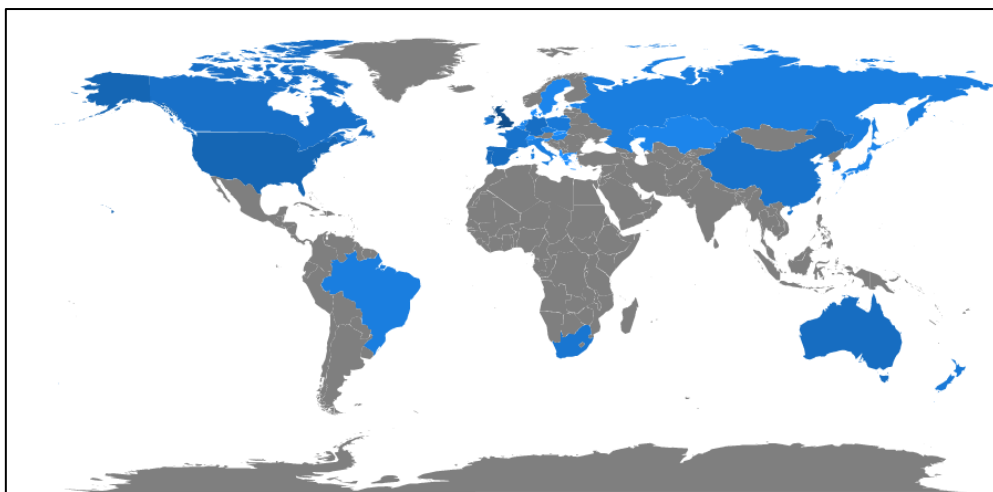

Figure 5: Country Specific Scientific Production

Intensity of blue color is proportional to number of publications.

However, there are some collaborative publications in each field. As in Figure 7, among the top 20 countries, UK is in the top position to have Single Country Publications (SCP) with an MCP (Multiple Countries Publications) ratio of 0.0488. More specifically, out of 41 corresponding authors' from the UK, only 2 publications have MCP collaboration. Out of a total of 11 publications from the USA, 7 are SCP and 4 are MCP. Eventually, the MCP ratio for the USA is 0.36. The MCP ratio is highest for Korea, out of only 2 publication, both are MCPs.

Figure 7: Most Relevant Countries by Corresponding Authors.

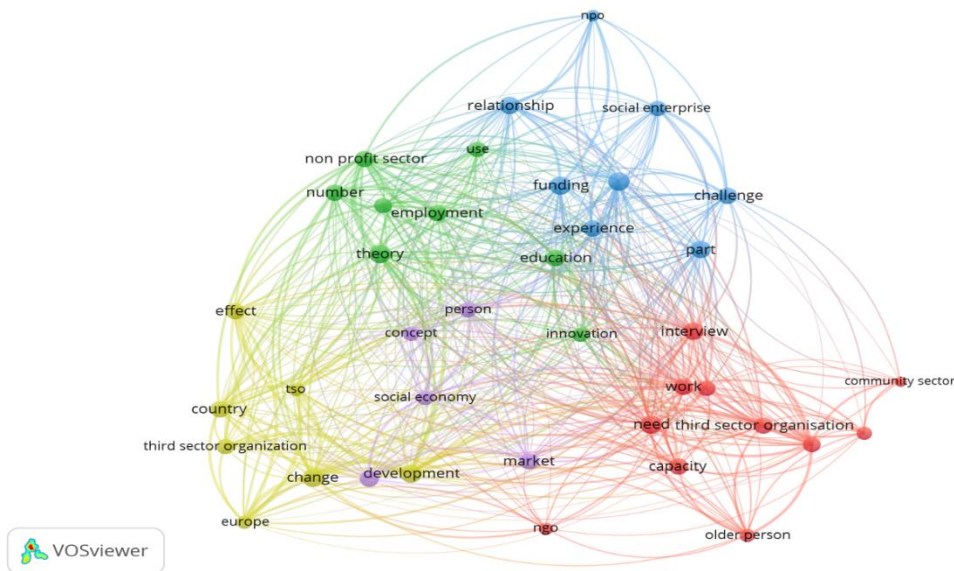

Figure 6: Keywords Co-occurrence Network

Keywords Co-occurrence Network

Keywords Co-occurrence Network displays the links among the keywords and the relative link strengths. In the co-occurrence network in Figure 6, the thickness of lines signifies the strength of the connections among keywords and the closeness of keywords.

However, the size of the node reflects the relative weight of a keyword. The keyword co-occurrence analysis here produces a total of five clusters that include 39 keywords, 523 links and the total link strength stood 3451.

The largest of these clusters (11 keywords) is coloured red and is led by the keywords ‘partnership’ followed by ‘need’, ‘interview’, ‘work’ and ‘third sector organization’. Most of

the keywords in this cluster are related to the structural issues of third sector organizations. The second-largest cluster of keywords (8 keywords) is coloured green and connected to the non-profit sector. This cluster is led by the keyword ‘non-profit sector’, which has the largest number of links and the total link strength is 321. The third highest cluster with 8 keywords is led by ‘research’ followed by ‘relationship’ and ‘funding’. This cluster is coloured blue and the majority of the keywords in this node are connected to research issues. The fourth cluster (seven keywords), led by the keywords: ‘development’ and ‘change’, is connected to concepts that are linked to the development of the third sector. Finally, the fifth cluster coloured purple has 5 keywords led by ‘social economy’.

Thematic Map Analysis

We can examine themes according to their position in the quadrants using the thematic map, a very instinctive plot. The upper-right, lower-right, lower-left, and upper-left quadrants represent motor-themes, basic themes, emerging or disappearing themes, and very specialized/ niche themes respectively (Cobo, López-Herrera, Herrera-Viedma, & Herrera, 2011). The thematic map analysis is depicted in Figure 8.

Based on 250 author’s keywords, the thematic map shows the motor themes are led by ‘social economy’. Other themes in the first quadrant are the voluntary sector, non-profit, European Union and social enterprise. The lower right quadrant presents six basic themes of which third sector and civil society are the major themes. As per the lower left quadrant, the emerging or declining themes include, ‘third sector organizations’, ‘governance’ and ‘austerity. However, there is no niche theme as shown by the fourth quadrant.

Figure 8: The Thematic Map Analysis

Three-fields Plot

The three-field plot is a dynamic science and graphic mapping tool that helps to summarize the entire bibliometric study in one figure and demonstrates proportionality among the contents. The three-field plot represents the linkage among three different meta-data. Figure 9 shows the three-field plot among keywords plus (left column), authors' keywords (middle column) and the sources (right column). There is a difference between authors keywords and keywords plus in the WOS database (Zhang et al., 2016). Author Keywords, those provided by the original authors, and Keywords Plus, those extracted from the titles of the cited references by Thomson Reuters. Keywords Plus, generated by an automatic computer algorithm, are words or phrases that appear frequently in the titles of an article's references and not necessarily in the title of the article or as Author Keywords (Garfield, 1990; Garfield & Sher, 1993).

Figure 9: The Three-fields Plot

Among the authors' keywords, the 'third sector' is mostly used followed by 'policy', 'voluntary sector' and 'social economy'. However, keywords plus shows that 'organizations', 'civil-society', 'impact', 'state' and 'activism' are the widely used keywords. As discussed earlier, 'Voluntas' is the leading source in this field. From the economic perspective of the third sector, 'social economy', 'economic crisis', 'non-profit', 'employment' are some of the keywords used by the authors repeatedly. Likewise, among the sources, 'correlation and regression analysis' and 'environment and planning an economy and space' are relatively connected to economics. The three-fields plot thus identifies the major focus of the research publications in the third sector economy. The third sector consisting civil society organization is mostly studied from its organizational structure, functions, policy and social contribution perspective rather than economic aspects. Eventually, future research agenda in this field could relate to macroeconomic issues, entrepreneurship, employment, market failure aspects.

CONTENT ANALYSIS AND FUTURE RESEARCH DIRECTIONS

Categories of Third Sector Economy Literature

All the 118 publications under the third sector economy can be categorized into 13 different categories. **Hata! Başvuru kaynağı bulunamadı.** summarizes the categories with corresponding frequency distribution. Most of the publications (almost one-fourth) are related to various social issues.

Figure 10: Sub-streams of Third Sector Economy Literature

Figure 10 shows the categories in percentage. Nearly one-fourth (23%) of the publications are related to various social issues. However, almost another one-fifth (19%) documents relate to political sciences & Public administration. Area studies, social work, health issues, interdisciplinary sciences and sociology cover 3%, 3%, 4%, 4% and 5% respectively.

The second-largest category is connected to the political science & public administration field having 22 publications (19 documents). On the contrary, environmental studies stood at the third position with 11 publications, far behind the top two categories. Economics, however, is at the fourth position with only 8 publications followed by business and development studies that have 7 publications each. Eventually, only insignificant research is related to economics.

Table 4: Various Streams of Third Sector Economy Literature

Publication Category	Number of Documents	Percentage	References
Area Studies	4	3%	(Jing, 2015), (Hasan, 2008),(Itcaina, 2019),(Spanova, Nakipova, Pestunova, Mukatay, & Jazykbayeva, 2020)
Business	8	7%	(Petrova, 2019), (Loosemore, 2015), (Vermeer, 2008), (Wiggill, 2014), (Sotos & Garcia, 2012), (Hodges & Howieson, 2017),(de Avila & Bertero, 2016),(Geok & Geok, 2018)
Development Studies	8	7%	(Valentinov, 2008), (Wallace & Cornelius, 2010), (Valentinov, 2012), (McMullin, 2019), (Rodger, 2012), (Aiken & Bode, 2009), (Harris, Harris, Hutchison, & Rochester, 2002), (Eden & Bear, 2010)
Economics	9	8%	(Gatskova & Gatskov, 2016), (Paiva & Carvalho, 2018),(Spicka, Arltova, Boukal, & Smrcka, 2017),(Dominowska, 2016),(Pevcin, 2012),(Haugh & Kitson, 2007),(Hulgard, 2014),(Neysmith & Reitsma-Street, 2000),(Bovaird, 2014)
Environmental Studies	11	9%	(Alexander & Smaje, 2008), (Kolcava & Bernauer, 2021), (Bezhani, 2015), (Cook & Inman, 2012), (Young, 2016), (Wainwright & Manville, 2017), (Halford et al., 2015), (Clifford, 2012), (Moulaert & Ailenei, 2005),(Bassel & Emejulu, 2018), (Lyth et al., 2017)
Health Issues	5	4%	(Rodnyansky & Yasnitskaya, 2017), (Grant, Goodenough, Harvey, & Hine, 2000), (Grieve & Olivier, 2018), (Zabdyr-Jamroz, 2017),(Crampton, Dowell, & Woodward, 2001)
Interdisciplinary Sciences	5	4%	(Valentinov, 2009), (Belzunegui-Eraso, Erro-Garces, & Pastor-Gosalbez, 2013), (Martinelli, Serrecchia, & Serrecchia, 2006), (Baxter & Fancourt, 2020), (Jasinska-Biliczak, 2019),
Interdisciplinary Social Sciences	7	6%	(Kenyon, Mason, & Rookwood, 2018),(Serra, Serneels, & Barr, 2011),(Maboya & McKay, 2019), (Chapman, 2017),(Lim & Endo, 2016),(Murdock, Shariff, & Wilding, 2013),(Van Til, 2009)
Management	3	3%	(Melao, Guia, & Amorim, 2017),(Nugroho, 2011),(Fredriksson, 2005)
Political Sciences & Public Administration	22	19%	(Lubienski & Perry, 2019), (N. R. Fyfe, 2005), (Prakash & Gugerty, 2010),(Body & Kendall, 2020), (Kalogeraki, 2020), (Archambault, 2017), (McCall & Williamson, 2000), (Hughes, 2019), (Carter, 2016), (Netto, Kamenou, Venugopal, & Asghar, 2012), (McCall & Itcaina, 2017), (Wollmann, 2018), (Myers, 2017), (Laszlo & Viktor, 2017), (Krasynska, 2015), (Ferreira, 2015), (Rees, 2014), (Wong, 2008), (Lyons & Passey, 2006), (Velazquez & Gallego, 2020), (Hardill & Dwyer, 2011), (Wong & Jun, 2006)
Social Issues	27	23%	(P. Tomczak & Bennett, 2020), (P. J. Tomczak, 2014), (Mythen, Walklate, & Kemshall, 2013), (Verdugo-Castro, 2019),(Pegg & Caddell, 2016), (Cahuas, 2019), (Hayashi, 2016), (Dalziel & Willis, 2015),(Hossein, 2017),(Kala, 2008), (Cunningham, 2010), (Salamon & Sokolowski, 2016), (Defourny, Gronbjerg, Meijs, Nyssens, & Yamauchi, 2016),(Gatskova & Gatskov, 2016),(Chaney, 2014), (Chaney, 2015), (Lund-Chaix & Gelles, 2014), (Thompson & Williams, 2014), (Parente, 2012),(Lacerda & Vieira, 2011), (Amendola et al., 2011), (Onyx et al., 2010), (Bode, 2003), (Corcoran, 2011), (N. Fyfe, Timbrell, & Smith, 2006), (Meade, 2005), (Baines, Charlesworth, Cunningham, & Dassinger, 2012),
Social Work	3	3%	(Chui, Jordan, & Wang, 2019), (Pentaraki & Dionysopoulou, 2019), (Hahn & McCabe, 2006)
Sociology	6	5%	(Sanghera, 2018), (Barman, 2016), (Halford et al., 2015), (Parente, 2016), (Pape et al., 2016), (Tesits, 2012)

Studies in the field of economics

In the field of economics, some studies (Gatskova & Gatskov, 2016) (Paiva & Carvalho, 2018) (Neysmith & Reitsma-Street, 2000) used survey data to show a relationship among some variables using a quantitative approach. However, some other studies used time-series data (Spicka et al., 2017) (Haugh & Kitson, 2007), cross-sectional (Pevcin, 2012) and panel data for econometric analysis.

Table 5: Summary of the studies in the fields of economics of the third sector

Author and year	Objective	Data and sample	Methodology	Findings
(Gatskova & Gatskov, 2016)	To explore the factors behind the limited civil society involvement	Survey data of the year 2010 and 2014 in Ukraine	Probit regression model	Lack of political identification, passivity, and reliance on informal networks inversely affect the people's propensity to participate in civil society organizations
(Paiva & Carvalho, 2018)	to investigate the relationship between accounting and management applications in the third sector organisations of a less developed country	Survey data collected from four provinces of Angola	Pearson Correlation Test	A relationship exists between the type of organisation and the origin of the resources obtained, the disclosure of financial statements, the use of operational plans and the use of budgets.
(Neysmith & Reitsma-Street, 2000)	To seek to expose the issues and complexity of volunteer work in poor communities	Data collected from Canadian Community Resource Centres	Monetary and experiential valuation of volunteering	Differences between funders, volunteers, and program planners originated from the differing social settings.
(Spicka et al., 2017)	To investigate variations in socioeconomic factors of the size of the non-profit sector	Panel data of Central European Region	ARDL and ECM	Different systems of care for the elderly, GDP per capita have significant impact on the size of non-profit sector.
(Pevcin, 2012)	To investigate the variations in the size of the non-profit sector among countries theoretically and empirically	A sample of 38 countries	Multiple and pooled data regression analysis	The ability to explain the differences in the size of the sector across countries is influenced by the selection of the measurement of sector size.
(Marcuello, 1998)	To analyse the supply and demand factors of the nonprofit organizations.	Non-profit sector data of Catalonia region from Spain	OLS estimation	Competition between NPO, characteristics of the population, market size, and the relationship with the government and private lucrative sector determines the size of the nonprofit sector.
(Haugh & Kitson, 2007)	To review the linkage between the third sector and the Labour's economic policy	UK data for the period of 1995-2004	Mostly descriptive analysis	Third sector has significant impact on the environment, social capital, poverty, measures of social exclusion, as well as GDP and employment

Among the studies directly related to the field of economics, three studies (Marcuello, 1998; Pevcin, 2012; Spicka et al., 2017) focused on the factors that determine the size of the nonprofit sector. However, the findings of the three studies are different from each other. Two other studies (Gatskova & Gatskov, 2016; Neysmith & Reitsma-Street, 2000) covered the labour market perspective of the third sector. Only one study (Haugh & Kitson, 2007) focused on the impacts of the third sector on the economic variables and another study (Paiva & Carvalho, 2018) covered the accounting and management practices in the third sector organizations.

Discussion and Research Gaps

Although diverse research has been conducted on the third sector economy, there still lies enough scope for additional research. From the perspective of economics, the earlier analyses indicate that fewer investigations have been performed in the third sector economy. Especially, from the macroeconomic viewpoint, extensive study is vital to discern how the contribution of the third sector could be incorporated into the mainstream calculation of various macroeconomic indicators. Moreover, from the microeconomic perspective, both theoretical and empirical analyses of third sector organizations are yet to be explored. Although some studies focused on the determinants of the size of the nonprofit sector, the findings of the studies are diversified that requires further investigation into the field. In addition, the contribution of the third sector to national income and development require specific definitions and tools for measurement. The maximization function of third sector firms is different from capitalist firms and requires rigorous theoretical analysis. Instead of conventional profit maximization, why entrepreneurs invest in the third sector needs scientific investigation. Moreover, how conventional utility maximization function changes in the case of people working in the third sector as volunteers is an area of further examination. All the studies from economics perspective reviewed in this paper were conducted in the developed countries. But the emergence of third sector in the developing countries might be based on some other variables that are different from the developed nations. Eventually, third sector in the developing countries require further focus. Since the existence of a third sector can be justified based on both market failure and government failure, the economic rationality of the existence of a third sector requires scientific discovery.

CONCLUSION

The study is based on 118 published documents in Web of Science (WOS) and reveals that the third sector receives research focuses from various stakeholders. Both research and the number

of citations of the published documents on this sector are growing. Although most of the researchers concentrating in this field are not specialized, there has been a rise in publications on third sector economy lately. Among the sources in this field, the journal *Voluntas* is the most reputable. Nonetheless, the publications in the third sector economy encompass a vast array of journals, books, and conference proceedings. It is evident that maximum researches in the sector have been conducted in the UK. Research collaborations with other countries have also been on the rise. On the contrary, the keyword analysis clarifies, that the major clusters are led by 'partnership', 'non-profit sector', 'research', 'development' and 'social economy'. But the thematic analysis reveals that the motor theme includes 'social economy'. Nevertheless, the three-field plot and content analysis depict that the future research agenda in this field could be related to macroeconomic issues, entrepreneurship, employment, and market failure aspects. Since the study covers only the WOS database, further research could be conducted through SCOPUS and other standard databases. Mainstream economics researchers can focus on the determinants of the size of the voluntary sector both in developing and developed countries.

Özet

Müzik, insan hayatının içinde yer alan, duygu ve düşüncelerimizi ifade etmemizi sağlayan, yaratıcılığımızı ortaya koyabildiğimiz ve ruhsal gelişimimize katkı sağlayan önemli sanat dallarından birisidir. Eğitim, bireylerin davranışlarda istenilen yönde davranış değişikliği geliştirme sürecidir. Müzik eğitimi bireylerin duygusal, sosyal ve akademik gelişimlerini desteklemektedir. Bireyler okul hayatlarına ilk adımı attıkları andan itibaren müzik eğitimi almaya başlamaktadır. Müzikal becerilerini geliştirmek isteyen ve bu alana ilgisi olan bireyler müzik eğitimlerini profesyonel olarak devam ettirmek amacıyla mesleki müzik eğitimi olarak bu alanda gelişimlerine devam edebilmektedirler. Ancak her sanat alanında olduğu gibi müzik alanında eğitim gören bireyler de performanslarını sergilerken sahne korkusu, özgüven sorunu, heyecanı kontrol edememe vb. nedenler sebebiyle kaygı yaşamaktadır. Bu durum, bireylerin performanslarının olumsuz etkilenmesine yol açabilmektedir. Bu çalışma, Türkiye’de müzik eğitimi alan öğrencilerin performans kaygılarına yönelik 2018-2023 yılları hazırlanan lisansüstü tezlerin incelenmesini amaçlamaktadır. Araştırma nitel araştırma yöntemiyle hazırlanmıştır. Araştırma kapsamında elde edilen veriler doküman analizi yöntemiyle elde edilmiştir. Araştırmanın verilerini, YÖK Ulusal Tez Merkezi’ne “müzik, kaygı ve performans” anahtar kelimeleri kullanılarak elde edilen lisansüstü tezler oluşturmaktadır. Toplamda 10 teze ulaşılmıştır. Bunlar sırasıyla; (f=1) sanatta yeterlik, (f=4) doktora, (f=5) yüksek lisans tezi şeklindedir. Elde edilen tezlerin tamamı araştırma kapsamına alınmıştır. Araştırma sonucunda, Türkiye’de müzik eğitimi alan öğrencilerin performans kaygılarına yönelik lisansüstü tezler incelendiğinde, çeşitli değişkenlerin bireylerin kaygı düzeylerini azaltmada yardımcı olduğu yönelik bulgular tespit edilmiştir.

Anahtar Kelimeler: Müzik eğitimi, performans, kaygı.

**A REVIEW OF POSTGRADUATE DISSERTATIONS PUBLISHED IN 2018-2023 ON
THE PERFORMANCE ANXIETY OF MUSIC EDUCATION STUDENTS IN
TÜRKİYE**

Abstract

Music is one of the important branches of art in human life which allows us to express our feelings and thoughts, reveals our creativity, and contributes to our spiritual development. Education, on the other hand, is the process of invoking changes in individuals' behaviors in the desired direction. Music education supports the emotional, social, and academic development of individuals. Individuals start to receive music education from the moment they take their first step into school life. Individuals who want to improve their musical skills and are interested in this field can continue their development in this field by receiving vocational music education to continue their music education professionally. However, as in every field of art, individuals studying in the field of music also experience anxiety due to reasons such as stage fright, self-confidence problems, inability to control excitement, etc. while performing. This situation can lead to negative effects on individuals' performances. This study aims to examine the postgraduate dissertations published between 2018 and 2023 on the performance anxiety of music education students in Turkey. The research was designed using a qualitative research method. The data obtained within the scope of the research were retrieved by the document analysis method. The data of the study consisted of graduate dissertations obtained through the use of the keywords, "music, anxiety, and performance" in the National Thesis Center of the Council of Higher Education. As a result, a total of 10 dissertations were reached. These were Doctor of Arts (f=1), doctorate (f=4), and master's (f=5) theses, respectively. In conclusion, upon examining the postgraduate dissertations on the performance anxiety of music education students in Turkey, it was found that several variables help to reduce the anxiety levels of individuals.

Keywords: Music education, performance, anxiety.

Giriş

İnsan sosyal bir varlık olduğu için, sosyal hayatın her noktasında yaşadığı durumlar karşısında çeşitli duygularla tepki verebilmektedir. Bu duygular; üzüntü, sinir, mutluluk, öfke ve kaygı vb. şekilde çoğaltılabilir. Bireyin yaşamını etkileyen duygulardan birisi olan kaygı, günümüz dünyasında bireylerin sıklıkla yaşadığı bir duygudur. Bireylerin yaşantılarında karşılaştıkları stresli olaylar karşısında vücudun kendisini savunmak için verdiği psikolojik ve fizyolojik tepkiler kaygı olarak tanımlanmaktadır (Moonesi ve Taghavi, 2015). Dolayısıyla, bireylerin bireysel olarak ön planda olduğu alanlarda kaygı durumları heyecana bağlı olarak artabilir. Bireyler eğitim hayatları boyunca kaygı duygusunu sık sık yaşayabilmektedir. Bireylerin eğitim alanında yaşadıkları kaygılara yönelik alanyazında yer alan çalışmalar incelendiğinde; Aygün (2015), öğrencilerin eğitim süreçlerinde yaşadıkları gelecek kaygısına yönelik hazırladığı çalışmasının sonucunda, bireylerin gelecek kaygılarına yaş, cinsiyet, okudukları okul türü vb. kriterlerin etki ettiğini vurgulamaktadır. Taşdemir (2015), ortaokul öğrencilerinin matematik dersine yönelik yaşadıkları kaygıyı ele alan çalışmasında, 5. sınıf öğrencilerinin 8. sınıf öğrencilerine göre kaygı düzeylerinin daha düşük olduğunu saptamıştır. Aydın vd., (2018) çalışmalarında, yabancı dil öğreniminde bireylerin yaşadıkları kaygının nedenlerini, kaygı süreciyle baş etme yollarını, yabancı dil öğrenme sürecinde kaygının öğrenme sürecine olan etkilerini incelemiştir. Araştırmanın sonucunda, yabancı dil öğrenim sürecinde sınav korkusunun süreci olumsuz etkilediğine değinmişlerdir. Aynı zamanda, çalışmalarında, kaygı duygusunun bireyin hatalarını fark etme sürecine katkı sağlaması sebebiyle olumlu etkilerinin de olduğuna yönelik görüşlere yer verdikleri görülmektedir.

Kaygı düzeyinin yüksek olduğu eğitim alanlarından birisi de müzik alanıdır. Müzik alanı, bireylerin sıklıkla bireysel/karma performans sergiledikleri dolayısıyla, stres, heyecan, kaygı vb. duyguları yaşanabileceği bir alandır. Kaygı durumu bireylerin performans sergilediği zamanlarda sahneleme öncesi, seyirci sayısı, hazırlanan etkinliği zorluğu vb. etkenler kaygı durumunu arttırmaktadır (Miller, 2004). Kaygı durumunun ortaya çıkmasındaki temel sebep genellikle strestir. Birey, korku yaşamamasını tetikleyecek bir durumla karşı karşıya kaldığında kaygı duygusunu yaşamaktadır (Ellis, 1994). Performans kaygısı; topluluk önünde konuşma yapan, sahne sanatlarının herhangi bir dalında performans sergileyen bireylerin zihinsel ve bedensel olarak vücudun verdiği tepki olarak tanımlanmaktadır (Cemali, 2017). Müzik alanında bireylerin özellikle sahne performansı sergilemelerini gerektiren durumlarda sıklıkla kaygı yaşadıkları görülmektedir. Müzik alanında performans kaygısı yaşayan bireylerde, konsantrasyon bozukluğu, endişe ve korku vb. duygular ortaya çıkmaktadır (Sabzehzar, 2020).

Müzik eğitimi alanında bireylerin performans kaygılarına yönelik alanyazında çeşitli çalışmalar bulunmaktadır. Tokinan (2014), müzik öğretmeni adaylarının performans kaygılarına yönelik hazırladığı çalışmanın sonucunda; kadın öğrencilerin kaygı düzeyinin erkek öğrencilere daha yüksek olduğunu, müzik alanı performans kaygısı ve özgüven arasında anlamlı bir ilişki olduğunu saptamıştır. Sarıkaya (2018), müzik eğitimi lisans öğrencilerinin mükemmeliyetçi bakış açılarının performans kaygılarını olumlu/olumsuz etkilediği sonucuna ulaşmıştır. Taner (2022) müzik alanı lisans öğrencileriyle yürüttüğü çalışmasının sonucunda aile, arkadaş çevresi ve öğretmenlerle performans kaygılarını paylaşmanın bireyleri rahatlatacağı sonucuna ulaşmaktadır. Ayayeter (2019) araştırmasının sonucunda, müzik öğretmenlerinin performans kaygılarının düşük olduğu sonucunu elde etmiştir. Ünalın (2023), müzik alanı lisans öğrencilerinin performans kaygılarının ve stres durumlarının azalmasında yoga yapmanın etkili olduğu sonucuna yer verdiği görülmektedir. Müzik alanında eğitim gören öğrencilerin performans kaygılarına yönelik olumlu/olumsuz pek çok veri olduğu saptanmıştır. Müzik alanında performans göstermenin önemi düşünüldüğünde bu alanda performans kaygısına yönelik çalışmaların literatüre katkı sağladığı yadsınamaz bir gerçektir.

Bu bağlamda, bu çalışmada, Türkiye’de müzik eğitimi alanında eğitim gören öğrencilerin performans kaygılarına yönelik 2018-2023 yılları arasında–lisansüstü tezlerin incelenmesi amaçlanmıştır. Bu amaca yönelik olarak, çalışmada şu soruların cevapları aranmıştır.

- ✓ Müzik eğitimi alanında eğitim gören öğrencilerin performans kaygılarına yönelik olarak lisansüstü tezlerin yıllara göre dağılımı nasıldır?
- ✓ Müzik eğitimi alanında eğitim gören öğrencilerin performans kaygılarına yönelik olarak lisansüstü tezlerin türlerine göre dağılımı nasıldır?
- ✓ Müzik eğitimi alanında eğitim gören öğrencilerin performans kaygılarına yönelik olarak lisansüstü tezlerde kullanılan yöntemle ilişkin dağılım nasıldır?
- ✓ Müzik eğitimi alanında eğitim gören öğrencilerin performans kaygılarına yönelik olarak lisansüstü tezlerde kullanılan örneklem gruplarına ilişkin dağılım nasıldır?

2. Yöntem

Bu çalışmada, nitel araştırma yöntemlerinden biri olan doküman analizi tekniği kullanılmıştır. Nitel araştırma; belirli bir olayı, davranışı, bulunduğu doğal ortamda derinlemesine inceleme sürecidir (Saban, 2010). Nitel araştırma yöntemi sürecinde çalışma konusunun belirlenmesi ve gerçekleştirilmesi sürecinde araştırmacı sınırları kendisi belirleyebilmektedir (Karataş, 2015).

Nitel araştırma yöntemleri içerisinde en sık görüşme, gözlem ve doküman analizi yöntemi kullanılmaktadır (Yıldırım ve Şimşek, 2016). Doküman analizi, araştırma kapsamında ele alınan konu ile ilişkili kitap, dergi, gazete vb. kaynakların analiz edilme sürecidir (Yıldırım ve Şimşek, 2016). Doküman analizi sürecinde, araştırma konusuna yönelik yazılı belgeler analiz edilmektedir (Aydın, 2019).

Çalışmanın verileri, YÖK Ulusal Tez Merkezi veri tabanında yer alan “müzik, performans ve kaygı” anahtar kelimeleri kullanılarak ulaşılan yüksek lisans, doktora ve sanatta yeterlik tezleri oluşturmaktadır. Bunlar sırasıyla; (f=1) sanatta yeterlik, (f=4) doktora, (f=5) yüksek lisans tezi şeklindedir. Müzik eğitimi ve performansla yönelik ilk çalışmanın 2018 yılında hazırlandığı görülmektedir. Araştırma kapsamında yapılan incelemede 15 lisansüstü teze ulaşılmıştır. Müzik eğitimi ile ilişkili olmayan tezler araştırma kapsamına alınmamıştır. Araştırmaya 10 lisansüstü tez dâhil edilmiştir.

Doküman analizi tekniği doğrultusunda verilerin analizinde betimsel analiz yöntemi kullanılmıştır. Betimsel analiz; gözlem, görüşme ve doküman analizi yöntemiyle elde edilen verilerin bütüncül bir bakış açısıyla yorumlanmasıdır (Yıldırım ve Şimşek, 2016). Betimsel analiz yönteminde, araştırılan konuya ait veriler belirli bir tema altında incelenir. Ardından araştırma kapsamında incelenen veriler bulgular başlığında ele alınarak yorumlanır (Altunışık vd., 2007).

3. Bulgular

Çalışmanın bu bölümünde, araştırma kapsamında ele alınan sorular doğrultusunda elde edilen bulgulara yer verilmiştir.

Tablo 1. Müzik Eğitimi Alanında Eğitim Gören Öğrencilerin Performans Kaygılarına Yönelik Olarak Lisansüstü Tezlerin Yıllara Göre Dağılımı

Tez Başlığı	Yılı	Tür
Konservatuvarda ortaokul ve lise düzeyinde öğrenim gören müzik öğrencilerinin müzik performans kaygı düzeyleri ile duygusal zekâ düzeylerinin çeşitli değişkenlere göre incelenmesi	2018	Doktora
Müzik öğretmeni adaylarının mükemmeliyetçilik ve öz-yeterlik inançlarına göre müzik performans kaygılarının yordanması	2018	Doktora
Müzik öğretmenlerinin müzik performans kaygılarının ve iş doyumlarının çeşitli değişkenler açısından incelenmesi	2019	Yüksek Lisans
Müzik öğretmeni adaylarının müzik performans kaygısı ile bireysel çalgı performans sınavı kaygısı arasındaki ilişkinin incelenmesi	2020	Yüksek Lisans
Mesleki çalgı eğitimi gören öğrencilerin müzik performans kaygısının giderilmesinde sinir dili programlama (NLP) yönteminin uygulanması	2021	Doktora
Müzik bölümü öğrencilerinin çalgı performans yönetimi özyeterlilik algıları performans kaygı düzeyleri ve aralarındaki ilişkinin incelenmesi	2021	Yüksek Lisans
Lisans düzeyinde çalgı eğitimi alan Konservatuvar Müzik Bölümü öğrencilerinin müzik performans kaygısına ilişkin görüşleri	2022	Yüksek Lisans
Müzik öğretmeni adaylarının çalgı performansı özyeterlilikleri ve müzik performans kaygılarının öğrenci başarısı üzerine etkisi	2022	Doktora
Müzik performans kaygısının korno sanatçıları örnekleme üzerinden nitel olarak incelenmesi	2022	Sanatta Yeterlik
Müzik öğretmeni adaylarının müzik performans kaygısı, algılanan stres, sürekli kaygı ve bilinçli farkındalık düzeylerine ilişkin düzenli yoga pratiklerinin etkisi	2023	Yüksek Lisans
